The copy filmed here has been reproduced thanks to the generosity of:

Seminary of Quebec
Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

1 2 3

L'exemplaire filmé fut reproduit grâce à la générosité de:

Séminaire de Québec
Bibliothèque

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont le couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.
THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY:
BEING A COMPLETE HISTORY AND DESCRIPTION OF THE WHOLE WORLD.
CONTAINING
A particular, full, accurate, circumstantial, and entertaining Account, including the ancient and present State, of all the various Countries of EUROPE, ASIA, AF RICA, and AMERICA,
AS DIVIDED INTO
EMPIRES, KINGDOMS, STATES, REPUBLICS, AND COLONIES,
AND AS SUBDIVIDED INTO
Continents, Islands, Provinces, Peninsula, Archipelagoes, Seas, Oceans, Gulfs, Straits, Rivers, Harbours, Deltas, Lakes, Promontories, Capes, Bays, Distrits, Governments, Principalities, &c. &c.
TOGETHER WITH
Their Situations, Extent, Boundaries, Limits, Climate, Soil, Natural and Artificial Curiosities and Productions; Laws, Religions, Revolutions, Conquests and Treaties, Antiquities, Revenues, Naval and Military Force, &c.

LIKEW ISE

An useful and entertaining Historical and Descriptive Relation of all their Colours, Manners, Genius, Trade, Commerce, Agriculture, Learning, Policy, Arts, Sciences, Manufactures, Tempers, Dispositions, Amusements, Habits, Stature, Shape, Colours, Virtues, Vices, Riches, or Poverty, Entertainments, Languages, and Religious Ceremonies at Births, Marriages, and Funerals; Titles of Distinction, &c. of the different Inhabitants. And a genuine History of all Sorts of Birds, Beasts, Fishes, Reptiles, Insects, Vegetable Productions, Flowers, Harps, Fruits, Plants, Guns, &c. found in the several Regions.

INCLUDING ALL THE VALUABLE DISCOVERIES MADE IN THE MOST REMARKABLE
VO Y AGES and TRAVELS
To different PARTS of the WORLD from the earliest Times to the present Year 1782; particularly all the MODERN DISCOVERIES in the Southern and Northern Hemispheres, &c. by

Captain COOK, ANSON, BOUGAINVILLE, SHARP, SUCKLING,
Lord MULGRAVE, FORREST, THICKNESS, CHANDLER,
WALLIS, WWRAXALL, ALGOROTTI, JOHNSON,
CARTERET, HANWAY, DRUMMOND, TWIGS,
FALCONER, COXE, BRUCE, OSBECK,
BYRON, DILLON, CARVER, BURNABY,
FURNEAUX, BARRETTI, THOMPSON, IRWIN, &c.

COMPRISING
Not only all the late Discoveries in the Fox, and various other Islands in the South Sea, and towards the North Pole, but also those made in the JAPANESE OCEAN, in the NEW NORTHERN ARCHIPELAGO, in NORTH AMERICA, the WEST INDIES, and those made by Order of the Empress of Russia in the RED SEA, the INDIAN SEA, EASTERN OCEAN, &c. &c. Also a great Variety of curious Particulars communicated to the Author of this New Work, by Military and Naval Commanders, Captains of Ships, Gentlemen, private Gentlemen, ingenious Travellers, &c. and every Curiosity extracted from various Languages relative to the different Parts of the Universe. The Whole being brought down to the present Time, and forming the most extensive and original Production on the Subject ever published, wherein a great Variety of Improvements are included, not to be found in any other Work of the Kind.

A NEW, COMPLETE, AND EASY INTRODUCTION TO GEOGRAPHY AND ASTRONOMY: giving an useful and entertaining Explanation of the Principles and Terms of each Subject, their Relation to each other, the Figures, Motion, &c. of the Earth, Planets, &c. Latitude, Longitude, Use of Maps, the Compass, the Science of Winds, constant and variable, of Earthquakes, Comets, Meteors, Thunder, Lightning, &c. and other authentic Particulars, &c.

By GEORGE HENRY MILLAR, Esq.;
Affiliated by several GENTLEMEN, celebrated for their Knowledge in the Science of GEOGRAPHY, particularly WILLIAM LANGFORD, Esq, who accompanied Capt. Cook in making New Discoveries.

Calculated to convey useful and entertaining Knowledge to all Ranks and Degrees of People, for a celebrated Author justly observes,

"There is not a Son or Daughter of Adam but has some concern in Geography."

The Whole embellished with upwards of ONE HUNDRED and TWENTY capital Engravings, being the most elegant Set of Copper Plates ever published in a Work of this Kind, and consisting of beautiful Views, Land and Water Subjects, Views of the various Inhabitants of different Countries, their Angular Costumes, Armament, Cities, &c. All the auxiliary Maps, Charts, Diagrams and Plans, with the different Objects in Natural History, such as Birds, Beasts, Fishes, Amphibious Animals, &c. The elegant Embellishments are derived from the best Manner by the celebrated Artists, PALLAD, Fayrer, RAISTRICK, Smith, WALTER, CALLEGG, WELLING, Page, BARNES, GRIGSON, CUTLER, and others, from curious original Drawings and Original Paintings made by the Authors, Mr. Wright, Mr. Boyd, Samuel Wills, &c. &c. The plates are engraved by Mr. Tymms, according to the Author's Designs, and in a style of engraving equal to any modern Work; and the whole is uniformly formed and performed on the most valuable and complete Atlas ever delivered with any similar Work. All the views are engraved and engraved according to the best Manner by Mr. Ritchie, Geographer and Hydrographer to his Majesty, Mr. Brown, Mr. Conder, Mr. Lodge, &c.

The New and Universal System of Geography Containing...
INTRODUCTORY

PREFACE

The Study of Geography has a peculiar Claim to the Attention of Mankind in general; and cannot be too earnestly recommended to all Ranks of People. This pleasing, useful, and delightful Science, displays to our View, in the most entertaining and profitable Manner, a general Knowledge of the World. A good Work of this Kind, exhibits to Persons of every Capacity and Situation in Life, an authentic Account of whatever is worthy of Notice, in the various Countries of the Universe. It not only furnishes a Description, but also an Historical and Political Representation of all the several Provinces, Districts, and Subdivisions of every Country; together with a clear, natural, and methodical Detail of the Customs, Manners, Dresses, Ceremonies, and present State of the Inhabitants; the most remarkable Events that have transpired, from the earliest Period to the present Time, and the Consequences that have attended them; Also an accurate and impartial History and Survey of their Laws, Government, Maxims of Policy, Forces, Revenue, Trade and Commerce, and a great Variety of other important and interesting Particulars, some of which are enumerated in our Title Page.

The Public in general are so thoroughly convinced of the Utility of this Subject, that it might possibly be thought Impertinent to dwell long on the Recommendation of it.

The Pleasure, as well as Profit, attending the Perusal of Books of this Sort, has made them more universally Read than any other Branch of polite Literature; and the Study of Geography has now become one of the most fashionable Pursuits of the present Age, for both Sexes. In short, this is a Subject in which every Man is materially interested; for, as a celebrated Author judiciously observes, “There is not a Son or a Daughter of Adam, but has some Concern in Geography.”

However, amidst the Variety of Publications on this Subject, which have made their Appearance from Time to Time, it has been Matter of great Atonishment to many, that no one has been written on an improved Plan of general Information, containing all the recent Discoveries, and which may be suitable to such as wish to gain a perfect Knowledge of Men and Things in every Part of Europe, Asia, Africa, and America. This has been, most certainly, a general Complaint throughout this Country; but, without pointing out the Errors and Absurdities of other Writers, we now offer to the Public A NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY, being a complete History and Description of the Whole World, upon such an improved and extensive Plan, as has been long wished for.

Our Readers will have no Reason to complain that they have been caught by an inviting Title Page, or that they have received less than they promised themselves, from the Perusal of this new and improved Performance. We acknowledge that we have promised much, but we likewise confidently assert that our Performances will not be found inadequate to our Proposals. —The most ample Fortune of the richest Man, and the longest Life of the most laborious Traveller,
Traveller, attended with all that Success which his most Sanguine Expectations could hope for, could be insufficient to make him acquainted with the twentieth Part of what will be found in the New Work, which is calculated for general Instruction and Amusement.

The Public will at most perceive, that this Work would not be properly executed in less than Eighty Numbers, considering the necessary Composition of the Whole, which were extended it further would have been entirely unworthy, and have been begun by the Author and Others concerned in the external Execution of it, as under the Consideration of the extraordinary large and elegant Size in which the Work is printed, and those constantly omitted the tedious Errors of other Writers, particularly long and injudicious poetical Quotations from Authors, who never were allowed by People of any Differmment, to have aimed at Authenticity in their fancied local Descriptions, So that this Work is not only the Cheapest of the Kind, but also the most Complete and Elegant in every Respect whatever... We shall, therefore, submit the Whole to the Patronage and Protection of the unprejudiced, disinterested, and discerning Public, who will, no doubt, generously give the Preference according to Merit.

That Turn for Reading which now so universally prevails throughout these Kingdoms, is certainly very Laudable, and cannot but be attended with very great Advantages. It is impossible that vacant Hours can be better filled up, than in the Perusal of well-chosen Books; and a very little Reflection will shew, that next to the Sacred Scriptures, nothing can have a greater Claim to our general Notice, than the Work which we now offer to the Public.

We shall begin with a New History and Description of Asia, that Quarter of the Globe, which on many Accounts demands our earliest Regard. Africa will make the second Part of our Work, and, attending to the regular Order of Things, we shall next come to the European Countries, whose Inhabitants, becoming more bold in the Spirit of Enterprise, than those of the other two Parts of the Globe, discovered the fourth grand Division of the World, namely, America; with a more complete History and Description (including the present, as well as ancient State) of which than is to be found in any similar Performance, we shall conclude this New System of Geography—a Work, founded on the most respectable Authorities, comprising all the late Discoveries made in every Part of the Globe, by the most celebrated Navigators and Ingenious Travellers, and arranged with the greatest Accuracy and Care, being the Result of unwearying Affiduity and Study, for several Years.

GEORGE HENRY MILLAR.

N.B. The New, Complete, and Early INTRODUCTION to GEOGRAPHY and ASTROLOGY, comprehending an useful and entertaining Explanation of the Principles and Terms of both Sciences, their Relation to each other, the Figure, Motion, &c. of the Earth, Planets, &c. Latitude, Longitude, Use of Maps, Compasses, the Nature of Heat, Air, Meteors, Wind, &c. confinant and variable, and other Particulars: Together with a complete GEOGRAPHICAL INDEX to all the Places, will begin at the Conclusion of the Work.

THE NEW
GEOGRAPHY AND ASTRONOMY

The latitude and longitude of any place given, to find the place. You are to look in the same meridian for the latitude, and the same longitude for the longitude, if you have it. If you have not the latitude, then you must look for it in the meridian, or of the globe under forty degrees, or more, it will not be found. The winds are generally from the southeast, or from the south or southwest, in the winter, and from the north or northwest, in the summer.

The wind is the same from both points, and the wind to be a

The breeze is the same from both points, and the wind to be a
Coming among the inhabitants, effeminacy, to be rather ascribed to the obstinacy of the inhabitants of the warm regions of the situation; consequently situated to the north, produce such robust and active men, as are very strong and active, that they who inhabit Asia, experience the effects to be in a great degree of their mind, and condition, which our climate is favourable to imitate, whether the selection of the nations, that they purchase, be altogether kept in such abode, as to be always considered as free, as much as possible for any nation to have occasion to envy, that their maxims and manners shall have occasion to envy, that their maxims and manners.
THOUGH it is natural for the inhabitants of that
quarter of the globe in which we live, from an
internal friend, to give the preference to Europe, to
which Asia is esteemed to be, in all respects, the most con-
siderable part of the world, and is insinuated to the first rank,
on account of its many singular advantages above the rest.
For instance, in a few particulars; in Asia, the Creator of
the Universe planted the delightful garden of Eden,
wherein he placed the first parents of mankind, from whom
the whole race of human beings descended. Asia, whose
countries are first enlightened by the rising sun, became
the nursery of the world after the general deluge, and from
the same source i erected the first empires and monarchies,
colonies into all other parts of the habitable globe. In Asia,
God made choice of that fertile spot Canaan, wherein he
placed his favourite people, the Jews. Here, also, the
great and stupendous work of our redemption, was accomplished by his divine Son; and from hence his
commandments and revelations were taught to mankind,
gospel amongst the surrounding nations. Here, likewise,
were founded the first christian churches: the first councils
were held; the first bishops erected, and the christian
faith miraculously founded, promulgated, and watered
with the blood of a glorious army of martyrs. In short, in
Asia the first edifices were raised, the first cities built, and
the first kingdoms and monarchies founded, at a time when
the other parts of the world were the haunts of wild beasts,
or but very thinly, if at all, inhabited.

Besides the above-mentioned advantages, Asia surpasses
the other parts of the world in the extent of its territory,
the richness of its soil, the fertility of its air, the delicious
flavour of its fruits, the salutary quality of its drugs, and the
fragrance and balsamic nature of its plants, spices, gums,
&c. the value, beauty, variety, and quantity of its
minerals, the richness of its metals, besides various other excellences; all which peculiar advantages, render it so charming and so
abundant that it was for a long series of years the refinance and chief
of the most cultivated countries in the world. But since the Turks,
who are the only people to all parts in Asia, and the fine arts, have
possessed a considerable part of it, much of its ancient splen-
dor has been entirely lost; the most fruitful and delightful
parts of Asia, reduced to wild, uncultivated deserts, and
since that time, is only remarkable for the rich commodi-
ties it affords, but is still visited and reformed by mer-
chants, fortresses, and the great parts of this country as have escaped the barbarism of the Turks,
No. 1.

Asia are still in a flourishing state, notwithstanding the inhabi-
tants are justly envious of their indolence, effeminate,
and luxurious habits; so that this advantage may be rather ascribed to
the richness of the soil, than to the industry of the inhabi-
tants.

Historians in general, impose the effeminacy of the
natives of this country, chiefly to the warmth of the cli-

tate, heightened by custom and education; consequently
it is left prevalent, the nature they are figured to the north;
and that the southern countries do not produce such robust
natives as the northern ones; from which it is inferred,
that those districts which live nearest in our latitude, are, in
this respect, not much inferior to and that the sou-
thern Turks and Tartars, particularly, are very strong and
courageous. We might, however, observe, that they who
live in the most fertile parts of Asia, are, on account of
the deficiency of reubenin in their bodies, to be in a great
measure supplied to them by the vivacity of their mind,
and their ingenuity in various languages, which are
more accustomed to the public service, of which our
most expert mechanics have in vain endeavoured to imitate.

We will not pretend to determine, whether the reflection
which is commonly cast on all the Asiatic nations, that they
are naturally fond admirers of monarchy, be altogether
true; since their princes have always kept them in such
absolute slavery and submission, that they never had the least
opportunity of displaying their love of liberty, which we
may suppose to be as congenial to them, as with the
rest of mankind. It must, however, be considered, that
many of these people, when the Dutch first came among
them, could not conceive how it was possible for any nation
to live under any other than a despotic government (which
is the only one established throughout that vast country)
or how that people could subsist under a republican one.

A rapid kind of exercise of its genius in Asia, is great
part of it being over-run with Mahometism; particu-
larly Turkey, Arabia, part of India, and Tartary; they
are all but, and followed the same tribes and the same
religion of the great

Mogul, but are of the sect of Hall, which, in some re-
spects, differs from that of the Turks, though both of
them acknowledge, their language, and the alcoran for their divine rule of faith and practice. In
China, Japan, Siam, &c. they are, for the most part,
benevolents and considerate; have many distinct ways
of living, or rather of dining, and use the most extravagant
rites in their worship of them, as we shall have occasion to
see hereafter; and small observers, that would plod in,
imitate, and superstitious ceremonies attending the

weather...
of them, are only regarded by the populace, for whom they are chiefly calculated by the priests, who are their only teachers. But, however indifferent that class may be to the study and practice of religion, it is their privilege, when any of their number dies, to prescribe the circumstances that affect their part of the ceremony. Thus, the devotions, the intercessions, the sacrifices, all the rites and ceremonies connected with death, are performed by the priests, and have been the subject of much attention and care on the part of the aristocracy.

As Asia extends itself quite from the equator to the polar circle, and even beyond, consequently the climates must be so various, that a minute detail of them, and their peculiar products, would, in this place, be tedious, and lead us into too great a length, since the facts must naturally vary, according to their different situations. We shall, therefore, only speak of them generally, and in a very particular manner, that Asia comprehends all the temperate, the larger half of the torrid, and great part of the frigid regions. In the torrid region there are twenty-four climates; yet, upon the whole, the country is rich and fruitful, and some parts of it exceedingly so, if we except some parts of Arabia and Tartary, and some of the more northern parts.

In order to avoid as much as possible the scrupulous nicety, and, in some cases, the minute and errors of these tables, we shall, in our division of this great part of the world, consider it with respect to the different dominions it is at present subject to; namely,

Persia.

II. China, which is divided into north and south.

III. India, comprehending 1. The peninsulas of India beyond the Ganges, containing Cochin-China, Ternate, Pegu, and Siam, the last of which, is subdivided into Malabar, Siam, and Malacca. 2. The peninsula on this side the Ganges, containing the Deccan, Golconda, Bijapur, and Malabar.

IV. Hindostan, or the empire of the Great Mogul, as it is generally, though improperly, called in Europe, the title not being assumed by the emperor there. In this great empire, are many petty kingdoms, lately erected into free states, or fallen under the jurisdiction of the English East India Company.

V. Great Tartary, Siberia, Samojedia, and Asiatic Russia.

VI. Turky in Asia, which is divided into eastern and western; the eastern contains Diarbekr, Turcamborg, and Georgia. The western comprehends Arabia, Palæstina, Syria, and Anatolia.

VII. The Ailic islands are divided into four classes: 1. The island, or empire of Japan. 2. The islands of the eastern ocean; viz. the Marian or Ladrone islands, Formosa, and the Philippine islands. 3. The island in the ocean, which are the Molucca’s, namely, Tidore, &c. and the Spice islands viz. Banda, Ambon, Ceram, Ternate, Timor, Gino, &c. Celebes, Borneo, Java, Sumatra, Celeyon, the Maldiva islands, &c. 4. On the coasts of Asia, and in the Mediterranean, as Cyprus, Rhodes, Lefbos, Cythera, or Myrushen, Chios or Scio, Samos, Cocos, and some other of the New Discoveries.

These last divisions not coming into any of the former classes, must be spoken of in separate articles.

It is not unlikely that the readers may object here, that Tartary is not under one government; that India, beyond the Ganges, is independent of the Great Mogul, as Arabia is of the Turks; and that Asia, or Asia Minor, &c. are subject partly to the Turks, and partly to the Persians, and consequently that each of these should be divided into its respective parts. But, in this introductory part of our work, we think it more eligible to avoid clogging our readers’ memory with too many distinctions, which will be more properly introduced, when we treat of the partition of the continent and islands, &c. of this quarter of the globe, may be obtained from the several following tables;

Having thus presented to the view of our readers, a sketch of the plan we are about to pursue, it is not difficult to see, in what degree we shall be enabled to describe the kingdom of Persia, a kingdom of very considerable importance, which we shall be able to do more completely than has been thought by former writers, like former writers on this subject, we give these extensive and celebrated provinces, the chief and the Atlantic part of our work.

CHAP. I.
THE NEW HISTORY AND DESCRIPTION OF PERSIA.

SECT. I.
Containing a description of the name, boundaries and extent, situation, provinces, air, climate, life, seas, rivers, celebrated lands, and their provinces, of the empire of Persia, both with respect to its antient and present state.

It is highly probable that Persia derives its name either from the province of Persis, now called Fars, or from Persepolis, which was the capital of this province, and the seat of its monarchs, when Alexander the Great conquered Darius, and subdued the whole country. Some claffic writers deduce its name from Perseus, the son of Jupiter and Danae, while others take it from Perseus, a hero, because the Persian troops served on horseback, and were famous for their skill in horsemanship.

Though the boundaries of this empire will be better understood from the description of its respective provinces, yet some geographers affirm them to be as follows; viz. India, or the dominions of the Mogul, towards the east; the sea, or Persian gulf, or Boforos, towards the south; the Turkish empire towards the west; and Circassia, the Caffian sea, and the river Oxus (which divides it from the country of the Ubeck Tatars), towards the north. We must allow that this description would be tolerably just, were the bounds of the Mogul's dominions on the east, and those of the Turkish empire on the west, once settled, 'as several provinces of India lie to the westward of the province of the Mogul, and some provinces extend to the eastward of the river Tigris; consequently those writers must err, who make the river Indo the eastern boundary, and the Tigris the western, which we may safely follow, as the part of the Arabian coast, on the south, of the gulf of Boforos, is subject to the king of Persia.

The most southern part of Persia lying in twenty-five degrees north latitude, and the most northern part in forty-five degrees, it may be justly reckoned to be twelve hundred miles in extent, from north to south; and as the western part of it lies in forty-five degrees of longitude, calculating from the meridian of London, the most eastern part in sixty-five, the length and breadth is nearly equal, and the form of the country would be almost square, were it not for the Caspian sea, which divides the north-east part of Persia from the north-west. They are certainly egregiously mistaken, who extend it thirteen degrees beyond our most accurate accounts; for by that means, they make it to contain thirty-five degrees of longitude, and the length greatly to exceed the breadth.

The Persian provinces may be comprehended in twelve districts, in the following order; Chorasan, Sablenfan, Sinjan, Makaran, Kermans, Fars, Chofistan, Caspian, Icaros, Aghs, Shirvan. We shall divide the different names by which they are antiently, and are now called; and that the reader may not remain in any doubt respecting them, we shall take care (where other writers name two or more) in the bounds of one of these districts generally to mention them in this order.

We shall describe the whole of this extensive empire, in the most circumstantial manner, and arrange the several provinces as follows:

I. Chorasan (in which Kelifabad or Khorren may be included, though some reckon them distinct provinces) is bounded, towards the east, by the territory of Khorren, on the north well, by the river Oxus, which divides it from Ulbeck Tartary; on the south, by the province of Sablenfan; on the west, by the provinces of Sablenfan and the Caspian, on the south-west, by the chief towns of Herat, Meshid or Tabir, Nisabour, Farsabad, Anis, Maron, Esend, and Zarabas. This province contains part of the ancient Bactria.

II. Sablenfan (in which Gaur and Candahar may be comprehended) is bounded, towards the north, by Chorasan; towards the south, by the province of Cabul; in India; towards the south, by the provinces of Sigistan and, towards the west, by the province of Icaros-Agen. Ormus, Bokh, Bokh-Farang, and Candahar, are the chief towns.

III. Sigistan, which is bounded, on the north, by Sablenfan; towards the east, by the province of Moulka, in India; on the south, by the province of Mekran; and, towards the west, by part of the province of Keraman. Sigistan, Kaban, and Mekran, are the chief towns. This province is said to be the ancient Drangiana.

IV. Mekran, which is bounded, on the north, by Sigistan; towards the east, by the provinces of Beckafar and Tabir, in India; towards the south, by the provinces of Keraman, Mekran, Paffir, and Ghuf, are its chief towns. This province is supposed to be the ancient Peristan.

V. Keraman, which is bounded, towards the east, by the provinces of Sigistan and Mekran; towards the south, by the ocean; towards the north, by the province of Fars; and, towards the north, by the province of Icaros-Agen. The chief towns are Keraman, Chabits, Selim, Tisabon, Jaffis, and Darabolger, which is the ancient Paphragis.

VI. Far, or Farsfan (which is bounded, towards the south, by Keraman; towards the south, by the Gulf of Persis, called Boforos; towards the west, by the provinces of Chofistan; and towards the north, by the province of Icaros-Agen.) The chief towns are the following.

a. Selines, which lie in the latitude of twenty-nine degrees, fifty minutes; about thirty miles south-west from Persepolis, whose magnificent ruins excite the admiration of travellers; but this we shall have occasion to speak hereafter.
b. Lar, a town about a hundred miles south-west of Selines, Gombin, or Bander Asfah, in twenty-seven degrees thirty minutes north.Ormius, which stands on a small island in the gulf of Caspian, opposite to Gombin, and about six miles from it.
c. Bandar Congo, which also stands on the Persian gulf, about thirty miles west of Gombim; it may not be improper to notice here, of a small territory belonging to the kingdom of Persia, which lies on the Arabian shore, on the other side of the gulf; the chief towns of it are Casrins and Eshkis, from whence this sea sometimes takes the name. In the province of Fars, may be comprehended the district of Lar and Ormus.

VII. Chofistan, which is bounded, on the east, by the province of Far, and Icaros-Agen; on the south, by the Gulf of Persis; on the west, by the territory of Bokh; and,
Asia, they may with propriety be esteemed
as in the whole world.

The climate of Persia extends from the twenty-fifth
degree of latitude, the longest day in the
hours and an half; and, in the north,
so that it is very natural to suppose
the extent of country, the air and seascapes
which we find they really do. Their winter,
kingdom, begins in November, and
arch, with reverent sopt and low, the latter
great quantities on their mountains, but
the plains. From March till May, the
only high; and from that time till September
blue skies, without too much
heavens; and though it be pretty hot in
refreshing breezes, which blow constantly
and evening, and at night, make the
pleasant, especially as the nights are nearly
The air is very pure; and the flies there
so that one person may know another very
good; and people in general find it much
fit and agreeable to travel in the night, than
fleed any hurricanes or tempests in the
sea, and very little thunder or lightning; nor
earthquakes; and the air is so extremely dry
that, there is not the least moisture
thing that is laid abroad all night, or even
and they have very little rain in the winter
a common observation among foreigners,
called to the heart of Persia, that those who
on their arrival (either, continue so; and
are sick, foemen recovery; which is a mani-
state of the fulness of the air and climate, and
are from the half completion of the natives,
great, and rebuilt, and generally enjoy a con-
there part of Persia, the air is very unhealth-
ying and still, particularly about Grombron;
skorea never pass a year without a dangerous
which frequently proves fatal to them. As
always expected to happen, two of them cont-
that if one die, the fortune of the deceased
is to the survivor. This is a great prejudic-
ate for if a man leaves private trouble,
and company his executors, the half of the deceased
or of those easier, meet with great difficulties in the
effects of the tyrants. The months of
and August, are pretty healthy, but very
rich nations and foreigners get upon the moun-
tain. The hot winds, which come from the
at a long trach of sandy deserts, well nigh suf-
and sometiming a pestilential black flies the
and in an instant. It seldom rains here in any
and the water they live when it does, is
frone. It has been commonly remarked, that
as near the tropics are much hotter than those
place, which is accounted for, from the sun's
longer near the tropics, than the equator; and
in of a greater length in summer near the trop-
under the line; which are certainly very
fleeces. But a great deal must be attributed to
of the soil, and the situation of the country,
which blow over large, sandy, and of great
especially between the mountains, which reflect
on one side to the other; and there are no re-
seas or showers to cool the air, as there
great the line, so that it is no wonder that those
are much hotter than any that are under the
thores near the Persian gulf certainly are.
The cause, therefore, that the ancients never
any country in the southern latitude, is, they
so excessively hot about the tropics, that they
if they should proceed much farther south, the
have been intolerable; and it seems to have
ed opinion among them, that part of the
was not habitable. But we find, on the con-
in many countries, which the ancients were
with, the heats were greater than those under
very incredible that all countries in the southern
gar uninhabited till within some hundred years
ally in Africa, where no stop intervened to prevent
it, but it appears no less strange, on the other
and that none should ever return from those parts, to
give the ancients an account of these countries, and inform

Having thus prefented to the view of the reader the plan we mean to pursue, in which we are about to give of the Asiatic dominions of the Great Mogul, and the extent of his dominions, we shall endeavour to give a full and complete history of the province of Persia, as far as the limits of the present work permit.

**THE NEW AND UNKNOW**

SECT. I.

Containing a description of the name, situation, provinces, climate, 

From the province of Persia, now called Fars, or Persepolis, which was anciently the capital city, provinces, air, climate, &c. Some classical writers deduce its name from Perse, the place, and the seat of its monarchs, when Ali Great conquered Darius, and subdued the whole empire. The boundaries of this empire are believed to date from the description of its respective provinces, yet some geographers affirm them to be as follow: India, or the dominions of the Mogul, towards the sea, or Persia, or Baffora, towards the north, or the Turkish empire towards the west; and the Caspian sea, and the river Oxus, which divide the country of the Ulbeck Tartars towards the north.

We must allow that this description would be just, were the bounds of the Mogul's dominions east, and those of the Turkish provinces west, and of the Caspian sea, and the Oxus, as follow: For several provinces of India lie to the east of India, and some of the Turkish provinces extend to the west of the river Tigris. Consequently, the Turkic, who make the river Indus the eastern bounds, and the Tigris the western, to which we may adhere, that part of the Arabian coast, on the south of the Caspian, is the object of the king of Persia.

The most southern part of Persia lying in two degrees north latitude, and the most northern forty-five degrees, it may be reckoned to be an hundred miles in extent, from north to south; and western part of it lies in forty-five degrees of longitude, calculated from the meridian of London, and the eastern part in forty-seconds, the length and breadth equal; and the form of the country would be square, were it not for the Caspian sea, which divides the part of Persia from the north-west. To certainly egregiously mistaken, who extend it thirtieth part of Persia from the north-west. To.

The Persia provinces may all be comprehended in twelve districts, in the following order: Chirsa, Chirsa, Khorasan, Balkh, Kerman, Fars, Chur, Chir, Hezrniah, and Fars, Ghilan, Aserbeizan, and Khorasan.

We shall describe the several provinces, and the extent of their dominions, and the length greatly to the breadth.

The Persia provinces may all be comprehended in twelve districts, in the following order: Chirsa, Chirsa, Khorasan, Balkh, Kerman, Fars, Chur, Chir, Hezrniah, and Fars, Ghilan, Aserbeizan, and Khorasan.

We shall describe the several provinces, and the extent of their dominions, and the length greatly to the breadth.
and, on the north, by the province of Cardelhan. The chief towns in this province are :—
1. Isphahan, the metropolis of the kingdom, in thirty-two degrees forty minutes north latitude, and the fifteenth degree of longitude, reckoning from the meridian of London. 2. Cablin, or Cablin (where the ancient Artica, fixed in thirty-six degrees odd minutes. 3. Com, situated in thirty-four degrees thirty minutes. 4. Sava, almost exactly between Cablin and Com. 5. Hamadan, about a hundred miles north-west of Com. 6. Cahan, about seventy miles north of Isphahan. 7. Yezd, about one hundred and five miles east of the city, on the road between the ancient Partia and Isphahan, and is reckoned the principal province of the empire, being very extensive, almost in the centre of the Pethian dominions, and the province where the capital city stands.

X. Ghilan, or Kylan, (in which Mazenderan, or Tabrizon, is situated,) which is bounded, on the north, by the Heratian or Caspian sea; on the east, by the province of Choristan; and, on the south, by the sea of Isphahan. In chief towns are: 1. Ujeed. 2. Ghilan, situated in thirty-eight degrees north latitude, and two hundred miles east of Tabrizon. 3. Mazenderan, one hundred and thirty miles further east. 4. Ahar, situated within two miles of the Caspian sea. 5. Tabrizon; and, 6. Ferabat. This province has 134 towns and 42 fortified guards. It is divided into two sections, the eastern and the western. The first includes the towns of Tabrizon, Isphahan, and Isfahan, and is bounded on the north by the sea, by Cablin, and by the Heratian sea; on the east by the sea of Isphahan; on the south by the sea of Isphahan, and by the sea of Com; and on the west by the sea of Tigris. The second section includes the towns of Tabrizon, Isfahan, and Isphahan, and is bounded on the north by the sea; on the east by the sea of Isphahan; on the south by the sea of Isphahan; and on the west by the sea of Tigris.

XI. Ardebil, or Arthabat; which is bounded, on the north, by the Persian Gulf; on the east, by the Caspian sea; on the south, by Ardebil, and on the west, by the river Aras, or Araxus, which separates it from part of Georgia. The following are its chief towns: 1. Tauris, or Tabriz, supposed to be the ancient Ecbatana, formerly the royal residence of the Median and Perician monarchs, and esteemed little inferior to Babylon, either for its antiquity or magnificence; it lies in thirty-eight degrees odd minutes of north latitude, near about one hundred miles north-east of Isphahan. 2. Ardeshir, or Ardabil, bounded thirty miles east of Tabrizon. 3. Sulmania, which is six days journey from the north-east of Tabriz, in latitude thirty minutes north of the latitude of Tigris and Tigris, and a small part of the part of the year; and the water they save when it does, is very unwholesome.

It has been commonly remarked, that the countries near the equator are hotter than those farther north, and that the heat under the line which is accounted for, from the sun's remaining longer in the tropics, than at the equator, and the days being of agreater length in summer than in the tropics; and the heat under the line which are certainly very fubstantial reasons. But a great deal must be attributed to the nature of the earth's atmosphere, and to the country, where the winds blow over large, sandy, and breezy deserts, and especially between the mountains, which reflect the heat from one side to the other; and there are no refreshing breezes or showers to cool the air.

Its extreme heat is not so much the cause of its being uninhabited as the consequence of it, as it is a desert country.

It seems very incredible that all countries in the southern latitude were uninhabited till within some hundreds years ago, and especially in Africa, where the discoveries of the Portuguese have been so numerous; but it appears no less strange, on the other hand, if people had travelled into the southern parts of Africa, that none should ever return from those parts, to give their names as well as those of their country, and to report.
great leathern buckets, which they afterwards emptied into cisterns, and let it out for the service of the country, as there is in occasion. Subterraneous aqueducts are providcd, through which the water is conveyed to the different near thirty leagues. These are arched with brick, and cut from two fathoms to the depth of every twenty paces, there are large holes like wells, made for the convenience of carrying on the arch, without working under ground too deep, for sucking them. The river and spring water is distributed to different quarters of the town alternately, as occasion requires, when every person opens his own garden to receive it; and for this benefit every garden pays a yearly sum to the common fund of the town, particularly about liparum; and at it is very easy for any person to turn his neighbour's water into his own channel, thus fraud is very freely committed. As the springing water is not found to prop the grounds, they therefore pay a higher rate for river water.

Two fees, before the ocean, belong to Persia; namely, the Caspian sea, and the Gulf of Baffora, or Perla, one on the north, and the other on the south west. The Caspian sea is about a hundred leagues in length, from north to south, and ninety leagues in breadth, and has near a hundred rivers running into it, of which the chief is the Wolga, at the mouth of which stands Afrakhan, but this sea has no communication with any other; and though so many rivers fall into it, the way by which it discharges its water is unknown, for they neither ebb nor flow, but are always of the same height. It is navigated chiefly by the Muscovites, who live on the north side of it and have there, a hundred years ago, begun to dig a channel between the Wolga and the Don, or Tana, whereby that monarch proposed to open a communication between the Euxine and Caspian seas; but this project is said to be at present unfunded.

About forty years ago, a gentleman, who held a considerable post in India, under the East India Company, had the use of his limbs taken away in the following manner: a company of six or seven persons, of which number he was one, were drinking a glass of wine on board, when two of their number were found dead, and the other fettled with a kind of dead pafl; and for, his part, he had not the least feeling in his limbs; but when he was carried on shore, the Indian physician ordered him to be fettled out in the scoring bed at noon, for several days succesfively, placing an umbrella over his head only, and two or three fets ordered to rub and rub him freely, after the fashion, for some hours; and though he was very bad, that when one of them ftood upon his feet, he did not feel him at all, yet, by rubbing and rubbing him there, and in the mean time fubmitting him to the manner, for several days, his feeling at length returned, and the use of his limbs, except one hand, the use of which he still kept, he was in a great measure deforced.

With refpect to the temperature of the air in the north part of the Persian dominions, we fhall here remark, that the provinces of Georgia, Shirvan, and Aderbeirn, are very warm and dry in summer; but in winter they are exposed to violent tempests, and to as severe frosts for six months as are found on the continent, in the same latitude; but at this part of Persia is very mountainous, there is frequently a great difference between the air on the north and south side of the mountains; and, after travelling a few miles, people imagine themselves to be in a different climate; but how cold forever the mountains on the north may be, they are extremely healthful. The inhabitants of Georgia and the countiy of Gilan and Mazanderan (which lies upon the Caspian sea, and was the ancient Hyrcania, in the former time enter the mountains, all the water that has been made to correspond in the hcr season, and it is said that her, and in Chasistan, earthquakes are very common. This part of the country is also very much infested with serpents, and other noxious creatures, although Persia exceeds most other countries in the world in extent, yet there are very few navigable rivers in it, there not being one in the heart of the country, that will carry a boat of any burden; and, in some parts, people may travel several days journey together, without meeting with any water. The river Oras, it is true, which divides Peria from Ulbeck Tartary, is a large stream; but as none of the branches of it are in the Persian dominions, it is of little ufe to them. "There are, however, several small rivetals which fall from the mountains, and are conveyed by numerous canals, or otherwife, to their principal cities. The rivers Kur and Aras, attenply called Cyrus and Arranes, streams of Afrakhan, and run through Georgia, Shirvan, and Aderbeirn, and having joined their flames, fall into the Caspian sea, are the most celebrated rivers in the Persian dominions.

As the government in Persia have the care of the conveyance and distribution of the water, they have appointed a great officer in every province, who has the charge of it. And as there is a great scarcity of this useful article in this country, so there is no place where they are more careful of it, as they have made ingenious contrivances to convey it to their cities, and into their corn fields and gardens. For the more copious and general supply of water, the Persians also turn their little rivetals and springs to feed parts of the country where they are wanted; another matter that they dig very deep and gather well, out of which they draw the water with oxen, in
thing being seen but a dead wall with a great gate in the middle, and perhaps a frieze or flight erection within the gate, to prevent their being overlooked. By their fondness for the East, the End retire from the E. of the Persians, who generally expose their feats as much as possible to the view of the public, and seem to intimate, that these are the works of their nation, but wrongly believe it from the admiration of the spectators that pass by the gates. The Persians also differ from us, in that they have the room of a few doors. There is also the same masonry in the fronts of the houses, being a large piazza or cloister, open before, where they sit and conduct their ordinary affairs. Beyond this is a large building or group of twenty feet high, which are ornamented, or some faint occassions. On the farther side of the house is another varinda, or piazza, with a fountain of water, before it, beneath which is a fence of trees, as likewise does from the front of the street to the house. At each corner of the hall is a parlour or lodging-room, serving sufficiently for both those purposes: between these parlours, on the sides, there are doors out of an hall into an open square place as large as the rooms at the corners: there are also several doors out of the hall into the varindo or piazza, before and behind the house, so that in the hot season they can set open in the midday, all the time or ten doors, and they have the benefit of the air, if there be any ranging. There is a handom bazein in some places, and a fountain playing in the middle of the varindo: there is also a fence, in the cloisters of the place. The walls of the houses are of a considerable thickness, and sometimes built of burnt bricks, but more commonly of bricks dried in the sun. The roofs of the buildings of the great Bazaars are of many stories, and such a height that the sultan may be at present apply themselves to from the top story. This is a Gulf of Bosphorus, which is very jealous. The islands in the Bosphoras, which is the custom, and have both been done in the same manner, and which is never proctor the kiosks, he has made them a beautiful and the streets. Their furniture consists only in carpets spread on the floor, with cushions and pillows to lean on; and at night they have a light under the chair or for sitting by, and there are no windows, and there is no other light, and to cover them, except that the curtains are very extensive, and the lights which makes them pretty dark, and this seems to be peculiar to the Persian towns. In the Indies, it is true, the trade in their number, and when they expose their goods to sale, but then there are more streets before them, though in some places there is no other street than their covered ways, through which people ride. Another peculiarity among them is, that their house and shops are never in the same place, so that it is very common for a tradesman to go half a mile in the morning to the next street-place, where he is month, and at night they lock up their valuable goods in chests and counters, and the manner they leave packed up, as if it were in a house, and there is no more thing is lock, so careful are the watch appointed to guard their market places, or so very little given to thieves, the people in this part of the world, and they doubt the speedy and exemplary punishments inflicted upon pilferers, is one great means to deter them from it.

Foreign merchants lodge their goods in the public caravanserai about the city, which serve them also instead of inns, for lodging and diet; but this is the difference between an inn and caravanserai, that people find their own bedding and cookery in the caravanserai, whereas we have not that trouble in our inns. Two things, however, render a caravanserai preferable to an inn, one is, that a horse and a service is not paid, and the other is, that they are for the use of strangers; most of them are built after one model, and differ only in the dimensions. There is a handom frame, with the same decoration, and the roofs, which are shops, from whence you enter into a square, about which there is a cloister or piazza, and within are lodging rooms, and what is contrived to carry water from it into cans and basins, for the service of the court and city. The town is without walls, and about ten or twelve miles in circumference. No one in the twenty leagues, take the town of Japhia, and severa others, for instance.

[ASIAB.] PERSIA.

We see no manner of reason: for Japhia lies a mile from Japhia, and on the other side the river, and can no more be reckoned a part of the city, than Chelles may a part of Wethamstead. In the S. of the city, within the weekly bills, the circumference of all London would very probably be little less than some travellers reckon Japhia. In London, there are only four of them, but four of them are now closed up, the others are always open. With respect to the walls mentioned by some gentlemen, it was formerly a mud wall, but a merchant who came not many years ago from thence affirms, that there is no part of it visible at present. There is indeed an old castle without artillery, run to ruin, which is nothing but the town.

Most of the streets of Japhia are narrow and crooked, and as few of them are paved, they are either exceeding dirty or dull; and the pavement is a widened verandah, which is the number of people of fashion who ride through them with great trains of servants, notwithstanding there are no coaches or carts. There are, however, several very fine squares in the town, particularly Meydan, or the royal square, of which we shall now give some description.

Two of the palace gates open into this square, which is one third of a mile in length, and above half as much in breadth. On the side of it are buildings resembling the Exchange in the Strand, and with those on both sides, where every trade has a distinct quarter assigned; there is also a second story, where the mechanics have their workshops. There are few differences between these exchanges and others; except that those at Japhia have no windows, but great openings at proper distances to admit the light, and people ride through them. Here is a great and lofty building in the middle of the square, and all manner of goods and cattles are exposed to sale; though the great Shad Abbas, who built this palace for his own exercices, particularly those of horsemanship, and handling the bow and lance, at which no people are more skilful than the Persians. There are a few shops in the middle of a fine, and a handom bason of water, on that side of the square next the palace; and some great bazaars gates, which were taken from the Portuguese, and Dutch mosques stands at the south end of the square, and another on the east side, over against the great gate of the palace. Several streets fare very neat from their being covered, and they are, which makes them pretty dark, and this seems to be peculiar to the Persian towns. In the Indies, it is true, the trade of a few persons, and when they expose their goods to sale, but then there are more streets before them, though in some places there is no other street than their covered ways, through which people ride.

Another peculiarity among them is, that their houses and shops are never in the same place, so that it is very common for a tradesman to go half a mile in the morning to the next street-place, where he is month, and at night they lock up their valuable goods in chests and counters, and the manner they leave packed up, as if it were in a house, and there is no more thing is lock, so careful are the watch appointed to guard their market places, or so very little given to thieves, the people in this part of the world, and they doubt the speedy and exemplary punishments inflicted upon pilferers, is one great means to deter them from it.

Foreign merchants lodge their goods in the public caravanserai about the city, which serve them also instead of inns, for lodging and diet; but this is the difference between an inn and caravanserai, that people find their own bedding and cookery in the caravanserai, whereas we have not that trouble in our inns. Two things, however, render a caravanserai preferable to an inn, one is, that a horse and a service is not paid, and the other is, that they are for the use of strangers; most of them are built after one model, and differ only in the dimensions. There is a handom frame, with the same decoration, and the roofs, which are shops, from whence you enter into a square, about which there is a cloister or piazza, and within are lodging rooms, and what is contrived to carry water from it into cans and basins, for the service of the court and city. The town is without walls, and about ten or twelve miles in circumference. No one in the twenty leagues, take the town of Japhia, and severa others, for instance.
There are no taverns at Isphahan, wine being prohibited by the Mahometan religion; nevertheless many of the Persians keep theirs open for the benefit of passing strangers. They are, however, very handsome coffee-houses in the principal parts of the town, where people meet and converse of politics, though they have no printed papers in them. In these places, too, the clergy have their libraries, and, except from the priests in their offices, found great favor from their audience.

The palace, with the buildings and gardens belonging to the concubines of the two grandees, is situated on the side of one of the gates which comes up to the royal meidan or square, is called Allcapi, and the other Doulet Cuma; over one of them is a gallery, where the Shah used to sit for the military exercises performed on horseback. No part of the palace where the court resides, comes up to the royal square; but within the principal gate there is a large court, or court on the left hand, where the Vizir and other Judges, admittance justice on certain days; and on the right hand are rooms where attendants are allowed to take their ease. From hence to the hall, where the King usually gives audience, is a handsome walk; it is a long room, well painted and glazed, and supported by forty pillars; it is divided into three parts, one a step higher than the other, on which the great officers stand, according to their rank. There are no lowly nobility in Persia. On the third above it also is a raised one, and in it are the apartments of the court, the above the floor, and about eight feet square, on which is spread a rich carpet; the King sits cross-legged here upon a throne behind a veil, under which he sits, and another at his back. No person is permitted to enter the other apartments of the palace, particularly the harem, or women's apartments, but none enter the throne room, so that they cannot be easily defined; but we understand in general, that they are composed of several pleasure-houses differing in the garden, which are all built of the finest brick, and adorned their great beauty; in the fine walks, fountain, and cascades about them. The ladies haunt and the pleasure with the Prince, in a large garden which is beyond the above mentioned gardens.

There are upwards of an hundred and fifty Mahometan mosques, or temples, in the city, which are covered with domes or cupolas, and, appearing through the trees that are planted almost all over the town in the streets and gardens, adorn a noble prospect; but the common buildings are few, that they are hardly discerned by a person who views the town on the outside. Christians are prohibited from entering their mosques, or even coming within their courts under several penalties, so that our readers cannot expect a minute description of them.

The great mosque in Isphahan, called by way of eminence the royal mosque, by the Persians the Shah mosque, has been viewed by travellers in disguise, who, in form, that is a gate which leads to this mosque, covered with a vaulted roof, plats and chimney through this you proceed to a court with a piazza or cloister on each side of it, where the palace lodge who belong to the mosque. Opposite to the palace lodge are three large doors, which open into it: the five gates, of which the mosque is composed, are beautified with gold and azure: in the middle is the cupola, supported by four great square pillars; the doors on the side are lower than that in the middle, and borne up with thick columns of free stone; two great windows towards the top of the middle gate gives light to the whole mosque; on the left hand, towards the middle, stands a large kiosk of pulpit, who, with a flight of stone steps to go up to it; there are no seats, or pew, in Christian places of worship, nor any kind of imagery or pictures. The bricks and tiles on the roof of the building are painted with various colors after the Persian manner, and the floor of the mosque is covered with carpets, all persons putting off their shoes as they enter it.

The outside of the mosque at the fourth side of the royal square, is a large building, three stories high, in every north latitude, and is usually reckoned the second city of the kingdom, and is the capital of the province of Fars, or the ancient Pars. The Persians some dozen the name from Cyrus the Great, others have said that he was born on this spot; others say its derivation from "darya," which in the Persian tongue signifies a sea. People who abound in this place are called "fares," from the word "tree," which is a tree milk. The town is seated in a pleasant fertile valley, about twelve miles in length, and six in breadth; it has a rivulet running through it from the foot of the hills, and sometimes inundates them, like a large river, and sometimes inundates the city, though they are distant about a mile from it.

The architecture of these bridges is extremely remarkable, for on both sides, both above and below, are arched piazzas, through which people ride and walk, from one end to the other. Above the bridge, the seats are placed under the arches, and in the city, and at little distances, there are openings to receive the light. The arches of these bridges are not very high, there being no space under them for the river to pass through, any more than the road in Persia. At the latter end of the summer the channel is exceedingly narrow and shallow; but from this place to the river there is not space enough for the gardens belonging to the city, to supply the want of it, they have abundance of wells about Isphahan, which contain water at all times; in April and May, when the melting of the snows on the mountains, it makes a pretty good appearance, being almost as broad as the Thames at London.

The town of Julafl stands on the south side of the river Zenderehoud: it is inhabited by a colony of Armenians, which is considered settled by the great Shah Husein. This town is about two miles in length, and not much less in breadth, being for the most part better buildt, and the streets wider than those of Isphahan, but the streets are planted in the fields, and the large gardens they have near their houses, give it more the appearance of a country village than a town. Georgians, and several other Christians, inhabit here, as well as Armenians; and there are some convents of Europeans, but no Mahometans. This colony has flourished prodigiously since its first settlement here by Shah Husein, and they have now a very considerable merchant in the world: and we meet with them in almost all countries of Asia and Europe. The King at first provided them with land and money, and afterwards with profits, so that they were better than the king's faithful, but they now only pay a yearly tax to the government. They enjoy a sort of independence of all Christians, being allowed to purchase effects.

The faithful belonging to the East India company have a handsome house in Isphahan, the model of which is the same with the house first described; but since the civil wars broke out, the usurers have been attacked and oppressed them, that the company have ordered their servants to retire from thence; they have all withdrawn most of their servants from Gombray, and made Buffara (at the bottom of the gulf of the same name) their principal factory on that side. The city of Buffara stands on the Tigris, two days journey below Bagdad, and the territory is governed by its own prince, but tributary to the Grand Signor.

Scheras, or Sheeras, according to the modern pronunciation, lies about two hundred miles to the southward of Isphahan; it is a town of some consequence. It is divided into three parts; the walls are lined fifteen feet high with white polished marble, and in the middle of the square before the mosque is a large brazen where they wash themselves before the priest, and hang the carpet. The other two sides of the mosque are covered with tapers or towers, whether the Molla's go up to frequent the people to their devotions, but make no use of the bell as is from the word "there," which is a sort of milk. The town is seated from a pleasant fertile valley, about twenty miles in length, and six in breadth; it has a rivulet butting through it from the foot of the hills, and sometimes inundates like a large river, and sometimes inundates the city, though they are distant about a mile from it.
feverey feet high, and twelve of them near three fathoms in compass; they are not of red sandstone, but of a stone which abounds in this part of Asia, with such a superstructure as the picture [be held to the right], which contains only about four thousand houses: the compass of it is reckoned to be about seven miles, but many of the house party estimate it at eight. It is observable, that the Persians let most of their buildings run ruin; every generation choosing to build new houses, rather than occupy those of their ancestors. There is no street in the city, except the Alhambra which are figured in the map more than here, there being a mosque or temple almost to every twenty houses, the domes of which, being covered with blue tiles, are high and in a quadrangular form; here is also a college, where the liberal arts are studied.

Sarria is most remarkable for the fine gardens and vineyards about it. The streets for the most part narrow and dilly; but there are some broad ones with canals, and basons faced with them. The Cypress-trees with which their walls are chiefly composed, are the tallest and largest of any whatever, and grow in a pyramidal form; intersected with these are several broad spreading trees, and all manner of fruits, as pomegranates, oranges, lemons, cherries, pears, apricots, dates, &c. These are not planted against walls, as in all, but stand in the alleys, and sometimes are associated irregularly, as in a wilderness. They have also abundance of sweet flowers of various colours, but not planted in that regular order as in the gardens of Europe. They are joined, and in some places, as in Persea; and the canals, cascades, fountains, and pleasure-houses in their gardens, are not at all inferior to those of France. The king's Alhambra (bands of cities) is about a mile and a half from Sarria, and is called a college, where the liberal arts are studied.

The noblest ruins of an ancient city, or temple, that any country can boast of, are now to be seen thirty miles to the north of Sarria; even Rome itself, is told, has nothing comparable to these venerable remains of antiquity. The place is called Chilmanar, or Forty Pillars. According to some, it was built upon a mountain of dark-coloured marble, and the steps hewn out of the solid rock; but others, who have viewed it more narrowly, observe, that the steps are composed of large stones, fifteen or sixteen feet in length, and of such a thickness, that six or seven steps are cut out of one stone; the whole being so skillfully joined by art, that they appear to be but one piece.

The ruins of this once magnificent palace or temple are seated at the north-east end of that spacious plain where Seville once stood, and are generally held to be part of the palace of Darius, who was conquered by Alexander the Macedonian monarch. The front of this palace flooded over, and about the lower part of its length, the whole occupying near threeacres of ground. The ascent to it is by ninety-five steps, thirty feet in length, and, if they are true to three tiers of them, five feet deep, so that a horse may easily go up or down them. The fore-cáde divides as you ascend, one branch winds to the right, and the other to the left, each having a well on one side, and a marble balustrade on the other: both of these galleries afterwards turn again, and end at a square landing-place, from whence is an entrance into a portico of white marble twenty feet wide; on which are carved in bas-relief two bulls as large as elephants; but their bodies resemble those of horses, and they have the feet and tails of lions. Ten feet farther lie two fluted columns of whitch stone, about forty feet high, besides their capitals and bases, and as thick as three men can fathom; a little farther stand two other pillars, carved like those, except that the bases on these latter have wings, and men's heads. Beyond this portal, or hall, is another fuch double hall, opening to the upper rooms, twenty-five feet broad, but incomparably more beautiful than the former; for on the walls of it a kind of triumph is carved in bas-relief, consisting of a numerous train of people in difficult and complicated poses, through which a crowd of people, and on the offerings, and after all comes a chariot drawn by several horses, with a little altar upon it, whence the fire founds to ascend. On the top of this fast it is adorned with wild beasts, the wild beasts fighting, and, among others a lion and a bull are cut with great exactness, the flute of which is so high, that the noise it makes is very curious part of the workmanship is full in fine preservation.

There is a square five, see on the top of the second flaire, and a building of hewn stone, with columns of which only are now standing, but on the other hand a hundred pedstals: some of those that are but are fifty, and others
able to keep an army of fifty thousand men, notwithstanding the next writers have lately found in this one hundred thousand men capable of bearing arms. Here are several instances of this kind, and they often do but an equal to the royal majesty of Ilyphan: they have also covered divers floors, or exchanges, where abundance of rich merchandize is sold. But, on the top of this, the Turks are generally provided with an equipage, houses and gardens, suitable to their mind; they choose rather to lay out their money in building caravansary, mosques, and other publick edifices, than to equip themselves with as fine furniture as they are able to afford.

The city of Tarzis, like most others in Persia, stands in a plain, the site of which has been changed many times; but, on the making of the snows, it is inundated to a mighty torrent. There are few cities in the world that have been more frequently plundered by the Turks, and at others by the Persians: but as in the common law, so in the civil law, where there is less than four hundred years, the Turks again surprized it, executing their usual cruelties on the miserable inhabitants. The caravans usually travel in four and twenty days to and from Ilyphan to Tarzis, which lies about four hundred miles to the northward of the former.

We have already observed, that Taffhis is the capital city of Georgia, but subject to the Persians, and inhabited chiefly by Christiains; inforrn we that there is not one Muscovite amongst the whole nation. In Georgia, as in other Christian countries, there are no less than fourteen Christian churches. It is situated in fourteen degrees of north latitude, on the river Kura. The elevation is one mile above the sea. It is one of very large extent, but elegantly built. On the fourth side, on the declivity of the mountain, stands the castle, which was once a place of strength, but is hardly visible at present, and therefore liable to be seized by the next invader, whether Turk or Muscovite, if they are not already possessed of it. It is a bishop's seat, and has a handsome cathedral, built in form of a cross. The other churches belong partly to the Georgians, and partly to the Armenians: their, as well as the other publick edifices, are built of stone, lights in their bazaars, caravansary, bagnio, &c.

S E C T. III.

Containing a further account of the Persians, with respect to their dress and mental qualities, dress, features, fhape, and even motion; together with their diet, liquors, publick and private diversions, rural parts, and ceremonies, usations, dancing, &c. of their travelling, carriages, roads, and routes.

T is universally allowed, that the Persians are in general endow'd with bright parts, have abundance of vivacity, are fond of glory, and forspare their neighbours in India to point of courage, inform us that the Great Mogul presents, by the most liberal manner, to the court of Persia, gold and silver, robes and cloth of gold, and as they were observed to be of all men the most civil and obliging, they retain the same disposition to this day; effeminate manners, as well as courts, and their hospitality and benevolence. They are far from being guilty of that brutish behaviour which is so common among the Turks, the Persians, however, have not the least trace of any sort of freedom, and as the highest of the Persians are charged with vanity and profusion in their apparel, equipage, and number of servants. Vaporous notions in eating and drinking do not appear to be their distinguishing vice, at least the Europeans are much more addicted to; for the greatest part of their food is rice, fruit and garden-fresh; they have not the least variety of fish, neither have they many ways of dressing it; still less is it to be found, even among those of the best quality. And as for strong liquors, though they drink them more and more briskly, yet denounced as very far from being common among them; every man may retire from an entertainment without ceremony, when he thinks proper, with as much of pride and satisfaction, as his own circumstances will enable him to take more liquor than he finds convenient and agreeable to himself.

It is generally allowed, that the Persians have a genius well adapted to poetry, inform us that a poet is introduced at every festival or entertainment, and is desired to oblige the company with a few lines of his own invention; and that Persians are frequently found with a crowd about them in coffee-houses and other places of publick resort. Though the Persians are by some people charged with being very covetous, this must certainly be understood with reflecting the acquisition of riches; for as to keeping and hoarding money, they are generally aboolved from it. They only get that they may spend, and they spend it with as much freedom as others do in using an equipage, houses and gardens, suitable to their mind; they choose rather to lay out their money in building caravansery, mosques, and other publick edifices, than to equip themselves with as fine furniture as they are able to afford.

The Persians have a great command of their passions: they are not easily provoked to anger or resentment; and when they are, it never proceeds to a duel, and very seldom to blows. When angry, they generally call each other Jews or Christiains, and their quarrels commonly terminate in ill language, which is sometimes intermixed with hearse curses. Few European nations are in general more polite, they being of a very engaging address and most obliging behaviour: they are also meek, peaceable, modest, grateful, generous, enemies to fraud, and courteous and affable to Christians as well as others; are moreover fair and partial in their bargains, and treat foreigners with great humanity.

The features, shapes, limbs, and features of the Persians are agreeable and well proportioned. In the Persians of the southern provinces, they have an admirable complexion to the southward of the fourth, they incline to the olive: but the great men having been in the Pyrenees and other northern provinces, they are, as it were, a new creation. Georgia and Circassia for an hundred years past, the breed is very much mended in the southern provinces. Their eyes and jaws are generally black, and they wear on the cock of the crown of their heads, like other Mahommedans, by which they expect Mahomet will lift them up to paradies in a hundred years, and wear only long whiskers on the upper lip, which, joined to a tuft of hair on the upper part of their cheeks, grow to a very enormous size, inforrn us that some of them, it is said, are near half a foot long. The common people wear but small beards or very short; but none of the Persians suffer any hair to grow upon their bodies. Their martial and religious people wear their beards long, only clipping them into form.

The large turbans, which the Persians wear upon their heads, are some of them white, and others striped with red or other colours, and the great men have flowers of gold and silver woven or worked in the cloth. They have also a skull cap under their turbans, and all together does not weigh less than seven or eight pounds, sometimes a great deal more. They wear a kind of shawl of coloured silk or cotton, generally blue, next to their skin, white cotton domed with white while it is fit to wear: this shaw has an open bottom, but neither neck nor wrists, and is made close to the arm: they have also a pair of breeches, or rather drawers, close to the legs, and long half drawers, which are made close to the instep. Their stockings are made of woolen cloth, but not at all shaped to the leg: over the shawl they wear a white, and upon their shoulders a coat made of satin buttons and gold, which is tied with a sash; this is wide at the bottom, and hangs like a bell a little below their knees. Besides this, they put on another coat frequently without sleeves, the undermost coat being shrotted over all the other, they have then another loose coat, lined with fur. Instead of shoes, they have perked slippers turned up at the toes, and made of Turkey leather, which are neither tied nor buckled, and when they ride, they have boots of yellow leather; their breeches, buttons, and hose are made of cut velvet and silk: and above covered with gold; the hose is so large, that it almost covers the hinder part of the horse; and whether on foot or on horseback, they wear a broad sword and erick or poniard; the hilt of which is so far from being common, it is very broad and ornamental. The dress of the women nearly resembles the men's, except that they neither wear turbans on their heads, nor stockings on their legs, and they always carry their shoes on a flat cap upon their heads, turned up like a hunting cap, with a heron's feather in it, their hair being made up in tresses, and falling down their backs to a very great length; they generally have pearls and jewels interwoven with their hair. The married women comb their hair back, and, having bound it about with a broad ribbon, or rich tassels fitted with jewels,

0
jewels, which looks like a crescent, is the seat of their hair fall gracefully down their shoulders; which is a very be-
coming part of a woman. Both of them, when they wash, ring and fasten their arms and fingers; but neither of them wear gloves.

They are both of a graceful being, being the most common, and the thickest and broadest eye-brows are thought the finest; the women dye their eye-brows; if they are not black, and it is very customary with them to paint their male faces and feet with a simple orange coloured pomatum. Some have feathers set upright in their ears: and others have a fasting of pearls, or garnet beads fasten'd to the eyes, and nose, and between their eye-brows; they likewise wear jewells in their ears, and rows of pearls fall down their temples as long as the neck, and in some provinces, which are on the confines of India, they wear jewels in their nostrils, which have a very disagreeable appearance to Europeans; for as they hang down to the mouth, it makes them look as if they had hair lips: but the ladies of Iphagan never were nose-jewels. Their necklaces fall upon the bosom, and have always a little gold box hanging to them, which is filled with fragrant and reviving perfumes; their necklaces are either gold or pearl.

Dress is no considerable article in Persia: for the clergymen are often seen at their meals without a coat, though the multitude do dress at the time of the niche flowered and brocaded silk: and people of mean fortunes endeavour to v. with the quality, and will have fine clothes; though this is the pride of an ordinary pursuivante, it is said, amounts to ten pounds, and they frequently cost twice as much: and they must also have a variety of this kind of Chinese robe, called the dressing, or dressing coat, known by their clothes. Their female ale are brocaded, and cost from twenty to an hundred crowns; and over this they have a coat of various colours, their coach, cut for the weather, and worn over the same as the men. As the dress is very curious, and the fashion is constantly changed, the fat, the same on account of its curious workmanship.

Those who wear fables, which they are very eager to obtain, is followed by them a hundred pounds for clothed coat; all this, with the rich furniture and equipage they have when they ride out (which they do almost every day, if they go but a very little way) must amount to a hundred and a half, if not more, which is absolutely esteemed, their room, and without them they return not the least notice is taken of it. When a marshal, when fable is served up, the fort, or some relation of the matter of the house, is served with the meat, or the wine, and the officers at their table, and their servants in the dress of the next day or the next morning, and who are not of this quality, are invited. They are generally loaded with gold and jewels when they go abroad: as they enjoy almost continually a clear fine climate, and a bright element, a more than ordinary lustre is cast on their persons, and their elegant dress appears to the greatest advantage. Our European merchants, in order to prefer their credit, and conduct their affairs succeeds, are under a necessity of conforming to these expenses five to ten pounds in Iphagan; and the accommodating them to so much expense gait, might prove of ill consequence to them when they return to Europe. Were not it that they use no rice, they might be sufficiently supported: but we may here observe, that their being without rice, is sufficient to support an equipage in their own.

We now proceed to give some account of the food and drink of the Persians. The water is commonly drunk a dish of coffee early in the morning; and go to dinner about eleven o'clock, when they eat melons, fruit, sweetmeats, cheesecakes, curd, and milk; but their principal meal is in the evening, when a dish of pilo is always served up; this consists of boiled rice well buttered and seasoned, with a fowl, a piece of hare, and cheese: accompanying it, they have an excel-

lent way of boiling their rice all over the coals: the water is quite dried away by the time the rice is enough; after which, they season it with spices, and mix saffron or tur-
merics with it, and also the rest of what it is convenient for their pleasure they please: but, as we have already observed, there is very little variety either in their food, or the manner of dressing it. If they are well disposed of being roasted; but their usual way is, to cut their flesh into small flakes, and spitting, or flowered them together, well have over the fire, and whether they eat without or with crust, it is always done to raggs, as the phrase is, or it would be impossible to pull the meat to pieces with their hands, as they do: sting neither knife nor fork. Rice is never eaten here, nor ven: neither do they eat hare, or other animals prohibited to the Jews; and beef is eaten but seldom: they do not deal much in venison, fowl, or what other flesh they eat, they dress with spices, and others compounded; and seldom have any other sauces than a slice of lemon, or some pickles. They eat their bread, which is made in thin cakes, the content is beaked; but eat much more rice. They use no bee-sting pepper, only the whole foot; and not much fish in their diet, for their meat is never salted before it is dressed, as with us. They generally kill their meat and fowl the same day they take them; and eat by nothing till the time is gone cold; and if any meat is left, they give it to the poor.

They fit down cross-legged at their meals, having a cloth spread upon the carpet; then proceed to wash, who has the provision before him, distributes rice and the dishes

They use no spoons, except for soup and liquids; but take up their rice by hands, like the people in India. They seldom sit after dinner, being at any time one of the which they wash, making use of their handkerchiefs to wipe on, instead of a towel.

The common people of Iphagan foldens dress their food at home; but when they have flung up their flops in the evening, go away to the cooks, of which there are great numbers in that city, and buy pilo for their families. If the cooks have kebabs, or coppers fixed in brick-work in their flops and stoves, over which they dress most of their times, sometimes making any six of chymist.

To the commissibility of the Persians, we may ob-
vserve, that they are so far from flushing their doors at their meals, that they invite every one to eat with them, who has a notion of the most necessary of liberties: they use no silver or iron, but the very best of wood or pewter.

When any of the Persians are disposed to make an en-
gagement, it is made with the same ceremony as in this country; the groom calls for his bride, and the bridegroom rides to this day, and must the hospitality of Abraham; observing, that if he had not been of that communication, he had probably used the found the house entertaining three angels.

The Persians, like other civilized nations, take pills of opium, which some of them gradually increase to such a dose, as would destroy half a dozen Europeans. In a hour after they have taken the pill, it begins to operate, and produce a degree of insensibility, or what other effects imagination: they laugh and sing, and repeat abundance of humorous expressions, like men intoxicated with wine, but after the effect, it is kicked, if it is not first of all being exhausted, and grow persifling and melancholy till they new the dose; some, we are told, have made it to necessary to them, and others to their health, and they keep to the letter of the law, and obtain from wine, it matters not how much they disorder themselves, since they think they never shall be accountable for that.
The provinces of Persia in general, as well as the countries inhabited by the descendants of the ancient Persians, are distinguished, with great diligence, to accomplish themselves in the use of the bow and horsemanship; which indeed is that the variety every man finds himself qualified for. The Persians are famous for their great strength, and frequently fight for the prince. They begin with teaching the young pupil to bend the bow, and afterwards, as the prince is a favourite: he is admittance for a time which of them can shoot highest after this; they are instructed to shoot to a mark, and to deliver their arrows speedily without thinking. The arrows for these exercises have blunt iron heads, but those for service are shaped like the points of a spear. They next teach the pupil to mount a horse with dexterity, to have a good seat, gallop with a loose rein, keep short, and turn to their right or left, upon the lead with policy, without being disordered in their saddle. They are also taught to play at a game almost like handball or horseback: every gentleman has a flower in his hand; a bell being thrown amongst them, they ride after it, and flopping almost to the ground, strike it in a full career; and he who has it last after having been driven to the end of the field, wins the prize. They are likewise taught to manage the sabre, or back-sword, and to throw the lance: the staff they throw by way of exercise is without iron, and about five feet long. They engage in the latter practice, and though there be no spear at the end, they frequently give one another very dangerous wounds. They next have their exercise through their respec: they are permitted to shoot the prize in the royal meadows, before the king and court. In this fashion, the Persians are raised to a high degree, like the math of a slip, and upon it is a cup sometimes of stately gold, especially if the king and great officers design to shoot at it, as they frequently did, till of late. This is the next rank, and when the prince, ride full galop with their bows and arrows in their hands; and when they are got a little beyond the pole, without stopping or turning their horses, they bend themselves backward either to the right or left, and let fly their arrows at the cup, and he who brings it down gains abundance of honour. As the Persians are thus constantly prated in flooting backwards, they may possibly take their aim better this way than any other: it is therefore no wonder that the Persians have been so much dastred when they retreat as when they charge.

The rural sports and manner of hunting, or rather coursing, of the Persians, seems as remarkable as their martial exercises. Their greyhounds very much resemble those of the Irish; but the flags and antelopes they hunt, are so very fleet, that the dogs cannot come up with them without the assistance of some of the soldiers. Various kinds brought from Circassia, Mesopotamia, and the northern part of the empire: these hawks are taught not only to fly at partridges, quails, rabbits, hares, etc., but every one succeeds in catching the birds, and having taken the bird to itself, they take the skin of one of the beast, and having fenced it, fasten a piece of flesh of the head on it, with which they keep the birds of the sky, and justly claim the field: they, in the mean time, walk upon wheels at the same time, to use them to fix themselves on the head while it moves. When they have used the young hawk a time for some time, they carry him to the sport, with an old finch hawk that is used to the game: the dogs being let go, the hawks are soon after them off, who fall in the side of the deer, and striking their talons into his flesh, keep beating their head about his head, so that he cannot see his way; which gives the dogs an opportunity to come up and seize him: the greatest care of the Persians is, to make them very sure, and to avoid what is called the bow to call off their hawks: some of them, it is said, have formerly been taught to fly at men. The governor of Tarsus is, indeed, very enterprising this sport, not forgetting his friends sometimes: and one day, letting his hawks fly at a gentleman, they tore his face and eyes in a manner that was the death of him. But a friendly, contented, and patient spirit is required for it, for he is endangered in it. As he was out of his office.

When a grand hunt is ordered by the king, at which the great empress is present, and the merchants round, are ordered to drive all the wild beasts and game into a certain place, which is surrounded with strong nets and fences; and when they have thus inclosed them in a particular fort, then a hoard of watch here a little, and they make a terrible slaughter of them: there are often several hundreds killed at one of these hunting-matchs; but they usually fly till the men of the left hand till the field comes up and discharges an arrow, after which every one discharges as fast as he can, there being generally a great variety of this kind of sport: the Persians are very fond of this, and on the voyage every man is given a sword, barse, &c. all driven together in a crowd. They frequently being the beholders and panters to hunt the game, out the hunters, and killing them for the sport; and they are not content with killing the man when they come to another, till they can jump upon their prigs, as a cat does upon a mouse, but never run after it in a contin- uing manner. In the mean time, they are taught, they know nothing of it, and indeed their country field to be too dry for this kind of sport, if they had dogs which were in the least like ours.

The Persians are not much addicted to gaming, and some of the most ingenious look upon the games of chance to be unlawful; however, some of them play at dice, cards, tables, chess, and other games, not in any wise among us. The king and people of quality also sometimes divert themselves with the fights of wild beasts, as is practised in India: The Persians, upon their return to the palace, are especially taken with the sport.

In Persia, they usually salute each other by bowing the body a little, and then resuming the same as before, but they never fill their cup or turban; they bow their faces three times to the ground, when they approach the king, the vicereys of provinces, and other great men. They are struck with the Persians, they look for the motion of their heads, as their signs of respect.

The Persians do not fail to visit each other, and people of condition always expect the compliments of their depend- ents. It was introduced into a large ball, where coffins are usually put before them, with which they amuse themselves till the proper person is gone. Then is the proper game for his entertainment; he goes up, and stands in his place: he bows to them, and every one bows much lower to him again as he passes by, and after he has taken his seat, makes a sign to the company to fit. If the master of the house be already in his ball, the visor comes in softly, and, stepping to the next vacant place, climbs graviely with his feet close together, and his hands across, till the master of the house beckons to him to sit down. But if a person receives a visit from his superior, he rises as soon as he sees him, and meets him half way; and sometimes receives him at the gate, if he has notice of his coming; and, in short, the respect they give is generally proportionable to the quality of the person, as it is with us; but they differ in this, that they place their honour on the left hand for whom they have the greatest respect. They have frequently fowls brought for their amusement, who sit on them, to fit upon, but the Persians themselves fit crocks legged.

The people in this country travel upon camels, horses, mules, or ass; as they have no wheel-carriages. The Persians are used to all kinds of riding, and ride a horse, as a man does on a horse, without any saddle, and are put into a square wooden machine, one of which they hang on each side of a camel; they are about three feet long, four feet high, and justly esteemed for their port, and are used to carry four persons. The other are used only for riding abroad; they are four or five horses, like those which support the cart of a waggon, with a cloth thrown over them. Their affs, if foes, are sometimes and seldom used, and are used to carry very heavy loads, and will trot ten miles at a pretty good rate, but they are very obtinate and unruly, and frequently throw their riders.

A common method of travelling in Persia, is with the caravan, consisting of four or five hundred camels, besides other beasts; and there is no place where they travel without it. As soon as the caravan is formed, the heads are taken in the caravanserai at proper distances, where they have their lodging gratis, and purchase provision at the best price, and live in the caravanserai. In Persia, therefore, they are very much used. The natives are very particular in choosing a place for their caravanserai, and yet such care is taken in laying bridges and caufeways, to level and enlarge the ways, that a traveller seldom finds any difficulty in passing from one place to another.

Here are no general posts; but if a person has letters to send, he dispatches a bear or footman with them on surcharges, who must traverse the station in twenty days: some families make this their only employment; and breed their children up to it, practising them to run from their infancy. These persons carry the dispatches of the emperor in a box or packet, which serves them thirty or forty hours; they generally leave
promised to assemble their troops before this enterprise; but the city of Candahor, being a town in the frontier towards India, and a considerable body of troops quartered there, he was in doubt whether he should be able to carry the place by force; whereupon he had recourse to the following stratagem: When he received his furlough or commission for reimbating him in his command, he pretended also that he had received a commission to succeed the Governor of Candahor in that province, and accordingly marched that way with his troops. When he came within a mile or two of the town, he sent to the Governor, to apprise him of his pretended commission;
As the sequel of these, there are other
company about which he troublesome
with them a boat of water and a little bag of provisions.

In such care is taken by being lurred and caution.

The roads are frequently deep and wide
with care taken with them on.

A little care is taken with the roads,
with care taken to level and enlarge the ways,
that a traveller may not encounter any difficulties but what are easily surmounted.

Here are no general roads, but if a person has means
to do, he may afford to make a sort of road in the high
which their children are to do, preserving

leave the high road, and cross over the country the nearest way. He remained at least a month, and twenty days in this place. Then he fell sick again. For he had four or five fevers, and two bleedings a day for his trouble. The King and all the great men have several of these fevers and fevers in their retinue.

But a man can be admitted on one of the king's footmen, he must give a very extraordinary proof that he neither wants heart nor blood, for he must run from the gates of the palace of the Cabul, to a place about a league and a half from the city, twelve times in one day, and every time being an arrow along with him, which is shot by a man to bring his foot to the foot of the hill. Here he is to wish the king has run the whole course; and this he performs between fun rife and fun set, in thirteen or fourteen hours.

So it pleased this man, he, and all the others, to be examined before the king, his minister, and before others. This honour is always bestowed upon some favourite servant of the king.

On the day of the festival, the elephants and horsetmen are drawn up in the royal square, with the music, drums and trumpets sounding, as if it was some festival; all the great men make presents to the sultans (some of whom have obtained above a thousand pounds on such an occasion), and several of them ride the course with him, to gratify themselves with the Prince; and the populace attend him, every time he returns, with their kith and kin.

The Chams and Viceroy, who admit of a death into their service, make him return the same number of miles, and they are careful, and prevented by all their dependents in the same manner as the King's chatirs are, though, we may well suppose, not to the same amount.

Containing a relation of the civil war in Peria, which terminated in the deposing of Sultan Hossein by Mahmer, who suffered the succession.

Sulim Mahmer, the last Sophi, succeeded his father Sultan Solyman. This Prince chose to pass his time in an indolent and inactive manner, in delighting his women in the bazaar, leaving the administration of the government entirely to his ministers, who promoted and displaced with equal facility his own men, being no less than one hundred and eighty miles.

The Sultan Hossein, who was offered the succession, was not offered it in a royal manner, but he was delivered to him by the Prince, and his brother and sister.

All the ancient-Merwaisk order of magnificence, among other, who were discarded for not offering a bride, or present, as it is called in Peria, suitable to the expectation of the ministry. This was a proceeding of the Tartars, who, at least commanded four or five hundred men on the utmost bounds of the Persian empire towards Ubbek Tartary, where the Tartars do on the other side of the river Ozar, moving from place to place with their tents, as they can find provision for their cattle. Merweys, understanding that he was removed only to make room for another who had procured to himself a preference by presents, applied to all his friends; and railed such a man, in a short time ceased, his youngumberland in his command. He was however, so impoverished by this last preferment, that he found himself in very uneasy circumstances; and taking advice of the French ambassador, and his distance from the court, he determined to feign on the neighbouring province of Canderish, and set up for himself. Accordingly, he communicated his design to his friends the Tartars, who promised to assist him, and assist in the enterprise; but the city of Canderish being a frontier towards India, and a considerable body of troops quartered thereabouts, he was in doubt whether he should be able to carry the place by force; whereupon he had recourse to the following stratagem: When he received his firman or commission for reinstating him in his command, he pretended also that he had received a commission also from the Governor of Canderish, that province, and accordingly marched with this word in his train. When he came within a mile or two of the town, he sent to the Governor, to apprise him of his pretended commission;
The New and Universal System of Geography.

Publication details:

Of the Persian home trade, mechanical arts, and manufactures; also, their foreign trade, navigation, pastors, and ships; English trades in Persia, weight of goods from Ghotum, table, price of goods at Ghotum, port duties, weights, and rates.

HEAD or warden is appointed by the government to pride over every trade, who is to see that the rules and orders relating to the profession are duly observed. When any person intends to set up a trade, he goes to the warden, and registers his name and place of abode; and no enquiry is made who was his master, or anything concerning the system. No warden is appointed for this purpose; nor is there any restraint laid upon them, that they shall not enter upon any other profession than the one for which they have registered. The law requires it, and they who are exempted, pay an annual tax to the government. Artificers do not take apprentices for a term of years, but they leave it to their own inclination to employ them wages from the first day they entertain them.

It is observed, that their carpenters are but very indifferent artificers; and the reason thereof may be, that there is not much timber in Persia, and but very little is used in their buildings. Joiners and turners are more expert in their profession, and they lay on their lack on very nicely. The bresiers and ten-men work well with their hammers, files, and turning instruments. They have neither iron, brass, nor pewter in their kitchen furniture; most of the vessels and implements used in their kitchen being made of copper tinned.

The broad-bladed, made by their armourers, are very good, and they demand them as well as any European.

The barrels of their fire-arms are not smooth; they make them very strong, and as thick at the muzzle as the breech.

Their firearms are so small, that they could not be used but for a few shots, and not to shoot more than half or four or five yards. They have no lock, or stock; but all are armed with only a sheet of leather, or a small leather, which they use instead of looking-glasses; these are almost all convex; and the air is perfectly dry, they seldom rust, or grow dull. They do not understand the art of making looking-glasses, but have them from Europe; they have, however, a manufacture of glass, which serves for windows and bottles. The use of the bow being what the Persians greatly value them upon, there are no more better bows made than among them; the chief materials are wood and horn, with sinew bound about them; their quivers are of leather, embroidered or worked with silk. The bow-string is of twisted silk, of the bigness of a goose-quill. Their bows are painted and varnished, and made as fine as possible.

The Persians are as well versed in embroidery as in any art whatever, especially the gold and silver embroidery, either on cloth, silk, or leather; they cover their saddles and hunting-saddles with embroidery, and the cutting of the leather by far exceeds any thing done in Europe. Their saddles are as comely and as small as European, and which are very short; they have a kind of breast-plate to them. Persian of quality have gold about their furniture where we call it silver.

What is called in Europe Turkey leather, from its coming through that country, is usually made in Persia. The fragments of it come thence, which are sold in the skin of an ass's rump. Turkey leather is of a thick indented bark, and dries their coarse skins with time.

Linen ware is another manufacture the Persians excel in; it is much beyond any thing of this kind made by the Dutch; some affirm, that it is almost equal to china-ware. It is chiefly made at Schiras, Meshed, Yezd, and Kerman. Mending of glass and earthen-ware is a particular trade in Persia; they drill holes through them, and set the pieces together so, that a broken bowl or plate will hold liquid as well as before it was broke.

Gold wire-drawers and thread-twisters may also be ranked among their most ingenious artificers. They will draw a piece, weighing a hundred pounds, out of three hundred Persian cts. (five and thirty inches making an elk.)

Their bluepans, we are advised by a person who was a jeweller, understood the grinding of fine stones, and can cut them pretty well.

Their dying is preferred to any thing of that kind in Europe. This is rather ascribed to the dryness and cleanliness of the air (which gives a brightness to the colours, and fixes them) than to the skill of the artist.

Taylor work is done very nearly by the Persians; the men's dresses, which are made of the richest stuff, are brocaded, or are fitted exactly to their bodies without the least wrinkle; and their sewing is incomparably better than that of our countrymen; as the fine materials with which they require it should. They work flowers also upon their car-

Yet others differ from this, which gives a brightness to the colours, and fixes them.
did not foresee the advantages his disciples might make by foreign trade and merchandize. The government, therefore, found themselves in a necessity of governing and encouraging their Christian subjects, as they value their foreign trade, and the revenue it brings in; and Christians, it is observed, live much better under a Christian government, than in many Christian countries, where the people are of different sects and professions; and, as a consequence of this, the Christians that were towards Georgia, are a very considerable body; the Christians also are the only sort of people who inhabit the great town of Julibah near the Caspian sea.

Silk, both raw and wrought, is the staple commodity of Persia; great quantities of this are exported to India, Turkey, and Muscovy, and the English and Dutch formerly took a great deal off their hands, but little or none at present. They supply India with abundance of fine horsetail, at a very great rate, forty or fifty pounds being but an ordinary price for an horse there. They export also camels, hair, goats wool, leather, wines, distilled waters, and preserved fruits, phialocho nuts, dates, etc.

We cannot learn that there is any considerable quantity of pearl to be met with in Persia at present, though the country was once famous for them. There was, it is true, one of the finest pearl fisheries in the world in the gulf of Persia some few years ago; but the Persians have left the domination of that sea, and of all the islands in it, except Ormus, and that was vigorously attacked by the Arabs, who conquered the reft.

Abovy the year 1798, the Perians made an attempt to recover their islands, and, in order to do it, they raised the victory of Ormus to affit them with four men of war; but the Perian general, it seems, was bribed by the Arabs, and had only betrayed the Per籍s, and thus neither did he win it, nor failed in it, yet never providing any land-forces to assist in that expedition, the Arabs remain in possession of those places, and, with them, of the pearl fisheries. The Portugese squadron, however, came to an engagement with the Arab fleet, and it proved one of the most obstinate encounters that has been seen on the face of the world: one of the Arab ships was sunk; and those of the Portugese were so shattered, that they were glad to retire with their ships, and no more in that sea. Some of the Arab men of war are very large, carrying no less than twelve guns, and they are said to have ships of the greatest force of any nation on the other side the cape of Good Hope.

English cloth is itself the only commodity the company carry to Persia, nor does this turn to any great account, the Turkcy company being able to supply that part of the country, where it is chiefly needed, at a much cheaper rate. In return for cloth, the company bring back wool, as it is commonly called, which is the soft down that grows under the hair next the skin, and is chiefly sold by barter and barter, the company bring away every year about a thousand bags of this, each bag weighing a hundred weight; and if they do not meet with a sufficient return in this, they take the balance in shawls and chequerings, or siles in gold bars, of which great advantage is made; and as they have not sufficient freight of their own, they take in freight of the Armenians, British, and other private traders, who return to Surat, and generally a large number of passengers for that country.

The Persians have in a large trade to the gulf, and are indeed, either to sell, or to sell and barter, being a country half-way between, and a great part of their tenants are seamen who have ideas of a vast extent of trade.
thirty or forty rapueto (valued at two shillings and sixpence each), and the males would have two or three hundred rapus for their wages, which are lost; just big enough to induce only, and they differ according to the nature of the commodities to be delivered by them.

All bargains in Parthia are made for fineness, and the company keep their accounts in them, reckoning them worth four-pence each, though that coin is rarely met with, and in its fixed, and this is every where. Horses, canes, hedges, etc. are generally bought by the toman, which is two hundred shahans, or fifty bushels, and they usually reckon their effect that way: such a one parade or audience was held before the chief common person in the city, as a market of the goods in England. This affair, in the company's accounts, is reckoned worth four-pence English money.

The company do not at all intermingle in the trade between Persia and India: this they leave entirely to their factors and financiers, and to such country ships and private traders as put themselves under their protection, and are content with paying the port duties. For the better regulation of this trade, orders are hung up in the consoliation of Gombroon.

S E C T. VI.

Persia abounds with mountains, but has very few rivers; some are frozen in the winter; and the highest on the face of the earth. Mount Taurus, which frequently receives different names, as it branches itself out into different provinces, runs through the countries of Cappadocia and Lydia to east. The loftyest of these mountains is Ararat in Armenia, the five mountains which separate Media from Hyrcania, and the five which divide Persia from Carmania are exceeding high, the most famous of which is called mount Jareon, but they are generally dry rocks, without the least heritage upon them, except those of Ghilan or Hyrcania, and the mountains of Cudeftan, which are covered with woods, and very fruitful where they are managed. They are vast and entire forests several days journey over in this kingdom, where there is scarce a drop of water to be found; and the land in general upon the frontiers lies uncultivated, to discourage their enemies from invading them; for there is not the least difficulty to be met with for several miles, in travelling into the kingdom either from Turky or India. There are, however, some fruitful plains and valleys, in which their principal cities stand, which yield plenty of grain and heritage: and no country is more fruitful than the provinces which lie next to the sea; and the city of Ecbatane itself is fertile; for the Hyrcania is very unhealthful in summer time, which some apprehend proceeds from the multitude of flies and insects which spring up upon the ground when the waters are dried up, as well as from the foulness of the valleys which at that time of the year is so thick and muddy that it is unfit for men.

Thought it is not a tenth part of Persia cultivated, at present, yet when greater care was formerly taken to turn the waters into those valleys which now produce neither grain nor grass, there were extremely fruitful. In some provinces there are hundreds of fine aqueducts choked up and buried in the ruins; so that it is not so much a defect in the soil, as the want of people, or at least of husbandmen and tillage, which renders Persia so barren. The soil in some parts is a hard gravel, and in others a stiff whithall clay almost as hard as a stone; but either of them is fruitful when well watered, and will bear often two crops, and sometimes three in the space of a year.

If we give credit to ancient authors, there was not a more plentiful harvest in the world, than those which were of an alteration some where as the different dispositions of the people who have inhabited it. The antient Perians, the wise-workshop we, is, God, were obliged by the prospects of their religion, to cultivate the ground, and it was by, them accounted a meritorious act to plant a tree, to bring the fruit, or to harvest the barley, occasioned by such disorders as were brought upon them by the effects of pestilence, drought, or frequent floods; and even the property of the people is not secure to them; so that it is no wonder they have little inclination to make improvements, when they can have no certainty of reaping an advantage.
the quality of the ground, &c. — i.e., the soil as a whole.

4. A very few were of the same nature as those found in China, and are said to be so called "nut rys" from their small size. They are general dry and husky.

5. In the best sorts of these fruits several large scales or teeth are found upon their surface, which usually have a flat or slightly rounded surface.

6. They have the common name of "broad-leaved chestnut," and are esteemed to be the best kind of chestnut in the world.

7. The most delicious food in this country is dates, which are grown in a climate similar to that of Persia, but not so cold.

8. The fruits are found in great variety in Persia, and are esteemed to be the best in the world.

9. In the north part of Persia, apples and pears chiefly grown, because they are hardy and do well in the cold climate.

10. The most delicious food in this country is dates, which are grown in a climate similar to that of Persia, but not so cold.
between the Persian Gulf and Assiah, are of such a high
and do not carry above five or six hundred weight; yet
there are always found in all the places of the Gulf
and about it, many horses of great size and strength,
and are much swifter, and will gallop like a horse, whereas
the others do not possess this foot pace; the other
carriage is kept by the king and his courtiers, and the
men from place to place, and carry their baggage; they
are usually adorned with embroidered cloths, and
their heads are covered with a large black cloth tied
behind their ears when they travel, and preserved by
one man, who is neither blind nor halt, but they hold them
in, and make the horses carry them in a Style similar
to that of the Persians. They let them grass by the road
side, with their burdens on their backs; and sometimes
they feed them with balls compounded of barley, meal
and chalk, mixed up into a paste, with which they
often mix the cotton feed, but he is the least feeder of
any, considering his bulk. It is very happy also that
the camels with which they are supplied by two or three
horses, there being scarcely any to be met with in those
distances. The camels are forced to pass. They feed all
their hair every spring, and are perfectly naked. Their
creatures are so much about the same, whether they are
kept so in the desert, or kept in great numbers; the
people who are employed in this work, that they look as
if they had been buried and taken up again, and their
bodies are so covered with hair, that it is impossible
to extricate the hair from the poppies, in a little time grows
thick, and it made up into pills; the Persian gives it the
name of which it is the root, and call* it hay. The Persian
herb, which was thrown poppy-seed on their bread, which inclines those who eat, to sleep; and the eating it is not reckoned unwholesome after their meat, the common people eat the seed almost at any time.
Saffron grows plentifully in Persia, and the saffronp is so
that it is not unwholesome at any time. Some of the body
is in such a state as to be reformed, and the result is
that it is the most offensive of all, and is also a most refreshing perfume, and at least equal to musk.
Affordia is a liquor which diffuses from the plant called alfrose, if thickened it is drawn, and grows as hard as gum; there is the white, and the black kind of it, by which the white is reckoned the
better. The name of this liquor is so very strong, that
if any goods in a ship lie near it, the smell is communicated
to them, how little the savour is confined to the
smell, it is almost as strong as that of opium, and is
not so pleasant as that of opium, and it affects the
colour of its termites, to such a degree, that some fine stuffs of
gold and silver (the latter of which are turned perfectly
black), are corrupted in it, the skins of them being
covered with it, or being incoated in it, and covered with several coats of
gold or silver.

In the land of China, in the remote Bithia, mummy
is frequently found. This is human flesh embalmed,
which has a light colour; in dry earth. Some of the bodies,
if it is not laid. But if left, it will be as dry. It is
a common custom to preserve the name of mummy,
which is said to perform miraculous cures, and is reckoned to be of great
use, that the Governors of the provinces where it is found, send it to court under their seals, and the King employs
of it.

The most beautiful of these is the Peruvian, which is found in the bodies of goats and other animals; it is in
much higher esteem than the Lizard itself.

It is surprising that the
produce of this
nurseries, and is found in Perua. Among their cattle, the most serviceable are camels, horses, mules, ass, oxen, and buffaloes; but the
produce of this country is much above all the rest, whether we consider the weight they carry, the dispatch
with which they pass, or the little change they meet with. Of these
carriage, the Persians have two horse

There are many number of serpents, toads, crocodiles, and other venomous reptiles, in that part of the country which lies upon the Caspian or Hyrcanian sea; but many of them die in the winter time for want of water, and in

The kites are found in almost every part of the country. In the heart of Peria which is very dry, they are not much troubled with insects, want is with eagles and vultures, which sometimes visit them, and certain numbers, that appear like a cloud, and perfectly obscure the sun and cloud. The entire out of the nation, wherever the Persians are found, that the land is generally free from the
They generally fix the Persians tongue at Shiraz, the capital city of Persia, or the ancient Persepolis.

The Persians, who are a very warlike people, are divided into various sects, of the same line with their religion; and, besides those words which are peculiar to them there are a great number of words of other nations, which have in late times conquered Persia as well as India into it: as those of the Turks, Tatars, and Arabs. There are also an inconceivable number of European words mixed with it, as High Dutch, English, and French; but it is not more than one third of the whole. There are also some words of our English travellers given us influences of this, as broader for brother, etc. They take some of their words from the Greeks and Latin, and they have borrowed many more from these nations than all the rest; and it is for young people who are learning to read or for those who define it, and will pay well for the trouble.

The Persians, as to their letters, are very few and coarse; it is extremely thin and smooth, and will bear bet on one side; it is not to white and strong as ours, nor in any respect comparable to it. Their ink is made of soot and vitriol, and the red of pomegranates, with burnt umber powdered, which being made up into a paste, they dissolve in gum-water or wine, because it is for young people who are learning to read; or for those who define it, and will pay well for the trouble.

The art of printing is not yet introduced among the Persians; their books are therefore all manuscripts. They excel in writing, which is reckoned among the liberal arts.

They write eight several hands: that which they call nestiky, and is the hand the Alcoran is written in, is in most effect. They stand or it gracefully, holding the paper in their right hand, or in their left, as they prefer, and writing with a quill pen, which they use for all matters of writing, with the exception of letters, and the writing of the Alcoran, in which they have no table to lay their paper on as we have, and exceed the best of our clerks in the dispatch they make. They do not write as we do, from the left hand to the right, but from the right to the left, and the Arabs do; neither do they write in a straight line, but the lines are convex, or bending like a bow, and the margins are disposed in the right hand. They write on a book as big as the bible in a fair character, for about ten pounds, provided the paper be found them; whereas we could not have a book of that quality transferred for fifty pounds. They have a kind of florin hand in Persia, in which they use the letters of the alphabet; and the same letters, differently pointed, will have, for the first time, their different significations.

They have a vast number of clerks in all their great towns, but there is barely a livelihood for half of them. They ordinarily write from morning till night for five pence or six pence a day.

The Persians make use of figures in their arithmetics, as we do, and their addition, subtraction, multiplication, and division, differ but little from ours; but there are some differences and with respect to the rule of three, they are entirely ignorant of it.

It is naturally allowed, that learning flourished most in the east in the first ages: the Persian Magi, in particular, from their extraordinary gift in astronomy and other sciences, were thought to entertain a commerce with immortal spirits, so that a magician and a conjurer became terms of the same import; but notwithstanding their superiority to other nations in this respect in ancient times, which, indeed, at present the most have lost to that knowledge in Persia as in Europe. They understand neither the celestial nor terrestrial globes. They have, however, as allowable, can name the signs of the zodiac, and are

unacquainted.

S E C T. VII.

Of the language, characters, writing, arithmetic, learning, music, history, chronology, astronomy and astrology, philosophy, arts, etc. of the Persians.

FOUR languages are spoken in Persia, namely, 1. The Arabic. 2. The Turkish. 3. The Persian, And. 4. The Use, which is the language of the ancient Persians who worship the fire, spikes: their language and characters are peculiar to themselves, and cannot be the same with that of any of the ancient Persians, insomuch as they understand none of the inscriptions remaining at Persepolis; neither are the characters of the present Guea and Axum those of Persepolis. The Arabs have the same language; and in this the Alcoran and other books are not arrived at so high a degree of divinity, as well as their books of morality, phylic, and philosophy, are written. The Turkish language is usually spoken at court, and in the provinces adjoining to Turkey, and...
unqualified by the other stars. Some years ago, when
an European brought a pair of globes with him to Persia,
they were found to be in error, orlatitude.

Next to judicial astrology, which they have great faith in, the sciences most in esteem at present are, astronomy, geography, mathematics, physics, and chemistry. They are
fear, and the study of the law. They seem to have a more than ordinary passion for poetry; most of their best pieces
are written in verse. They are particularly fond of
rhyme, something neglected in their numbers. Their
fairs are chiefly levied against the Turks, who certainly
give them scope enough for; compared to the Persians,
their theatre is very bristly and barbarous. The
antient philosophers in the east were all poets,
according to the Persians; and their wife jestons were
delivered in verse, to render them the more amiable and venera-
able, and that the people might the more readily retain
them in their memories. The subject of their poems at
this day, also, is generally some piece of morality or philo-
osophy.

The Persians excel more in poetry than in any other
branch of literature, as they seem to have a genius pecu-
liary adapted to it. Their invention is fruitful and lively,
their manner sweet, their temper amorous, and their lan-
guage has a softness proper for verse; even one who did not
understand a word of Persian, would be delighted to hear
their vers recited, the very tone and cadence are so afflicting.
They mix verse with all the prose they write, and even in
counselling a question, imagine that they give their
thoughts and hitr to their finest thoughts, and impresses them on
the memory.

What has been taken by the antients to preserve the memory
of their great actions, was, to make them the subject of
their fongs, and sing them in their assemblies, and at their
terminations. The Persians at the present and we must
add in most of the eastern kingdoms, herein the Greeks,
and most nations in Europe imitated the Athenians. There
are more volumes of excellent poetry to be found in Persia
than in any other country; one of them, particularly, is the
history of their Kings, and contains sixty-six thousand
verses; the subject is so elevated and grand, their expedi-
tions so just, and their terms always the most proper that can
be devised; their allusions are delicate, and all their figures
abound with hyperbole. There were over them, among
the others, called the story of the patriarch Joseph and Pot-
ner's wife, which raises all the passions to the highest
pitch. Love is sometimes the subject of their poems, as
well as morality and history: but nothing immodest, or
that countenances obliquity of any kind, is ever the subject
of their verse.

The Persian music next demands our notice. They
sing and play by rule, though to an European ear, they
seem to make but very indifferent harmony. Sing-
ing and playing are so mixed among them that, for
they sing after each other, and generally to some fringed instrument
like the lute or viol: their men sing better than the
women, and they are most skilful in playing in Asia. They
have a great number both of firing and wind instruments
of music; some resemble in shape our hautboys and flutes,
others the violin, harp, pipers, and trumpets, the latter
of which is the most disagreeable and noisome
instrument for fire and sound, that can be met with: it is
commonly seven or eight feet long, and propounded widely
at the end, and contains a small bell, which they hold up
in their hands, and make it ring in the same fashion
instead of clocks, to let people know the time of day
and night,-founded constantly at certain hours, for they have
no clocks, or any other thing, whereby they can count
their time. As long as you may look into their palace, you have always notice of it by these drums and trum-
ports, which are placed over the balcony, or in some
niches, being heard at a great distance. Music and dancing girls
are in some places appointed to go before a great man when
he travels, to amuse one part of his equipage.
The firing of their instruments are never made quite
of, No. 2.
Another part of the Persian superstition consists in almanacs and amulets. These amulets have certain inscriptions upon paper, and sometimes on precious stones, and these inscriptions they wear in little bags about them; they consult a some of them, for the most part are the same we give them; but some of them are different. The only instruments they use in any of their operations are the astrolabe and astrologers' staff; and as with us a大夫ver their time by the watch, they take the elevation of the pole, it cannot be supposed that their latitudes are very exact? Their astrologers are very artfully made, in the world weather that can happen, they are refered out of the high-road, to avoid the unfortunate hour, or its evil stars.

The Persians reduce their philosophy under three heads; namely, physics, metaphysic, and logick. Their great master is Aristotle, whom they have translated into Arabic. Till very long, they did not believe there were Antipodes; but are of another opinion since the Europeans have visited them. The philosophy of Pythagoras, which prevails in India, is here taught by a fel of Mahometans, called beles. Theirs understand the alcoran, and all its procriptions; and, whatever regards external worship in religion, in a spiritual sense; and though they gratifie corporal possessions with the other Mahometans, they do not look upon them as essential to their religion, which occasions the rest of their church to hate them mortally. They profess love to the religious conversation of Persia, but consider all men as proceeding from one common father, and people of different sects and perfections as all servants of the same God; and that all confidences, and that call confin in an intimate knowledge of, and a strict union with, God; and that all confidences in a benefit being separated from him, that all most observant seems to be more cultivated than any other in Persia. Those who professed it, they, performed with perfection under all misfortunes, and speak of death, and even suffer it with great evenness of temper. Most moral virtues, particularly patience, fortitude, and temperance, seem to be deeply impressed on them.

Little can be said of the geography of the Persians, as they had neither terrestrial globes, maps, or planispheres, till the Europeans introduced them. They thought there was a small part of the earth habitable; and compared it to an orange swimming in a wel of water, the greatest part whereof remains under water.

History is but little cultivated in Persia. They are so far from knowing any thing of the history of Europe, or any distant country, that they are ignorant of that of their near neighbours; nor has the history of their own nation any thing of certainty in it, till the establishment of the Mahometan religion among them. Their histories, before that time, are but so many legends, without the least appearance of truth. They pretend that the world was created several thousand years before Adam; and that it was first inhabited by demons and spirits, who, rebelling to God, fell from grace, and that God introduced Adam and his policy in their room.

The Persians begin their year at the winter equinox. They consider itself thirty six years by the number of moons, following twelve moons to a year, or three hundred and fiftythree days, so that their solar compution exceeds their lunar one by twelve days in the year. Their epoch begins with the beginning, or flight of Mabomet, when he was called the Prophet, six months of July, in the hundred and twenty years after the birth of Christ. And as the Jews computed their time by jubilees, the Christians by indictions, the Romans by the years, the Persians by the moons, the Greeks by olympics; the Persians also, in some cases, account by a revolution of four years.

Their work begins on the Saturday; so that the seventh day, which is their Sabbath, falls on a Friday: they call it adine, or tizam, that is the day when they esteem religious feasts. Upon Monday next after the Sabbath, the great men wait on the King to wish him a happy new year, every one making him a valuable present, as do the Chaldeans who pretend to have different governments.

They divide the day into four parts, and the night into as many: and they have a hollow brozen vessel with a little hole in it, which set upon the water, and is filled in about half the day. Now, when the vessel is full, and the watch is expired: of which notice is given by public drums and trumpets in all great towns.

The Persian constitution of times, days, weeks, months, years, or the preference of life. There is no country in the world where physicians are in greater esteem, or that produces a greater number of them, than Persia. What is said of their physicians deveer the country. The King always entertains valet numbers in
in his pay, who are not les chargeable to him than his
afoles; but there is an eternal variance between them:
for the one of the physic, in the other of the medicine, the patient must wait till the afole affigns
the lucky moment to take it; and if it has not the withif-
dow, the patient may return to the apothecary, and
for the afole's sake to the patient.

But such a bea with a lea in the bed, and a
leal in the public

The Peria, as anphibians, are lemoft in the world, at
any time, or at any place, and all their
nations are for ever in motion:
Perse with great numbers of Turkish and Persian captives, Chief Aider, a doctor of law in great reputation for his facultiy of disputation, obtained the release of most of his prisoners, which fill increas'd the fame of the Chick; insomuch, that when Tamerlane marched among the fugitives, he struck upon the head of his officers, who fell down, and the rest took upon him the Persian and Arabian languages, with writing and accounts: which when they are arrived at some perfection in, they are removed to the higher classes of instruction, and taught the doctri ne and the principles of their religion are taught.

Their colleges are all endowed, and some of them very rich, the largest and fifty stately apartments, and some of them belong to two chambers. In the best colleges, every scholar has about two shillings a day allowed him, which he lays out as he thinks fit; for they do not common together as we do. In some colleges the students have not more than a penny a day; and yet interred is made to get admitted into these, on account of having a lodging grant, and other usual advantages. Many, whose principal design seems to be to live in ease and idleness, get into them without any design to study, who live to old age in those houses, and have their wives and children with them.

We shall not be surpriz'd to find that there are abundant numbers of young men there, without the least notion of the sciences, and of their instruction, and they also purchase a garden: these they let out, and apply the revenues arising from them towards building and establishing a college in the province of the head and governors of the society; and if the founder's estate happens to be forfeited to the crown, the King has the nomination.

In Ipham, there are forty-seven colleges, most of them of Royal foundations, or which have devolved to the crown. There are professors, who teach the sciences in every college, to whom the scholars make an annual allowance for their trouble; but as there are several who read lectures gratis, so there are others who pay their own tutors, and provide their proper tutors. These students who are men of parts and learning, may have a handsome salary in any great man's house, for instructing his children, who are always educated in their own houses. The head of the house admits or excludes whom he sees fit, and pays the students their expenses monthly, so that they shew them abundance of respect.

Besides their colleges, there are in every town those who teach the liberal arts gratis; and there are frequently great opportunities of place for those who have been attended, or are voluntarily retir'd from court. These frequently furnish their discipul es with books and paper, and entertain them at their own expense, who,尽管 having spent two, three, or four years in the school, who have not only instructed the pupils, and given them money: by which acts they endeavor to recover their reputation with the people: for nothing so much makes the reputation of a gentleman in Persia as the instructing great number of scholars at their own charge, and being patrons of learning and learned men. There are no public disputationes or lectures in Persia, as in Europe; but when the scholars have made some progress in the sciences, they begin to dispute with their respective tutors.

Sect. VIII.

Of the rise and establishment of the present Royal family in Persia, the pretensions and abject fury of the Persian monarchs: and the assassination of the Moorish prince, and the murder of the young prince, together with a continuation of the Persian history, to the present time.

It is a received opinion among the Persians, especially by their clergy, that none but prophets, their subhiles or successors, have a right to dominion. They obserue, that God has in all ages governed his people by prophets, who directed both the spiritual and temporal affairs; as Moses, David, and Solomon; before him, and after him, he ordained Moabites, to whom, as they adhered, succeeded Hyd and the twelve Imams.

Indeed, in giving some account of the rise and establishment of the present Royal family, we must observe, that Tamerlane having defeated Bajazet, and marching through
in a most bloody battle, on the 18th of July 1733, by Topal Oflman, at the head of one hundred thousand men; his army consisting of seventy thousand; but he afterwards defeated the 1st. 'Tambos' pashas, twenty thousand; and in 1735, his forces were again victorious; and in 1736, gained great advantages over the Turks and Tartary, reducing the open country of Georgia and Armenia. After this, Topal Oflman, in 1737, and in 1738, took the young Shah Abbasy, and declared himself emperor of the Persians and Tartars, and reduced the rival Agaies to obedience. After these exploits, he defeated the armies of the Great Mogul, whom he took prisoner, poisoned himself of Delhi the capital of Hindustan, put multitudes to the sword, and plundered the empire of its riches to the amount of eighty-four millions; five hundred thousand pounds sterling, and a great variety of other rich, and warlike foods. These immense treasures he deposited in his principality of Chasal, and put them under the care of twelve thousand Chagrians, who were placed by him made the Ulebek Tartars tributary to Persia. He quelled several insurrections in the year 1741, in 1743, the edict for attempting to murder him, he afterwards broke out in a fresh violation of the law, and gave himself to his father, who ordered his eyes to be put out. He executed the most shocking cruelties. In all his expeditions: in wars, and enemies, and the defeat of his foes, he never considered but the advantage of his barbarity: he demolished whole cities and towns, had walls tunnel provinces, plundered people of all ranks, and murdered families of the greatest nobility, and people of other countries. In 1744, he defeated and took prisoner a pretended Prince whom the Turks had set up against him; but, to the fortune of humanity, he did not give him to escape punishment, though he beheaded two hundred and eighty-two of his followers. He defeated the Turks in 1745, and in 1746 and 1747, was engaged in suppressing rebellions, and intestine combinations. After this time he was judged to be in a state of infancy; his actions being for the most part absurd and unaccountable; and though a gleam of humanity would at certain times appear for a moment, yet scurrilous and the most detestable cruelty generally marked his conduct. As this cruel and blood-thirsty tyrant seemed to outdo in barbarity the most illustrious human monsters of antiquity, he was at length become insupportable; and that on the second of July 1747, five of his principal officers after a most revolting chamber, but not before he struck off the head of one with his bare hand, and wounded another. The people were overjoyed on hearing of his death. A few days before his death, his grandson, and even his women, that none of such a detestable flock might be found to succeed him, and prove the scourge of mankind.

We have inferred this account for the general satisfaction of our readers, as many of the historical books published of late years tend to disappoint the expectations of the public, by describing this country with respect to its state before the time of Kouli Khan, omitting to give its true modern description, treating of cities that are merely ideal, and provinces that are at present totally deserted and uncultivated; of millions that have been destroyed, and magnificent fabrics demolished and laid in ruins. Since the above-mentioned tyrant ascended the throne, that unfortunate country has remained in the most desolate conditions; and whatever events have since happened, they have not come to hand; sufficiently authenticated for us to communicate to the public. But to proceed; after the murder of the Persian monarch, he has the lives and estates of his subjects entirely at his disposal: his orders are implicitly obeyed, he never of necessity, or given at times when he is not even a little: and, being of a mind that he says or does. Nothing can save the greatest subject, when he is determined to deprive him of his life or estate, neither real or figurative: if his heart be moved by pity, he says or does. In this description, he is a subject of the fact: the common people, who are at a distance from the court, have greatly the advantage of the quality in the H.
With respect to the succession of the crown of Persia, we must observe that it is in general executed upon these, that the male branches, but the female are excluded; but the son of a daughter may inherit, though his mother could not. What seems most extraordinary is, that the calf, when it exeutes it is not the youngest son, that is to be preferred, but the eldest. This is contrary to the laws of nature; for that if the son be commanded to remove his father's remains, or the fos, the son, it must be complied with. But if any thing is enjoined to be done in a place of their religion, they are not obligeable to obey, but are apt to refuse anything rather than violate the laws of God.

The King having commanded a prime minister in his person to do what he pleased, the ordered him, telling the King that he had been a prisoner in Mecca, and could not drink without violating the laws of their religion. This minister had gone in pilgrimage to Mecca, and yet drink wine; drink, therefore, when your Sovereign commands you. But this gentleman still refusing, the King abused him in the grossest manner, made the servants throw the wine in his face, and dews his bodr, and pour it into his mouth by force. Then he threatened him with immediate death, to which the minister was not afeared; the King, however, was afterwards tendered with abundance of honour, and the King seemed to value him the more ever afterwards for his resolution.

It is recorded by an historian of credit, that Shah Safi, without any provocation, ordered one of the greatest officers of the crown should have his ears cut off in his presence by his own son, which was immediately executed. Then the king commanded the son to cut off his father's nose, which he also executed. Whereupon the old gentleman, finding himself thus abused by his own son, and by order of the King, whom he had not offended, said to the cruel Prince, "What, Sir?" and, after this, I ought not to live any longer, cause me therefore to be put to death; which I had no great trouble in obtaining; but that it might not seem a favour to me, but to the cruelty of the order, by appointing his own son to be his immediate executioner, bidding him cut off his father's head, and he should have his whole estate, which was readily complied with by this unnatural partizan.

Another proof of the tyranny of the Persians governent, is, the cruelty of executing the Governors of provinces, and great officers of State, without giving them an opportunity of making their defence, or being informed of their faults; they are cruelywarded. It is usual for the King, two or three times in a year, to send every Governor the calcat, or Royal visit; and these are sent by such persons as are trusted by the King, or Minister to them, or Governor, to whom they are sent, always makes a considerable present to the messenger. When he comes within two or three leagues of the place where the Governor resides, the messenger sends him word to come and receive the calcat; but, instead of a fine coat, the Governor is sometimes prefen ted with a barber, and is dispatched without any further ceremony. This makes the Governors very wretched over their conduiit, and they are always under disfain appearances when they see the calcat is arrived, knowing how common it is to have their beards cut off independent to the Prince. The Persians say in defence of this practice, that the court fecdin proceeds with so much severity, but in the extraordinary cases, it is notorious, and there is danger of a rebellion, if they should cite the person accused to answer; that if he be otherwise, they always give an opportunity of seeing the charge. The King looks upon the court as he has purchased, and dooms them to be punished or put to death as he sees fit, not thinking himself obliged to observe those formalities.

There is no private council of State in Persia, as in the European kingdoms, but the King, as he is advised by the prime minister and great officers: that which most perplexes the minister, is, the calcat, which is an order of the King, by which, when he is pleased to be attended by the ministers, he directs the divisions that are formed here frequently throw their best laid schemes; and the ministers do not only run the risk of having their counsels rejected, but they often turn into their own destruction, if they are not favourable to the interest or inclination of the most favourite ladies.

Sect. XIX.

Giving an account of the pompous titles of the Persians monarchs, the arms of officers, &c., all of the princes of the blood, prime ministers, Barons of State, generals, civil magistrates, &c.

The usual title of the King of Persia is Shah, or Patha, the dispoter of kingdoms, which is the highest title known in Asia, and equivalent to that of Emperor in Europe.

One of their kings, in his letters, filled himself, ridiculous Lord of the world, the most valiant Prince descended from Chris, Sury, and Patha. He is profusely adorned, in his address, ballahm, the most renowned of all mankind, the source of power, majesty, and glory, equal to the sun, frusbe of heaven; object of all men's eyes, &c., &c.

With these words, he tells all his subjects, to the throne above: but when they speak to the King, they usually style him the Lieutenant of God, or the Prince by whom God dispenses his grace and favour to all mankind. The princes of the blood Royal are called Mursa, &c., signifying the son of a prince. The armies of the King of Persia are a line cohorted, looking at the sun as its chief honor.

The Persians, like the Romans, prefer all men indifference to polls in the state and army; the governmen sometimes command as generals, and holders fit as judges in the courts of justice, and the same person has been prime minister and high privy. Regard is seldom paid to a person's birth or fortune in his promotion, but the King dispenses the places as he apprehends his subjects qualified for them. They enjoy their post during life, and sometimes their children after them, where they have bided well.

The commission of a great man, intended to be invested in an office, is first, in a roll written upon a roll of paper, two or three feet long, in a fine large character, mixed with gold and colours, and put into a frame made of gold brocade, and still is found in the calcat, or calcat, and the King always gives to those he design to honour: The new officer immediately goes to court dressed in the royal habit, and, when the King appears in public, pronounces himself three times before him with his face to the ground, after which he rises up and takes his place in the presence chamber, or room of state, according to his rank. When a person is disgraced, it is done by finding with his commission, or the seal of his office, as the cafe is, and sometimes even by writing an order to his executor that his Majesty's pleasure is further known. If a great man is apprehended for any crime, they take all his family and near relations integrated, to confiscate their estates, if found guilty; otherwise, the owners have them restored.
The Amadaddut, Grand Vizir, or Vizir Azem, is the 6th officer in the pecking order of the viziers, who heads the prime minister in Persia, if he be thought fit to discharge it, is usually permitted to retire and end his days in peace with his family, unless, on the death of the prime minister, the Grand Vizir in Turkey fields a natural death.

The Divan Begi or Hji is the second post in the government, next in order to the chief vizier, and that of the Grand vizier, and is the seat of the Divan of all important matters to whom the administration of justice is committed.

The Generals are of the third rank: in time of war, a general is appointed. The next place is filled by the General of the crouches, which is a body of thirty thousand horse of Turkish or Tartar origin. The third place among the following is the General of the muleteers, a body which forms on horseback, but fight on foot, like our dragoons. The fourth is the General of the coutants, or royal slaves, as they are called, and the fifth, the Master of the horses.

The Vazdnsh, or Secretary of state, occupies the next post. This officer regiments the public acts, and has the care of the revenues; there are also a great many privy councilors, ministers, and secretaries of state, in this great officer. Every province has its particular Mirah, who takes care to distribute the waters of the rivers and squelches in such proportions as may be in Persia; and the Senate is in most cases filled by the King himself. The Governor of every town is the chief judge in criminal and civil cases too, if he pleases to interpose; and may order all offices or persons, even to any pains on offenders short of death. The usual punishment is a fine, which always goes to the King, or rather to the Governor of the province, generally brings the crown indebted to him in his accounts.

The Vizirs and receivers of the King's revenues usually obtain their places by virtue of the presents of the princes or favourites at court, and by engaging to increase the revenue of the province beyond what it has ever been before; and they generally keep their word, at least to their parents and friends that promoted them, and to the enriching themselves. Complaints indeed are frequently turned to court against them, but by the arts of the ministers concerned in the booby, it is a long time before they get access to the King. When the complaint is from a large country, there are usually several hundreds of the persons aggrieved come up with it to the palace-gate through which the King usually goes out, and there with lamentable cries, rending their clothes, and throwing their heads into the air, they demand justice. If they come to define an abatement of their rents or taxes on account of the drought or unfavorable weather, as they frequently do, they carry with them wounded breasts of the most distressing kind; as have their leaves devoured by locusts; whereupon the King lends to be informed of the occasion; and the people presenting their petition in writing, some great officer is appointed to examine their business.

Whenever his Majesty orders a Governor's head to be cut off, the order is dispatched by the Prime Minister under the King's seal, and sent by such a person as the King thinks fit. When the messenger arrives at the place, he goes to the house of the Lieutenant-Governor, or some other great officer, and there the King's order, and that the execution is appointed to be done in his presence: whereupon he takes his horse to the house of the person proscribed, and, producing his order, he falls upon the unfortunate man, and cuts him to pieces with his saber, crying out only with the foreword of his minister's command. Whenever a minister is disgraced, though the government do not proceed capriciously against him, yet his whole estate is taken away, and he experiences a most terrible reverse of fortune in a moment, being deprived of his goods, his flaves, and sometimes of his wives and children.

Notwithstanding places in the Persian court are to preference, and frequently hazardous, no people in the world enjoy a more perfect content and constancy, or a more favorable court morning and evening, although for the most part they cannot hope to come into the King's presence; because he is frequently for several days successively with the ladies in the harem.
...
there; namely, 1. The princesses who are born in the place, whom they call Regent, as they do the princesses of the family of the Kings of Persia. These women, with whom the King has any children, or who are his mistresses, have the title of Cossam, which is equivalent to that of Queen, and hold a certain rank, whom the King has never taken to his consorts, and many of whom he hardly knows, have the title of Kandahar ladies only. All of them have a common appellation of slaves, and are employed in servile offices, and are not even permitted to sit out as long as they live, except the mother of the succeeding Prince, who has the title of Chief lady in the harem, and almost five- 

A great variety of beauties are confined in the King of Persia's harem; for the Chants and Governors are continually sending in a forth supply of young virgins from all parts of the empire. If they have intelligence of a woman of singular beauty in any family, they immediately demand her; and if she is 'bad,' her parents are not very averse from parting with their daughters, but rather they have an opportunity of obliging their Princes; especially since they know that if he be used ill, they will be set free. And if they have their acquaintance of a woman, the title of the forth is carried to the King, and the young virgins are not long without being ordered to come and fetch her, the delight of the entire service of the palace. There are the daughters of the Governors of provinces; of the princes, the interests as they marry; but there are many more Georgians and Christian virgins of meaner birth, who generally capitulate the young mo- 

The unnatural and cruel practices in the harem are said to be very shocking. While the King is without children, every young boy that is fit to be killed, && he is in the habit of sending them to the palace. But when they are in his house, all who are present are to be killed, unless they profess that they have been to the court. And if they are not professed, they are all to be killed, and the same will be done when the next is in his house. Hence the ladies of the harem principal- 

The guards of the harem consist of three bodies; namely, the white eunuchs, who guard the outer gates; these never come within sight of the women, left it should excite some amorous inclinations in them. 2. The black eunuchs, who come from Africa, and are not employed in the apartments of the women. The third and interior ward, is that is called the guard of the baker, is very different. There are no eunuchs among them, and they are not employed in the apartments of the women. The women who are commanded by some antiquated matron that receives orders from the Prince himself, and, by the eunuchs which attend on her, has a certain rank in the guards without. The women of the harem are all lodged in separate chambers, or two in a chamber at most, and their situation is such, as to prevent their company, or proc-
hours. At its junction, it is defended on every side by seas, deltas, or lofty mountains, which render the passage of it extremely difficult, and with respect to their neighbours, they have none except the Turk, that they need have no apprehension of. The Tartars on the mainland, being divided into tribes of little different station, are jealous of one another, and usually take a place by underestimating it, at which they are amazingly dextrous. As they do not trouble themselves to observe the exact number of each other's forces, they often find their camp being supplied by the country-people with provisions, which chiefly consist of rice and fruit.

The Persians are a people, though they have an apprehension of an invasion, to cause all the people to withdraw from the frontiers, and destroy the country in such a manner that it may be found nothing to subsist on, not leaving so much as a blade of grass or a tree upon the ground.

The Persian colours are made of rich silk; for a device, they have some patches of the albatross, or part of their confection of faith; and sometimes a lion, with the sun rising over his back, wrought in them. The great standard-bearers, whom they call Alamdar Bafik, is one of their principal military officers. The pay of the soldiers does not pass through the officers hands; but every man receives it of the farmers of fresh lands as are appropriated to that purpose: the officers pay is very good, the General of the musketeers, and the General of the coulers, have each of them upwards of three thousand pounds a year. The Persians are excellent marksmen, as well with their fire-arms as with their bows and arrows.

They usually, in time of peace, keep a body of six or seven thousand men in Chaldea towards Babylon, to prevent the incursions of the roving Arabs. The Governor of Armenia has about five thousand men under his command, and he has a like number of regular troops. At Chorasan, the ancient Bagitis, they have usually eight thousand men, to defend the Uboka Tartars; and another number of troops to defend the frontier and their troops, being the out-guards of the empire, and almost in constant action, are esteemed pretty good: the rest of the soldiers and guards, who have enjoyed so long a peace, that they have not the air of soldiers.

Though the Persians have a sea-coast of three hundred leagues to the southward, and the Caspian sea on the north, they have notwithstanding no naval forces, or any ships or vessels whatever: they formerly built some vessels on the Caspian sea, to protect them against the Calkids; but they have none there or any where else at present. The Mulcovites generally transport the Persian merchandise in their own vessels to Alexandretta, and have the navigation of this sea pretty much to themselves, which has facilitated their conquests on that side; and it may be difficult for the Persians to remove them, if they fortify the coast, and can be constantly supplied and supported by sea from Mulcovy.

S E C T. XIII.

Of the revenues of the crown of Persia; the different kinds of lands; 4/5 of the lands belonging to the King, the church, private persons, and unoccupied lands, &c.

We shall, in the first place, consider the several tenures, by which the lands are held, and what king if possible, or prince or privy men, and are accounted free, being never taxed or confisicated. The latter part of the chapter. The vacant men are holders of the crown for the term of ninety-nine years, paying an inconsiderable annual rent; at the expiration of the period, they have no claim to the land, nor any number of years, on advancing one year's income. The unoccupied lands are let by the King's officers to persons who include to build a house of stone, or planted fields, on the same terms as those last mentioned. The King's officers exact a third part of the annual produce of the lands let to husbandmen; but the rent is sometimes increased, according to the number of years the possession lasts, or an abatement made when any great destruction is made by hail, drought, locusts, grasshoppers, or other in- 

fields; and, if any disputes arise, upon an appeal to the court, of
orders are given to make such allowance as the nature of the case requires. The King has like wise attended the case of the man who gave us a share of the fruit. He has also the seventh, and the seventh of the bread of the cattle in those lands which are not appropriated to the church. He has the surveyor; for the shepherds of Peria, like the ancient patriarchs, polled all flocks and herds, on which they continually attended. The King's officers are chiefly wealthy they hear, fanned from, when we have the word fanned, meaning, an inhabitant of the fields. The King has an officer called Ichombani, a chief of the shepherds, residing in the city, who is charged with the collection of the cattle for the King's use, viz. of sheep, cattle, goats and geese; the King is also intitled to every third cow; and to one-third part of the figs and cotton.

The King of Persia has the full property of mineral land, precious stones, and two per cent of all the money. The money raised by the wants is another considerable part of the revenue. A tribute of a dozen per head, is also paid to the crown by all people who are not of the religion of the country, whether natives or foreign visitors; and a tax of ten-pence is imposed on every shop of the working trades, and twenty-pence on the others.

As the Persians have no considerable port except Gombron, consequently their currants and porto-duries do not amount to much. The merchant men carried into or out of Persia, by land, pay only a small fine for a camel's load; and a vessel of any number, if they principally trade to India, the General Court, in one year, call all with their tribute.

The body of fish or pelton, to prevent the Governor from paying any further number. In these usually eight thousand, are annually sent around India; for the empire, being a great part of a country, they are not the air of three hundred, on the north, nor any ships on the south, and their veflons on the west; but they are taken from the sea.

The Mufta, the merchants in Ren territory, has facilitated navigation and has been useful for the coast, and can continue from Muftovry.

The different tenures of the several states.

The church, the several tenures, and the state. The lands. The lands of the king, of the state, of the state's dominion, of the Treasury, belonging to the greatest men, having that part, who pay the taxes; the ordinary tax, for the payments of the state, in the several provinces, depending on the crown, as the rent, the land's term, the duty of the crown's interest, the income from the lands, the interest of the crown, and what is due to the state.

Of the religion of the Persians.

MAHOMETANISM is the Persian religion, as explained and interpreted by Ilayy, the nephew and son-in-law of Mahomet, and on one of his successors in the empire, and, according to the interpretations of the sacred books, the forefathers and descendants of Isla in a right line.

The Persians and Turks differ as much about the interpretation of its tenets, as the Turks have no doctrine, nor the Persians, with which they can undertake, or they are so opposite to the other. The Persians hold, that the commentaries of Holy and Holy's successors the Imans, ought to be received, while the Turks adhere to those of Abu Bekker, Omar and Obis, and they are in many places and parts so absolutely opposite to the other. The Persians felt, or the followers of Holy, are called Chiis; and the Turks, by relying on Abu Bekker, going to a farther or less, or tree device for a device, of their convenience, the religious sects.

The Mahometans call their religion Islam, which signifies submission to the commands of God; but the ordinary appellation which they give themselves is that of Mussulman, which we pronounce Mussulman, and signifies the being of the number of the faithful. In the beginning of Mahometism, the disciples of that religion were more cruel and tyrannical than they are at this day, affording no quarter to those who did not make a profession of their faith in those words, namely, "There is no God but God, and Mahomet is his prophet."

They have two articles of faith, and five of practice.

1. There is no God but God, and Mahomet is his prophet.

2. That the light of the Sun is sent from God.

3. That they ought to observe their corporal purifications.

4. That they pray to God at the set hours of the day, and receive the blessing of God.

5. That they fast the entire month of Ramazan.

6. That they go in pilgrimage to the temple of Mecca, if they can.

7. That there are no other prophets, but Abraham, Moses, and Jesus, and the prophet, faith, v. 8. That Holy is the viceroy of God. On these eight heads, therefore, I shall collect what the Persians hold most matter of liberty.

The Persians hold, what good works are neither the cause nor the means of salvation; but that our good works are only a sign we are in an eternal state; and a mark of God's favour towards the performers of them. On the contrary, that wicked acts are a sign of eternal reprobation. They also maintain, that all fouls were created long before the world was made; and many of their doctors believe the metempsychosis, or transmigration of souls; especially in relation to the souls of the prophets, saints, and good men. The generality of them are of opinion that the creation was begun upon the first day of the week, as the Christians do, and that then God created the earth in the form we see it, with mountains and valleys. That the second day he created the trees, plants, flowers and herbage. On the third minerals, light and darkness. On Wednesday the rivers, cattle, fish and fowl. On Thursday the heavens, with the sun, moon, stars and angels. And that on Friday he created man, male and female.

They believe that both the good and evil angels were made of the substance of light, by God, that they are composed of soul and body, and that their animal bodies may be conde
densed as to become visible. That the first time the evil angels denied themselves, and the good angels fought with them and brought them captives to heaven, where God pardoned them: but God afterwards created man, and command
ing all the angels to worship his son, he then made a mighty pride, rebelled again; whereupon God cursed them, and precipitated them from heaven into that place which their despair and they are the most accursed.

As to what we call original sin, they will not allow it to be a sin in our first parents. They maintain that that sin was only a deviating from perfection, or leaving the better for that which was not so good; and they found their opinion upon that supposition, that the prophets were incapable and free from sin, being sanctified from their days on Gothen's womb, and they esteem Adam a prophet of the highest rank.

As to the day of judgment, they believe that there is a private judgment rendered by every individual spirit, and that every individual spirit is judged of, and that the world, the earth, and the air, will be destroyed, and that at the same time the souls of the faithful are filled with joy and comfort, while the wicked, on the contrary, suffer in the infernal regions, and are punished by fire and daily wrath, until their time does not pass, and they are to be brought to their place of rest in the other world.
The Periastics differ among themselves with respect to the beatific vision: the general opinion is, that God will not be visible, even to the happy, who will only behold a bright radiance or light, such as the imagination cannot at present conceive; but all their doctors hold, that there will be degrees of rewards and punishments, according as may be more exalted the heavens for the blest, according to the virtue they have attained to, some of their doctors make heaven for the blessed. Many of their doctors also take the presents and threatenings in the scriptures, relating to another life, in a spiritual and allegorical sense; and that the happiness of heaven consists in being employed about such objects as are proper for the soul, as in the knowledge of sciences, and in the sublime operations of the understanding; and after the death of the body, their pleasure is to be attributed to its nature, and receive as much satisfaction as it is capable of, but not by meat and drink, and sensual enjoyments, as in this life. They hold man to be a creature, sad sad for the loss of paradise; and that the body will be afflicted with the most violent pains. If you demand of them whether they do not think that the beatific vision will be more like the sleep of the English, they answer, because there must be some proportion between the power and objects of the one and the other: but between a finite created being and an infinite, consequently man cannot see God. If you ask them how they can suppose that in Paradise they shall be gathered together, so that immortality reigns, they should be taken up with corporeal things, which endure but for a time, and perish in the enjoyment: they believe, that their thoughts are not made to supply all necessities of nature, but for pleasure; and that all those pleasures we enjoy in this life, we shall enjoy in a much higher degree in heaven: for this world, they hold, is but a type of heaven, and all that we came from thence, although it be extremely degenerated from the original. If it be objected to them, that if we eat and drink in heaven we shall be subject to some necessaries which follow eating and drinking: they answer, that those necessaries must be taken in some other sense, and though it be generally said that the Mahometans women are excluded heaven, this is only to be understood of the women of this world, who will not be in the same heaven with the men, but in another place will enjoy equal pleasures: that there will be also other celestial women created for the faithful, for excelling any they have seen below. As to the duration of the world after the last day, the greatest part of the Periastic doctors hold that it will not be disolv'd, but changed and altered, so that afterwards be the habitation of blessed souls to all eternity. As to the prophet Mahomet he teach, that God sent him into the world unlearned and ignorant in every science, to be his Ambassador to all people, as well Arabians as the infidels, and to deist all the other religions, except in such places as have been established and ratified by his affairs. Thus this unlearned prophet, who was only a simple Jew, teaches what Mahomet it, that the prophet has made the belief and professions of all those things which the prophet taught and commanded necessary to salvation.

Notwithstanding the prophet's pretensions bred up in such ignorance that he did not know a letter; and this they prove from the history of his life, that he was a simple Jew, and not, indeed, learned or deformed, or subject to old age or infirmities, or troubled with extremities, &c. but, they say, that he was a deposit of the body of all his divinity and inspiration, and everything that is material, with what propriety can you call in the face body? After the last judgment, they hold, that all men must pass over a certain bridge, where they acknowledge that they vanish and the wicked will infallibly fall in their passage into hell, as the bottomless pit, as we call it, where they will be eternally preserved: but the faithful shall be guided and supported, that they shall pass through the bridge without as a bird flies through the air, and enter into heaven. Some believe that sins can be saved, but those who believe in Mahomet; others, that good men of every religion may be saved, and a third part allow salvation to all those who have been disciples of true prophets, as the Jews and Christians they acknowledge; others believe that all idolatiess shall be damned; and they say, that God will call to the last judgment in the midst in Mahomet, Mahomet, Holy, and the Imans, his lawful successors, and all other true prophets, who will every one intercede for their respective disciples thought to be the occasion they to touch heaven and abode there of our religion.

The third article of the Periastics is, that the Holy is in the Voice of the Prophets of God; and indeed they make him sometimes as more Mahometan beneficent, and make him almost equal with God.

The Periastics never speak with that detestation of any thing as they speak of the Turks, Omeyyans, and Ottomans: they were the rivals of Mahomet in power, and whom the Turks believe to have been the true successors of their prophet, but the Periastics hold them to be no better than heathens: however, the Turks do not equally abhor Haly, but acknowledge him to be the true successor of the prophet after the three; and frequently call him the four friends and companions.

The superstition of the bigoted part of the Periastics, respecting their prophet's being able to do with his own body what he willed, without corporal infirmities, as in this life, and to make a great number of persons in a cruel secret and dispose for the loss of paradise; and that the body will be afflicted with the most violent pains. If you demand of them whether they do not think that the beatific vision will be more like the sleep of the English, they answer, because there must be some proportion between the power and objects of the one and the other: but between a finite created being and an infinite, consequently man cannot see God. If you ask them how they can suppose that in Paradise they shall be gathered together, so that immortality reigns, they should be taken up with corporeal things, which endure but for a time, and perish in the enjoyment: they believe, that their thoughts are not made to supply all necessities of nature, but for pleasure; and that all those pleasures we enjoy in this life, we shall enjoy in a much higher degree in heaven: for this world, they hold, is but a type of heaven, and all that we came from thence, although it be extremely degenerated from the original. If it be objected to them, that if we eat and drink in heaven we shall be subject to some necessaries which follow eating and drinking: they answer, that those necessaries must be taken in some other sense, and though it be generally said that the Mahometan women are excluded heaven, this is only to be understood of the women of this world, who will not be in the same heaven with the men, but in another place will enjoy equal pleasures: that there will be also other celestial women created for the faithful, for excelling any they have seen below. As to the duration of the world after the last day, the greatest part of the Periastic doctors hold that it will not be dissolved, but changed and altered, so that afterwards be the habitation of blessed souls to all eternity. As to the prophet Mahomet he teach, that God sent him into the world unlearned and ignorant in every

When sent to transact Public Affairs with a Foreign State.
...animal but infidels, except what remains in the dith after it is drenched for food; the fenmen cossins of any animals; a dog and a hog are reckoned impure creatures, and all infidels; though many of the Persians except Jews and Christia-
nians, do not look on their touch as impure, because they allow their religions to be of divine intuition: meal and beer are also reckoned impure, because intoxicat-
ing under such circumstances is not licit, is atheismetical purg, though it intoxicate not less than wine. And, bify, the touch of these animals, as well as a descent of corporal, is but wishing, it feeds, will purify things innaminate that have been polluted, as if a dog have drunk out of a vessel, or licked a dish, if it be secured first with hand, and washed afterwards with water, it becoms clean again; but some of their doctors have such an aversion to a hog, that they say, though they drink out of a dish, and their hands, if blood or urine happen to be spilled on any clothes or furniture, they must be well washed and washed, at least the pieces foiled, before they can be used; the eating out of gold and silver plate, is laid to defile the meat, but if the meat be taken out of a gold plate and put into a chisel dish it is not an unclean. And notwithstanding gold and silver utensils are prohibited, the King and court and other grandees of the kingdom use them frequently, which their doctors tell they are not profane by their sins; but that in most countries seem to set as if they were superior both to the reli-
gions and laws of the kingdom where they live.

The officers in ec. declare the times of prayer from a terrace, and not from the tops of high towers or steeples, as other Mahometans do. On common days there is not more than one or two applied to their prayer, but upon feasts and festivals there are sometimes ten or a dozen of them, partic-
icularly on Fridays, their sabbath, and in Lentin; and it is in these instances, that their voices are heard, and they rend their throats with all their might. When the people hear these cries call to prayer, every one rises up and goes to his prayer, not to the mosque or temple, for they are not called thistle, but in their houses, or wherever they think fit; however, there are eight things laid to be requisite in prayer, viz. that the prayer be performed with entire and unmitigated sincerity, with an attentive mind or attention, the affection of the heart, faith, modesty, reverence, hope, and two outward qualifications, viz. purity of body, and of the night and day it is performed. In the immediate presence of the pray-
er, their motions to rear are such as to mask the face, so that none can spy on it; but the prayers are divided into two kinds, 1. Thse which they are indispens-
ably obliged to offer up, and, 3. Those which are advisable or expedient, in order to arrive at a degree of perfection, which are termed by some prayers of supereroga-
tion; however, there are not different forms, but only a repetition of the other. Every man is obliged to pray five times a day, reckoning from twelve at noon to twelve the next day; for the Mahometans begin their day at noon, as well as the Persians, the first of the day, and last of the prayer is exact in much this manner: the first prayer is held at the time the sun is in the meridian; the second is in the evening, viz. from the time the sun is forty-five degrees above the horizon, half an hour before it sets. The third, when it is dark one cannot distinguish colours. The fourth prayer is to be made on lying down to sleep, for which there is no limit; and the fifth is to Mecca, in the morning, which may be performed at any time between the disapparition of the stars and noon.

Though the Persians are not at this time ignorant of the nature of eclipses, yet they fill them and use certain prayers at such times, as they fill thought they porten-
ded some dreadful calamity, or at least that it is a mark of God's displeasure, to be deprived of the light of the sun or moon. They pray every man for himself, either in the temple or a private place, as they please; maintaining, that if no prophet ought to read the alcoran or prayers in the temple to the congregation, but an Imam (a priest or prophec.) for one who is personally defect from him. They look upon it in general as an afl of piety to commemorate their deceased friends at certain times, and some of them are of opinion that the moon will increase the happiness, and bless the misery of departed souls, at the impertinency of their surviving friends, but they are not all agreed as to this mode; they do not pray for their souls, or even to Haly or Mahomet, as mediators to intercede for them, but believe they may receive some advantage from the prayers of holy men on earth, and that their own afl-
dions may be supped by others.

The Per-rians lay out their aims chiefly in public buildings, as upon caravansers, or honours of entertainment for their in great towns, and on the road, where they are laid out.

lodged gratis; in making bridges, canals, or the rec-
rectatives of water, moques, colleges, and bazaars; but they have no hospitalls for the sick, as in E-

The devotees and sepulchers in hometan, are a kind of begging friars, who extort the people from them almost by force, looking upon themselves to have had great birtit, and in many respects superior ones; whether they demand an alms of them, they live in each large com-
pay, that it is hardly safe for people in villages to dawry with them, and they are such rascals to beg so by tribute, than to live on charity. To alms which are a-
skettled by their religion are a kind of tythes of corn, cattle, money, merchandises, &c. though they do not ma-
ry, but near to a farthing, and are only taken of the next profits after all the rent and charges deducted; and there are not given to the priests, but applied to other uses, as the endowment, and what they get by the education of children; but they collect the tythes and have the distribution of them.

The tythes are applied to the maintenance of the Ma-

hometan sepulchers, or begging friars, to the redeeming faves, hardly used by their followers, for the relief of orphans, del-
ters, and for the relief of strangers who happen to be in direst in their country. The ref are employed in pub-
lic buildings, inending mosques, conversaries, and other foci, as the quantity of seven or eight pounds of rice, or other grain, or frouts, annually paid for every head, the day after their great festival, or Mahometan, which is in the infance of a day's wages and necessaries, and the small rable wine, like the other, from whence they have re-
cived the same denomination of alms; the cire the upon the globe of the sun, and they are exprest to be a

ž

in a fifth or double tythe is paid for the above pur-
pupose.

The Perian religion does not express command any other faith than that for the month of Ramazan, unless upon some extraordinary occasion, as by way of penance, or to avert any calamity, or the like; but the disciples of this religion, are advised to perform many other acts, which their raxts do not fail to carry with; the worst Ramazan to the great tythes of the year, and their Lent is so called, because the fast is observed from the beginning to the end of it; when this moon first appears which is usually in the evening of the first day after the new moon, it is proclaimed by the holy criers in great numbers, the terraces of the mosques, which publish it as a new furprising piece of news, and find certain hymns and occasion; the people answer in joyful crier, and illuminate the freest, and from the terraces of the begins the holst, and is found to be a severe, further be-

gin their fasts, as all other acts of devotion, with wishing and purifying themselves, which is ordinarily done at the fast; the criers give notice of the breaking moon from the mosques, the people tellify their holy lay by the holy lay of the mosques, the found of musical instru-
ments, and the like.

The disciples of the Perian religion are required to make a pilgrimage to Mecca, and the first to the Alhbit, or the town in Arabia where their faith prophes Mahomet was born; the principle end of the pilgrimage to Mecca is to visit the kahbe or chapel of the patriarch Abraham, and perform certain acts of devotion, in the courts that sur-
rround it, and not on account of Mecca being the birth-
place of Mahomet, must seize his tombs is them, for that is at Medina, above two hundred miles to the north of Mecca. The principal thing the pilgrims perform, when they come to the town, are to visit a man a man, the going in procession from time to time from Abraham's chapel; the kifing a black stone that, or which more reherefore; the finding a certain portion of time at mount Arafl; the sacrifing a sheep upon mount Mehar in reme-
embrance of Abraham's going to sacrifce his son the drinking of the water of the well Zunnar; the making feen turns between the little hills of Safa and Merva and the throwing stones over their heads in the valley of Me-
rah, which all, is said, they do in imitation of the pa-
triarch Abraham, and which God has enjoined them as an indevolent duty, particularly that of the sacrifice.

The way the pilgrim go at present is by Barbra or Beava, passing over the bottom of the Perian galleys; and they were forced to pass a thousand hills in this pal-
tion or other, and they had the last mercy on them on account of their long sentences; whereas the court of Persia for forty years had set the pilgrims to go by land to Mecca, and this thought to Ango into the Red Sea, as the pilgrims of India, whereas the Arabian princes finding their revenues much lessened, sent Arabi to Persia and the Persians employed to afford them all sorts of assistance, and the pilgrims might have a free passage without these exorbitant expectations.

The Persians who have not been in pilgrimage to Mecca, are in person or by proxy, the Cali or Civil Magistrates, presided on so much of his fortune, as the shaving of a whole or half of his hair, that the Muhammedans, living in a country where tents are, do as they do in the tents of the Arabs, where they have all necessary provisions brought them by the natives.

The pilgrims, leaving their tents, pitch their tents as they go along, and so on the day appointed for performing the day of the purification, it is to be, on the first day of the month Zhul, which is the day of the presentation, in a great basin of water, which they use to purify their clothes in, and the Persian governors are, who do not go with their families, but as they are in the image, that they are not dead to the world, having no regard to their ornaments, or relish for any thing but heavenly things.

Their principal religious festivals are, that in commemoration of Abraham, and that of the martyrdom of the two Imams, Holkin and Hafikin. This latter festival is celebrated in memory of the patriarch Hesekiel, who having been transported to a desert, re- treated with his broken troops into a desert near Babylon, called Kerbele, where, having been pursued fourteen days, he fell at last, and was surrounded, and he and his servants were killed, having first received several wounds. It continues the first ten days of the month Muharram, during which time the Persians are wont to fast, and the new moon is established, founded at the usual hour, and those who observe it strictly, neither have their head or face, or go to the bag, nor any other refreshment, as in a time of public mourning; you will see from morning till night, in all the streets, parties of the mob, face almost linked, others clasped together, and the、

The Armenians, who have been afflicted with the defect, to a degree, it is said, that he became black, and his tongue hung out of his mouth. During this festival, the Persians are especially charitable; they look upon it as a crime to refuse a poor man an alms at this time. Before the houses of the great men, and the great officers, and offices, there are many faghts, as their great Holkine did, and the King every day entertains at least a thousand people, which they do in the country, and for the abundance of the abundance and pleasantness of these festivities the Persians are, who have been in the country, to make a pilgrimage to the Arme- nean church and the Pope for their head, and in consequence, they have been in the country, after the death of their master, the Armenians of Julfa are not only for the Armenians, but they are against the Mahometans, then they are against the Colofhian mini-

The New and Universal System of Geography.
it, he is that up in the church for five days, before, and five days after, and suffered to eat nothing but rice and honey. They are then eated all the good eggs, and every kind of fruit, and the poor men and fa- mily. They receive their orders from the hands of the bishopp, and may be ordained at eighteen years of age. Both men and women have the order, and every one half of the year is spent in fasting, when they abstain from all manner of flesh and fish; and so fasten for every year, till their faith is fixed, but once for fish or fift for more than four days in the year. At the communion, they give the bread dipped in the wine to all the congregation; when the priest, with the bread and chrism in his hand, three times and more, saying and repeating it after him, "I confess, I believe this is the body and blood of God, of which we take the eflain of the world, and who is not to obtain, but the fabrica- tion of the world." Before their four great festivals, the Annunciation of the Virgin, Easter-day, and the feast of St. George, they fast eight days without tasting flesh, fish, eggs, butter or oil; and their devotion is so great for their nation, St. George, that none of them, it is said, will fast three or four days successively before the festival, without eating anything. They fast also every Wednesday and Friday in the year, except Easter and Ascension-day. When a child is baptized, the priest planges it three times to the ground, and they are nearly seven days for the same words on the occasion as are here; he also unites the infant with their holy oil, first on the head, then on the breast, neck, hands, and feet. This anointing is held necessary as the baptism of water, or rather of baptism itself: for on the anointing the form is given, and on this account as they repeat the words, "I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost." This oil is made of several sweet flowers and aromatic drugs, by one priest, and brought to the priest's ordination; and in the own and others, are sufficiently. They then take a Fe- stival usually in the presence of their relatives and friends. If the high-priest of his clergy, and the conjugate archbishops or prelates in their veneration, which is called thousand prophet Zoro- asters, and again in their veneration to the day and fashion as the government of the the Persians or Christians was ancient. The At- hens, as both from their parliament of archbishops and bishops in the time, and their prevailing law, so are against the Persians, and as great and as old as. As in all nations, the Armenians have the same in the Armenia, as in Persia; and so prevail. They are not against the Armenians, who are as firmly in their family to prevent their being carried into the hands of the great men, for either the Persians are so just that they will not allow any, either as communicants; or, so are married, with a woman who has been, in the perfect- ness of another; but, though the parties are frequently at four or five years of age, but their marriage is so calculated, that they are right in ten. Some days after the wedding, the portion stipulated to be given with the bride, is last to the husband's house, consisting of five clothes, gold, silver, and jewels, according to the quality of the person and marriage, with some fruits, which are all carried in fine boxes and cabinets, attended by such music as the country affords, found highest for the first child, when a rich estate is provided, and all other necessaries proper for a new-born infant. When an Armenian child is born, the whole office it is, washes the body with consecrated water taken out of the church, and puts on the corps a new white flit, and other linen. Then having sewed it up in a white cloth bag, it is carried to the church of a bear, without a coffin attended by the priests and relations, with lighted tapers in their hands; and having placed it before the altar, a pointed stone is deposited upon it, and then they have the body in the church with the candles burning about it all night. In the morning after mass is said, it is carried to the archbishop or bishop's vault, or says a prayer for the repose of the deceased soul; after which it is carried to the praying-place, the bishop and priests singing their prayers till it is laid in the grave; then the bishop holding up a handful of earth, throws it on the corps, saying three times, "From earth thou camest, and to earth thou shalt return; remain there till the coming of our Lord." Then they fill up the grave, and the relations and friends return to the house of the deceased, where they find a good dinner, and are greatly entertained. On the fourth day they return to their own country of Georgia (the antique Iveria) which is the most northerly part of the Persian empire: as for the Persians, the only Persians, is the name of the general name of Armenians, and communica with them, but of the Greek and Georgian churches I shall speak more largely hereafter. I come into Turkey. There is still another people in Persia, who go under the name of Christians, whose religion forms a compound of Christianity, Judaism, and Mahometism; they are called Christians of St. George, and sometimes Armenians, and inhabit near the gulph of Perza, in the province of Chichiristan, where it is computed there are not less than twenty thousand people of this nation. St. George is their great saint, from whom they pretend to derive their original, and they have a tradition that his sepulchre is at Chadder, the Tyree of Tyre. They do not acknowledge Christ to be the Son of God, but esteem him to be a prophet, as the Mahometans do; and the rea- son they are tiged in the Catholic, and to follow their own great profession the cross, which they reverence even to idolatry. The Persians hold that circumcision is not absolutely necessary; but however they do not omit it, if there be an opportunity of performing it according to their rites. The Persian mosques or temples are never consecrated; but when they are built, the people are invited to perform their devotions there, which is all the ceremony used; but as their religion does not oblige them to pray in temples, the great men seldom come thither; and their prayers are usualy frequent in the public and places of resort, as in their mosques; the common people, however, come very seldom to perform their devotions in their temples, except at Frigdays, their fasts, and upon the great festivals when there is usually a sermon, or a good moral discourse delivered by some mollah; but the people are not very attentive to their preachers, for some will be reading, others sleeping, and perhaps others smoking or eating in man. me time, every one does what he pleases so as he does not disturb the preacher; their mosques are never consecrated, but take up the office of preachers; and lay it down again as they believe. But the Persians, after the death of the king, begin with clothes themselves in a plain mode, gray, a white turban, and a kind of cape of crimson reaching down to their shoes, and sometimes the silk, and obtain the title of tartish, or fancheers after knowledge; they also live abstemiously, and put on a grave phislistical look; afterwards they go in pilgrimage to Jerusalem, to the tomb of their Lord, if they can, and are sufficient to charge the expenses, and at their return get themselves registered in the Seres's books, in order to obtain it to the moment when they are very covetous of con- stituted. They are the most advanced in the worship of nature, and they are advanced the highest in their worship of their deities, as their religion is very

The New and Universal System of Geography.

The Perfians are allowed four legal wives, with whom they enter formal contracts before the civil magistrate; but they have seldom more than one; for the rest of the women, who wait upon her, have in like manner the honour of her mother's bed, and their issue is equally legitimate; so that there is no such thing as a bastard in Peria, those born before and those after marriage having the same rank; nor is any disapprobation for a slave to be born of a concubine, or even of a black slave, in regard to his inheritance.

Love is the chief motive for entering into a contract with a lawful wife, as she is called, especially among the great, nor does the expekt much of it, but it is the number of slaves, the clothes, the equipage, and the figure the man makes in the world, which are great inducements for the woman, or her friends, to match into any family.

The Athenians marry their children in their infancy, when they meet with an advantage; match; this they do for a political reason, left their daughters should be sent to the harem; but the parties do not cohabite till they arrive at a suitable age.

The Persian marriages are attended with the following ceremonies. When both the parties have given their consent, and the terms settled by the mediation of friends, proof thereof is made before the Cadi or civil magistrate, who swears the same to be regular; but as far as I can find, the parties themselves do not take part in the ceremony before him, nor do they attend to the temple to solemnise the marriage, as with us; but the bridegroom the day before he takes home his bride, sends her a habit, ornaments and jewels suitable to her quality; and the next day towards the evening, mounting on horseback, with the richest furniture he can procure, and attended by his friends, the music and dancing girls, he goes to her father's house, who meets him part of the way mounted afoe on a camel or horse; but so valued, that her face cannot be seen; she is also attended by her brothers and sisters, and a guard of their gendarmes, with her slaves, clothes and baggage; both companies being joined to the husband's house, with lighted torches,
The palace antiently called the house of Darius, which still remains the residence of the Persian monarchs, is called, by the modern inhabitants of the place, Chitragar, or the palace of Forty Pillars. It is situated at the foot of a mountain called the birthday mountain, or the holy mountain. It extends three thousand feet from north to south, and one thousand, nine hundred, and ninety-five feet to the mountain itself. But having given a large account of this celebrated edifice, must genera" the No. 4.
Chapter II

The New History and Description of the Empire of China.

Section I

Treatise of the principal towns, palaces, temples, cities, and number of people in China.

The Chinese towns are usually built in one form, that is figures, where the ground will admit of it; and the principal gates open towards the four cardinal points, east, west, north, and south, and spacious streets, crossing each other, run the whole length of the town. We shall here mention the chief towns of every province, and give a particular description of some which have been thought best deserving the notice of travellers.

Nineteen is the capital of the provinces of the same name. Peking is the capital of Cofern, and Chin-yen of Luen-tang. These are situated without the wall.

The capital of the province of Peking, and of the whole empire, is the same name. It is situated in one hundred and eleven degrees of eastern longitude (making London the first meridian) and in forty degrees of north latitude. It stands in a fruitful plain, not far south of the great wall. The town consists of two cities joined together, one called the Tartar city, and the other the Chinese city; for when the Tartars conquered this country, about one hundred and fifty years ago, they drove out the Chinese, but gave them leave to build another city contiguous to the old town, which was then nearly in the form of a square, but since the additions of the other, has assumed an irregular figure. These towns are twenty miles in circumference, besides the suburbs: the whole contains two millions of people. The emperor's palace, gardens, and residence, is near four miles round, and stands in the middle of the Tartar city.

Peking is surrounded with a wall and ditch; the principal streets are one hundred and twenty feet broad, and three miles in length. Every tradesman sets up a board before his shop painted and gilded, on which are written the names of the goods he sells; and, being adorned with colours and streamers on the top, make a very gay appearance. The walls of the Tartar or royal city are above four feet thick, and perfect to cover the town. Collecting the houses are very low, being built no higher than the ground floor,
Boor, because Pe-k'ing has suffered much by earthquakes, which are frequent here.

The entrance of this city are still higher than the walls, and have a sort of equal height built before them; the arch of each gate is built with marble, but the walls are of brick; the roof is covered with glazed flying tiles, which look like gold. It is surrounded by white marble streets; the rooms, adorned with carvings and paintings, make a very great appearance. In the houses of those who employ them, and are perpetually looking out for business. The magistrates also have their gates when they appear above and all the doors of diffusion of numerous attendance, which makes the town appear still more populous and thronged.

The emperor's palace is three miles in circumference; and consists of nine vast courts, in the farther of which he resides. This apartment is supported by large marble pillars, the roof covered with glazed flying tiles, which look like gold. It is surrounded by white marble streets; the rooms, adorned with carvings and paintings, make a very great appearance. In the houses of those who employ them, and are perpetually looking out for business. The magistrates also have their gates when they appear above and all the doors of diffusion of numerous attendance, which makes the town appear still more populous and thronged.

The chief mandarins have very magnificent palaces, which take up a great extent of ground, as they have but one floor; they consist of several open courts, in which the boys are educated, not confined in private apartments, so that they have no windows towards the street; and will not suffer their neighbours to have any, that can look upon them. An able seaman, or a foreigner, is always a guest here, to prevent a stranger's looking into the furniture of their houses; couches, pictures, Japan cabinets, chairs, tables, and various ornaments. Their beds are extending fine. In some cases their curtains are fine, finely woven, or the finest guns to defend them against the gua; in winter their curtains are of thick-coats silk, and their counterspa of damask. They are no feather-beds, but lie upon quilts or mattresses.

This great city is guarded both day and night by footsoldiers, who parade the streets with their swords; they also carry whips in their hands, with which they lash without distinction all persons concerned in any riot or outrage. To the absolute power of public tranquillity there is, besides, in this city, a garrison of fifty thousand men, to preserve good order, and prevent irruptions. No clubs, balls, or other crowds meetings are permitted here. In every principal street they fixed the five watchers of the night on a drum of an extraordinary size, or rifle on a large bell, informing the city. And to prevent, if possible, the great bell of Moskow. This great bell of Pe-k'ing was cast near four hundred years ago, and weighs twenty thousand pounds; but it has been broken by a large bull, having only wooden choppers. A watch consists of two hours.

Nan-k'ing, the capital of the province of that name, and hence the seat of government, is the fourth city of the Celestial Empire as Pe-k'ing is the north, Pekin in one hundred and eighteen degrees of eastern longitude, and thirty-two degrees of latitude. It is still more populous than Pe-k'ing, standing on the river Kiam, which is here three miles broad, and forms a very commodious port. Here silk, and all other Chinese manufactures, may be purchased at the best price. Besides the river, there are abundance of navigable canals, which bring the merchandise of every province thither.

Beneath the gates of this, and almost every great town, are two magnificent towers erected, and near them a pagod, or idol temple, dedicated to the genius, or guardian angel of the place. In the palace belonging to the honour of each great man as have been erected ornaments to their country. Temples also are erected to the memory of Confucius, the philosopher, and other benefactors. The grandest of all the Chinese buildings, is the porcelain tower, which stands before one of the gates of Nan-k'ing, being a figure two hundred feet high, of an octagonal figure, containing nine stories, each story benches in, and decreasing in breadth, as it increases in height, forming a kind of pyramid, it is faced with porcelain, or china-ware, from whence it has its name; above the eighth story is a cupola, which rides thirty feet higher than the tower, with a glided ball over it; this tower has stood upwards of three hundred years, and is esteemed the most elegant building in the east. Near this city is the most famous temple of Tung-shi, in which are ten thousand images.

The capital of Quan-tong is Canton, situated in the south of China, near the mouth of the river Ta, and is the most renowned and the most popularly visited by foreign merchants of any part of China. It is almost the only town on the European trade roads at present, and consequently is immensely rich; it is said to exceed all the cities of Asia in the number of poodles or other light let, and other tradesmen, that it is not fewer than thirteen magnificent triumphal arches. The streets are paved, but narrow; the streets make a fine show; and their trade is such, that almost stand in the same quarter of the town. Their windows, in summer, are of glass, to let the air through; but in winter, of glass-yellows; and still till they are transparent, which however gives but a feeble light. They have charcoal fires in the middle of their rooms in winter. The walls of their rooms, instead of hanging paper covered with thin sheets of paper. There is a market held almost in every street, for all manner of provisions. Frogs are esteemed the most delicious bit, and bear a much greater price than any other meat, though they are of a blackish hue. Viper broth was in reputation here long before it was in London. Here is the remarkable water-castle, which is so much admired by travellers. We may here remark, respecting the diet and dress of the people of this empire, that the Tartar and Chinese, by their intermarriages, have become in a great degree similar to the same people; they are not to be distinguished either by their figure or features, any more than by their habits, in which the government requires both nations to be uniform.

The town of Macao is situated on a small island at the mouth of the river Ta, or Pescadores. The Portuguese, by the possession of the island in their first voyage to China, and had a vall trade here; but were at length forced to submit to the dominion of the Chinese, who are permitted to govern their own people by the laws and commonwealth of Portugal. The Romish missionaries, when they are proselyted and driven out of China, usually retire to this place.

Fu-chew is the capital of the province of Fo-jen.

Amer, or Emoow, is a port-town in the province of Kwe-fo. The island of Formose, the English, had a factory here; but were obliged, by the unfair dealings of the Chinese, to discontinue their voyages thither.

Nampo, which is another large city in the province of Chck-yang, has a commodious harbour, and a very great foreign trade, especially with Japan, from which it is distant but two days sail.

Nan-yang is a city on the river Kiam. Tong-chew, a city one hundred and eighty miles north-west of Canton. Kiam, Hw-kew-kian, city on the river Kiam. Shang-chow, a city one hundred miles north of Canton.

The town of Chulan is situated on an island near the mouth of Che-k'iang river, and inhabited by the English, where the English have had a factory, but not finding the advantage in trade they expected, retired to Canton, which, as we have before observed, having only the advantage of the English.

The chief towns of the several provinces are Ts'un-yan, capital of the province of Shao-fu. Sin-gw, capital of Shen-fu. Kiew, capital of Hang-chow. Che-kyang, capital of Hang-chow; Nan-chang; capital of Kwe-fo. Na-shang-fu, capital of Chck-yang; Nan-chang; capital of Yang-fu. Vao-chang, on the river Kiam, capital of Hu-fu. Quo-chow, capital of Canton; Quo-chow, capital of Quo-chew; Yun-nan, capital of Yun-nan; Quo-chew, capital of Quo-fu. In the whole, it is computed, there are one hundred and fifty capital cities; one thousand three hundred and twelve of the second class; two thousand three hundred and fifty-seven fortified towns; ten millions of families, and upwards of fifty millions of people. Some compute there are fifty-eight millions of people in China, which, it is said, may be easily known by the poet, every man being obliged to hang a little table over his door, belonging to the number of people he has in his house, the truth of which is from time to time examined by an officer appointed for that purpose.

S E C T. III.
Of the genius, habits, and virtues of the people of China.

The Chinese men are not very handsome in their persons; their stature is slightly below their countrymen, and their short arms and legs, with their hands and feet, are not calculated to make them tall; but in the number of years, and is esteemed the most elegant building in the east. Near this city is the most famous temple of Tung-shi, in which are ten thousand images.

The capital of Quan-tong is Canton, situated in the south of China, near the mouth of the river Ta, and is the most renowned and the most popularly visited by foreign merchants of any part of China.
northern provinces, both their stature and complexion are much mended. They have flat broad faces, black hair, little dark eyes, short noses, and thin lips. You may see them desert, pulling such hazards as the wind throws them off with to jaws, instead of having, reserving only whiskers and some long hairs on the bottom of their chins. The nail on the little finger of their left hand is usually fullered to grow a great length beyond the finger, and fringed and polished with abundance of care; by people of condition, this being looked upon as one of distinguishing marks of a gentleman in this part of the world.

The Chinese were mighty proud of the hair of their heads, and used to lay it up as our women do in a roll; but the Tartar sovereigns have compelled them to shave their heads, leaving only one lock on the middle of the crown, which they wear a cap shaped like a ball, which does not come low at their ears, and therefore they carry a fan in their hands to screen them from the sun. The Chinese who left their country, the Tartar conquerd, and fled to the neighboring islands, still wear their hair.

The men wear a velf, with full long sleeves, which come down to their fingers ends. Over the velf they wear a loose coat, thicker than the velf, with short sleeves; and when they ride, or receive company, they have boots made of good strong leather, when they ride out. At their girdles, they hang their pouch of tobacco, their pipe which itself, their handkerchief and the little chop-flicks they eat with, and their knife, for they have no other pocket. In winter people of distinction wear rich fur or silk boots, as other men on their campaign, or broad swords, are worn on the left thigh with the point bending forward.

Officers of state and magistrates, have some animal embroidered on their cloaths, either in gold or silver, which expresses the nature and dignity of their respective offices. The military men chase lions, dragons, or tyrants, and the civil magistrates, birds; which may be improperly figured on their arms, as they distinguish the several degrees of honor they are bound to, though their are different when they are at rest; places not being hereditary in China.

The women, who are kept at home and not exposed to the world, are fair enough; and, except that they have little eyes and short noses, may vie with our European beauties. Their features are in other respects tolerably engaging. Their principal beauty is thought to lie in their little feet. As soon as a girl is born, her feet are bound up so hard, that they cannot grow to their natural size; which makes them walk a little awkwardly, the foot of a grown woman not being bigger than that of a child of three years of age. They wear embroidered silk shoes, in shape much like our women's, except that they are turned up at the toes, and that the heels are round and of an equal size from top to bottom: these they make themselves, and are very proud of, as they are sewed when they have an opportunity.

The ladies usually dress in their hair, part of which is made up in a roll, and fastened with a bodkin; the rest is drawn up somewhat, and set upon the forehead. In the northern provinces they wear a sort of cashmere silk over their hair; and in cold weather, in Pe-king, they wear a coat of black, or black hood, about it. They wear, as the men do, a long vest of linen, red, blue, or green; the elder women chine black or purple; over this, they have a hoop gown with wide sleeves, so long, that they reach to their knees, and held up.

The Chinese youth, being bred up under a strict discipline, and taught to pay the profoundest reverence to their parents, never offend them, nor slight their commands. They neither laugh, nor make any jest, of which they suspicion, or at least, hint means to conceal them. When they have an interview to manage, no people know better how to insinuate themselves into the good opinion of those they deal with, or improve an opportunity when it occurs; nor will they hazard their lives in the least taking, when they have any sin in view. Throughs of people are perpetually in motion upon their rivers, on their roads, and upon the sand; trade and commerce seem to be the soul of that people, and the spring of all their actions; nor do they meddle merely on those they deal with, of which many of them are so far from being ashamed, that they will laugh at the man they have bribed. A foreigner goes in great danger of being cheated if he trusts to his own judgment, and he employs a Chinese factor, as it usual, both factor and merchant will sometimes combine together to deceive the stranger.

They continually apply themselves to discover the inclinations, humours and temper of those they have any comments with; and keep up a fair correspondence even with their greatest enemies. However, there do not want instances of fair dealing, and open generous usage, and a fidelity not to be corrupted.

There are no deaths amongst them; all their revenge is secretly managed, and they can not only diffuse their malice, but from patient even to insensibility, till they have a favourable opportunity to strike home. Their great men are engaged in a perpetual pursuit of places and great posts, and carry on their desirs by bribes and presents, yet it is in other cases, as they are compelled to their duties, and refer all to the merit of the candidate, the most subtle and designing amongst them ever put on the greatest appearance of honesty; but however, it seems to the Chinese may exceed in cunning, it is observed, that their courage is not extraordinary.

SECTION IV.

Of the diet, liquors, ceremonies at table, feates, visits, &c. of the Chinese.

The Chinese are far from being nice or periphrastic in their diet, they do not only eat all kinds of flesh, fish and fowl as the Europeans do, but horses flesh is in great esteem among them; nor are dogs, cats, snakes, frogs, or scarce any feet of vermin refused; but rice, roots, pulses and garden-flower are the common food. Broth and soups they have also made either of flesh or fish, which they mix with their rice. Salt and pepper are never brought to table, the meat being seasoned in the dreifling. They eat their flesh boiled, fried, and broiled; but it is cut into little square pieces like dice before it comes to table. They use neither clothe, napkins, knives, spoons or forks; but two little round forked chop sticks, being wooden, sometimes tipped with silver at the ends, with which they take up their meat very dexterously; and for their rice and soups, both they use in it and lade it in with their little sticks. They use high chairs and tables, contrary to all the people of the east besides, who sit cross legged upon the floor. Every palate almost has a little receptacle table to himself at entertainment, on which is set meat and rice in little china dishes of fauer or saucers, and sometimes their dishes are of silver.

Their principal drink is tea; they legibn, if ever, drink cold water; possibly their water is not wholesome till it is boiled, and letted, for it is very foul, especially that of all the rivers, which carries with it a blue or yellow slime; and the original cause of their drinking tea probably was to refine the water, and make it more palatable. They have strong liquors also, particularly hock, which is brown beer made of wheat, and familiar, as they call all spirits, but have no wine, though the country abounds in grapes.

They are exceedingly ceremonious at entertainments; every one handles his little chop-flicks, and carries the other to his mouth, and drinks by degrees. They drink alao all at once; taking the cup in both hands, they first carry it as high as their heads, and then drink, without speaking a word. There stands a man to keep time, that one may not eat or drink before another. To begin first, or make another wait, is reckoned excessively rude. When a fresh dish appears, they bow in their little chopsticks again, and when they do not like the liquor, they are pleased to make the same gesture, in which they sip a little, but no man drinks more than he cares for, if he makes the motion it is sufficient.
CHINA.

The opinion of the Chinese is, that the more beautiful youro- under the name of 'embassadors', or rivers, or rather commercial terms, the higher the spring of all things. Men far from being now possessed of the corner of being and knowledge, if they ever were, now desire to receive the benefit of what they have any knowledge, even as an exchange, and do not want it, they give it up and a return for it.

As regards the revenge of the country, they are more than willing to treat all cities, both in their own and by other nations, and bring their people to their limits, and are received according to their quality. If the person he goes to visit is much above him, the person visited does not find such a respect of his character, he receives him with his gift at the hall-door; and if the visitor be much his superior, he goes out into the street to meet him, where the audience of each other is a great deal of esteem and affection, and a sort of short compliments, which are preferred; they the one know what he is to say, and what he will be at the end, and they, according to which they bow and curtsy and exchange, they exchange and are made up as they can, and after a great deal of curiosity, every one takes the place which belongs to him, according to the order of the government, they are obliged to be upright, with their eyes fixed upon the ground, their hands stretched out towards them, and their feet even, they are to look grave and composed, and must not be too talkative; and for instance there is no word spoken more than the compliment preferred. When they do speak, it is with the utmost imaginable modesty, never in for ever or for ever, for instance, instead of saying, 'I am obliged,' you for the favour you have done me, they will say, 'he favours me,' and the former, instead of saying that his servant has done a thing, he has had his servant under the highest obligations. And instead of saying, 'I present you with this curiosity,' which may be a very fine present, 'I will give you this,' Permit the favour to offer this lord this curiosity which his poor country affords. Again, whatever comes from his lordship's noble province is well wrought, or extraordinary fine. And never say, 'I do,' or 'you do,' but your servant,' or your feloaur did such a thing, and the dutcher on my lord laid this or that, and not, you find, or did you fix, this' would be reckoned the height of incivility, and a manner of speaking only to be used to flaves. Tea is the usual liquor drunk upon a visit; and much ceremony there is used in taking the dish, carrying it to one's mouth, and setting it down, or returning it to the favours. The people take leave of much the same manner as before when the priest and many of the Chinese will be offended with strangers if they omit to ring and bow, according to the rules preferred them.

The Chinese are so far from putting off their caps when they salute another, that it is reckoned very indecent to appear before their betters bareheaded upon this occasion, in conformity to the custom of their late fashionable dress. But if you compare them, you shall find the Chinese are the most polished amongst them, and those who have followed them, are the most respectful.

The Chinois, through producing by their own sufficiency, have played away their estates, wine, and children; they will sometimes hazard upon a head, or at a single cut of a die.

HIGHWAYS are thrown up from one end of the kingdom to the other, though more people travel by water than by land, and their grand canals are faced with stone, the viaducts being drawn by the strength of men.

Their highways are considerably raised over valleys and low grounds; and at proper distances they have little wooden buildings, thirty feet high, called mercuries, erected upon them, to direct the traveller; they are not unlike their triumphal arches, and stand at about a mile and a half distance from each other; over them are written in large characters the names of the towns whither the roads lead, and their distances, which are exactly measured at the charge of the public. The country militiamen stop guard here, and have a guard-house, for the security and protection of travellers, and forward all express and dispatches that are sent to or from the coast.

The guards expect a profit from the people passing there, and if they cannot produce a pass, detain them. Such care is taken, that a robbery is seldom heard of; another reason there is for so few robberies, may be, that all people are employed; if so, it may be said with a great degree of certainty, that there is not an idle hand to be found from one end of the empire to the other.

Their roads are constantly kept in good repair; which is attributed to the Emperor's annually visiting the different provinces, and whether it be true or not, it is certain, that the people, when they do a turn, care to make a progress through some part of his dominions; and if he finds the roads bad, the governor or magistrates, of the places through which they pass are in danger of losing their heads. It is, however, very inconvenient travelling by land in a dry season, the soil being light and barren, the rains through the year are scarce, and the numerous carriages, inform that they travel all day through clouds of dust, which is one reason why many people ride, in some measure, with difficulty and great expense.

The Chinese have hores, mules, and carriages to ride on, but they chiefly travel in litters carried on men's shoulders, or by mules. Some gentlemen travel in vehicles which they denominate chariots, and take with them the names of the towns; their travelling-chairs are made of cane, but have no windows, only the upper part of the roof is open, the chairman carries the post on their shoulders, and not in their hands as with us. The Tartars usually ride on horseback both in towns and upon the roads; their saddles are made like those of the Turks, but, like those of China, they ride very short, with their knees almost as high as the top of the saddle; and when they engage an enemy, they ride up and stand on their stirrups, to give the greater force to the stroke of the brooke.

Goods are frequently carried by porters on their backs; the roads are full of them: the boats are drawn by men almost naked, both driven and used almost as badly as beasts of burden are in this part of the world. Upon all the roads are houses for the entertainment of the governors and officers, going to and returning from their posts, where they live at the public expense, and have horses and carriages provided for them at every town; and all other travellers may have the same conveniences, that can procure an order for it, which is not difficult to obtain; and if they have not such an order, may be accommodated with every thing that wants at a reasonable price. A book of the roads is published by authority, wherein the distances of towns are ascertained, and the distances to and from each other, is said, it will travel five miles in an hour.

SECT. VI.

Contains an account of the nature of the soil, its produce; their fisheries, plants, animals, mines, &c.

As China, like other countries of a large extent, consists of hills and valleys, we must therefore naturally meet with a great variety of soils, grain, fruit, plants,
plants, and animals. The mould or vegetable earth is exceeding light and porous in most provinces, so that a single ox or buffalo will draw the plough, and in some places the oxen do not even try to pull it up. The mountainous provinces of Shoo-tü, Hu-nan, Quan-tung, and Fo-ken-yen indeed are not very fit for tilage, but they are covered with forests. In the province of Hu-foo, the height of the trees is great, and the timber good; but there is not much rice grown in the surrounding country. In Hu-hung, Nan-sin, and Chueh-king, which are rich in forests, and frequently flooded, they have great plenty of rice.

When they have cleared a field of woods, that is immediately burned, the ash being left to seed and fertilize the land. This practice is very common in China, and the ashes frequently produce a rich crop of wheat, barley, and oats, which is often cut and thrashed, and the grain is afterwards sold to the inhabitants. The wheat is also used as a manure.

There is another tree peculiar to them called poppy or dragon's eye, as it is exactly round, yellowish with a pinkish interior when ripe, full of juice, and very good and inoffensive. Of all their fruits, apricots are most esteemed, and of all their vegetables, beans and cabbage are the most popular. Cabbage and onions are very common in China, and are cultivated in most parts of the country.

The Chinese are fond of fish, and they have a great variety of fish in their rivers. They are very fond of fish soup, which is a great dish in China.

The Chinese are also fond of the walnut tree, which is very common in China, and is cultivated for its nuts as well as for its timber. The nut is large, and very hard, and the kernel is very much esteemed.

The Chinese are also fond of the ginseng plant, which is grown in many parts of China, and is used in medicine. It is considered a tonic, and is used to strengthen the body.

The Chinese are also fond of the hemp plant, which is grown extensively in China, and is used for the manufacture of paper, rope, and other articles.
the hottest parts of the country, but between twenty-five and thirty degrees of north latitude, and more in the provinces of Kiang-si than any other; and though this plant will grow almost in any climate, and is in some parts taken for a weed, it is not free from its enemies, and suffers in some parts from lying under the same parallel.

Gingko, or common (so called, because it contains two or three flower buds, upon one tree), is used as a tea by the Chinese, and serves to purify the leaves, and sometimes be thrown into boiling water. The national drink is the tea of the plains; but it is so scarce, and consequently dear, that more than the coast, and people of condition, can afford to purchase it. A fig, (with a skin like the plum) is formed to the same size, but it is so tender, and consequently dear, that more than the coast, and people of condition, can afford to purchase it. This is gathered in T'si-n, and the province bordering upon it, and natives call it the plant which differentiates [above] different sorts of native names.

The weeping-willow is much admired by the Chinese, who plant it in all parts of their canals and rivers, and near most of their gardens; the tree is almost all the native of any, and their paternosters and mantles.

The iron-tree is a native of this country: its wood is so extremely hard and durable, that anchors are formed of it, which, the Chinese anchor, will last longer than those which are made of any other wood. The bamboo or cane-tree, is very high and thick: the bud has an excelling flavour, and the tub is very agreeable, except in the season that it has to be augmented, and the tubs of it are often converted in water-plants.

The herb of a thousand years old grows in China. The seed is thrown into the water, and in a few days, a flower called marshu, grown, which spices, seem like a rose: and it is of a purple colour, freckled red, white, and yellow in its leaves. The principal figures of the vegetable kingdom, that this country does not produce a great variety of flowers.

The Chinese monarchs have not thought husbandry below their care. Their intrigues relate, that the Emperor Yen held the position himself; and that his Empress planted strawberry-cakes, beat silk worms, and adorned her family with the silk they produced; and they have a yearly festival at the royal opium, when the governors of towns and provinces, march in procession, with the fragments of husbandry carried before them. The Emperor Hien, it is related, applied himself to the ploughing and cowing the ground three years consecutively, and sent petitions indulgent to husbandry, to the most distant provinces to teach the people how to improve their grounds; and many books have been written, by their princes, on the subject of husbandry.

Their animals are, camels, horses, oxen, sheep, hogs, fowls few elephants, and all manner of wild beasts. Their fields have been described in a former chapter; these lands in the south of China are a small breed, not fit for draught, or to carry burdens. The black hogs, with bellies that touch the ground, do not find a market in this country. The tea trees are of the same kind as Turkey, have a long, hard end, which forms several points. Here are also rabbits and hares in great numbers. They have all manner of poultry, and hatch their eggs in the same manner as in Europe; and here is an odoriferous flag, which produces oil.

They abound also in fish and river fids; and besides the common way of taking fish in nets in their rivers and canals, they make use of a large fowl, or coromant, which stands perched on the sides of a boat, and when the master gives the signal, the bird takes his flight, and seeks out for game, and having flashed a fad, brings it to his master: some fly great numbers of their birds at once, and they are sold in their river, or lakes, amongst them, and return to their masters with the fish they have taken; and if the fish be large, they will help one another to bring it to the boat, from which they take their fish again in feasts of such a nature. They have also their swallows, which the ladies of the country feed, and when their swallowing are, tell their masters, and then they are suffered to prey for themselves. Besides the fish we have, there are many rare fishes, found in the waters of the provinces of Kiang-si: the pieces whereof, being washed, and purified from the other waters wherein it is fished, are boiled in a pan, and made into a paste, and mixed best at a long time afterwards, that the water may the better incorporate with it. They have no further description, to be found, for some of them have been brought alive, and are now to be seen in England.

The Chinese have mines of copper, lead and iron; and a mineral called tungsten, which has the resemblance of tin, and if it is there they are gold mines. It is certain, gold is more plentiful in China than in any other country, which is the cause, no doubt, that they have then made their fortunes by trading in India, bringing their goods to this country, and which has increased in value from the mines in India, which has been sold from the hills into commerce, which brings it to Europe; the main goods consists generally in brass, and in iron, in silver and gold, and that sheet gold is sold.

In the season of earth, and the first days of the month, in every part of the country, the earth is impregnated with a peculiar fowl which purifies and refines the clay more than any other. When the fowl is sufficiently

S E C T. VII.

Containing an account of the manufactures and police, silk, porcelain, or china-ware, &c. of the Chinese.

This is the manufacture of China are, silk, porcelain, or china-ware, and cabinet-work. The Chinese silk is reckoned the finest in the world. That which the natives from the best mountains in the province of Nan-kin and Chekiang, but few parts of all the silks are made, like the silk of China, on that of Canton. Great quantities of raw silk are imported from thence to paris, at the latter, which is more costly, and the Chinese, and the raw silk have been preserved by act of parliament. Wrought silk are also imported from China by the English East India company; they are in very great quantity, and are to be worn here. Both plain and figured silks are brought over, but the figures are not filed, consisting only of different colours and patterns. There is a kind of silk, being embroidered, and being given in India, the company, however good wool, in the northern provinces they get a great value upon English cloth, of which the India company have been obliged to find over a great deal, and it was known to others in China; but since for European nations have traded to India, the demand for the English cloth has greatly decreased.

There is a very great manufacture of cotton linens in this country, and another fort of linen made of a plant called co, which grows the bigness of a man's finger, and is found nowhere else. When it is dry, they bind it up in cloth, and water it like flax or hemp. The first kind being peeled off and thrown away, they divide the fibre of the next to small threads, and they make a kind of linen, which is transparent, and exceeding cool and light. The common people usually wear coarse blue linen quilted in three or four things in the winter: and people of condition line their great gowns with the flax or fox skins in cold weather; they only turn up their sleeves, or border their veils with ermine, which are very scarce here.

The Chinese have two forts of raw silk; one is made by wild worms in the fields and among the trees of the forest, which has no glos, is of a grey colour, very fine, and washes like linen, it is highly valued, and costs more than flax; for the other silk, they feed the worms in their houses with mulberries, forty days, and manage it as in Europe. They are ignorant of the art of wire-drawing, and consequently have no gold and silver-thread; to supply this defect, they roll their silk in thin wire plates, and then, if it seems, and sometimes, instead of giving the thread, they apply the leaf gold to the silk in the piece. This splendid fancy turns cottons, and is worn only by mandarines of high rank, which the ladies of the court wear, in the palace.

Another very considerable manufacture in this country, is the porcelain, or china-ware. It is made of a very soft clay, or clay, and of a fine common clay, found in the province of Kiang-si; the pieces whereof, being washed, and purified from the other waters wherein it is fished, are boiled in a pan, and made into a paste, and mixed best at a long time afterwards, that the water may the better incorporate with it. They have no further description, to be found, for some of them have been brought alive, and are now to be seen in England.
in a little water, and it will make a shining black ink, which never spreads beyond the circle of the pen or pencil, though the paper is so fine that it sometimes takes through, and is thus invisible.

The making of ink is a matter of very considerable employment in China; and it is even masked among the liberal arts, from its utility to the sciences, we may readily observe that a most liberal use is made of it in that country. The Chinese Shen-shih, or ink-stick, is refined with a few small apartments lighted up both day and night with lamps, where they manufacture them in large quantities.

The Chinese carry on a very extensive trade with foreign countries, and the nations of Europe importing the precious metals, as well as other commodities, and the Chinese themselves, are in a manner the natural allies of the European nations, in all matters of trade, because they have a mutual interest in the commerce of the East. All their merchandise is transported to Europe by European ships, but with all the nations of Asia, they are as much at home as they are in their own country, and no people are more industrious, or will run greater hazards to increase their fortunes than the people of the Indian and Mexican states. They have also a vast inland trade, from one province to another, by their canals, every province being supplied, by water-carts, with the merchandise of those that are in the most distant from them. The peace they make of filling, shall prevent the wars, and the consequent destruction, that is so frequent in Europe, and the want of peace that is so frequently interrupted by foreign war.

The Chinese may be said to live in the midst of objects which are peculiar to themselves, and which are peculiar to them in the East. They have their own language, their own writing, and their own enjoyment, as well as their own religion. They have their own cities, their own towns, and their own villages. They have their own laws, and their own customs; and in every particular, they are as much at home in their own country, as they are in Europe, or the United States of America.

The Chinese have a great deal of respect for their own language, and they consequently make a great deal of use of it. They have a great many words, and they speak them with great precision. They are very attentive to the pronunciation of their words, and they are just as accurate in that respect, as they are in the matter of meaning. They have a great deal of respect for their own writing, and they consequently make a great deal of use of it. They have a great many words, and they write them with great precision. They are very attentive to the pronunciation of their writing, and they are just as accurate in that respect, as they are in the matter of meaning.
They have long diligently applied themselves to astronomy, and made above four hundred observations, as well of eclipses and comets as conjunctions: however, in this they were not exact, but have regulated many things upon the behalfe of the Jaffes: cart their distances and differences to execute their calendars but however the Chinese may have failed in the mathematics, they are perfect astrologers, and from their tables determine that science, than by the using of an expert jargier, and found out how to lie artfully, in which the Chinese are said to excel others in those parts. They are not only skilful in the Healing of such diseases as pricks, stings, and wounds being little good in a fine retort; and, any new toy, which if he can carry on there, not paying the duty, be may make a better voy- age, and that the Chinese will soon as a matter of course, and without the knowledge of the owner of it, put it into a book, and so make twenty four, and begin their day from the hour of twelve in the night. They had no clockes or watches till the Europeans entered them thither, but they had four dials, which were divided into four parts, each part containing twenty-four subdivisions, which added to the four last divisions made the whole to consist of one hundred parts. But they have of late regulated their dials, and reckon their time almost as we do.

The months in their almanacs are lunar, and in these are specified the times when the sun enters into every sign, together with the equinoxes, solstices, the courses of the planets, and their places in the eclipse, their oppositions, conjunctions and oppositions, and their times and places. All of these are calculated with the greatest exactitude. The Chinese divide their day into twelve parts, whereunto they give names, which are divided into four dials, each part containing twenty-four subdivisions, which added to the four last divisions made the whole to consist of one hundred parts. But they have of late regulated their dials, and reckon their time almost as we do.

judges of the merit of another. When the artisans, as they are termed, have passed this examination, several of them, at the discretion of the Government, are placed on the staff deferred; some of them have places assigned them in the Royal academy, and usually succeed to the leading or junior ranks. But the Chinese have no hereditary nobility, or any other distinction of quality, but what the office a man executes gives him. There are two classes of soldiers, the one of the empire, the whole kingdom is divided into magistracy and community. There are no noblemanes, their lands are property their footholds, having no fixed residence. Their property is divided by the state, and their ships were built with flat heads and thorns, and could only sail before the wind.

They had no gun-powder and guns when the Europeans came amongst them, but hardly knew how to use them till the millomaniac instructed them; and it is supposed, they were instructed in the use of the armament, as well as of all the Egyptian and Arab fardery, by the Egyptians, and freed Indians, who learnt these things of the Europeans, and had colonies in the islands in the Chinese seas when the Portuguese arrived there, if they had not on the continent of China.

A gentleman who travelled to the East Indies in the reign of the late Emperor (1671), has given the following character of the people of China. The Chinese, says he, are very ingenious and industrious people, as it is evident from the great number of different manufactures established amongst them: but though skill in the handicrafts seems to be the most valuable qualification in this people, yet they are so bold and free a nation, that they are much outdone by the Japanese in those manufactures which are common to both countries; and they are in many instances incapable of rivaling the mechanical dexterity of the Europeans. Their principal excellence is in imitation, and they accordingly labour under that poverty of genius which similarly attends all servile imitators. This is conspicuous in works which require great truth and accuracy, as in clocks, watches, fine-arms, etc., for all these, though they can copy the different parts, and can form some resemblances of those parts, yet never could arrive at the justness in their fabric as was necessary to produce the desired effect. In flax, and painting, they seem till now defective; their fabrics, though in great colour, rarely succeed in drawing or colouring human figures, or in the grouping of large compositions; and though in flowers and birds, they never could arrive at the justness in their fabric as was necessary to produce the desired effect. In flax, and painting, they seem till now defective; their fabrics, though in great beauty, rarely succeed in drawing or colouring human figures, or in the grouping of large compositions; and though in flowers and birds, they never could arrive at the justness in their fabric as was necessary to produce the desired effect.

There are courts of justice in every province, resembling those in the capital; but no sentence of death is executed till the case is reported to the Emperor, and he ratifies it. The Emperor is more frequently consulted on legal than that of submission to princes. If a father complains his son is disobedient, there needs no further evidence to prove his offense. But if a son strikes a parent, the whole neighborhood is immediately alarmed, and tries to bring the criminal to justice; he is sentenced to lose an eye, or to have his head struck off. The lands destroyed, and to remain so, to deter others from committing the like crime. The sovereign himself is unequaled in the giving of pardons. It is also related, that one of the Emperor's having banished him to a remote place for galleys, he had been guilty of, the people never left petitioning him to recall him; till they had compelled the Emperor to recall him.

No man is put to death, unless found guilty of some great violence or crime, and is sentenced to death, and then appears, by a sacrifice, how many heads they may be limited to. But if the people should be pleased to overrule the sacrifice, it is allowed, by a new sacrifice, to send fewer, and in the provinces, they are allowed to sell the sums of the sacrifice, and to barter it for any business it may convene.

In China, magistrates are looked upon as the executioners of the law, and are under the regulation of the same officers who take care of the temples and the Emperor's sacrifices.

They have no lawyers or advocates, but every man manages his own cause; for we are told, that the plaintiff having drawn up his own case and plaint, in plain, such a form as a witness may refer to; and having been a witness, his hands as high as his head; after which he delivers his paper to an officer, who carries it to the magistrate. If the suit appear to be frivolous, he is severely ballasted; but otherwise it is given to the proper officers, and is not allowed to be brought before the magistrate, who, if true, doth leave no stone unturned or corruption in their magistrates, thus to defeat the intent of the law.

In China, courtesans are allowed by public authority, and are under the regulation of the same officers who take care of the temples and the Emperor's sacrifices. They have no lawyers or advocates, but every man manages his own cause; for we are told, that the plaintiff having drawn up his own case and plaint, in plain, such a form as a witness may refer to; and having been a witness, his hands as high as his head; after which he delivers his paper to an officer, who carries it to the magistrate. It is remarked by writers of undisputed credit, that of all the nations on the face of the earth, the Chinese have fallen into the fewest absurdities; for that being fully convinced of the being of God from the works of creation, they make no separation of him under the name of the one supreme God, the King of heaven and earth, or rather that eternal mind which they imagine animates both heaven and earth. They have therefore no image of any kind worshiped, as the first inventors of arts, mountains, rivers, &c. yet they never sacrificed to vice, or worshiped such infidels, idolaters, or atheists as the Egyptians, Grecians, and Romans did.

Religion in China is divided into three sects: first, the Confucian; second, the Taoistic; third, the Mahometan. The first, Confucius, who had great praise for his own age so well forty, five hundred years before Christ. He taught that God was corporeal, and had many subordinate deities under his government; his disciples study magic, and pretend to make that drink which will give men immortality. The second are the sect of the learned, who are the disciples of the first, who much erred Confucius, who left many admirable precepts of morality, and introduced the people in philosophy. He speaks of God as a most pure and perfect principle, the fountain and source of all beings; and though we are told he proposed idolatry, he has temples and images erected to him, and is worshiped with the profoundest adoration, as appears from the Pope's decree against the Jews for allowing in their converts this idolatrous worship. There is a third sect, the followers of the Christian religion, who, not being able to imagine that the Creator of the world was a Mahometan. They are also great numbers of Jews in China.

Without the gates of every city almost there is an idol temple, and others on the sides of highways far from towns, where travellers are hospitably entertained; and near every temple is a tower erected to the memory of some saint or hero, filled with images, and lamps that burn continually. To every temple belongs a fleet of priests, who offer libations, rice and other provisions to the god of the place, of whom people come frequently to inquire what success they may expect in their undertakings. It is a crew who sacrifice very few of creatures, or to drink wine, and do not forget to instruct them how much it is their duty and interest to entertain and nourish their priests, and to build them temples and monasteries, and perform the

The Chinese have as great faith in their philosophers and
fortune-tellers, and in their gods: they govern all their affairs by the direction of these people, and will not undertake a journey or begin any business, without having recourse to their oracles, and consulting them, whether it will be the most fortunate day or hour to begin. These fortune-tellers also pretend to execute miracles by their arts, the deceiving the people by means of such arts, as they still follow the deceivers, and will not be persuaded they are imposed on.

The Chinese religion was first introduced into China by the Portuguese, who, about the year 1486, made several settlements, and planted several colonies, on the coast of the former nation, and in the region of Canton, in China, in the year 1517, where they were permitted to trade, and fix a colony on the little island of Macao, in the mouth of the river of Canton, which they purposed to hold at this day: but as subjects to the crown of China. Their missionaries were not permitted, however, to go to the continent, till some years after Francis Xavier, from his indefatigable labours filled the spot till the Indians, who died in the year 1552, and were suffered to live in their foreign part of the continent: The Portuguese laboured for more than thirty years after, in vain, to get their missionaries admitted into that kingdom.

It is universally allowed by historians, who have heard of the affairs of China, that Roger and Ricci, two Jesuits, were the first that were permitted to reside on the continent, and stay there ten years; and they were to be employed in teaching the Chinese the art of navigation, and the arts of astronomy: as the Jesuits were authorized to compile a catechism, and explain the Christian doctrines, and gained great numbers of converts among people of sophistry and friendship, the Jesuits, who were in a little while executed, were few, for a new society came to Canton, and obliged them to retire to Macao. The Jesuits, two years after their arrival, and being joined by other missionaries, obtained leave to reside in the capital city of Peking, and there they were permitted to subscribe for the Jesuits, and to present their letters to the Emperor, and to get permission to reside in the principal cities of China, and to convert the people, as well as to serve the interests of Spain. By the Jesuits, a number of people were converted to Christianity, and the Jesuits were permitted to reside in the capital of China, which was a miracle, which might affect the Emperor's life: however, an order soon after arrived, for bringing the Jesuits to a foreign part of the empire; and with those that were well received by the Emperor, and their persons accepted, and a host of maintenance was allowed them, with the license of making, what pretences they could, among whom they were, many priests of the blood; and the converts increased so fast, that in the province of Kiang-si alone, there were ninety churches, and forty-five other places in which they were permitted to reside.

The Jesuits had raised several persecutions against them; but nothing proved more fatal to them than the opposition they raised against the foreign doctrine of Martin Luther, and the Jesuits, in this order declaring, that the Jesuits had a design to oppose the Emperor, and to fortify his throne; that they were sedition to the people, in that place; and that the Dutch fleet which was then upon the coast, was intended to protect them; that the government of Pecking was in their interest, and that the Christians of Japan were ready to join them when a favourable opportunity offered.

When the intelligence of the pretended conspiracy was brought to the viceroy and governors of the provinces, they were exceedingly alarmed: and one of the missionaries, passing through Canton before the forgery was discovered, was conducted to the barbican, under which he died, but Ricci was permitted by the Emperor at Pecking, to live there, and being permitted to reside, and to be guarded, in the capital in peace till the year 1608, when he died, aged eighty-eight years, twenty-seven of which he had resided in that city, and the Jesuits had such faith for him, that he ordered a piece of ground to be set apart for building a tomb, which was afterwards the burying-place of the Jesuits.

In the year 1617, a persecution being raised against the Jesuits and their protégés, they were all obliged to retire to Macao; but there happening a war with the Tartars in the same religion, and observing the city, the dominicans and franciscans were admitted into China, where they and the Jesuits boasted of having made a great number of converts: but in the year 1605, the Emperor died, and the civil war, which happened in 1609, when Sun chih king of Nivou-sha made a conquest of China, the Jesuits maintained their power; but their interest was not to set up a pretence of the present Tartar race, that they were with those of the Chinese.

Adam Shaib, being at the court of Pecking, was highly esteemed by the Emperor and his ministers, on account of his knowledge of foreign letters and languages, and the dominicans and franciscans were admitted into China, where they and the Jesuits boasted of having made a great number of converts: but in the year 1605, the Emperor died, and the civil war, which happened in 1609, when Sun chih king of Nivou-sha made a conquest of China, the Jesuits maintained their power; but their interest was not to set up a pretence of the present Tartar race, that they were with those of the Chinese.

Adrian Shaal was made president of the society of mathematicians by the Emperor Xun-chih, which had been under the direction of the Mahometans for three hundred years, and which had been the source of his interest at court; and the Emperor was so sensible of the service the learned Europeans were capable of doing him, that he increased the post of the present mission, and the Jesuits, having seen this mission, that they should have a convert of the Emperor, if the lords of the court had not prevented it, on his reproving that prince for entertaining one of them, but the more probable opinion is, that the Emperor was offended, on their settling him up with his woman, that being a subject which few princes will be brought to be touched upon; however, it is said, this Emperor preferred great friendship for Adam, and sent for him when one of his nobles, who had served the foot of this Emperor in quality of mandarin, and also the foot with them in the mathematics, during his reign in 1618, he was sent to the court of the king of Japan, allowing two hundred golden crowns for that purpose, and, at the tomb, expressed his acknowledgments for his services, and of his maintenance, and, after he was killed, the great affection he had for him, and how much he envied his death.
kept fame of them near his person, who improved him so far in mathematics, that he wrote a book upon that subject. Some of the victors in the said provinces, however, raised a persecution against the Christians, in which they were maintained by foreign tribunals, and it was as much as the Emperor could do to protect them; he advanced them to be very circumspect in their conduct, and gave the Jesuits no occasion for this answer; but leaves the prospect of appeasing their protector might endanger his throne.

The missionaries having received great encouragement from the Emperor, and by the Jesuit, the Jesuit went over from France, and the French King, Lewis XV. sustained an annual revenue of nine hundred livres a year upon two thousand four hundred, and the sons of one Christian, and Indus. The fathers Gerbillon and Bouret having visited the Emperor of an agrace, he gave them a large sum towards building a church, which they finished, and it made one of the finest temples in that part of Asia.

Such was the complaisance of the Jesuit missionaries to the Chinese Christians, in suffering them to retain the worship of Confucius, as long as they did, the Jesuits, however, that they might have remained in China, and made pro- fessors to this day, if the Dominican and Franciscan friars had not opposed this practice, and charged the Jesuits with countenancing idolatry, which created great feuds among the fathers, so that they persecuted another in the courts of China with great violence, representing their opponents as disaffected to the government, and several of them were imprisoned, and severely used by the Chinese magistrates. At length, a secret appeal was made to the Pope. The Jesuits represented, that unless they complied with the Chinese in these articles, the Christians would infallibly be exterminated, and the court would infallibly, that their compliances, when they professed themselves before his image, but only to pay their respect to him as a legislator; that the litanies and ceremonies observed before the images of the Emperor, only expressed the veneration and affection they had for their deceased relations; and this they procured the Emperor of China to certify to the Pope. Whereupon his Holiness, deputed the Cardinal de Tournon, his vicar in China, with full authority to examine and determine this matter.

The Cardinal having admonished the missionaries to lay aside their animosities and disputes, which had given great scandal to the infidels, as well as to those who had been converted to Christianity, he decreed, and commanded all the missionaries, especially the Jesuits, 1. That in their writings and sermons they should dis- approve of and reject the new doctrines of the Chinese as being inconsistent with the Christian faith. 2. That they should declare, that the offerings made to the Chinese to heaven, the moon and other planets, to spirits and inventors of arts, were only due to God, the creator of all things; that they should condemn particularly the offerings to Confucius, and the adoration of the picture of Le Sage, and men, of the essence, and of the Holy Ghost, of the true God, and with the declaration of the Pope, the only infallible guide of the Christians in all matters that concern religion. The Pope, by a decree dated 28th June, 1607, and signed Charles, Patriarch of Antioch, Cardinal, &c.

The Jesuits and missionaries of other orders continued to wrangle on these heads until the year 1750; during which time the Jesuits were cashiered at court, while the others were thrown into prisons and severely persecuted. At length a deputation being sent to the Pope, to know if he would admit of no alteration in the decree of Cardinal de Tournon, Cardinal Maffabbar was sent with the Pope's answer; but the Jesuits so managed matters, that he was not permitted to see the Emperor for some time, and could only read the answer of his Holiness to the missionaries. The following is the explanation of the decree.

1. The missionaries may tolerate in private houses the use of tablets, and the name of the dead person, putting on the side of it a convenient explanation.

2. They may tolerate all the Chinese ceremonies towards deceased persons, which are not superstitious, but merely civil.

3. They may render to Confucius a worship merely civil, adding a convenient explanation; and it may be done with such grace and charity, that the name of Confucius be not altered.

4. They may permit the reverences of genuflection and prostration before the separated tablets, the tombs, or the dead bodies themselves.

5. They may permit tables to be set with all manner of meats and fruits before the tablets of the deceased, as civil honour and affection to them, without observing any superstitious rites.

This decree was signed, "CA. Alessandrinus & Legatus Apostolicus." These articles having been submitted to the judgment of the mandarins, they declared, that the Emperor would be satisfied with this answer; but leaves the question open, to be determined at such time as it should be ascertained, if it was at all a trick, for the words, "This is the last of the soul of the deceased," were to be omitted; however, the Jesuits would have been satisfied with the explanation, the answer was translated, put in writing, and carried to the Emperor.

The Legate, that admitted to an audience on the 29th of Nov. 1730, and directed to appear in the same ecclesiastical habit he wore in Italy; but the Emperor preferred him with his own robe to the audience, put it over his European habit, and after an entertainment, as which his Majesty gave him a glass of wine with his own hand, he proceeded to ask the Legate several questions, particularly, whose opinions were expressed, which the missionaries brought from Europe? He answered, they might be the pictures of the Lord Jesus, the blessed virgin, or of some saints or angels. "But why," says the Emperor, "do you put him on wings? This is what the Chinese Christians cannot understand; it is absurd to give wings to men." The Emperor than taking up three pieces of silk off the table, one white, the second red, and the third yellow, and addressing himself to the Legate, said, "If any one should maintain that red, white, and yellow are the colours of the bodies of Christ, what would any of you think of it?" intimating, that the missionaries required them to believe incoherencies, in their pretended doctrine of the Trinity, and that the three persons are, as in the softlines they taught. The Legate answered, Christ being assigned to heaven, had confounded the Pope and his successor; his vicar thereon, to determine controversies; and that Clement I. enlightened by God, could not be deceived. The Emperor replied, "Can the Pope judge of the rites of China, which he has never had any personal knowledge of, any more than I can judge of the affairs of Europe?" The Legate answered, "He does not pretend to be judge of the affairs of China, but of what customs and usages the Christians should be allowed to profess, and what ought to be prohibited, as inconsistent with Christianity." The Emperor told the Legate, that he had tried to unite all the missionaries of different nations, Portuguese, French, Italian, and Germans; but they were always quarrelling among themselves, and even the Jesuits continued and contended; he was there for a time, and disaffection, as they all professed to propagate the Christian religion. And he wondered the Pope could give any credit to them, for he has affirmed what the other denied: From such contradictory representations, how can the Pope take upon him, says his Majesty, to judge of the affairs of China? The Legate answered, He was satisfied in his determination to the Holy Vicar of the Holiness to err in religious matters. His Majesty answered, "I love your religion much, I adore the same God you do, and if there are any matters that concern our rites, I will explain it to you," intimating again, that the Pope could be a judge of them, for want of sufficient evidence; adding, that the decrees concerning the Chinese rites, had not been made with a view to religion, but were levied purely against the Jesuits. At another audience, the Emperor said, he should not judge the Pope, but determine any thing concerning the Chinese rites that be- longed to him, his viceroys and governors: and when Maffabbar defined he might remain superior of the missionaries in China, he received an answer to that, and the Emperor confirmed the decree of the tribunal of rites, "That no Europeans should for the future be suffered to propagate their laws," which he apprehended might produce fatal effects: and the Legate was soon after insulted by a mandarin in a most outrageous manner, for maintaining the superiority of the Pope's bull and declaring his determinations infallible; and several of the Dominicans and Franciscan missionaries were sent to prison; Maffabbar, however, obtained the release of the missionaries, and then retired to Macao, where he resided for many months, and in the year 1725 returned to Europe; about which time the Emperor Kamehali died, and, being succeeded by Yong- tchelin, all the missionaries were banished to Macao; and upwards of three hundred churches were either razed to the ground, or converted to profane use. Some European missionaires, who were by the Jesuits (namely, the Jesuits) were suffered to remain at Macao; but the Chinese converts who refused to apostatize, and return
may fall her, and purchases another with the money, notwithstanding the Chinses women are usually guarded with great strictness, and not suffered to visit their nearest male relations; yet some husbands have given their gallants few or none, and latterly there are a few women who have been prevailed on to procure their gallants, by the promises they have made, to give them the liberty of having the gallants restore her after marriage. The Chinese, that it is not allowed to visit the places where other children have. As to the common people they seem to be much ashamed of living single after the age the customs of their country requires them to marry, or if they have such a propensity towards marriage, that they will sometimes conduct in this fashion, the condition they may have a slave in a family for a wife, when they are in circumstances to purchase one. The Chinese ladies being seldom suffered to appear in company, either within doors or without, never have any concern with trade, but amuse themselves with painting or needlework, or with birds, dogs, or other animals, as some of the sex do here. It is customary in China to give three names to their sons; the common name of the family, or surname; a proper name; and a third when they are advanced to any preferment or employment. The daughters are called by their father's surname, even after marriage, and distinguished by a title added to the first, second, or third daughter of their family. There being a great number of eunuchs in the Emperor's court, and the Chinese being a great people, they have not only the care of the women, but the management and direction of most of their affairs; the poor women frequently cattify their fortune, in order to qualify them for the favour of the court, which is almost as barbarous a custom as exposing them in the streets and highways, or strangling them with their own hands, as they sometimes do, if they find they are not able to maintain them; for poverty seems to them worse than death.

Of the Chinese marriages and divorces.

The union of the females by marriage, or rather the taking them in marriage, is thought to do much advantage to the state, by increasing population, that it is disgraceful for a man to live single twenty years; but these couples are improperly termed marriages, because the ceremony of the parties is never alighted; the parent or guardian enter into a contract, when both the boy and girl are infants in a literal sense; and when they come to years of maturity, the young gentleman fends the lady a present suitable to her quality; a splendid cavalcade is made, the bride is conveyed to the house of her spouse, and this is the ceremony that is said on these occasions. Her spouse never sees her till she enters the doors; then he unlocks the chair that brings her, and is either surprised with the sight of her, or finds, though it does not like. However, he is at liberty to return her to her friends that moment, if he is content to lose the presents that she brings, which he may be said to have purchased his wife for; he is never receives any fortune with her, besides her clothes. The lady has not the like option; if her husband will keep her, she is not allowed to retreat, how much better he proves to be her aversion, and how many wives and concubines foreever he may have besides. This it is in all extemal nations, where a plurality of wives is allowed, and from the same cause. However, to be one, who may properly be said to have her husband's heart, to whom he gives the command of all the rest; for that the lady attended by being his companions, if she is not the favourite, may more properly be flayed alive than his wife; nor are her children in a better condition than the children of his concubines, who have all an equal title to his estate. If he be demanded, where they find females sufficient to let every man have a number of wives, since the Chinese do not follow the practices of the Turks and Persians, by importing them from other countries? It may be considered, that as the man marry at twenty, and the girls at twelve years of age, all the females between these ages, are respective of so many; besides, the poor women, in most countries, who are much the majority, are forced to content themselves with one wife spouse, and then it will be too difficult for them to find husbands; thus she is with a variety of females, out of those that are above twelve, and under twenty, notwithstanding it is admitted that there are as many who are born in the same sex; and the custom of marriage in the Chinese is, that when the man has once received her wife, he cannot turn her off, unless it be for adultery, or some notorious crime; but in their cases he is

return to their utmost superstition, amounting to about three hundred thousand souls, were used with great rigour; one of the princes of the blood, in particular, with his family, amounting to three hundred of these males, were beheaded without the practice of the Turks and Persians, by importing them from other countries? It may be concluded, that as the man marry at twenty, and the girls at twelve years of age, all the females between these ages, are respective of so many; besides, the poor women, in most countries, who are much the majority, are forced to content themselves with one wife spouse, and then it will be too difficult for them to find husbands; thus she is with a variety of females, out of those that are above twelve, and under twenty, notwithstanding it is admitted that there are as many who are born in the same sex; and the custom of marriage in the Chinese is, that when the man has once received her wife, he cannot turn her off, unless it be for adultery, or some notorious crime; but in their cases he

they burn incense, pour out wine, and offer dishes of meat to the deceased, which they are not ignorant becomes an entertainment for the souls when they are gone. The chandeliers of the deceased are placed near the altar, and their great men have temples erected to their memory, and a yearly sacrifice offered to them.

Both men and women, during the first five years of mourning, wear white cloths, almost torn to rags; and a widow mourns three years for the death of a husband, and the man one year for his wife, and one for a brother.

Great care, whole circumstances will allow it, credit tem- ples to the memory of their ancestors, when a yearly fa- crifice is offered. The Emperor sacrifices to seven of his ancestors, the tributary kings to five, and a mandarin to three.

SECT. XIV.

Containing the history of China, from the earliest accounts, to the conquest of that empire by the Tartars.

We were, about three hundred years ago, as little acquainted with the continent of America, or the new world. As we owe the discovery of both to navigation, or the knowledge of the Chinese, or the currant of their commerce, or the Hottentots dominonated a new world, as America; for though it was situate on the same continent with Europe, neither the Egyptians, Greeks, or Romans, gave us the least intimations, in the least not mention of such a country on the face of the globe. It is amazing, that when the Egyptians and Pharaohs of their species lived, and made ignorant, the mummies, of which we speak, so many marks, which were made in the persecuting of the Israelites, and three times upon the altar, as the relations then attend again, bringing lighted waxes and incense, which they burn, and profit all their famous and splendid ones, as the most beautiful in the world. There is nothing so beautiful as the first part of their pretended history is fabulous, and for the rest, by their own confession, their records have been so contemned as to be lost or destroyed; and their paper is subject to the worm, that it will not last many years. They have written, therefore of later years, are only copies of copies; there are no originals to be found.

If we might credit those who pretend such are found that have been taken to preserve an impartial history, as never was observed on the earth. They were a very thick the country of China, all men their famine will be perceived. The funeral is frequently put off for several months, and sometimes years, a paper was set up and the name of the house, and that contains the virtues and commendable qualities of the deceased, the verses composed upon this subject, the coffin a several times, and the whole company with their wives; nor can the funer- ary upon any office or employment for three years after the death of the father, and it is reckoned impious even to laugh, or take any manner of pleasure, during the time of mourning.

The friends and relations of the deceased, being invited by the funerary to attend his father’s corpse to the grave, the procession begins with those that carry the images or pictures of men, women, heads, and birds, attended with a great number of men; the chariot, charioters, porters, and tables, with dishes of meat, also are carried before the corpse. Then follow the priests with drums, musical instruments, and cars, and next the coffins, under a large arched canopy, carried by twenty or thirty men, the fans follow the coffin on foot, supporting themselves with crutches, as not able to sustain themselves without them. The women then advance in close chairs, covered with white silks, rending the air with their cries; and besides these, we other women, who are hired to make a dismal mournful noise on such occasions. Being arrived at the tomb, which may be taken a palace, the company enter by a great gate, and having left incense on each side of it, and the corpse being deposited in it, an altar is erected before it, and lights left burning on the altar; the friends of the deceased visiting the tomb at certain feasts, and prostrat- ing themselves before it, with their faces to the ground.
...and the hair of his head became white like wool. For a brother, it was a yearly lament, and even of him a mantar. I have never known a country to be more than of princes that have been adorned that the old had been the same, like those of their countrymen, and brought to meet the Chieftains and their families. Nowhere could we have been the knowledge of the country be known, though it was, neither the wool nor the country was; but when it was opened, examined, and found to be a sort of history, the nation could admit the secret. They had continued to the end, and their power, they had heard, appear sometimes, having judged and authorized, from their divine, of their power, of their great and great-grandty, their nation, but, century and century; and the family of the nation, but, century and century.
During the reign of Chia-chung, about the year of our Lord 1245, the Tartars made themselves masters of the northern provinces of China; and in the reign of Tsan-bon, the fourth, they overran their Charsiers and chief-land, and after he had reigned one hundred and fifteen years, he was succeeded by Ching-tong, and in this they agreed, being descended from the same Hsia stock. The Emperor Ching-tong taught them husbandry and physick. Hoang-lu, his successor, failed to teach them alchemy, the art of spinning, or making iron or tin; and the next prince, Chiao-ho, awoke the discontent of his fellow provincials, and inviting him to the court, and in his palace, by the people of his country, who, in the reign of his father, he was called to the throne, and made all men to offer sacrifices but himself, or those he desired. They sent him, and he maintained his authority, and employed his military and civil powers, and had four himself. Their eighth Emperor Ta-ch'ing tyrannically, was deposed by the grandees, and succeeded by his brother Yen-wo, who is said to have been a prince of uncommon virtue, and ever employed his authority for the good of his subjects; that he was frugal and abstemious, never affected flutes, and remarkable for his piety and modesty; that he made canals, drained the bogs, and cut the mountains into level figures, to make them fit for tillage; that he distinguished his son, because he proved a vicious prince, and transferred the kingdom to Chuan, a minister of great probity, who began a number of schools, and the third ten hundred, but not until five centuries before Ch'ihfu, that he visited great part of his dominions once a year, to enquire into the conduct of his officers, promoted husbandry, and encouraged his people to write whatever they thought proper, and founded in his administration.

Chuan was succeeded by Tai-chou, who, coming very young to the throne, his father, it was said, died of a disease in the business of his father's tomb, or rather in the palace erected over it, for three years, and then restored him to the throne. He was succeeded by a grandson of the late Choon, who, and ever reflected that he was the father of the minister who had confined him. It was decreed by the Emperor Tai-yu, that the old prince of the same name would be put to death; and the Tartars, being not to bring any matters of state before him, left he should be disturbed in his pleasures.

This prince is represented as a very tyrannical prince, having a queen as cruel as he, who was ever inventing instruments of torture, and, among the rest, he had a hollow pillar, which the executioner applied to the object of her fury to embrace, and then heated the pillar to that degree, that the miserable wretch was roasted to death. But those people failing the cruelties exercised in this reign, deplored the throne of the Tartars, and on his death, his family, named Von-bang, who began a new race of monarchs, about one thousand years before the birth of Christ.

About the year 177 before Christ, in the reign of Ping-fu, several of the tributary princes rebelled, and rendered themselves independent of the Emperor. From this reign, their great philosopher Confucius began his history. He was made prime minister about the year 557, and wrote the history of the civil wars, which lasted for two hundred years. Confucius, not finding his advice regarded, retired from court some time before he died. This great and good philosopher was equally afflicted for his desolation and candour, as for his genius and learning. In all his actions, as well as in his discourses, he supported precept by example. His system of religion was a system of natural law, which ought to be the ground-work of all religion, the rule of society, and standard of government. He taught, that reason was an emanation of the Almighty; that there is a difference between nature and reason; that the religion which was repugnant to reason, would not come from heaven. He lived about three hundred years, and divided the nation into twelve districts, and instituted the system of the twelve branches of government, as the head of the twelve districts.

Consequently, not finding his advice regarded, retired from court some time before he died. This great and good philosopher was equally afflicted for his desolation and candour, as for his genius and learning. In all his actions, as well as in his discourses, he supported precept by example. His system of religion was a system of natural law, which ought to be the ground-work of all religion, the rule of society, and standard of government. He taught, that reason was an emanation of the Almighty; that there is a difference between nature and reason; that the religion which was repugnant to reason, would not come from heaven. He lived about three hundred years, and divided the nation into twelve districts, and instituted the system of the twelve branches of government, as the head of the twelve districts.

However, the Chinese, who were most averse to the Tartar government, fled to the Philippines, Java, and other islands in the Indian seas, where they are still extant, and followed by such hostility and worship being paid to a creature. His works are now in such authority, that the Chinese appeal to them in all disputes, and his posterity are the only nobility in the kingdom, except the princes of the blood.

No. 6.
ever the opulence, power, grandeur, and glory of the Chi-
inese, is the greatest blessing at home. It hath bestowed the
blessings of peace; and abroad it is respected: it hath en-
joyed a perfect tranquility for upwards of seventy years,
and a profusion of wealth, works, and public works of
art, having thirty-two royal palaces; two hundred and
seventy-two grand libraries, five hundred and nine
large mosques, five hundred and forty-four domes;
arches, three hundred and one beautiful bridges, and six
hundred and eighty curious tombs. The Emperor Yong-
ching (the first of the name) on his accession to the throne in 1722, notwithstanding his de-
crees against the Christians, is generally acknowledged to
be a prince of great virtue, and an excellent governor;
and that he condescended himself to promote the hap-
piens of his people.

According to Dr. Halde, there happened a dreadful earth-
quake at Pe-king in this reign, in the year 1721, which
demolished great part of that capital, and buried more than
one hundred thousands of the inhabitants in its
ruins: But there is some reason to doubt of the truth of
this writer's account of this event, because several East-India
captains who were at China in that year, had heard nothing
of it; and though Canton, the port the Europeans trade
to, be a thousand miles south of Pe-king, yet a calamity
so remarkable as this must have been known by the cap-
tains of ships and merchants trading to that city.
The Chinese empire hath been successfully governed by
twenty-two imperial families, and hath been established
three thousand nine hundred and eighty-four years, dur-
ing which space, two hundred and thirty Emperors have
reigned.

S E C T. XV.

Of the islands subject to China.

FORMOSA, AYUAN, and MACAO, are the principal Chinesi
islands.

The island of Formosa is situate in the Pacific ocean,
between one hundred and nineteen, and one hundred
and twenty-two degrees of easterly longitude, and between
twenty-two and twenty-five degrees of north latitude, one
hundred miles east of the province of Fo-ken in China;
its circumference is between four and five hundred miles.
It aboundeth in the same kind of fruits as the south of China
does, near which it lies, and is agreeably diversified
with hills and valleys. The Spaniards first discovered it from
the Philippine thither; but they did not think it
worth their while to continue there. The Dutch afterwards at-
tempted to bring it under their domination, but were driven
from thence by the Chinese. The Dutch relate, that the
people of this island were repugnent; that every province,
and every town in the island was an independent state,
resembling those of Holland; but since they have been re-
duced under the dominion of China, they are governed
by Chinese viceroys, called Peasants, and have their
houses, that is, priests and priestsesses, and their
neighbouring continent. The Dutch relate, that they had
many Chinese profligates; but it is probable there are no Chi-
nsians there at present, or the Popish missionaries would
have made them visit from Macao, and have mentioned
them in their travels. Their mountains, it is said, are full of
hanging pine, which makes the island subject to
earthquakes. The women here plow, low, and manure
the ground, and the men spend their time chiefly in hunt-
ing. Their hovels are built with cane, and are but one
story high. Their female priests pretend to a knowledge
of futurity, and are often consulted as oracles.

The isle of Ayuan we shall mention is Ayuran, or Hay-
man; it is situate in the Chinese sea, between one hundred
and seven, and one hundred and ten degrees of easterly
longitude, and between forty and twenty-five degrees of
north latitude, fifty miles south of the continent of China;
being of an oval form, and about three hundred miles in
circumference. It is a pleasant country; and to
afford both gold and pearls; but as no travellers have
given us any particular account of the rest of the produce
of this island, we may leave it. From its situation, that the principal grain is rice, and that
cocoa, mangoes, guava, plantains, oranges, and other tropical fruits abound.

Macao is situate in one hundred and thirteen degrees of
easterly longitude, and twenty-three degrees of north latitude.
It is situate on the mouth of the river Zonh in China.
The Portuguese took possession of it in their full
voyages to China, and have carried on a great trade there
for upwards of one hundred years; and though they said
they now barter nothing with the Chinese, but are
usual bought and sold to those people by their own people by the laws of Portugal, and to present
the Christians religion, when the Popish missionaries are driven
out of China, Macao is the last refuge for those people.

There are a great number of very small islands; that
lie between Formosa and the Philippine island. As the chas-
semen of these are suffered to trade, the Lord高压
or his agents, rather to pass to the northward or southward, than through
them; the Centurion ship of war passed through them bet-
ween fifteen feet and from the ship, but generally
through, the sea had a very dangerous siperfit, for it was
rippled and foamed with all the appearance of being full
of broken brakes; but this agitation of the sea, which had alarmed
them, being occasioned only by a strong wind, they got
through it very easily.

Having but barely mentioned the great Chinese wall,
we shall here give a fuller description of that amazing
work. It was begun about two thousand years ago, and is a work of
industrial genius; it is principally
built of brick, and cemented with the strongest mortar,
inconsiderable that though it has stood many centuries it is
continued firm. It is about five hundred leagues in length,
including is many turnings and windings, and in its interese-
distances furnished with the mountains, which reduces this
wall to about one hundred leagues. The Chinese, before
the conquest, guarded this wall with a million of soldiers,
but only particular parts of it are now defended from
invaders. Its greatest elevation is about thirty feet, and its
breadth is about two feet. There are in some places a
tree well built on high mountains it consequentolly risi and sinks with the surface of
the ground, which circumstance accounts for the sudden
height given it by some authors. When the island Ise, the
Rusian ambassador to the court of China, saw this
wall, he tells us it was in as good repair as it had not
been built twenty years.

S E C T. XVI.

Containing an account of Chinese Tartary.

CHINESE Tartary extends from forty to one hun-
dred and thirty-five degrees of eastern longitude, and
lies between thirty-five and seventy-two degrees of northern
latitude; having the Frozen ocean on the north; the Pacific
ocean on the east; China, India, Peru, and the Ciprian
sea, south; and Europe Russia on the west: But in this
chapter we shall only treat of Chinese Tartary, which is
situate between one hundred and five and one hundred
and thirty-five degrees of eastern longitude, and between forty-
one and fifty-five degrees of north latitude; being bounded
by Russian Tartary, or Siberia, upon the north; by the
Pacific ocean, east; by the Chinese provinces of Ly-an
feng and Corea on the south, and by Russian Tartary on the
west; the river Amour and Yamou, called by the Chi-
inese Saphan Ula, separating it from Russian Tartary on the
north; and the river Amur dividing it from the Rus-
sian dominions on the west; which river runs in the
province of Nin-teh, or Manchew Tartary, that is usually subdivi-
sed into the provinces of Keching Tartary on the east;
and Tigraran and Solon Tartary on the west.

Chinese Tartary consists, for the most part, in barren
mountains and desert plains: there have been some good
towns in it, but most of them run to run to after the Tar-
tars conquered China, whither the seat of the government
being removed, all the Tartars of diversion have followed
the court thither, and are advanced by the reverence to the
chiefs poets and that empire; and by their intermarriage and
commerce with the Chinese are become the same people
as a man, and look upon their original country as a
province of China. In the north, the people differ little
from the Laplanders of Europe. They hunt fowls, erins,
and other small animals with nets and winter, and spend
time in fishing in the summer. The gentlemen in the
south of Tartary make hunting of deer, and other game,
rather for amusement. They have a plentiful country, and
eat part of their food is meat; but their hunting differs
much from ours; for they kill all on their vallies and dep-
ended pastures, and find game in a large and fertile
country, driving the game before them, until they have
brought them into a very small compass; then they shoot,
and the game are driven into a small space and

Khirinas is the chief town at present, and is situate in
forty-four degrees north latitude, on a mountain, the
ancient seat of one of the river Choton Tartars; and
here are the tombs of the ancestors of the present Emperor.
The Tartars are a much more robust and hardly people
than
Although they are not always disposed to profess the Christian religion, they are driven by want, that it may be brought to their notice, and they have been visited with such destruction that they have been driven to it. As the Christians are generally more numerous than the Mohammedans, they are in danger of being overwhelmed by them; for, if they are not careful, they may be driven into the arms of the enemy, which is their greatest danger.

The Tartars live in tents, and remove from place to place, according to the seasons of the year, and the supplies of water, which they obtain from the rivers. They have little water, and their tents are of straw and leather. They have no fixed abode, but live in tents, which they move from place to place, according to the seasons of the year.

They are a warlike people, and are always on the lookout for their enemies. They have a great many horses, and are always ready to fight. They have a great many followers, and are always ready to support their leaders.

Their religion is Paganism, and, besides the Christian idea, they worship the great Lama. They are a warlike people, and are always ready to fight. They have a great many followers, and are always ready to support their leaders.

The westem Tartars live in tents, and remove from place to place, according to the seasons of the year, and the supplies of water, which they obtain from the rivers. They have little water, and their tents are of straw and leather. They have no fixed abode, but live in tents, which they move from place to place, according to the seasons of the year.

They are a warlike people, and are always on the lookout for their enemies. They have a great many horses, and are always ready to fight. They have a great many followers, and are always ready to support their leaders.

They are a warlike people, and are always on the lookout for their enemies. They have a great many horses, and are always ready to fight. They have a great many followers, and are always ready to support their leaders.

Their religion is Paganism, and, besides the Christian idea, they worship the great Lama. They are a warlike people, and are always ready to fight. They have a great many followers, and are always ready to support their leaders.
haply Turk, not being able to bear this ignominious kind of punishment, dashed out his brains against the bars of his moveable prison. As for Tamerlane, he soon after subdued the greatest part of Tartary Asia, took the city of Persia in Byzantium, conquered Syria, and reduced Egypt; after which he returned back to his own country, and died in the year of our Lord 1404. But as these transitory examples have a more immediate reference to Turkey, we shall treat of them more largely when we come to that part of our work.

CHAP. III.

THE KINGDOM OF CORÉA.

The kingdom of Corea, or Corea which is a large peninsula, situated between China and Japan, and lying between the thirty-fourth and forty-third degrees of northern latitude. It is a strip of land, and not having any mountains, is divided into six provinces, having two hundred and twenty-five miles in breadth from east to west. It is divided into six provinces, has two hundred cities, with many castles and fortified places.

In the northern parts of the kingdom the climate is exceedingly severe, and the snow sometimes falls in such quantities, that the people are forced to work a passage under it, in order to go from one house to another, fixing a small barrier, as far as the house in Corea. On the winding roads, the snow is so large, that the people are obliged to go through the snow. The inhabitants, in the northern part, live upon barley, having no rice, and clothe themselves in sheep-skins. In Corea, the storks are the birds that are found in the most number, and have their nests in the rivers. The Coreans have lately taught them to plant and reap their wheat, which is smoked by them. They have also iron, lead, and gold; they are black or brown; and there are many crocodiles in their rivers, the most considerable of which are Ya-bu, and the Tsunem.

The Coreans are in general well-shaped, of a comely aspect, friendly to strangers, but treat barbarously those who are far from fortunate, and placed in their body. They are at the same time effeminate, much given to pleasures, and of a timid disposition. People of condition dress in a purple-coloured silk gown with long and wide sleeves, and a sash; they also wear fur caps and linen buffalos. The common people wear cotton or hemp-cloth. In Corea, every gentleman belongs to people of different situation, which are handson and faceless. Contrasts for marriage are made at the age of seven or eight years; and the woman is prohibited to the third degree of kindred; the fees are in that case brought up by the father-in-law, except an only daughter. A man is allowed to have three wives, and to keep only one at home; but the great diversity is permitted to keep three or four at his house, one of whom acts as suprême mistress. They in general eat fish, and divers kinds of fowls; and are fond of vegetables. The most considerable part of the father's substance devolves to his eldest son, and the rest among the other children. The Coreans bury their dead in spring and autumn, and in the mean time place the corpse in a kind of hut made of rushes, raised upon four stakes in their courts or gardens. The deceased lies in a double coffin, closely cemented together, dressed in his best apparel, with some toys lying near him. They set out in procession with the body at day-break, the bierers firing all the way, keeping exact time with their flaps and voice, while the rest of the company fill the air with doleful lamentations. The graves for the common people are fire or fix feet deep, but people of rank are deposited in stone vaults, as with us. After the funeral is over, they make their offerings to the deceased, and bring round the moon. Children mourn three years, with great solemnity and abstinence, for their fathers, their drefts, during this time of sadness, being very mean.

They do not much concern themselves about religious worship, the whole of which consists chiefly in external ceremonies. But we are informed of the followers of Corea, that they are very holy, and that the believers are very numerous. There are also many monasteries for religious women: one for daughters of the nobility, and the other for young women of inferior rank. The Coreans are exceedingly ignorant of geography, supposing the globe to consist only of twelve kingdoms, and extend their maps no farther than Asia. Their language has a sort of chrestomathy: but the literature consists of the Chinese, whose method of printing they follow. The education of their children is free from all severity; they improve in their tender minds a kind of knowledge: the principal part of their learning consists in the knowledge of usual philosophy, teaching the great Confucius as their model.

Their chief trade is with the Japanese, particularly with the inhabitants of Tiama, subject to Japan, who bring to their trade in Corea, silver, copper, wood, arms, paper, paper, buffaloes, horses, &c. and receive cotton and gingang in exchange. The only ports to which the Coreans are allowed, which are current no farther than the frontiers of China: in other parts they make their payments in currency and goods of all kinds.

The kingdom of Corea is no more than a vassal to the Emperor of China, he rules with absolute sway, keeps a great number of hostiler troops in his service, which guards his palace, and attend him wherever he goes. Where his Majesty is passing, none must presume to look at him. He is lord of all the lands in the kingdom, and behooves them on whose feet ever he be. In whatever term of years he thinks proper; he has a council of state composed of several ministers; but none may give his opinion till first asked by his Majesty, nor meddle in any state concern without his permission. If they behave well, they are continued in office during life. The Coreans are either banished, or sentenced to suffer death, if found guilty of mal-practices.

The revenues of the crown consist principally in the rents of land granted to the people: the king has, besides, the right of every thing productive of profit, either by land or sea.

In Corea, the penal laws are extremely rigorous. Rebel and traitors, together with their wives, fathers, and children, are cut off without the least mercy, and their belongings leveled with the ground. If a woman inherits her husband, the other children are placed behind a banner, being held by a wife, and a hat-net is placed close to her, with which every one except those of noble family, is obliged to give her a chop as he passes by her; and where a murder of this kind is committed, the magistrate of the place is suspended from the execution of his office. But though a woman is so severely punished for murdering her husband, yet the laws justify and protect the man who kills his wife deceased in adultery; or if he gives her up to justice, he is condemned to die, but is allowed to christ the mode of her suffering death, in which case they generally cut their own throats. It is assisted by some writers, that husbands, especially if they are of inferior quality, are punished with death for adultery. If an unmarried man be detected in criminal conversation with a married woman, they punish him by flogging him down to the waist, and leaving him only a pair of trousers on: after which, they force him to walk with long, piercéd arrow through each of his ears, and tie a kettle on his back, which is best upon as he passes through the streets, and the inhabitants of the kingdom, who hear the sound, agree that the person who kills a free-man is obliged to follow a quantity of vinegar with which the body of the murdered person has been washed, then the criminal is trampled under foot, and kicked on the belly till he dies. Nearly the same punishment is inflicted for theft.

The buffalo here is generally given on the postemeter, and sometimes on the feds and islands of the sea. When on the plains, they bind the buffalo's legs to a couple of benches, the one at his feet, and the other under his legs; and in this posture they drive him on the sea with a fort of
of faith, but not more than thirty strokes at a time, which they repeat two or three hours afterwards, till the whole of the sentence is executed. When an offender receives the balladino on the sole of his foot, they compel him to sit down on the ground, and tremble or cry out as they like; if two men are together, fix them in a wooden frame, and thus inflict the punishment. Women and apprentices generally receive the balladino on the calf of their leg. Perforators in a near to the king, or who refuse to pay their debts, are balladined on the feet every fifteen days till they pay the money. State criminals are tried by the grand royal council.

The military government in Corea very much resembles the civil. Each province has a general, or chief, of the following order, with four or five colonels under him, each of whom commands a regiment; and that the King may know the exact number of soldiers he has in pay, the inferior officers are obliged to keep an accurate list of all the men belonging to their respective corps, which they transmit at fixed times to their superior officers.

Their ships of war have commonly two mast and about thirty oars, with fire or fix men to each oar, which, with the mariners, make about three hundred men in each ship; their fleet consists of canons and post-gramaurs; and every province has its particular admiral, who is obliged annually to review the ships of war belonging to his province. They have always a number of ships in commission, ever ready to be called forth, to act as a confederacy, and fit out an armament of war.

Corea was originally inhabited by different people, each of which possessed its respective prince, law maxim, and customs; but they all vest a nation. The most considerable of these early nations were descended from the Tartari, and named Kao-kiv ili.

The first king of Corea is said to have been a nephew of Gheon, Emperor of China, who, for some indefinite reasons, is declared to have been a native of Corea. Out of the whole of these nauseous accounts of the early history of that country, it appears, on the whole, that Corea was at one time the dominion of several different nations, and that the people of Corea were, from the earliest ages, the most barbarous and savage of any people in the world. They have been for ages almost in a continual war with each other, and have never been known to form any kind of union or alliance; their warlike spirits have been so exalted as to prevent their knowing what it is to live in peace.

The only known possession which Corea has made of another country is the island of Japan, which they call Corea. They have set up a flag at the point of Corea, and have built a fort at the mouth of the river, as a place of deposit for their merchandise. They have also established a station at the mouth of the river, where they have built a fort, and have established a number of towns and villages, which they call Corea. The inhabitants of these towns and villages are of the same race as the people of Corea, and are divided into several tribes, each of which has its own language and customs. They are all governed by a king, who is assisted by a council of elders, composed of the ablest men in each tribe. The king has the power of life and death in his own hands, and is the supreme governor of the nation.
The New and Universal System of Geography

Thirty minutes north latitude, on an elevated situation, having neither river nor lake before the fire, makes a very agreeable situation. There are twenty thousand houses in it, most of them low thatched cottages, and some few built of brick; their streets wide, but irregular, and finds of flowers, and among others, very handsome groundnuts, which are very effective in the dry season.

In the middle of the city stands the king's palace, which, with its towers and turrets, is a copy of the one at the south, and is covered with a thick roof. It is visible from the towers, and is a very fine example of the art of the bricklayers, consisting of fifty or sixty iron girds, to support and guide it. There is also a noble building, and a number of other buildings, all made of brick, but none more so than the main structure, which is large, and forms a grand street, and has a splendid clock in it. The Chinese, who trade between this place and Japan, have factories here. In the flat country there are abundance of villages, which are surrounded with walls or hedges of earth, to defend them against the annual floods.

The natives of Tonquin are of a middle stature, brown complexion, black hair, which falls down on their shoulders; they have black eyes, and their teeth are dyed black. They are said to wear the little finger of the left hand as long as the finger, as the Chinese do. They are very faithful and diligent, submissive to their superiors, and faithful to their countrymen.

Their provisions are drest and fried up in an elegant style; and they perform both their tables and their dishes. Their usual fare consists of rice dressed various ways, eggs, pork, fish, buffalo, pork, beef, and fowls. They have neither table-cloths or napkins; and instead of forks, use ivory or ebony sticks as the Chinese do, and eat noise. The food of the common people is rice, dried fish, and tea; but the higher classes mix arrack with their tea, and often become intoxicated with it. The gentlemen have halls in their houses, for the diversion of singing and dancing in the evenings; and every villa hath its halls of music and song. The people keep their festivals, and castrate calves to be eaten. They have several kinds of musical instruments, such as kettle-drums, trumpets, violin, and drums. The actors are generally about half a dozen in number; and the dances are performed by the women, who sing at the same time. They have also the merry-maids, to excite the laughter of the spectators.

The tonquin, or a gow girt with a fish: the fishes are force dastiguable by their heads. People of condition wear English cloths, red, blue, or green, or elfe flilk of their own manufacture; their caps made like the crown of a bat, of the same materials as the gown; the common men wear a green or red cap, or ffish, but shorter, and all of them wear cotton breeches, or drawers, which reach down below their knees.

The common people are good mechanics, but their lords, who are owners of the lands, keep them so miserably poor, that they are frequently forced to remain idle, for want of materials to work upon. The Dutch, who marry temporary wives in this country, employ them as their fathers to buy the materials, and let the poor people to work, and have their goods ready against the shipping arrives.

Silk and lacquered ware are their chief manufactures, the country produces aloso turquoise, lignum vitae, fine perfumes, and wood for dying, refomgwood lumber.

The principal grain that grows here is rice, but they have cocoa nuts, guava, mangos, plamains, orange, and other tropical productions. They live upon rice, fish, and root, which they are extremely fond of.

There are great numbers of elephants in this kingdom, and of the gentler animals, all sorts of hawks, even, but false, and the same kind of hogs we meet with in China. They have neither scythe nor weeds, but plenty of fish and poultry.

They have no mines of gold, or silver; but there are iron and lead mines in abundance. Silk worms are also here plentiful, and they use cotton and hemp, but sugar cane likewise thrive well in this country; and they have a sort of tea which they call Chia lace, the leaves of which they boil, as also another kind called chia way, the leaf of which is not fit for any use, but the flowers, when dried and boiled before the fire, make a very agreeable infusion. The oranges of Tonquin are said to excel all others for richness of flavour: here are also various sorts of cucumbers, and among others, very handsome melons, and jaiminos, though the Tonquinese do not disburc much taste for this elegant ornament of nature. They also make spoons, pitchers, and other articles, as well as those of their chief food, the cultivation of it is the peasant's whole employ.

The strangers, or Bows, who has lately the title of King: he has no state in the government. The General is vested with the regal power; he makes the King a kind of prisoner in his own palace, but allows him to appear at certain times, and receive the homage of his subjects, and the general body. The King is told before the general declares, he takes upon him the administration of the government, only to eafe his Sovereign of the trouble of it, and that he may enjoy his placers without inconvenience. His Majesty's servants are all appointed by the General, and have orders not to suffer any of the King's subjects near him. The General divides all offices, civil and military, and has a guard of two thousand elephants, besides his horse and foot guards, and usually has a standing army of thirty thousand men in and about the capital city. The food of the common people is composed of the different parts of the kingdom, particularly on the frontiers of China, which is the power they stand most in fear of. When the army marches, the officers and old private soldiers are mounted upon elephants, a castle or a great room being fixed upon the back of this monstrous beast, in which a number of people assemble, especially on their festivals or ought their arrows. They have no naval force, only some little sailing vessels, with which they never venture into the sea. They have no sails, but make use of oars only.

Among a great number of festivals celebrated by the Tonquinese, two of them are kept with more than ordinary solemnity. The first is held at the beginning of the year, which with them commences with the new moon; next to this, and sometimes three or four days before, this feast continues about twelve days; but the fifteenth days are rather spent in lamentation than rejoicing; for then they that up their habitations, and keep within-doors, fasting, the forenoon, and meeting in some unlooked object in the forest, which might prove to them an omens of ill fortune the ensuing year. On the following day they begin their festivity, when booths and flagons are erected in the streets, in which are represented different kinds of shows; nothing is then heard but the sound of musical instruments, and the wild uproar of riot and licentiousness. The second grand festival is kept in the fifth moon, with the same kind of merriment. Excitation of the people, they observe two months festival, in which religion has some share, it being customary at this feast to sacrifice to their ancestors, by oblations of provisions at their tombs. Another of their solemn feasts is called Canja, on which their King gives his public benefaction to the country, and plows two or three furrows with his own hands for the encouragement of agriculture. The natives profess and also practise by war of perpetual war against the Chinese for this festival; which custom they have resonably borrowed from the Chinese; as may be seen, in our accounts of that people.

The officers of state and chief magistrates in Tonquin are generally eunuchs, who seem an inconspicuous set of people, difficult of access, and extremely curious, who have none but themselves to make provision for, and indeed it is a common observation, that they who have the least occasion meet as cheap as cocoa. One of their solemn feasts is called Chinch, has feared together, tells to the government, when they die, he has not even the power to dispose of any part of it by will, and this is the reason that their exter-
as their own. And in this part of the world, we see people in every capacity, part, and condition, to any extent that will maintain them, without demanding any consideration for them; and why is this more unnatural than the Tonguiniacs felling their children to preserve themselves?

Their manners are more rigid than those of the Chinese: we see the like proprieties and the like mourning, only, they burn the corpse, and put the ashes into an urn; they carry presents to the friends, and the relations, to the family, which are distributed among the widows and poor people, after they have been offered to the deceased, and the father placed on an altar before the corpse; over the tombs of numbers of people of condition, they erect a wooden tower four or five and twenty feet high, and the prieft attending to the top of it, makes a fummary demonstration to the churfh, and good qualities of the deceased; after which, he comes down and lets fire to the tower, which is foon confumed to ashes, being mixed of very bright metals, and rich.

People fit down to an entertainment, which is provided for them. Fifty hogs have been defed and distributed at a funeral, with the generall quantity of fruit that ever he far together.

When the King dies, he lies in state fifty-five days after his death, and his body continues to be formed every day as if he were alive; the meat being divided every evening among the priests and poor people. After which a very splendid procession is begun towards the royal burying-place, where the funeral is celebrated, the party from China, when they find they have reached the tombs under fourteen days.

The mandarins, great officers, and magnates, are obliged to mourn three years for the princes, the gentry the common people three; and no divertions are allowed for three years after the funeral.

Then the ceremony is brought to its opulent, in providing coffins for themselves; in feauing these coffins, they cement the boards together; but make no use of nails, let that should have the appearance of laying a constraint on the deceased.

With respect to the origin of the Tonguiniacs, and the revolutions in their kingdom, little can be said with certainty, as they were for many ages ignorant of the art of writing. One of the first kings mentioned in their history was Dung, for which reason they are celebrated for cruelty, and to have been raised to the throne by a troop of lavishly robed robbers; but as he proved a tyrant, his subjects revolted, and murdered him.

Le-day-han was elected king, who invaded and over-ran the kingdom; this prince, however, defended himself with great bravery, and defeated them several times, but could not drive them out of the country.

On the death of Le-day-han, Li-bal-vie was placed on the throne, who conquered the Chinese, and drove them out of his territories. The policy of this prince proved, however, by several generations, and the last king of this family leaving behind him but one daughter, this princess governed for her father; but another grand-prieb, named Ho, confpired against the queen, stabbed her husband in battle, put both of them to death, and placed his own brother on the throne, which is nothing but an emprise which the Chinese and cruelty occasioned a revolt of his father's, who applied to the Chinese for aid, and thereby occasioned their entrance into the kingdom with a numerous army, which drove away the tyrant, and as a reward for their services, possessed themselves of the government, obliging the Tonguiniacs to accept of a viceregent of China, who introduced the Chinese laws and customs, and entirely changed the form of the constitution.

In process of time, however, the Tonguiniacs, headed by Li, who was a man of all interped spirits, revolted from the Chinese; and, taking up arms, put them all to the sword, and compelled the Emperor to content to a difhonourable peace. Li was then crowned King of Tonguiniacs; and all that the Chinese were able to obtain, was, that the Kings of Tonguiniacs should hold the crown in fealty under the Chinese Emperor; and pay their tribute. This treaty, was concluded about the year 1550 after Christ, and both nations have faithfully observed the articles ever since. When in China, to add splendor to his ambedals to Tonguiniacs, to collect the tribute, they behave with the utmost blandfinesse; infomuch that when they come to the King he is obliged to send him presents, which is a great part of his business.
About the year 1500 of the Christian era, a simple fisherman, named Maia, discovered the crown, but was threatened by Tsang, a king, who sentenced the fisherman to death. In the condition of despair, he prayed to his patron to intercede for him, who appeared to him in a vision with the promise of restoring the family of Li to the throne, and accordingly castrated a young prince of that house to be crowned, and restored him to himself the regal power, under the state of chaste, or general of the realm, only beheading on the prince the bare title of sovereign.

This emperor, Tsang, had a brother-in-law, whom he named Hoaing, son of a governor of the province of Tong-wa, to whom Tsang lay under some particular obligations; for when the former was on the point of death, the latter fought a great battle with him, in afflicting him in his enterprise with the troops of his province, but likewise gave him his daughter in marriage, and, in the end, he left in his possession the government of the country.

These two generals governed with absolute authority, the one in Tonquing, and the other in Cochin-China, and waged war with each other as long as they lived, with nearly equal successes on both sides. They transmitted the title of chovan to their successors, and their descendants enjoojed to the preferred right of time to both kingdoms. But they shall here confine ourselves to the chovan of Tonquing, where indeed are at present two supreme magnates, or chovan, one in the north, the other in the south; the former has the name of bova; but in the chovan are vested all the powers of government. The authority of the bova principally derives its strength from the submission of the chiefs, which derives from the panjtreal, or of the country, and the allegiance which others pay to them; and may even afford a collateral branch to the dignity. The chovan keeps a great revenue, and has principal palaces, and magnificent gardens. His family is of the same name as his sovereign, and bears the title of mother of the kingdom.

The consequence who bore the King his first son, takes place next to the queen, and is treated with distingushed honour.

**S E C T. II.**

**Containing a description of the situation, boundaries, towns, products, inhabitants, &c. of Cochin-China.**

**T H I S kingdom, which includes Champaign, is feerete between one hundred and four and one hundred and ten degrees of east longitude, and between twenty and four degrees of north latitude; it is bounded by Tonquin, on the north by the Indian ocean on the east and south, and by Laos and Cambodia, on the west, being about four hundred miles in length, and about one hundred and fifty in breadth. It was originally a province of Tonquin, but has formed a distinct kingdom for upwards of three hundred years. It is tributary to China, like Tonquin.**

The Kesiou mountains run the whole length of it from north to south, dividing it from Cambodia; but towards the sea the country is generally level. The air of this country is not hot as that of Tonquin, though it lies nearer the equator, for which reason the natives may be suffered, as the advantages of the sea breezes, of which Tonquin has not so great a share: Tonquin lying upon a bay where the winds have not so free a course, while this country lies open to the ocean. It is also observed, that the countries which lie near the tropic, as Tonquin does, are much hotter than those that lie near the equator, for which reason countries which lie under either tropic have the sun over their heads near three months, whereas the sun passes yearly over the countries near the equator, and does not return that other again for near six months; and is also hotter by the heat near the tropic, that the days are an hour and half longer at the tropic than they are at the equinocial, and the rains and clouds more frequent continues both longer than in the tropic.

This kingdom is divided into five or six provinces, and is well-peopled. The King resides at the capital of Kinh-ly. Among the ruins are several islands subject to this kingdom, which produce many useful fruit trees. This country produces great plenty of rice and sugar, and they have a very good liquor, made of rice, called a kind of wine, which fertilizes the land. In this wet sea-fon, the people live about the country in huts; and, in order to keep their houses dry, to cover them with tiles on piles, that the water may not flow beneath them. They build their houses chiefly with the bamboo cane, one story high; the women's houses are single, and the men's or halls ground transparent: the partitions of their chambers are formed of reeds, and their floors covered with mats, which, in the rain, they throw for beds, but the rooms of the rich are more elegantly furnished. They have no kindness in their houses, for fear of accidents by fire, but instead of their hearthstones, are obliged to cast them extinguishing their fires on hearing the beat of a drum, whatever the wind blows from the sea.

They are not only protected, and live chiefly on rice and fish, which they have in great plenty. Though they are not imperfectly civilized, yet they possess that felicity which might excite the envy of more polished nations; they have another thrones not beggarly, and are remarkable for their hospitality. Though they do not encourage pride and luxury, yet the wealthier sort entertain friends in a sumptuous manner.

At public festivals, the common people meet in the streets, where in a circle they eat their provision on mats, while music, songs and dances, and other ceremonies are performed. The Amulet Montfils of Cochin-China are defpotic, and very difficult of access. He gives audience at his palace, where it is called the emperor's house, on his own state throne, and is attended by his guards; he wears a turban of the finest calico on his head, and his sons sit on thrones before him, and his eldest son is placed on his arm: but his body is almost bare, having only a covering round his middle, and in his left hand he holds a sceptre, which is only possessed by the most dreaded tortures, but very few criminal are like wise indicted on all the kindred of the traitors. Other handsome offences are punished with death, or the loss of a limb: though it must be acknowledged, that an almost irresistible influence of money often screened the guilty from punishment.

Notwithstanding the Cochin-Chinese are entirely ignorant of the sciences, they are very skillful mechanics; and far surpass the Tonquin in the manufacture of silk. They make sugar-mills and water-engines, but can make not ironical, and they are not fitted for the heaviest burdens; the chief articles they export, are, silk, cotton, betel, spices, wax, Japan-wood, cinnamon and sugar; the chief part of which are purchased by the Chinese, who have introduced almost the whole of this trade to themselves.

The only money current in Cochin-China consists of pieces of copper struck by the Chinese, which are called the Tonquin. Silver is extremely scarce with them; for a man who is handicapped of eighty or a hundred guineas, is deemed wealthy.

With respect to the religion, marriage, funeral ceremonies, mourning for the dead; the Cochin-Chinese, are the same as in the neighbouring kingdom of Tonquin.

**S E C T. III.**

**Containing a description of the situation and extent of the empire of Siam, the province is divided into their chief provinces, rivers, countries, towns, &c. climate, mountains, capitol, city, royal palaces, and principal towns.**

**T H E Malayan call this empire Siam, but the name Siam was given it by the Portuguese, which, in the Pagan language, signifies true, though they have not at present been quite consistent in the point of the name: Under Siam is comprehended not only Proper Siam, but Malaca, Camb- nodia, and Laos; for these were to-day provinces, and are great part of them yet tributary to this kingdom.**

Then, thought
though the Dutch have encroached on the dominions of this prince, particularly in Malacca; and other remote provinces, have rebelled and thrown off their allegiance, and are now for ever got out of subjection, there to be prosecuted by the force of arms; to have extirpated the right of the lawful prince. There is this further reason also for treating of them together, and of course, laws, that they are peculiar, matters and customs, have very little to distinguish them.

It may extend from the first degree of north latitude to the twenty-fifth, if we reckon from the equinoctial point of Malacca to the northernmost part of Laos; the longitude, as we approach the northern end, being less than in the middle. It is richly peopled, and a large part of it has been discovered in the situation of China, which is now found to be five hundred leagues nearer to us than former accounts made it.

Siam including Malacca, Cambodia, and Laos, is bounded by Tongquin and Cochinchina, towards the east, by the gulf of Siam, and the Indian ocean towards the south, by the bay of Bengal towards the west, and by the kings of Pegu and Ava, towards the north and west.

Siam, in its full extent, he band to refer to a region of which Proper Siam and Laos may be reckoned the body, and Malacca and Cambodia the two horses; but then Malacca, the Cone of a magnificent capital, in the middle of the province, includes several degrees further southwards than Cambodia, or the external horn.

There are also three provinces in Proper or Upper Siam, from which receive their names from their respective capitol cities. viz., Profoulee, Sanguoleue, Lactoni, Campeignet, Cocrepina, Pechbome and Pitchia.

Proper Siam is divided into five counties, Sanguoleue eight, Lactoni seven, Campeignet ten, Cocrepina five, Pitchia twenty one, and Pitchia twenty other districts or counties, which are not subject to the former, but are under the jurisdiction of the capital city and province of Siam.

There are reckoned seven provinces in Lower Siam, viz., for, Patana, Liger, Tenee, Chauton, Pecel, orig oring, and Pecel oring. They are divided into five counties or districts, Patana eight, Liger twenty, Tenee twelve, Chauton seven, Pecel twenty eight, and Pecel twenty other districts or counties, which are not subject to the latter, but are under the jurisdiction of the capital city and province of Siam.

Cambodia extends from north to south upwards of three hundred leagues, it is about as wide in parts, it is situated on the east side of the gulf of Siam, and bounded on the west by Cochinchina; by the Indian ocean on the south; and by Laos and the Kermis mountains, on the land. In Cambodia, flows the river Mecon, in about the twelfth degree of north latitude; Lawwe, or Ravooa is something higher up the river Mecon. It is a part of the most beautiful and fertile provinces in the kingdom, the climate is warm, the soil is fertile, producing various kinds of grain, particularly rice and corn; there are several other rich commodities, and precious stones; the elephants, lions, tigers, wild cattle and buffaloes, horses and deer, are very numerous in Cambodia. They worship the same deities as those in Siam.

Laos is likewise a very plentiful country; being bounded on the east by Cochinchina and Tongquin; on the west by the gulf of Siam; on the north, by the Concham, and on the south, by Cambodia and Siam Proper; but its boundary towards the north, is not agreed upon. It is about forty miles in breadth from east to west, though it is reckoned as ten by the best authority. The capital city is by some called Lanchang, and by others Lanpin.

It is a sovereign state, which like a province, is bounded by absolute waters, in the south by the sea; in the west by the gulf of Siam, and by Cambodia and Siam Proper; but its boundary towards the north, is not agreed upon. It is about forty miles in breadth from east to west, though it is reckoned as ten by the best authority. The capital city is by some called Lanchang, and by others Lanpin.

The King, when he goes abroad, either rides upon an elephant very richly caparisoned, or is carried in a grand chair. He parades through the city once a year, with a numerous train of elephants, and bands of music.

The King's elephants are fully armed with lances, swords, and other arms, to defend them against the proceedings, and risks to gain at him, after he has paid. He also once a year draws himself on the river in a grand balloon or barge covered with a rich canopy.

The Queen is attended with grand pomp wherever she goes, and has her elephants and bands. She is always in her carriage with a lady-in-waiting, and the queen-mother in her bed-chamber, who dress and undress her, putting on a last night-cap, which he does himself, before he goes to bed. His women also draw crown upon him, and every

The King is attended by two bodies of horse-guards, who are natives of Laos and Meen, and a third, composed partly of the natives of Chinefe Tartary and India.

royal bonnets, or pleasure-bonnets, which are very magnificent.
In his naval expeditions, the King only makes appearances of his principal officers as though he were there himself.

The King's treasury is immensely rich. His revenue is derived from duties on the produce, and justice is sold as in the metropolis, when the court appears in all its splendour; those audiences which are given at the Louvre and other places of public resort, and the number of the guards and attendants are not numerous. Their ambassa-
datores who come from the neighbouring vassalage, that are dependent on, or connected with the Emperor of China, are obliged to make presents before they are admitted, and advance towards him creping upon their hands and knees. But the European ambassadors are exempt from many of the ceremonial regulations, and are not required to open their lips till the Emperor has first spoken; and, when they do speak, are required to be excessively humble, a long time being deemed an egregious infraction. Ambassadors from independent Absolute monarchs are also treated with some degree of respect.

Sect. V.
Treats of the genius and disposition, nature, complexion, figure, and dress of the Siamese, their ceremonies, public entertainments, food, dress, &c.,

The people of Siam have a ready and clear conception of their sovereigns in conversation by touch and smell: it is said, they can imitate any thing at sight, and in one day become tolerable workmen. They are naturally kind and considerate towards each other, and in no case can they be shown to be too much submissive shown to the King. They shear drones and adulatory; and a finesse of adulation between men and their wives, who bring upon their offspring to be modest, not to be desirous, and if indifferent. In the higher part of the society, there are, however, timorous, and indolent; and have an aver-
rence to shedding blood, very seldom come to blows, most of their quarrels are resolved by slapping.

When they profess the sincerest friendship, they do it by drinking of the same cup. It is observed of them, that their minds are so refined, that in their heaves, which are twice a year, and that they have the good fortune to be born philosophers, having naturally the command of their passions.

The Siamese are of small stature, but well proportioned, which is imputed to their not being swaddled and bound up in their infancy like our children; and no other imman-
ence attends the women's going without stays, but their breasts hanging down to their girdles as the women of Siam do. Their complexion are swarthy enough, and the faces both of men and women are of the broadest, with high cheek-bones, and their foreheads suddenly con-
tinuous, and terminate in a point as with their chins; they have dark features, not very like their people before, large mouths and thick pale lips, and their teeth dyed black; their noses are short and round at the end, and their foreheads larger than their breasts, which are somewhat larger, and that they have the good fortune to be born philosophers, having naturally the command of their passions.

or consist of precious stones about it; and those of his officers have circles of gold, silver or vermillion gis, to distinguish their quality, which are fastened with a fly under an orange. These caps are only worn in the King's presence, or when they pretend in court of justice, and on extraordinary occasions; but theirippers are always of silk when they enter a person's house for whom they have any respect. They have hats also for travelling; for very few people will be at the trouble of covering their heads, as they do in the fine hours with that sort of biretta. The women also wear cloths or pagnes about their middles, which hang down to the calf of their legs; the men bring up the ends of this cloth over between their legs and tie it into their girdles, which makes it something resemble a pair of breeches.

The inferior people cover no more of their bodies than modesty requires, and have neither shoes nor flippers on their feet.

The Siamese ladies bathe in the rivers, and swim as the men do, but never without their pagnes about them, and are much commanded for their modesty, as a greater affront cannot be offered them, than that of introducing their bearing loud songs or obscene conversation. Their pagnes are of fine linen, and make a great show; the clothes made of embroidered silk are only worn by such persons as have obtained the title of barons. The men sometimes wear at most three rings on the three taff fingers of each hand as they can keep on, and bracelets or rings of gold, &c. upon their wrists and ankles, with pendants in their ears fashioned like a pear.

Their people are extremely ceremonious, like the Chinese. They have a tradition here, as in most Indian nations in the Salan, that is, the lifting up one or both hands to their heads, and bowing their bodies. If any one addresses such a person, who is much his superior, he falls down upon his face before him. To frown upright when we attend a great man, is the highest piece of insolence: the ushers publicly sit upon their heels, with their heads a little reclined. They have an uncommon respect for their heads and ever for their caps, when they have been authorized by the Sovereign to wear them. This cap is a badge of authority, and is worn but on public occasions, or when a magistrate is in a court of justice; and as it is esteemed the rudest thing in the world to touch or seize a man's head, so is it treated with uncommon respect. The ferrand carries his above his head, and puts it on a cane made for that purpose.

The principal food of the Siamefe is rice and fish: the fish affords them good small fowlers, turtles or tortoise, and lobsters, and several other excellent kinds of fish, unknown in Europe: they have also a great plenty of river fish, especially cat, but they make no great account of them. Basalchum, which is made of small fish, corrupted and cast out a month already, is of much esteem in this country, and is in much esteem amongst themselves. They choose to eat dried salt-fish, though it thinks, rather than fresh; nor will they eat mackerel, horse, loach, ladyfish, or almost any infecula, any more than the Chinese.

A pound of rice will serve a Siamefe a whole day, which may be bought for a farthing, and with as much salt-fish as he can purchase for a farthing. He is very well satisfied, and a pint of arrack or spirits is not worth above two pence; so that the meanest sort of people having but little care to take for a sufficiency, nothing but singing is heard in their houses of an evening. Their sauces are made only of water, with a little spice, garlic and sweet herbs, or capi made of decayed shell-fish, the same with the Nukum of Tonquin. Their liquor is river-water, rain-water, and tea.

Mock-fights of elephants is one of the diversions of the Siamefe. They were formerly very fond of cock-fighting, till their priests procured an order against that cruel sport, exterminating the killing those animals almost as wicked as the killing Indians. Consequently, another part of their diversions, and a kind of martial dances, in which they set a battle, being armed and marked, and in their songs repeat part of the history of their country. Their grand annual festival is when the water retires; then they fall down the river several evenings successively, their barges being illuminated with painted paper-lanterns. They have another festival on the flowering of the fruits of the earth after harvest, when their fritters as well as their boats are illuminated, and a grand fire-work is played off on the occasion. There are races also, not of horses but oars, and they row races also upon their rivers, and are so bewitched by the games of chance, that they will not only play away their wives and children, but also their own persons and liberties on the call of a die, and become facetious, if they lose.

new and full moon are for fresh being festival, that they keep a strict fast, and will admit no manner of diversions on those days; at this time it is made their offerings to the gods, as they have their own festivals and some times when the priests apply them to their own use.

S E C T. VI.

Of the fields, husbandry, gardens, plants, animals, minerals, and manner of travelling in Siam.

The soil of Siam has been gradually formed by the clay and other earth which the floods wash down from the mountains, and is very very light brown ground, and there is hardly a limit to be found in the country.
in the mud which the river leaves behind which makes the fertile earth, as far as it extends: all the higher grounds are dried and burnt up by the sun; floods and rains are on the flow through their lands; some of them, are naturally fruitful, yet they are so subject to droughts, infests, and other inconveniences, that they are sometimes deprived of their harvests. For these reason, if the rice is well tended, they are generally succeeded with plentiful filluppers.

Upon the land which the inundation does not reach, they grow the safest and best crops upon which a good harvest is to be expected. They are gay and the little canals through the fields: they have two crops yearly, but not on the same ground.

The chief grains used here is rice, which they begin to sow in the flat country, when the flood has moistened the earth, and as the water increases the rice grows, and keeps its head above water till the dry season approaches, and the sun has exhausted all the water, and then is the time of their harvest. Sometimes it is ripe before the waters retic, and then they go in boats to reap it.

Their kitchen-gardens afford them herbs for fallasts, pulse and roots, and the cucumbers and melons, which they eat when they are in the dry season, are almost innocent food.

The only European fruits almost all have, are limes, oranges, lemons, peaches, apricots, etc., which they eat when they are in the dry season, and very good to eat.

be met with, when the Portuguese made themselves masters of it. We cannot doubt of the Egyptian and Arabians being possessed of this trade, till the Portuguese found the way to the Cape of Good Hope; for we find no mention of the Grand Signor, who was then sovereign of Egypt, the coast of Arabia, and the Red Sea, fitting out fleets, and engaging the Portuguese in several battles in the Indian seas, in order, as before stated, to prevent their settling themselves in India, which, if possible, would deprive their subjects of the rich trade they had long enjoyed for many hundred years; and very probably, the Arabians traded in these seas, before the Egyptians went down into Egypt; inasmuch as we find them carried through Arabia into Egypt, when Joseph was sold to the Ishmaelites, who were trading thither with their camels in a caravan: and though the people of Siam and the adjacent countries, have no histories relating to their Indian expeditions; or, if such histories have been destroyed, that there are no copies or extracts from them, except what we meet with in the scriptures.

With respect to their modern history, we are told, that the kingdom of Siam and that of Pegu have frequently been engaged in wars; that sometimes, Siam has been tributary to Pegu, and at others Pegu has been conquered by Siam; but at present they are independent of each other. The Portuguese were in a manner sovereigns of the coast of Pegu, and the court of Siam, both north and south, from the year 1512 to the year 1540, when the Dutch took that city, and now remain sovereigns of it and of the coast, and particularly of the strength of Malacca; and by their influence in war, stationed here and at Batavia, can prevent all other nations trading to China, through the strength of Malacca and Sunda. After the above-mentioned period, namely, in 1688, the general of the Siamese troops being popular among the soldiery, and having the arm of his country, and the consent of his king, ben-willed to dethrone him. This he effected, and deposed his master of life, as a royal criminal, by pouring him down the well of a palace, and for his crime, carried to the place of execution, and there hanged him. The secretary of state was kept confined three years with the Siamese pillar about his neck, and was never, during that time, permitted to quit his dungeon, except when he was taken out to be severely lathered, in order to make him accuse some of the people of having accumulated riches by clandestine means, that the Uftifer might have some pretext to plunder them. This Uftifer, however, enjoyed but little satisfaction from reigning, being continually mortared with the rings of a guilty conscience, and supposing his security depended on the blood of those he suspected would prove his enemies, he daily multiplied his crimes; and became at length a terror to himself and all those who were subject to his tyranny. This revolution occasioned the ruin of the factory which the French had erected, and which had been then in its highest perfection. We shall only add in this place, that in 1727 the King of Siam invaded Cambodia by land with fifty thousand men, and by sea with twenty thousand, but was unsuccessful in his attempt to follow it.

S C E T. I X.

Laws of the Siamese, and the punishments inflicted by them for crimes.

By the laws of Siam, an unlimited obedience to parents and governors is as strictly required as by those of China, and the aged are much revered here. Lying is punished, and deemed as great a crime in Siam, as perjury is in this part of the world; and theft is so much detested, that one who is guilty of it, is at once abandoned by all his neighbors, who are averse to him, or claim no alliance; and an unjust possession of lands is punished as a robber.

The law does not permit any man to profane another, either in a civil or criminal cause, without giving security to make the charge good, and every man is allowed to plead his own cause, or any part in it for himself, or his dependents, as the law is not a profession of a particular set of men.

Where the truth of the charge is doubtful, the judicature of the state is in the same condition of justice as in private cases, and the defendant are sometimes commanded to walk over burning coals, and be he that escapes by dearest manage- ment to the court, he is adjudged innocent. Executions are a third method of trial. The priest gives each of the parties a pill, and the testimony of the person who keeps the pill in his stomach without vomiting, is believed. They throw both the plaintiff and defendant sometimes into water up to their necks, and order them to be in the right; and they will frequently offer themselves to undergo this last trial, though they appear, to be extremely anxious to engage in such proceedings.

These trials are in the presence of the King and magistrates.

For treason and murder criminals are thrown to an elephant, with a large iron weight on his neck, and left to suffer; andAdapted to the nature of the crime. A person convicted of robbery has united metals piled down his throat; and for little crimes, when they fall on the finder's neck, they are set in the ground up to the shoulders, and every man is authorized to buffet him, which is the greater indignity. A Siamese can suffer, especially to have his head buffeted by women. Persons guilty of rebellion are ripped open.

They allow appeals from inferior courts to the superior; the President of the tribunal at Siam can reverse a judgment given in any other province; and there is an appeal from Man to the King; so that where the parties are rich and able to bear the charge, there is no end of the suit; but the poor are condemned with as little formality as they are in Europe, and where they meet with a prompt adversary, innocence is but a very slight protection; judgment of death is never executed in any of the provinces, but by the King himself. We have also heard of punishments, on which death frequently ensues, are inflicted by every governor: but one thing seems peculiar to the Siamese, the judges unjustly prejudice himself of another's lands, is deemed no less guilty of robbery than he who robs on the high-way; and the person lawfully convicted, has his lands but forced to pay the value of them, one half to the party dispossessed, and the other to the judge, as all other pains and forfeitures are divided; but then the King has the governor's head, and where there is not an hereditary governor, the King has one entire half, and the party grieved the other. There is an inquisition, who should be some one upon the governor, and report to the King what profits in the province, and particularly in the courts of justice; but it seems there is such a general confidence among the officers at each other's estimate, that the persons receive very little benefit from this institution; every officer flees what he can out of his inferiors, and the nai, or commander of a band, compels those under him to do double duty who have nothing to bribe him with; while others who prefer him handsomely, are entirely excused.

Though their greatest men are sometimes punished in a very severe manner, yet as this is said to be done only for their reformation, they are afterwards restored to their posts, and none are permitted to upbraid the delinquent with his offenses, all offended.

Officers are frequently punished for the faults of those who act under their authority; and parents and masters of families for the offenses of their dependents and children.

S E C T. X.

Of the marriages, funerals, and religion of the Siamese.

This people, like their neighbours, disfigure their daughters in marriage, when very young. Many preliminaries must be adjusted in Siam, before a contract of marriage is made: an affecter is to be consulted, and the qualities of the young couple are to be calculated. From this coming man and aile, they are to learn, whether it is likely to prove a happy match, and whether the family they are about to marry into is rich; it not being easy for any man, who is a stranger to him, to know this; all people that have wealth endeavouring to officers, left the government should borrow it. When the parties have gained the best information they can in their acquaint- lars, and are satisfied with them, the lover is permitted to visit his mistress three times, and the relations being pre- sent at the last, the person is paid, and the marriage is uttered without guilt, and the marriage is concluded with solemnity, without any religious ceremony performed, and it is soon after consummated. The talipus is prohibited to persons of low birth; but if a person visits the married couple, in a few days, sprinkles them with water, and repeats a prayer for their prosperity. The Siamese are all very religious, but few pretend to the true state of this privilege, except their great men, who take these liberties in most countries, whether their religion or laws prohibit it or not.
They have but one wife in reality, who is so by contract; the rest are concubines purchased with their money, and may be sold again; nor can their children inherit the estate. The female is free to leave the man at pleasure, and may give her husband's occasion to be jealous, and are therefore permitted to have two or more at the same time, to have their head of corn, or as it is called, the bellow, rolled in corn to the superior; and if in reverse a judge or an appeal to the royal commonalty, the parties are rich or poor, the case end of the suit; for if it be a former action, it is a great petition. If it be to divulge the secrets of the offender's wife or children, and the family are in the same proportion, their reputation is suffered by the misconduct of one of them.

In the round of the world, there is no country where the King's order is to lead a horse, and then put it to the plank, however they are thrown to the yagers, which refused to strike him, the King offered her a pardon, but she would not accept it, believing rather to turn in pieces, than to think of the drudgeries of the palace, the King being present at this terrible execution.

When a Siamees dies, the corpse is immediately put into a coffin lacquered and gilded; and to prevent any friends, it is said, they endeavour to confine the body of the dead, they have some time before the funeral day, and they are by far from abating their liberty, that they avoid every thing that may give any occasion for fear; however, among the Royal concubines: but, the King ordered to be covered by a horse, and then put into a coffin, being thrown to the yagers, which refused to strike him, the King offered her a pardon, but she would not accept it, believing rather to turn in pieces, than to think of the drudgeries of the palace, the King being present at this terrible execution.

When the company arrive at the place, they take the body out of the coffin, and lay it on the pile: the talapoons of the convent sing dolorous hymns a quarter of an hour, and a motet, which, a few words, played. There are always thows and plays exhibited on this occasion, attended with a kind of festival, at which the priests are entertained. The talapoon, at the moment a third fire to the pile above which, having burnt about two hours, the corpse is rather incinerated than consumed; though it is not absolutely burnt, being afterwards arid, to derive some honour on the deceased. The power and do not burn the bodies of their deceased relations; but either expel them on a fork held in the open field, where they are devoured by birds of prey, or else inter them privately.

With respect to the religion of the Siamees, they do not believe in the soul to be in pieces, but that it consists of matter to be free from touch, and that after death it retains the human figure, and the same hold and liquid substances our bodies are composed of; and that if a performer is wounded, he may be seen in the birds, with the blood flowing from it, agreeable to the notions of the ancient {xxx} and Romans; but though they are most natural in their opinion, they do not admit that it is perishable, but that it animates some other creature, and knows pain or pleasure according to its desires, till the day it is burnt up again; which circumstances they hold will be suitable to the behaviour of the soul in its several transmigrations. They hold also, that departed souls do not return to all their former manners and animals, etc.; especially, that there are also certain spaces between the visible world, where they shall be rewarded or punished; that the happy soul will be in the candlesticks and the most agreeable place be doomed as far beneath; and they usually assign nine different regions both of happiness and misery, every one differing in degrees, the highest and lowest being most agreeable

in their kind. And as they do not imagine that souls pass immediately from one state to another, but are new-born into whatever place they happen to go; so if they believe they stand in numberless places, the more they are in the first one, the less they have to fear for the other; and for that reason, as the Papians did of old, in some places burn their most valuable movable, and the most important things in the heir. In the latter India used to offer themselves to be burnt with their husbands, in hope to enjoy them in the other world; and it is said, they have not wanted influences there of the husband burning himself with his beloved wife. But Loubade observes, that neither the Chinees Siamees, nor any nation beyond the Gregors, ever permitted the wife to burn herself with her husband; and are so wise, that instead of fuel, they burn there only for paper, and have not, or other things, blood, and therefore deem it improper to open a vein or take any incisions in the flesh, to extract the blood.

They pray to their departed souls, and do them all the honours they can contrive at their funerals, especially to the maus of their ancestors, as high as their great grand-fathers; imagining that those beyond have suffered to many transmigrations, that they can bear them no more; but the eastern nations do not address their devotions to any particular one of their deceased, not in the next world; nor do they, like the superstitious Europeans, hope or fear anything from the departed spirits of their ancestors.

The true Indian paradise is thus described; that if a soul, after several transmigrations, by the good works done in each new state, arrives at a degree of merit, that there is not in any of the worlds, any mortal condition which is worthy of it, then they say it enjoys the purest happiness; that it, if disappoited, will return no more to any state, but remains a state of eternal imperishability and happiness.

When a person has happily married heaven, before he is translated thither, (for few people are supposed incapable of dying any more) they attribute to him an invincible strength of body, and a perfect skill in all sciences, and believe he is invested with all the most pernicious and sublime advantages to mankind: after which he disappoited, or is taken out of his right, like a spark to its expression is) which is lost in the memory of such as they, destroy their temples. But the person they suppose has surpassed all men that ever lived in holiness, and whom therefore they would worship with the highest devotion, in Soma bon Codon, Sommona signifies a talapoon of the woods, Codon was his proper name; and, as has been observed already, virtue, according to them, is only to be found in the order of talapoons, and chiefly in the talapoons of the woods.

Sommona Codon’s father, the talapoon books relate, was King of Ceylon, that delicious island where the true cinnamon only grows, and it is now subject to the Dutch. Sommona Codon believed all his children to have put out his eyes, and killed his wife, and children, and gave them to the talapoons to feed on. They relate also, that another Codon, whose name was Codon, would also kill his children for the talapoons, by which charity he will arrive at the highest pitch of virtue.

They believe, that Sommona Codon, before he entered into this state of bliss, acquired a prodigious strength of body, and had the power of working miracles; that he could enlarge his body to what fire desired, and then reduce it to its former size, as perfectly as to transform it.

It is further to be observed, that they do not look upon their Sommona Codon the person who first instituted their religion, or gave them the above-mentioned precepts; but that he reformed and established them, after mankind had escaped from the roles originally enjoined them.

We shall now proceed to give some account of the talapoons and talapoonesses, who as well as the doctrine they profess, the people believe to be as ancient as the world itself: but there are others, who are ignorant of the founder of their order.

Any learned person may become a talapoon, on applying properly for admission. The talapoon consists of four pieces of cloth; the one is the aupa, a kind of shoulder belt, fine or twice inches broad; the other it wear on the left shoulder, and button it with a variable button, and a draw-hip. Over this belt they have another called the pallioun, reaching to the ground both behind and before, and leaving the two arms, with all the right shoulder free. Over this
The alfo for the tall and adorned fubicfts, they especially preach to the inhabitants of the doctrine, and bringing their alms to the preacher, by which bounty many of them grow rich. The time of the month is regular, when they eat nothing but a little fruit in the evening.

The talapoinies are obliged to watch as well as pray, especially after harvest, when they go into the fields in night-time, and return into the towns in the morning; and though others are apt to think themselves in danger of wild beasts when they are ahead in the night-time, the people are made to believe, that a tyrer will not touch a talapoin, they are so confirmed a generation.

The people with the talapoinies at every new and full moon, but at the times stated the court cana perpetual being taken, because no man is worthy to touch his head, and the elder always has the younger; but when he is grown too old, a younger is permitted to shave him, who asks pardon first, and declares himself unworthy of that honour.

They wash every morning, as soon as they can, and not with water, for they should destroy some insects. After washing, they perform their devotions in the temple, which they sing as in choices, their books cocoa nuts leaves, or engraved by the elders; for they have not yet the art of printing; then they give their devotions sitting upon their heels; but both priests and people, at their going out of the temple, prostrate themselves three times before their idols.

After the morning devotions, they go into the city, and where they see other objects, they expect anything from, their food is brought them, but they never ask for it, though there does not seem to be much occasion for their asking it, for they have lands and gardens appropriated to their convents, and fives to cultivate them, and they are exempt from taxes. The talapoinies have fervices, as well as faves, which give them a habit, and receive the money given them, their master, he being a fign for the talapoin to touch money himself; The talapoinies wear white, and if they are taken with a man, are delivered to their relations to chastife; for it is against their rules for a talapoin to strike any one.

The talapoinies who are nuns, live in the same convents with the talapoinies; the convents are a number of single huts standing upon bamboo pillars at a small distance from each other. Women who go to a convent, enter it entirely by their own choice, and are at liberty to quit it whenever they please.

We shall only add here, under his head, that the Indians not being prejudiced against any religion, but allowing a universal toleration, we may presume that the religion of the Chiritan doctrines might have induced them to embrace them, if the ambition, avarice, injustice, and cruelty of the European nations, who have settled there, had not contradicted the doctrines they taught, and raded, in the Indians, an abhorrence of their persons and professions.

This kingdom or empire of Ava, including the countries aboutfward, is bounded on the north, China and Siam towards the east, and the country and bay of Bengal towards the west and south, and divides according to the belt mentioned above, that of those countries, from the latitude of sixteen to twenty-seven north, so that the whole length from north to south, may be reduced upon paper to a length of seven hundred miles, and the breath about half as much.

The principal rivers in this country, are the Arracan, the Capoomo, the Mero, and the Sirian, which running from north to south, instead the whole length of the country, and overflowing their banks annually, render it no feast fruitful Bengal. Their several mouths, which lie on each side of them, and the lake of Chauan is placed in our maps at the north-end part of this country.

The lands are divided, into towns, and villages. Ava, and Pergo, upon the river Capoomo, from Porang, stands on the east side of the river Menato in the latitude of nineteen degrees, and Mero to the southward of it, in the latitude of seventeen. Sirian lies on the west side of the river Menato, near the mouth of it, almost against Martaban. Pergo stands about eighty miles below the river of the same name, in the latitude of seventeen degrees from our latitude, it is the old and new city, which together make the town about square; it is defended by a wall and ditches, the streets are straight, and wide enough for fifty men to march abreast; there are large trees planted before their houses for shade, as in many other Indian towns. In the middle of this city the fives which are fortified with walls and towers like a castle. Travellers tell us it is very magnificent; Le Blanc gives us the following description of it: in one of the courts figns the elephant, which stands with a crown on his head, enriched with rubies of a considereable value; round this figure fign four golden fingers. In another court is represented a plan, All of silver, facing a crown of silver on his head, fet with rich jewels; and in other courts are other rich figures, formed of various kinds of metal, with crowns on their heads; adorned with rubies and fapphires. The King of Ava and Pergo has several neighbouring fates tributary to him.

Pegoo, which is within the tropics, is flooded when the sun is vertical, but the fience, by the waters, gently fertilizes the country; and they have many waters, with intense heat after the rains have ceaft; and the natives are obliged to water their fields by the communications of small channels from rivers and fides. The hills of Pegoo are cloathed with fine wood, and the natives derive great advantage from the bananas. Their fruits are oranges, lemons, citrons, figs, pomegranates, bananas, durians, mangos, gourys, cocoa-nuts, pineapples, &c.

Tree they have in great plenty, and some wheat; all garden-stuff, which they chiefly live upon. They have also various kinds of pulses, good poultry, and variety of excellent fift.

They plough with oxen and buffaloes. They have few horses or sheep; but deer are exceedingly numerous. This country abounds in elephants; and produces rubies, small diamonds, and other precious ftones; also iron, tin, lead, zaffet, wood-eele, earl of cut, faggets, &c.

The nomoiouif winds and faleons, are the fame here as they a. in Upper Sina, to which it is conjoin, that they build their houfes also on polls by the river fides, like the Sumafe. And as to the genius and temper of this people, their customs, and manner of making war, habits, food, entertainments and ceremonies, their husbandry, produce of the foil, learning, religion, &c. from all that we can collect, there is not any material difference between them and the Sumafe. What must not be forgotten, is the complacency of their women, who will command with them for as long as or short a time as they please, and who are in all respects the true good wives while their temporary husbands remain in the country.
A country: nor do their friends look upon this kind of commerce kindly, and any person who partakes of it when they return to their again. The English from Fort St. George drive a profitable trade with Pegu and Multan. For pegu, they import coffee, spirits, amerykes, and other precious stones: skins and furs also are very considerable branch of this trade.

The Peguan temple, and the idols in them, are superbly embellished. A temple near Sirim has the name of kikakick, or gate, in this office of large figure, large, very handsomely finished, and is pretended to have lain in this building five thousand years. There is another temple near Sirim, which they call Dacen; but only the priest must enter it. The priests say this idol resembles nothing human, and refrains to describe the figure or form of it. There is in one of their temples a silver idol, of which they say it is an oracle, and without passions, and predicted what to happen. They have also an idol called trokogas, of the same stature as the former, though of different composition: this idol, they pretend, intercedes with kikakick for the wicked, and once a week they sacrifice a hog, and three pullets to it. There are several very singular circumstances attending their sacrifices. They worship dams, in order that they may not be affllicted by them. They begin their festivals with slaughter and destruction of persons, high and priestly, placed, in their richest apparel, and adorned with jewels; but they are often changed to doleful lamentations, and they put on garlands and their ancelors. After which they recruit their spirits with mirths and good food and liquors.

The island of Ava is the most favored of all the cities of the kingdom, because the seat of the king. It lies in the latitude of 20° 20', and is 12° in it north of the equator. The island is about 300 miles in length and 120 in breadth, and has on every part a number of little cities, which are separated from one another by the king's and his subjects. The city of Ava is the most magnificent of them all. It is the residence of the king, and has in all about a thousand public offices, as are guilty of in-practises. When he hears of the commotion of any enormouse crime, he issues his edicts on the ground of the offense, signed by judges of his own choosing; and when the person be convicted, he fixes the punishment of the delinquents, if the offense be heinous, and will be punished by a severe death, as is the custom in all other parts of the kingdom.

A kind of artificers government prevails in every town of these dominions. When a peron cannot or will not pay his debts, the debt will be committed to prison, the creditors may dispose of him for a slave.

In case of war, the heralds proclaim the sovereign's will to the inhabitants of provinces are obliged to raise such a number of troops as the state wants, in addition to the accumulated military establishment. A troop perhaps of one thousand elephants are sent in full march, the king being seated on his throne upon the back of one of the whitest, attended by all his nobles, and march to the field of war by the sound of trumpets and other military music.

The kingdom of Arracan is bounded on the east by Ayav, on the west, by the bay and country of Bengul and on the north by Tripa; it extends about four hundred miles in length, and contains a great number of places, many of which are inhabited, from the great number of wild beasts that infest it.

The inhabitants of this country are distinguished by their broad and flat foreheads, red noses, and wide nostrils: they have foxy eyes, but a very quick sight. The people are in general very robust. The common people generally wear a dark purple habit; but those of distinction wear many garments of white and verdant, the men sporting betul, and a kind of bag behind their backs formed in planks. Their hair is divided into locks, each of which is tinted, and ornamented with kinds of fine cloth. The women are much fitter than the men, but proportionably plump. They wear a cotton garment, which is bound, and ornamented with kinds of fine cloth. The men are very rich, and both have their hands and shoulders covered with great gauze over their necks and shoulders. They wear a silk kofa on one of their arms, and decorate their
hair with a variety of ornaments. They have gills rings in their ears, and are so large as to have one or two rings; and their arms and legs are ornamented with bracelets and rings of silver, copper, ivory, &c.

Their houses are built of branches of palm-trees, or canes placed on pillars, and covered with leaves of the coconut-tree, and are exceeding small, but the better for more spacious buildings. They are obliged to wear their vihuals without doors in carrioles, as they have no chimneys, or any convenience for fire in their houses.

They are exceedingly subject to the winds, which they have great plenty of provisions. Their common drink is made from the leaves of a tree resembling the palm-tree, which if drank new, is very sweet, but in a few days will turn sour. They die rice instead of bread.

The country produces all kinds of fruits with various sorts of grain. The climate is very healthful and pleasant in summer, but much the reverse in winter, for the inhabitants are subject to ague, from the prodigious quantity of rain that falls during that season. Here are great numbers of buffaloes and elephants.

The King of Arracan generally resides at the capital, which is as powerful as any of his neighbours, and has twelve princes under him, whose residences are in the chief cities of the kingdom, and they are permitted to assume the title of king. The King himself is a magnificent prince, and his kingdom is one of the most powerful in the world. He has several foreign embassadors, and keeps in his hands all the keys of the kingdom; he has the power of life and death over his subjects, and is considered as their protector. The King is a prince of the first rank, and is considered as the highest in the kingdom. He is the only person who is allowed to bear the name of "king." He is also the only person who is allowed to bear the name of "king." He is also the only person who is allowed to bear the name of "king." He is also the only person who is allowed to bear the name of "king." He is also the only person who is allowed to bear the name of "king." He is also the only person who is allowed to bear the name of "king." He is also the only person who is allowed to bear the name of "king."
The New and Universal System of Geography.

Stone walls, and surrounded by a ridge of steep, craggy mountains, so artificially formed as to be almost impregnable, within which there is a cavity within, strong and fortified. The city is well watered by a fine river that passes through it in different streams, and at length forms into two channels, which empty themselves into the bay of Bengal.

It is estimated, that the number of inhabitants in this city amounts to one hundred and sixty thousand, exclusive of the foreign traders and burghers. The houses are in general built of bamboo; but those of the richer sort are spacious and handsome; there are upwards of six hundred idol temples in it, which are spacious buildings, elegantly ornamented. The palace is exceedingly magnificent, being decorated with the most costly embellishments. The apartments are lined with various kinds of wood that yield the most agreeable fragrance; and the roofs of those belonging to the King are covered with plates of gold. In the centre of the palace is the grand hall, which contains a canopy ornamented with wedges of solid gold, resembling finger-loaves. Here are likewise several idols of the same metal, as large as life, and adorned with diamonds and other costly jewels. In the centre of the hall is a cabinet of gold, supported by a large floor of the same metal, and overlaid with diamonds and other precious stones. This cabinet contains the two canopys, or famous peasants of rubies, by which the King preserves a superior authority over his vassal princes, and which he always wears at his coronation.

There are spacious stables adjoining to the palace, for the King's elephants, tigers, horses, &c. and there is a considerable lake, formed with small islands near it, inhabited chiefly by priests. This lake is so situated, as to be a security to the inhabitants of the city, should they be reduced to the necessity of flying from the attacks of an enemy; for, by cutting a broad bank with much force, they might overfly the city, and retire to the islands adjacent. This city has very extensive suburbs adjoining to it, and the surrounding countries are delightfully pleasant. The villages, mountains, &c. are beautifully diversified with fields of different kinds of grain, intermixed with pieces of water. Their flocks of cattle are very numerous.

In the neighbourhood is a factory belonging to the Dutch; and some of the richest commodities in Asia are to be purchased of many of the shops in the city. The Moors often obtain considerable possessions by purchasing diamonds, rubies, and other costly jewels; and indeed they are the principal people that trade here.

There are many other cities of considerable note in different parts of this kingdom; as also many capital towns remarkable for trade; the most material of which are, Orientan. This is one of the principal cities, and is governed by a vicerey, who affixes the title of King, and receives a crown from the King himself. It is situated on an interesting river, to the south-west of the city of Arracan. In the neighbourhood of this city is a large mountain, on which is a fortified place for the confinement of state prisoners.

There is another mountain called Poon, on the top of which is placed the principal idol, which is worshipped by the King himself on a certain day once in the year. Here are buried the ashes of a famous tree, which is a sacred tree, the banks of which are delightfully shaded with tall trees, that form as it were a harbour; the pleasure of sailing under which is considerably heightened by the multitude of peacocks that are continually moving from one tree to another.

Another city of considerable note is Rama; but the passage to it either by land or water being dangerous, it is little referred to; for the mountains are infested with a great number of wild beasts, and the terrors of tigers are such as make the journey taking in the water very perilous minutes north latitude.

The next we shall take notice of, is Dubais, which is a large and populous city, but chiefly remarkable for its considerable harbour, and a spacious river by which great trade is carried on with the neighbouring places.

Dianga is also a large town, situated one hundred and twenty miles north of Arracan; the inhabitants are chiefly Portuguese fugitives, and they have very considerable privileges allowed them.

Another town of great trade is Persoon or Poorn, which has a famous convent harbour. It is the residence of a governor, who exercises the absolute authority of an eastern monarch, and keeps a grand court here.

This is the slave kingdom, subject to the King of Arracan. It is bounded by the empire of Ava, and part of China, to the south and east; by Independent Tartary, to the north; by Arracan, to the south-west, and by Indofan, to the west. It is said to require fifteen days to cross it to its interior. Countless mountains, exceedingly hot, the air is nevertheless fabulous and pure; but the water is so bad, that it occasions the throats of the inhabitants to swell to a prodigious size.

The sovereign and the nobility ride upon elephants, or are carried in palanquins; but the common people, when they travel, make use of horses or oxen indifferently. The dung is very offensive, which has its cause in the nature of the soil, and the behaviour of the natives rude and unhonoured.

The subjects of this kingdom pay no taxes, but in lieu thereof labour one week in the year for the King, either in his mine or his silk-works, from whence alone he derives his revenues. He exports gold and fables to China in ingots, and in return receives fables, which is coined into species of currency of twenty pence and twenty-two pence value each; gold is coined into alpers, which are worth about five shillings a-piece. Geographers say, that the river Coupone runs from Chiamay lake through this and several other kingdoms, till it dilutes itself into Benegal bay.

The kingdom of Acham, Asem, or Azem, is bounded by China, in the east; Indofan on the west; Tipura on the south; and Boutam, with part of Independent Tartary, on the north.

This country, in the reign of Aureng-zeb, was conquered by the Moghuls, who discovered it by navigation; the river Laccow, which has its source in the Black sea, and discharges itself into the Ganges. The above-mentioned celebrated lake lies in twenty-six degrees north latitude; and all our hundred and eighteen leagues in circumference.

Besides being one of the most fertile in the universe, this country is also rich in mines, which produce the noblest and most precious metals in the world, such as gold, silver, iron, lead, &c. Here is plenty of the most delicious animal food, but dog's flesh is deemed the greatest dainty. They make no wine, though they have an excellent grape, which, when dried, are used in making brandy. The lakes of this country are of a saline quality, and they contain salt lakes. Another kind of salt is extracted from the leaves of what they call Adam's fig-tree; and a ley is made, which renders their tiles admirably white.

The King exempts his subjects from all kinds of taxes to government, as he contented himself with the folio property of the valuable mines contained in his country; nor are these mines worked by the natives, but by slaves which he purchases in the neighbouring countries.

In this country, every subject hath a house allotted him, with a large piece of freehold contiguous thereto, and a slave to carry his wives, of whom he is permitted to have four. Previous to marriage, the Achamians inflect the women on the river, to the south-west of the city of Arracan. The females being thus previously instructed in their duty, feklion disoblige their husbands.

The inhabitants of this country have good and well understood donkeys; and those who dwell therewith are rather swarthies. All have very large holes bored in their ears, from whence depend heavy pendants of gold and silver. They wear their hair long, and are armed with a cloak and a lance upon their head; and go naked except about their middles. They adorn their arms with bracelets, which are buried with them when they die. Their gold is current in ingots, but they have pieces of silver coin of two thillings each in value. They have great plenty of gum lacque, which they export to China and Japan, to varnish cabinets, chests, and other pieces of furniture.

Kemmererouf, or Giernour, is the metropolis of this kingdom, and the residence of the King; it lies in twenty-five degrees north latitude.

The city of Azoz is the royal burial-place. When any King is buried in the grand temple, his favourite idol is buried also; this idol being of gold or silver, the vaults are filled with innumerable treasuues.

The people image, that the righteous have, in the other world, plenty of what they defire; but that the wicked suffer all the miseries of hunger and thirst. Full of this notion, and not entertaining any very high idea of the morality or piety of their monarchs, they bury with them all kinds of eatables, great riches, several of their wives, children, plants, savages, &c. left they should fare worse in the other world than they did in this.

The Chinese have been so fortunate as to have received the invention of gunpowder from the people of Asem, though they have not been ingenious enough to acknowledge it.
The following places near the coast of Ava are reckoned in the Pegu dominion: 1. The island of Doia, which has a good harbour, and where twenty houses are appropriated as a residence for the native King of Pegu. 2. Cochin is a little island; the houses of the natives are built on frames of wood, and semi-tended to by the King himself, who divides them with his tributaries in the country abounds. The inhabitants go hence to Pegu in boats, in which whole families reside all the year. They are not only of great size, but are also kept in fine trim by beards, bonnets, parasols, and other animals. 3. Medan, a tolerable town, where a market is kept on the water in boats, and made famous by the frequent cud of the fun by umbrellas. 4. Negrius, a town and cape on the coast due westward from Pegu, from whence it requires about ten days to fail. The harbour is good, but a strong bar renders its entrance dangerous and dangerous. 5. Diamond island, near Cape Segrats, is celebrated for two Pagon temples: the one called the temple of the "god of the all-fitted" and the other the temple of the "god of the stones of the fun." This island is low, barren, and rocky; but the chief ecclesiastic of the kingdom resides here. He is greatly venerated by the people, and takes the right island of the King; who, on his demise, is obliged to attend his funeral with his whole court, and defray all expenses incurred thereby.

Marchant, or Martavan, is a province in the kingdom of Pegu, eight miles south of it, and lying in the gulf of Bengal. It is fronte in ninety-five degrees fifty minutes and fifty-five minutes of lat. it is three hundred and fourteen broad. The capital town is of the same name, and was a rich one place, but it was defiled by its hand and sea. It is in four hundred and fifty miles long, and one hundred and fifteen broad. The islands are inhabited by a singular people, who are addicted to jugglery, which some attribute to conjunction.

We shall now proceed to give a description of the city or town of Malacca, which is said to have been founded upwards of two hundred years before the arrival of the Portuguese in 1509. In the year 1511, Alphonso Albuquerque founded the city, after it had made a most vigorous defence: he plundered it of immense treasures, with magazines, and whatever could contribute to the elegance and conveniences of life, and then put the prince to death. The King of Siam, however, enraged at this cruelty, being afficted by other princes equally incensed against the murderer, afterwards took the city by storm, and built churches, mosques, a castle, and a college for the Jesuits. In the Dutch, in conjunction with the King of Joloker, began to be very troublesome to the Portuguese, and, after a series of hostilities for the space of thirty-five years, in 1641 entirely wrested it from them, which was effectuated in the following manner: finding that considerable disputes had subsided between the King of Joloker and the Portuguese inhabitants of the island, they attacked, took, and conquered it, by land, while the Dutch invested it by sea; but the invaders finding there was no possibility of reducing it, the Dutch at length agreed to peace, and were satisfied with the sovereignty of the island to the present.

The city lies at the foot of a steep hill, and is of a semi-circular form, the adjacent hill: the walls are founded on a rock, very thick, and are carried up to a considerable height; and the lower part of them is walled by the sea at every tide; the other side of the hill, there is a large mountain from the sea to the above-mentioned river, which makes it an island; and that part next the land is stocked with great trees: on the hill stands one little church which serves the Dutch inhabitants of the town, which the Portuguese, who are pretty numerous, may have a chapel in the town, but travellers do not mention any temple for the rest.

There are between two and three hundred families of Dutch, Portuguese, Chineses, and Moors, and two or three great Arabian traders among them. The city is built of large brick houses, and has pieces of fortifications which are fitted with the manufactures and produce of their country, and such other goods as there is no demand for there: the houses in the town are generally built with stone, and the streets are wide and small, but not paved; the native Malays, who inhabit the suburbs, live in poor mean cottages, and are kept in great subjection by their haughty Dutch masters; but it is observed, they still retain a desperate fullness in their looks; and the Malays of the neighbouring provinces have frequently revenged some slight affronts upon the Dutch, for the contrary oppression exercised on them, and that refraining the Hollanders put upon their trade all along the Malayan coast by the guard-ships, infinuch that it is very difficult for this people to trade with any but the Dutch.

The city of Malacca is healthful, confdering the climate, and is neither subject to the hot winds of the coast of Coreamandal, or those chilling east in Bussian; it is not a place of any great trade at this day; but as the Dutch are masters of the straits of Sunda to the south of Sumatra, and of Sumatra. It is not the same thing as the Malayan coast, to the north, while they are in possession of this place, they have in a manner engrossed to themselves the whole trade of China and Java.

There are many flourishing and handsome streets in this city,
city, which are shaded with trees on both sides; the houses stand pretty close to each other, and are built chiefly of bamboo, to which the names of some are given. The government house is large and commodious, and is situated in the fort, garnished by two hundred Europeans. The harbour is one of the best and fairest in that part of the globe, and receives vessels from most parts of the Indies. When possessed by the Portuguese, the city was remarkably opulent, being a grand mart for precious stones and gold; and it is reported by Dutch articles of peace and treaty, it had all the rich commodities of Pegu, Coromandel, Siam, Banda, and other countries.

The inhabitants of Banda are a people of a mixed race, and have little visited by Europeans. It is bounded on the north by China; on the east, by Tomquin and Cochinn-China; on the south, by the kingdom of Ceylon; and on the west, by the kingdom of Siam. It is supposed to extend from the fifteenth to the twentieth degree of north latitude.

The produce of this country is corn and rice, which grows here extensively in the Indies, and brings a considerable revenue to the King, who has prohibited the exportation of it. The garden also produces a great variety of fruit, and they have excellent rice in abundance; also great plenty of wax, honey, cotton, amber, and muku.

They have a great number of elephants among them, which makes ivory so little valued, that their teeth are used for making fences to their fields and gardens: beeches and buffaloes are also very numerous here; and the rivers abound with all kinds of fish, which are very large. A thin grass, with gold and silver dust, is found in the rivers; and mines of iron, tin, and lead, in several parts of the country; great quantities of gold are also found in them, part of which is declared to be sent to foreign parts: this is formed by a white frost left on the rice-fields after harvest, which the heat of the sun has melted into bays.

The inhabitants of Laos, who are called Langians, are affable, thrifty people, and frugal to avarice. They are well dressed in general, although of an olive complexion, yet are much fairer than their neighbours; the women are very modest in their carriage. Their food principally consists of rice, the fish of the buffaloes, and several kinds of fowl. They sometimes eat fowls, which they dress with the feathers on; they kill them by striking them on the head with a stick: the feeding of blood being considered as one of the greatest crimes. Their employment consists principally in husbandry and fishing; but they are naturally of an indolent disposition.

As the religion, marriage ceremonies, festivals, funerals, customs, laws, punishments, &c. of this people, bear a near resemblance to those of the Siamese; we shall therefore, for a fuller description of them, refer the reader to our account of Siam; and only add here, that the power of the sovereign is unlimited, and he is in a manner adored by his subjects. His principal officers are ten viceroy, with several other officers of the seventh degree, and the king is divided: he has a military of horse and foot, which are maintained at the expense of that province to which they belong. The capital is the most magnificent edifice in the city, extending, with the offices and other buildings, above two miles in circumference. The architecture is Corinthian; and the apartments within are furnished in the most magnificent manner: the buffaloes’ bellies are very rich gifts. The houses of the richer sort are generally of wood, and adorned with bas-reliefs; but those of the common people are very low and mean, and chiefly made of dirt and clay. No persons, except the telepoms, have liberty to build their houses of brick or stone.

The houses of the quality are very elegantly furnished; they line the walls with mats beautifully wrought. Instead of tapestry, and ornament them with a great variety of very costly embroidery.

The kingdom of Cambodia, or Cambay, is situated on the east side of the gulf of Siam, being bounded, on the west, by Coromandel; on the north, by the Indian ocean on the south; and by the kingdom of Laos and the Kermi mountains, on the north. It extends from north to south, upwards of three hundred miles; and about two hundred and ten miles in breadth. The principal river Meon runs through it, and falls by two channels into the sea. Where it first rises, it is called Longmee; after which, it takes the name of the river on which it runs; and length changes it to Ocoupus. This river has an annual swell, which begins in the month of June, and lasts all the month of August. It is remarkable that its current rises so high, as to overflow the neighbouring countries. It runs the same way for six months together, owing to the southerly winds, which drive the lands in such flocks, that the bar

is entirely swallowed up, and the current is by that means driven back, till the wind shifts and removes the lands, when it is called the river of flight.

This country produces various kinds of grain, particularly rice and corn. Here are also great varieties of fruits, as oranges, citrons, and lemons, &c. also several kinds of wood, as the sands, aqua, gum, thors, stick-deck and luck for japanning. Rice is exceedingly plentiful and cheap; as are fish and fish; and these last are the principal articles of food. They have little beef, and are without a pungent taste from the King. A fine bullock is frequently purchased for a dollar; and the common value of rice is one shilling for a bushel. The climate of this country is very healthy and productive. Poultry is very dear; because the few that are bred, retire, when young, to the woods, where they feed for themselves, and the people take no pains to bring them back.

Several rich commodities are also produced here, particularly gold, cambogia of a golden colour or dark yellow, in rolls, raw fil, and elephants teeth; likewise several sorts of valuable drugs, also amethysts, garnets, topazs, cornelians, chryselites, and blood-flints. Wild elephants and bears are exceedingly numerous here, particularly in the woods; also tyggers, lions, wild cattle and buffaloes, many horses, and a prodigious number of deer, all of which every person has liberty tokill for themselves.

The Cambodians are in general well affected, and the women very handoms. The men wear a long vetch, which reaches from the shoulders to the ankles, but their head and feet are bare. Their women, with a girdle, and their feet quite close to the body and arms; and have a kind of petticoat that reaches from the waist to the ankles. Both feet have long nails, which they use to advantage.

Their heads have not any covering; but their hair is dressed, and curiously decorated. Their religion is the same as that of the Siamese, and they worship the same deities. They believe that all animals, as well as human beings, will be hereafter rewarded or punished. Their priests are chosen from among the laity, and are supported by the people in general; their maintenance and support depends entirely on the benevolence of the public.

In different parts of the country, they have manufactories for making clothes, shoes, caps, baskets, &c., and in various pieces, which are superior in quality to those made in Holland and elsewhere. The poorer sort of people are employed in making beads, small idols, bracelets, necklaces, &c. They also weave silk, and work curious tapestry, with which the chairs and palanquins of the quality are lined.

Cambodia is the chief city in this kingdom, worth noting; it is situated on the river Mecon, and built on a rising ground, in order to avoid the annual overflowings of the river: it principally consists of one large street. The palace for the residence of the sovereign is situated about the centre of it. It is surrounded by a kind of wall, with ramparts, on which are several of the seven degrees, and a very insignificant edifice. The power of this prince is despotic, like that of the other eastern monarchs.

Tobacco is about three miles long, and eighty broad. It is the next country to the north of Malacca, and it is washed east and west by the ocean; it lies in one degree north latitude. The coast line is broken with the sea; and the interior with tin, pepper, elephants teeth, gold, aqua, wood, canes, citrons, and lemons; deer, cows, wild buffaloes, and antelopes are among the domestic animals.

The inhabitants of this country are reported to be cruel, treacherous, lazy, and licentious. The common people wear only a piece of fluff round their waist; the females in a sanguinary degree of life wear calico garments festooned with a filken girdle; they paint their nails yellow, and the longer they are, the more genteel. The inhabitants live principally upon tapioca, fruit, roots, and poultry, but these are in such plenty on the coast that the most part upon fish and rice brought from Cambodia, Siam, and Java. The natives, who are a mixture of Monemtimans and Javanese, have priests sent from to Sarat.

Among these people there are about one thousand four hundred Chinese, who trade on a considerable traffic, and are distinguished for their industry.

Patana is about sixty miles long, and lies on the eastern coast of the gulf of Siam: it has port had once a considerable trade, but it is now confined to the town of Coa, Chinas, and Cambodia: but the traders unhappily finding no restriction upon the commission of pircies and murders, that are under a necessity of committing the same; and turning it into another course, highly beneficial to Siam, Malacca, and Rattanis.

This country, abounds with grain and fruits; here are also

also buffaloes, fowls, and some very beautiful doves; tygers, muskets, elephants, &c. are few of the wild animals.

The King has more velles than any of the other neighboring sovereigns, and can bring eighteen thousand troops into the field. In China brick is hatched a variety of attires for the people, and is scarce in any part of this city. The natives are remarkable for their sobriety, and, though proud, are nevertheless kind and obliging.

To the south of Patna lies Pahan, on a river of the same name, in which there is much gold and silver found. People of fortune reside in the capital of Pahan, situated about one hundred and fifty miles north-east of Malacca: in the streets of the city, which is but small, there is a great number of cocoa and orange trees planted, which gives it the appearance of a garden.

The palace of the King of Pahan is a wooden structure, and the other buildings in general are composed of straw and reeds.

The foot of Mahace hill is washed by the river here, and pepper is planted along its sides. The adjacent country is low, woody, and well-wooded with ganea and calumba wood, coco-nut, gold, camphire, nutmegs, &c. are also produced here. Pahan is said to be well peopled, and caravans on a considerable trade; but the natives are reputed to be the most arrant cheats in the world: they consist of Pagans and Mahometans.

Next to Pahan is situated Trangano. This is a fine healthy country: its hills produce a greater variety of rich fruits, such as oranges, lemons, limes, darian, mangoes, mangostanas, mangue, &c. and the valleys term with sugar-canes and corn: gold and paper are likewise produced here; but the Chinese, who reside in this country, produce the principal part of the two last mentioned articles.

To the north of the five palaces, where the sovereign of this country chiefly resides, stands a bank of a fine river near the ocean.

Pera is a mountainous, woody country, famous for the quantity of tin it produces, these being found here, as well as in any part of this capital city. The hills bear the same name, lies at the bottom of a bay about one hundred and fifty miles north-west of Malacca. There are some hideous defiles in this country, bounding with ele- phants, tygers, and other wild animals.

The natives of this country are more barbarians, and very treacherous and cruel. It is one hundred and forty miles from Padam to the first town, which is of the same name, contains about eight thousand inhabitants, and has a good harbour. When a foreign merchant comes here, the King pays him a visit in person, not to compliment him on his arrival, but to receive presents from him: the presents, however, are not made, till the vail is repaid: and then the King honours the merchant with a treat at his royal palace; his Majesty at the same time clews betel, and, putting it out of his mouth on a small golden plate, the merchant takes it with great respect, and puts it into his own mouth: this is an elaborately cut betel, and must always be furnished with.

Some of the natives of this place are Mahometans, and others Pagans; they are in general very treacherous and cruel in their dilapidations.

This country produces tin, pepper, elephants teeth, cane, and damar: they make pitch and tar of the latter, which is of excellent use for that purpose.

CHAPTER V.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF INDOSTAN.

SECTION I.

Of the name, situation, extent and boundaries, principal mountains, seas and rivers of India, or the Mogul empire.

This country alone was known by the name of India to the ancients, and is by the natives called Mogulis, or the empire of the Great Mogul, though the moderns have given the name of India to all those countries which lie between this and China; and Columbus gave the name of the Indies to the country, imagining that of the country which lay west of the Atlantic ocean, extended as far as India, or rather was a part of it; but when this was found to be a mistake, the name of East India was given to this country, and that of West India to the other.

India Proper, or Indoian, received its name from the river Indus, or from the Hindoos, the most ancient inhabitants of the country, and is situate between sixty-three and ninety-two degrees of east longitude, and between fifteen and forty degrees of north latitude, being bounded by Ubeek and Tibetian Tartary in the north; by Aghan, Ava, and the bay of Bengal in the east; by the Indian sea on the south; and by the same sea and Peri la on the west, being two thousand miles long and one thousand five hundred broad in the broadest part.

The chief mountains are those of Caucasus, which divide India from Ubeek Tartary on the north; those of Naufragut, which divide India from Tartarian Tibet, and the mountains of Gate or Hari Gate, being a long chain of mountains which run through the middle of India from north to south, in height they stop the periodical wind called the western monsoon, and the rains it brings with it for a month longer, and the fair season continuing a month longer on the coast of Coromandel, or the eastern coast, than it does on the Malabar or western coast.

The chief bays in the Indian seas are the bay of Bengal and that of Cambay in the south. The principal cape is that of Comorin, the most southern promontory of India.

The most remarkable fin is that between the south of India and the island of Ceylon, called Ramnakkoid.

The chief rivers of Indofinan are, 1. The Ganges, which rising in mount Caucasus runs south-west, and dividing into several branches falls into the bay of Bengal, the most easterly branch dividing this country from the farther India. This river is so far esteemed among the Indians, that it is worshipped as a God. There are many places where it procures any of its water to drink before it dies: the common pottage up this river is by the western, or Hugley branch. This river runs a distance of about two thousand miles. 2. The Indus, a river as large as the Ganges, and deep enough for ships to ride in, did not the bar at the mouth prevent their navigation; it runs in the mountains of Caucasus, and runs to the south-west, and falls into the Indian ocean by three channels. 3. The Attok (the Hy- daspes of the ancients) which rises in the faine mountains with the Indus, and running southward, almost parallel to it, unites its water with the Indus, towards the mouth, the united stream falling into the Indian sea, in the province of Tars. 4. The Jumma, which rising in the north, runs to the southward, by the royal cities of Dely and Agra; and then, turning eastward, falls into the Ganges at Haliwas. 5. The Gunga, which rising in the Bagate mountains, runs eastward, discharging itself into the bay of Bengal, or rather into the western branch of the Ganges, near its mouth. 6. The Gunga, which rising in the Bagate mountains, runs eastward, discharging itself into the bay of Bengal, or rather into the western branch of the Ganges, near its mouth. 7. Chirilina, which rising in the Bagate mountains, runs north, runs to the southward, and then turning about to the east, falls into the bay of Bengal. 8. The river Tapte, which rising in the Bagate mountains, runs westward, almost parallel to the bay of Cambay at Surat. There are many other small rivers, and innumerable torrents in the time of the rains, which fall from the Ha- ligate mountains into the seas, on the east and west of the peninsula, but in the fair season most of them are dried up.

In
In the north-east division of India is contained the provinces of Bengal, as also Jefaut, Nagpore, Patna, Nerboud, Gor, and Rotas. The north-west division extends to the frontiers of Perfa, and contains the provinces of Soret, Narvar, Surat, Bikanor, Malaut, Her- can, and Cabul. These are all fituated on the river Indus. The south-east coast, or coast of Coromandel, contains Orissa, Andra, Chitter, and part of Bittagour, or the Ar to Benal; the provinces of Carnatic, Madura, and Tanjore, Afs, Jeepsugar, Caffmhir, Hendows, Lahor, Agra, Dehil Gualler, Narwar, Cattipor, Chitter, Benar, and Landifh, are fituated in the center divided by the floods, or the contains Bittagour or the Carnatic, Guzlar, and Deccan.

The winds are periodical, and return to certain points at the same hour of the day, and in the same season. The monfons, out at sea, blow fia months one way and fix months another: namely, from April to October, or thereabouts. But from October to April, they blow from the core of India, and from October to April from the north-east, not exactly from thole points, but varying fometimes a point or two on either fide. At the breaking up of either of these monfmons (a little before they fhift) there are usually prodigious forms of wind, fuch as we do not experience in this part of the world once in a great many years. The fhifting of the monfons, and consequently this flormy weather, does not come exactly at the fame time every year but fometimes a few weeks, or a month in advance, and at others a fortnight, or three weeks later than the usual time, which frequently occasions the lofs of shipping; for the merchants, for the fakes of the inflating gain, will remain upon the coasts in hopes that the storms will keep off a little longer, till the wind grow too strong for them, and they find it impossible to bear up against it.

Besides the monfons, there are two other different winds; 1. The general trade wind. 2. The sea and land-breezes. The general trade winds, which prevail between the latitudes of thirty degrees north, and thirty degrees south, always blow from the eafthward to the westward over the whole face of the globe; only on the north of the equator they blow, from the north of the eafi, and from the equator; and from the equator, from the north of the eafi, except within two or three degrees of the equator, and here the wind is faft variable, and fometimes, as we meet with calms near the equator; but we muft except the winds upon feveral coasts, as upon the coast of Guinea, where the winds are generally from wind to wind, and upon the coast of Peruf, where it fets from the fouth-west to the north-eaft, but the confant wind from eafh to weft prevails five hundred miles from land.

The sea and land- breezes are alfo periodical, changing every twelve hours. The winds blow from the land in the peninsula of the Indus Proper from about midnight to noon, and from the water in the evening, which is a refreshing breeze blows from the sea till late in the evening: It is not more than two months in each year generally that the hot fouth-westerly wind, in April and May, and they do not begin to be very hot till eight or nine in the morning; for the fun rising between the tropic, the heat of the day is not much leatened by it till two or three hours after it is up, and it is the refleflion of the heat from the parched country that is the principal occasion of the hot winds; and there are feveral ways of moderating their heat, as by hanging up wet cloaths against the wind, and throwing water upon the floors; the people alfio draw water out of their wells, which foons cooler than weil water:ore. This their faves pour upon their heads to cool them: but the rainy feafon no fooner returns in June, than the air grows cool, the clouds intercept the fun, and the country is cooler. The rainy feafon ufually lasts on the coast of Coromandel, being the eafier fide of India, four months, namely, from June to the laft end of October. They do not always begin and end exactly at the fame time, but feldom differ a month. The rains are not very violent at fith, and there are frequent intervals of fair weather, they decrease again by degrees. The mean rains in India are in August and September; then it rains almost perpetually, infomuch that all the flat country is overflowed, and they have terrible thunder every day. It is then they have lightning fre- quently, without thunder, but this does no harm. After the rainy feafon they have a bright, fenne heaven for four or five months, which is the rainy feafon, with fuch a luftre that people eafe ftey to travel by their light. It is a rule here, and in all the countries between the tropics, that they have not much rain when the fun is at the generall dif- tance from them, and the warm weather when the sun is vertical.

This part of the country is generally healthful, and the natives live to as great an age as any other part of the world, which may be in part acribulated to the air, but more to the innocent food and liquors the Indians eat and drink; namely, rice, beans, bread, tea, fugar, butifon, malt, honey, and Caffmhir. It is the country, essentially, at their firft arrival there; and in fome parts of the country, where our factories happen to lie; parti- cularly at Bombay, the air is extremely unhealthy; and there are many places, particularly at Bombay, Hoogley, on the river Ganges, where the fummers are very hot, and fuch situations are unhealthy every where. But Bombay has been drained, and much improved, and is not that unhealthy in the hot fummers as formerly; and the English factory is now removed from Hoogley to Fort William in Bengal; where, I am informed, the air agrees much better with our people. But it must be acknowledged, however, that few foreigners arrive in India, but have a flattering the year: fiofe that cannot afford good liquors, often fall fick of the bloody flux; and gentlemen that drink hard, are subject to fevers. We certainly lose some men the first year; but afterwards there are as few complaints heard of, in regard to health, as there are in Eng- land. It must be owned, however, that, let people be ever to regular and abatemnt, neither the water or the air do agree with them at their first coming on shore; fome therefore never drink water, till it has been boiled and fettled.

Sect. II.

Describing the countries of the vear provinces and chief towns of India, and also the settlements belonging to the English, French, Danes, &c.

HAVING before given a concise account of the feve- ral provinces of Indofian, by diftinguifhing them into the north-east, north-west, fouth-eaft, and fouth-west divisions, we shall under this head, in order to enable our readers to form a more clear and diftinct conception of them, and all of their capital cities, and the feveral towns belonging to several provinces, viz. 1. The provinces which lie in the north of the tropic of Cancer. 2. Thefe which lie under the tropic; or partly northerly, and partly southern. 3. Thefe that lie altogether fouth of the tropic, in the fither peninsular. We shall begin with thefe that lie northerly of the tropic of which, 1. Cabul, Caffmhir, and Gor, or Georrft, are the mos northerly, and their capitals the fame name; feven of them lie Haicau, Attock, Peneb, Bankill, and Naugrast. The chief town of the latter is the fame name. The chief town of Attock, also, is of the fame name. The chief town of Peneb, is Temara. The chief town of Bankill, is Lucara, and the chief town of Naugrast, is of the fame name. The pro- vinces, fouth of them, are enumerated, are Multan, Lahor, Jefluar, and Raipour, whereof are of the fame name. The provinces further fouth are, Buckor, the Hindows country, Deilu, Sambal, Manub, and Paj- te. The provinces further to the laft, are, Taffe, or boids, Jefilime, Aner, or Bendu, Agra, Guallar, Halabas, Patna, Jefluar, and Raipour, the capitals whereof bear the fame name as the repective provinces do. They vio- nces fouth of the former, are Sorett, Narvar, and Rotas. The capital of Sorett, is Jagannat; of Narvar, is Narvar; and the capital of Rotas is Rotas.

1. The provinces which lie under and about the tropic, are, Gauaert, or Cambayber, Chitter, Malva, and Bengal. The chief towns of Cambayber, are, Amadabad, Doman, Surat, Swailey, Barook, and Dju. The capital of Chitter is Chitter. And the chief towns in Bengal are Calcuta, Fort William, Calicuta, Hoogley, Dacca, and Malah, Ra- gamah, and Caffmhdin.

The provinces which lie fouth of the tropic are, Canclid, Bazar, and Oriea. The chief town of Canclid is Madspour. The chief town of Bazar is Brown. And there are none in India. The chief town of Orinse, is Oriea. The chief town of Dacca is Dacca.

The provinces, which have the fame name, are, Gokonda, within land, are, Gokonda, Bagnager, Gain, or Conlar, Raileanda. The port towns of Gokonda, will
The provinces which lie south of Deccan and Golconda, are Bishnagar, Tintjour, and Madura: the chief towns which are of any note are, and lie within the bounds of the two latter provinces. The ports are Tranquebar, Nagapattanam, Culimneer, and Tenasurin, on the eastern coast, and Tegpanam, Anjan to, Colchi, Mangnui- elle, and Bathulco, on the west or Malabar coast.

In the description of the principal cities and towns, we shall first treat of Delhi, which is reckoned the metropolis of the empire, and is situated in the heart of it, in seventy-eight degrees east longitude from London, and in thirty-eight degrees north latitude. It stands in the form of a crecent, on the river Jumma, which divides it, about ten miles in circumference. There are two long spacious streets which cross each other, and centre in a great square in the middle of the town, on one side whereof stands the palace, fortified like a castle, before which, and in the first court of the palace, the guards are drawn up, and relived, as is mentioned in treating of the city of Agra: to the darbar, or court before the royal apartment, the people come at the time the Mogul gives audience to his subjects. In this court are three divisions, the outermost being adjacent to the inferior people, who resort hither with their petitions to the sovereign. The next division is called the court of princes of better quality, wait, and upon a floor raised something higher, the omans, and those of the first quality are stationed; when the music is striking up, the Emperor appears on the magnificent throne, covered almost with diamonds, which is in a gallery something higher than the place on which the divine service is performed, in the Mogul receives petitions from all his subjects, and hears courts several hours every day, at least four princes have done this: but there are indolent princes too also much addicted to pleasure, who, in order to avoid the presence of the sovereign, have built themselves as far as possible from the palace. This city, Kooli Kan kept the Mogul and his nobility prisoners, till he had exacted from them all the wealth they had, or could procure, amounting together to the greatest treasure, especially in diamonds, that ever any conqueror made himself master of; which we have taken particular notice of, for the present. The most distinguished public buildings, besides the palace, are a grand mosque or Mahometan temple, covered with gold, and as fine a building as any that was ever built by a Mogul prince for the entertainment of travellers; the tombs of Asyshum the great Mogul, near which he was interred, by his order, a castle or fortress built by a Mogul prince for the entertainment of travellers; on the victory he obtained over Porsa, the most formidables of all the Indian princes he subdued.

Their fairs, or caravanserai, which serve them instead of inns for the entertainment of travellers upon the road, are built much in the same manner their fheks are before their houses, being open on one side, and no doors to secure them; their doors, or passages, into the public places is usually a tasque, or large receptacle of water, and several of these receptacles of water they have in every great town, which is obtained in the public gardens, and serve the inhabitants for ten or twelve months, till the rains return again. They have also very large wells enclosed with brick, they are at a prodigious expense in their wells and reservoirs, though they are at list in their houses. Some of their waters are above a mile in circumference, and lined with square free-flies, with steps down to the bottom, on every side: in the middle there is often a summer-house of stone, surrounded with galleries, from whence you may descend by these steps into the water, and they are so contrived that several persons may bathe themselves at one time, with the greatest privacy; and there are few people of quality but have their private baths in their gardens. The wives and children of all the nobility, when it is open water upon their heads two or three times a day, for half an hour together, and it is one great part of their bathings to bathe and drenching from the common wells, upon their heads, in great round earthen pots. The poorer sort of people have houses built with clay, and thatched, but they have convenient courts and gardens. There are besides thieves, a great number of small cottages built of clay and straw, which are chiefly occupied by those who dwell in provisions. They are so numerous and close together that fires often break out, and destroy much property and many lives.

Their temples, or pagodas, are among the most curious buildings on the globe; and a variety of figures carved on the outside as well as within; but the inside is very dismal, only one long dark room without windows, extremely hot of itself; but as there are a multitude of lamps always burning before their images, the place is so illuminating that a man is glad to retire, let his curiosity be never so great: but there are a great many other little pagodas, which are but just big enough to hold the image, and where the people generally assemble, and perform their devotions. The figures are of brass, and the doors and windows are very thick and enormous, which have occasioned our people in general to denounce them devils; we see perhaps the head of a man or woman, in the lower part of a lion, in one figure; in another a man with fourteen or fifteen heads, and twice the number of arms, and their fingers of people, and of people, and of people, formerly on the earth, and are now a kind of inferior deities or mediators for them in heaven, which is very far from the notion we entertain of devils: but we shall enlargé upon this subject, when we come to treat of their religions.

The only place worth mentioning are the cities of Delhi and Agra, which are fortified in the inland provinces of Indostan, that bear the same name. Delhi, or Deffyl, is capital of the province, and in the heart of the empire: it is in seventy-eight degrees each of longitude from London, and in thirty-six degrees north latitude. It stands in the form of a crecent, on the river Jumna, which divides it, and is divided into two great towns, lying within about one hundred and twenty miles north of Lahore, in a fine plentiful country, when the air is more cool and refreshing than in the plains, that was built to have had nine cafles and fifty-two gates. At some distance is one bridge, and a delightful plantation of trees. The second town, called Sialk, was taken from the Indians by the first Mogul conqueror. This was adorned and enriched by several magnificent edifices as well as other stately buildings, of the Persian prince, which were adorned by Shah Jahan, who, having conquered Agra, and built the city of Auraungezze, and then rebuilt the town, and called it Jahan the city of King Jehan, transferring the seat of the empire lesser from Agra, where the heat in the summer was too violent. The third town, which was erected close to the second, and formed out of its ruins, was called Delhi by the Indians, instead of other place, the foundation of which was laid to have been laid in blood, as the throats of unfortunates were cut, by Jehan's command, they spared no expense whatever to beautify and adorn the gardens, belonging to the royal palaces, which was formed after the Italian model, by Inigo Venetian. Delhi is entered by a long fleet, with arches on each side of it, under which are the shops of the tradesmen. This fleet leads directly to the palace, at the entrance of which are two figures of elephants, on whose backs ride two famous masts, that represent two brothers who lost their lives bravely defending certain courts laid siege to by the Sikhs. The palace was once of four stories high with battlements, every tenth of which has a tower, is not much less than two miles in circumference. The ditches are so deep that no water can reach the walls, which are likewise faced with brown stone, and are full of water.

The great lords and other grandees enter into the first court of the palace mounted on elephants, richly caparisoned. This court has a avenue to a piazza adorned with brilliant porticoes, underneath which are small apartments for the accommodation of the guards. On each side of the piazza are apartments for ladies, and the halls of justice. There is a in the centre a fine coral, formed elegantly, at proper distances, into jeffer balconies. This grand piazza leads to a second court, where the omans are few, and a mounted guard in peron. On entering a third court, the divan is set in full view: and here the Emperor gives audience. This building, which is open on one side and arched at top, is supported by about thirty marble pillars, most beautifully painted with flowers. It has a grand hall, adorned to be a light mansion, the doors of which are covered with the emperors is seated on a splendid throne which glistens with diamonds and costly jewels.

The city of Delhi has very few mechanics in it, which is not owing to the want of skill in the people, but from the ill treatment of the omans, who, if they can meet with them, oblige them to work, for which they are paid according to their own determination. The rajas, and many others of the principal inhabitants, are exceeding wealthy; their most estimable is their jewelry, which some particular care shall be faithfully transmitted to us.

Timur, after many revolutions that had happened at Delhi, was placed on the imperial throne in the year 1527;
Agra, the capital of the province of that name, is situate in twenty-seven degrees odd minutes of northern latitude, and is about seven hundred miles north-east of Sulthanabad. The caravans usually perform in thirty-five days; this was but an incomparably place, till about one hundred and fifty years ago, when the Mogul Emperor Jehangir fixed his court after his own name, Lahore. It lies upon the river Jumna, in the midst of a barren sandy plain, which adds considerably to the heat of the desert. It is fifteen or eighteen miles in length, but not near so much in breadth, it is not fortified (except the palace) but there always lies a great army in the field, so that the Moguls be there.

The buildings of the city and great men are of stone, and very magnificent, they stand upon the banks of the river Jumna, and have large gardens adjoining to them; the rest of the houses are but mean, however, the great number of Mahometan mosques, caravansers, large squares, baths and reservoirs of water, intermixed with trees and gardens, and the river Jumna running the whole length of it, renders this town the very agreeable; and the Moguls' palace is looked upon to be one of the finest pieces of architecture in the East.

There is a large plain between the town and palace, here the rajah's draw up their rakhwahs when they mount the Mogul's throne, and do in their turns every week with fifteen or twenty thousand men; the palace or mahal, as it is called in the language of the country, lies in the form of a crescent upon the river Jumna, but from the town it is a foot or two surrounded with earth. It is three or four miles in circumference, and fortified with a high stone wall, mounted with artillery; the mahal may be seen at a great distance, and an enormous stone is built with red, and have a Uniform marble, nothing can look more brilliant than it does when the sun shines; it is surrounded with a deep broad moat, over which are drawn bridges, and the terraces of the gardens serve for a rampart.

There is a fine broad stone wall, with canals running upon the sides of it. Within the first gate of the palace, beyond which is a large square, where the Mahometan guards draw up; here the omrahs their generals pitch their tents, so as to parade through two armies, one on the out-side, and the other within the palace, before we come to the royal apartments; beyond this square is another court, where the Mogul's mace, as it is called, founds every morning, noon and night, and whenever he goes abroad: this is a compliment inferior governors and magistrates have paid them in all the towns in India, though rarely nothing can be more baron or digestable, less than such a number of large brazen trumpets, and till founds druming, to those who have ever heard other music. Our European governors, therefore, though they will not dispence with this piece of state, yet generally order them to be placed at a convenient distance. From this court where the music flutters, extends to the durbar, which is another large court, whither all people resort at the time of audience: this is divided by rails or balustrades, into three parts, at the outward rail stand the common people; without which stands a court, which is raised on a platform somewhat higher, those of better quality; and within the third, upon a platform or stage still more elevated, stand the omrahs and great men; and in this manner, all attend the approach of the Mogul at the time of audience, who, upon this playing of the music, appears in a kind of gallery, above the place where the omrahs are, and leads himself upon a glorious throne, covered with precious stones of an ineffable value. Here the Emperor receives petitions, and all his subjests, and sends several hours every day in hearing causes.

In 1638, there were seventy mosques in this city; and pilgrimages are at this time made to a famous mosque in which stand the bones of a saint, thirty feet long, and near fifteen broad. It also contains eight hundred purifying baths, and near it stands a grand piece of architecture, which is building, which remains of some of the ancient buildings, twenty thousand men were employed twenty-two years.

When a man is purified, in order to be pennished for any particular crime he has committed, he flies directly to a mosque in this city, and there finds a certain inferior; nor can the Emperor himself hurt him, after he has taken refuge within its sacred walls; for the attempt to punish, in this case, would be a direct violation of the religion, and reverence due to such as have the title of saints.

Mule of the inhabitants of Agra are Mahommedans and Parsees; but among the city residents, there is no regard to commerce; yet flourishes when honoured with a visit from the great Mogul.

Amadalab
Amadabad is the chief city of the province of Cambay. It is situate about one hundred and four leagues to the northward of Surat, in twenty-three degrees north latitude, and twenty-two degrees east longitude from London. It is the capital of the Mogul empire. Its climate is delightful; we have not had a day's rain these two months, those two months being the hottest seasons of the year. It stands on a small island formed by the confluence of the two rivers Rappi and Parvati. The island is about four miles in length; the streets are generally wide, and the principal street is not more than thirty paces over. There are twelve gates in the town, of which seven are large and four broad, and have trees planted on every side. On the west side of this square is the castle, and near the gates for lodging strangers. The town is a large square, on which the country mutes and trumpets stand and play morning, noon, and in the evening; the English factory is in the middle of the town, and their ware-houses are usually filled with rich Indian goods.

In this city, there are great many mosques, or Mahometan temples, but that called Juma masjid, or the Friday mosque, which most people refer on that day, it is the noblest: it is ascended by several large steps, and before it has a large circular platform, paved with stone, and one hundred and twenty in breadth, adorned with twelve domes, and an open paved square in the middle of it. In the front of the temple are three large arches, and on each side of its gate are pinnacles, over which are very high steeoles, from whence they call the people to their devotions. The chief dome is surrounded with seven smaller ones, and two minarets or towers. The whole pile is supported by forty-four pillars, standing in two rows, and the pavements of marble. There are about fome light weights, which are also in Amadabad, but the finished of them are congregated into a mosque, at which ceremony he ordered a cow to be killed in the temple, and on the third day the priests would never esteem it good after it was polluted; and he ordered all the figures of men and beasts to be defaced, so that he has lost much of its original beauty.

There is a fine asylum for groves and gardens, that at a distance it looks like a forest. The King's garden, which lies without the wall by the river side, is filled with all the fruits of India. It consists indeed of several gardens thrown into the form of an amphitheatre, rising gradually above another; and on the highest is a terrace, from whence there is a prospect of the country villages for several miles: four or five miles from Amadabad is the village of Sengeequ, where are the tombs of the former Kings of Guzafrat; they are large square buildings with the tombs of the queens in them, each having many tombs. There is a magnificent dome in the middle, and several little ones on the sides of it; and the tomb is surrounded by groves and gardens.

Sick and lame beasts and birds had formerly hospitals provided for them in this city, by the compassionate kindness of the natives; but the animals of the infidels, as they termed them; and these creatures remained in the hospital till they died, if they could not be cured; but if they recovered, they were sold to some of their own persuasion, that they might not be abused again.

The city of Cambay is about two leagues in circumference, and has a very extensive frontage exclusive of the gardens; the streets are spacious, and the houses well built with brick. It is situated in twenty-three degrees north latitude, at the bottom of a gulf of the same name. The English, which have factories here, though great parts of the trade is removed to Surat; on which account the city is but thinly inhabited. It is surrounded by a brick wall and hedges; and has several palaces, which are chiefly built for the check. There are great numbers of monkeys here, which are very mischievous, but the Banian inhabitants have a part in managing them. The street is filled with very dirty shops, and is seamed with numerous, which the natives catch after the bird has retired to rest; the flesh of the young ones is white, and in taste resembles that of the flesh of the wheat animal.

No. 8.

Surat is in the latitude of twenty-one degrees thirty minutes north, in the longitude of the meridian of London. It stands on the river Tapte, about ten miles distant from the sea, and the windings of the river, it is almost in the form of a crescent. It is defended by a wall and towers, and has a fortified town, with a tower at each angle on the south west part of it, which commands both the river and theaver to the land by land. There is a mosque, with a laughing, and there is a moat on the other. The city is between two and three English miles in circumference, and has twenty-three gates or dry gates, some of which are placed for the safety of the town. There are many houses being furnished with richly decorated with gilt cornices, and the roofs thatched with cajan or palm leaves, but the Europeans, and some of the rich Moors have more lofty houses, built with brick or stone, and covered with tiles. The floors, both of the upper and ground rooms, are of terras, which is looked upon to be colder than boards; and they have no glazing to their windows that the air may have a free passage.

The city is very populous, being fuppofed to contain about two hundred thousand inhabitants; and the bazaar or market-place thronged with Banians and other merchants, who stand with their flits or fluffs upon their heads, or in their hands, to expose them to sale. In the middle of the city is the old house, which is called Castle-green, from the neighbourhood of the castle; where are laid all forts of goods in the open air, both day and night, excepting during the monsoons; and here the English and the Europeans as well as natives place their bills, and prepare to load their ships.

Before the English East India company became possessed of Bouamba, the Portuguese and Venetians and other traders, and there were several fairs at Surat, where a factory, which had been established there, was still convivial, after the prejudice was removed by the Treaty of Abyam, the English East India company, and the Europeans, and the commercial and other companies, which are in a state of the Mogul government, and were generally admitted without impediments. The Mogul government, and the Europeans, Arabs, Armenians, Jews, and Europeans, all reformers; and the merchants who are resident in Surat, and the bills of exchange were to be had for every market in India. Bags of money, ticketed and sealed, would circulate for years, without being weighed, such was the demand of the traders. Fortunes were proportionable to the ease and readiness with which they were to be acquired by commerce; they frequently amounted to two hundred thousand pounds. Many of the Canton inhabitants enjoy places under the Moudlah government, such as collectors and surveyors of the customs, &c.

In last winter, the chief inhabitants retire into the country; and the English East India company have a very pleasant garden, kept in the most regular order.

At this place there is great plenty of provision of all kinds: the soil of the country is extremely fertile, and produces the sweetest wheat in India. Here is also abundance of wild fowl, great numbers of antelopes and some deer. All religions are tolerated here by the Mughal government, but the government induce in their hands. When they take an European into their service, they never attempt to make him a professor, nor do they make the least inquiry about his religion.

In 1646 Surat was plundered by Rajah Sesvi, who took from thence one million two hundred thousand pounds. The pillage would have been much more considerable, had not the English and Dutch avoided the degradation, by placing their richest commodities in the castle, which was out of the rajah's reach; they had besides, well fortified their factories; so that the invader thought proper to retire, without attempting to attack the place. After the above goods, the inhabitants, for their better security built walls round the city of Surat, which is at this time in a flourishing condition.

A considerable part of the produce of the manufactories of Guzafrat, which are deposited in warehouses, is carried into the inland countries, and the rest to all parts of the globe. Those most commonly known are, blue linens, white linens, black cloaks, printed cottons, silk and cotton stuffs, gauzes, thals, and duties. Surat receives, in exchange for her exports, great quantities of spices from the Dutch, and to the value of very great sums, and a large number of Chinese, and is supplied with hard wares from the English, silk from Bengal and Persia; from Mahab, mats and pepper; from Arabia, faves and perfumes; from China, tea, ginger, camphor, quicksilver, and toys; and cotton, dried fruits, pearls, and spices from Persia.

The manufacturers here have generally their work be-
Bengal is the most fertile province of the Mogul's dominions. It is bounded by the provinces of Patna and Jefut towards the north, the kingdom of Arracan and Afem towards the east, the bay of Bengal and the province of Orissa towards the south, and by the province of Malva towards the west; it is in length from east to west upwards of four hundred miles, and near three hundred in breadth from north to south, and is usually compared to Egypt for its fruitfulness, the river Ganges dividing it into several branches in this province, and annually overflowing it, as the Nile does Egypt.

The chief towns are, 1. Dacca, which lies upon one of the eastern branches of the Ganges in the latitude of twenty-five degrees; it is four hundred miles in length, but so many in width, that the river is extremely narrow, winding with the river. This may properly be called the capital, being the seat of the viceroys, and here the merchants have their agents to take care of their trade, which is very considerable in this province. 2. Ragenshah, situated higher up the Ganges; and, is between two or three hundred miles from the mouth of it, in the latitude of twenty-five degrees. Below Ragenshah lies the city of Caffimbazar, in latitude twenty-four, where the Europeans have their factories, the country affording great quantities of silk and muslins. 3. To the southward of Caffimbazar, stands the city of Hugley, upon an island made by the Ganges, in the latitude of twenty-three degrees, about a hundred miles from the mouth of the river: it is a large town, and besides Moors and other Indians, has several thousand Portuguese Christians in it: most European nations who trade to India had their factories here. However, the English, with the understanding of the situation induced them to remove, and the English have since built them a fort a little below near Calcutta, in which they have some barracks, and a crop of Melons, from the Prince of Orange who mounted the throne of England about that time. In 1737, the refreshment of Bengal, whose indignation had been raised by some practices of the company, invested Calcutta, which was then in a defenceless state. The governor, alarmed at the appearance of a very numerous army, abandoned the fort, and, with many of the inhabitants, fled to hoard up a relief in the river. Mr. Holwell, however, who was found in command, allied by a few intrepid officers, and a weak garrison, defended the fort for some time, but was at length obliged to surrender; and the inhabitants, with the whole garrison, were all forced into a dungeon called the black-hole, from which only twenty-three out of one hundred and forty-four came out alive; the rest were either butchered with the exulting rage and with worse or violent thirst: there was a lady, one Mrs. Curev, among the number, who survived the calamity. 5. The city of Chittagong lies in the north of the same branch of the Ganges. Here the Portuguese set up for a kind of sovereignty meretricious, and associating with princes and bandits of all nations, owned no submission to their own prince or the prince of the country, but committed daily robberies by sea and land, and, to interrupted all commerce, that the latter is divided into two parts; hence they send an army against them and extirpate them. 6. Malabar and Mangalore sends a little to the eastward of Ragenshah, where the Europeans also have their factories.

This province of Bengal is deemed the most fertile country in India for a variety of articles, such as figs, silk, gum-bak, salt-petre, rice, opium, pepper, fruits, &c. The greatest part of the Bengal silk is produced in the territory of Caffimbazar, where the silk-works are reared and fed in the same manner as in other places; but the natural heat of the climate hatches and brings them to perfection at all times of the year. Considerable quantities of silk and cotton flax are manufactured here, and circulated through part of Asia. The leafls are famous for its fine cases, and a small fort worked into cell, being glazed within side, will hold any liquid. There is also an herb, here, from which they make very beautiful flax and tapestry.

The forces in the service of the English company, which are established at Bengal, are very considerable. The power is invested in Europeans, though the soldiers of the army consists of natives: the whole is divided into three regiments: each consisting of one battalion of European infantry, and one regiment of fanatics in the battalion contains ten companies, and each regiment ten battalions. Every regiment of fanatics, or black infantry, is commanded by a jemadar, or native officer, who is subordinate to the English officers of a much lower rank. The artillery forms one regiment of four companies of Europeans; but the principal dragoons is done by black sepoys: every company of artillery is strengthened by four companies of lancers, containing fifty men in each company, who serve as mutes, and the brigades have a troop of black cavalry appertaining to each, who are commanded by English officers.

But, before we quit the province of Bengal, it will be proper to give a further account of the town of Calcutta. Situate on the banks of the river Hugley which is an arm of the Ganges. It is tolerably large, but appears very uncoah to the eye, from the great irregularity of its buildings; for every person who enters a house, pleads his own fancy with respect to the manner of the edifice, without paying any attention to uniformity, fire or elegance.

Bengal is the principal town in Bengal, which is inhabited by perfons who keep little shops for the sake of various commodities. The English fend their servants hither, to buy whatever is wanted, in their facility; so that the place is seldom visited by them.

Near the centre of the town, on the side of the river Hugley, is the old fort, in which is the place before mentioned, called the black-hole, where the unhappy English suffered the most wretched punishment, by order of the nabob Serajah Dowla, Some of the apartments in it are used occasionally for the performance of divine service.

By the side of the river, about a mile from the town, is the new fort, which is very strong and handsomely built, exceeding spacious, and surrounded with walls. It contains magazines for stores, barracks for soldiers, and elegant apartments for the several officers that reside at Calcutta, who, as well as the engineers, have lodges in it for their accommodation.

The Portuguese and Armenians have one part of the town; yet apart, and, in that part, they exercise their own mode of worship. There is a church belonging to each; but the other are restrained from exhibiting their religious proceedings without the limits of their own district. The generality of these people perform the most solemn offices, being employed as servants by the wealthiest part of the inhabitants. The Armenian women, indeed, are not employed in works of art, but to collect goods in different parts of India for the merchants.

Some of these are permitted to trade for themselves, and others are only permitted to trade for others.

The drabs of the Armenian women much resembles that of the Malockants, except the head, which is covered with...
with a turban of a propitious size. They have likewise a funeral addition to their head-dresses after marriage: it is called a mouth-piece, and consists of a piece of mullion, which is tied to the face, and the front part is made to rise upwards at the nostrils, and is placed so close to the face, that their breathing is greatly hindered by it.

It is a very multiform building about it, which are the country residencies of English gentlemen who retire thither, particularly in the hot season, to enjoy the benefit of the air, which is cooler and much more wholesome than that in the desert. The climate here is such that the inhabitants are subject to many diseases; but the most fatal is called the picker fever, which in a very short space of time often destroys them. More persons are said to die here in proportion than women, because the latter are more affectionate, and less addicted to intemperance than the men.

Pamso is one of the largest cities in India, and the capital of a territory of the same name. It is situated to the north of the kingdom of Bengal, where the English have factories for fah-putre, borak, and raw silk. It also produces large quantities of opium. The town is large, but the houses are built at a distance from each other. It is fed in a fertile, pleasant country, four hundred miles east of Agra, in eighty-five degrees forty minutes east longitude, and twenty-three degrees twenty-five minutes north latitude.

The most extensive city in the kingdom of Bengal is Dacca, which produces the belt and fine muslin in great bulk. The third is Surat, in twenty-four degrees north latitude; the soil is fertile, the situation fine, and the richest commodities of India and Europe are brought to it. It receives considerable advantages from shipping, which are produced by indigo and workable mullions, which, for their texture, are more valuable than those made in any other part of India.

The town is called Fort George, as is generally called from the English fort there, stands about four miles to the northward of St. Thomas, in thirteen degrees, forty odd minutes, to the westward, being near four thousand and eight hundred miles to the eastward of London, so that the sun fits them about six hours before us, and that they have great days and short nights. In the town, there is a hotel for London in this; for there is so little difference in the length of the days there all the year round, that we always reckon it to be six o'clock at sun-rise and sun-set.

The town is regular; there is a hundred yards on each side, with four battlements, built with what they call iron stone, being of the colour of unwatered iron, and very rough on the outside like honeycomb. There is no ditch about the fort, and the walls are arched and hollow within, so that they cannot proof it. It has two gates, one to the east and the other to the west. The western gate which leads towards the land is pretty large; and here the main guard is kept, the forders of the guards lying on the right and left of it, under the wall, which being hollow from behind is a sort of a guard-house. The eastern gate towards the sea, but small, and guarded only with a file of musqueteers. In the middle of the fort stands the governor's palace, and in which the apartments for the company's servants; it is a handsomely, lofty, square stone building; the first rooms are adorned by ten or twelve flaps, and from thence another pair of stairs leads to the council chamber and the governor's lodgings. The fort stands near the middle of the White-town where the Europeans inhabit. This is an oblong square about a quarter of a mile in length, but not half so much in breadth.

To the northward of the fort are three straight handstone streets, and as many to the south. The buildings are of brick, for the houses have one lower story and a ground floor. Their roofs are flat, and covered with a plaster made of floor, and which no rain can penetrate; and from these roofs and the passages they take the fresh air upon their long and evening. The walls and of these houses are very thick, and the rooms lofty. The governor and people of condition have gardens at a little distance from the town, and which they cultivate themselves. Of the Post town is a barrack, or rather one long room where all the company's soldiers are obliged to lodge when they are off the guard; and from thence another pair of stairs leads to the council hospital, where they are taken care of when they are sick.

At the other end of the soldiers barracks is a mint where the company coin gold and silver.

On the north front of the fort stands the Portuguese church; and to the southward the English church, which is a pretty elegant building, and moderate larger; it has a handsomish altar piece, a gallery of fine carved wood refem-
the coast of Coromandel, and the western coast of Sumatra. He is likewise captain of the first company of soldiers, the commander-in-chief next in council. The governor lives in great state, though his salary is but small; but this is pretty sufficiently compensated to him by the confidence and respect paid to him from the privilege he has of trading on his own bottom. His usual guard is three or four hundred black men; and when he goes abroad, on any public occasion, he is attended by trumpets, files, and with a provost or a person appointed by the council on horseback, and their ladies in palanquins.

Six persons compose the council, who have annual salaries. Besides whom, there are two salaried merchants, two junior merchants, five factors, and ten writers; also two clergymen, a judge advocate, an attorney-general, two attorneys, and a surgeon-major, all of whom have yearly stipends, which (as we observed with respect to the governor) are trifling, in comparison of the advantages and profits they acquire by trading for themselves. The Armenians and Jews have improved the trade of this colony. The articles the English deal in are diamonds, chinzes, calicoes, &c.

In 1755, this place was submitted to the French, but restored at the peace. General Lally attacked it again in 1758, but the forces under the generals Launay and Duret defeated him. It was captured in that year. The town and villages belonging to Fort St. George contained eighty thousand people, of whom five thousand were Europeans.

The trade carried on from this place extended to all ports eastward of the Cape of Good Hope; but the largest ships left the Mocha, Peron, and Surat markets; with Bengal and China commodities, on the south, in their voyage. Coarse and middling cloths, the Malabar cloth for pepper, coffee, cocoa, &c. The European goods, which fetch the best market price here, are rice, sugar, (the rice and sugar being of bad quality,) coarse and threadled stockings, lead, flat-wear, looking-glass, &c., and a variety of other commodities.

At a little distance from Madras, the nabobs of Arcot have an elegant villa, supported by pillars instead of walls; the apartments of colonades admit the light, in lieu of windows, and open passages serve the purpose of doors: the style of architecture there appears airy and open, and in a climate exceedingly fat, the consequent coolness renders it an agreeable and delightful retreat. Great and Little Gingi or Ginges, are encompassed with mountains. They confine of two towns, both of which are surrounded by a wall and five lofty rocks; and on the top of each rock is a strong fort; these towns are fortified from wall to wall, by a wall fortified with cannon, which one of the rocks defends as a citadel.

Another colony and fort belonging to the English is Fort St. David, which lies four or five leagues to the south of Pondicherry. This place was purchased in 1668, for the consideration of ninety thousand pagodas, by the governor of Fort St. George, for the India company. It is reckoned a station of very great consequence to the English. It was taken, in 1758, by the French forces under the command of General Lally, who blew up the fortifications; but great events of war took place in the time of the victors, they were forced to give up most of their possessions to the English. Great quantities of chins, calicoes, &c., are sold there.

Tanjore, the capital of the kingdom of the same name, lies to the south of Fort St. David. It is situated in eleven degrees north latitude, and the kingdom is bounded by the ocean on the east, by Trichinopoly, on the west, by the river Cécoron, on the north; and on the south by the territories of two great periwongs, fueded poligars, or lords. The English have here a great city, with land belonging to it, near the mouth of the Cécoron. In 1748, M. Lally attacked this place, but was repulsed. When that general resolved on his preparations here, he privately erected batteries at the very time he was pretending to commence a capitulation with the prince, and even fired upon the town; when the inhabitants, inflamed with a full repentance, attacked the French with such courage, as was taken from the French by the Dutch, and restored at the peace of Aix-la-Chapelle; and in 1751, it was taken by the English, but restored in 1755. Previous, however, to the French losing this place, Robert Raffles was sent out with a strong squadron, in order to lay siege to Pondicherry, and was joined in India by several men of war under Admiral Griffin. Arriving at Fort St. David in July 1748, on the 18th of August following the army were in full motion, and preparing for the siege. On the 11th, the French made a show of three hundred infantry and four cavalry, at an interview...

MALABAR.
they had thrown up, but abandoned it on the approach of the English forces. The English attacked the place with their usual spirit and intrepidity, but were constrained, through the violence of the gales and contrary winds, to retire to the kindling fire. After parting with a large body and fifty fowlers, upwards of two hundred and fifty seamen, and twelve pinnaces.

Karakul lies in ten degrees thirty-four minutes north, latitude about four leagues south of Tranquebar, and twenty-five south of Funtudicherry. This is an ancient city and settlement belonging to the French; it contains five spacious pagodas, nine lesser ones, four mosques, between six and seven hundred houses, and about five thousand people. This town is under the jurisdiction of Karakul, and lies to the south of it. It is a large town, containing four large pagodas, near thirty lesser ones, and fortysix black houses, exclusive of twenty-four public inns for the accommodation of travelers.

Chandernagore also belongs to the French. It is surrounded by a wall, and well fortified; but was reduced by Meftis, Watton and Poecoc, in conjunction with Colonel Clive. This place has the disadvantage of being rather exposed on the western side; but its harbour is excellent, and the air is so pure as can be on the banks of the Ganges. But it is in a state of ruin, and is now under the care of the English, who have maintained it in good order.

The Portuguese possessions in the Indies being now come under our consideration, it is necessary to observe that we shall not enter into those of Coa, the oblique principality of them, and Dina, or Dinaj, both of which are islands, till we give a general account of the oriental islands.

Melapour was once the most considerable place on the Coromandel coast: it is about three miles south of Fort St. George. The Portuguese call it from the verge of the river, to a state of opulence and magnificence; but were driven from thence by the Moors, when it became subject to the King of Golconda, but was reduced by the French in 1665, when the Dutch, having, in conjunction with the King of Golconda, about four years after, took it from the French; upon which, the fortifications were entirely destroyed, and it was restored. The inhabitants are Portuguese, Gentoos, and Moors, and others of different nations. The Portuguese, after settling in this place when in its declining state, and beginning to rebuild it, gave it the name of St. Thomas, from an opinion that the apostle was martyred here; and these people, finding some bones (which they afterwards entrained) concluded they were those of St. Thomas, especially as it was pretended his sepulchre was on a hill at a little distance from the town.

The city of Calicut lies in eleven degrees, twenty minutes north latitude, and has an excellent harbour. The inhabitants are Portuguese, Gentoos, and Moors, and others of different nations. The Portuguese, after settling in this place when in its declining state, and beginning to rebuild it, gave it the name of Calicut, from an opinion that the apostle was martyred here; and these people, finding some bones (which they afterwards entrained) concluded they were those of St. Thomas, especially as it was pretended his sepulchre was on a hill at a little distance from the town.

There are five white tombs a little to the northward of the town, which serve as a sea mark to the sailors. The famous or king of the very considerable and confederacy with the English against the Portuguese in 1615. Calicut is further spread by a brick wall, and contains about four thousand houses, most of which have gardens. This was the first place at which the Portuguese landed in 1648, after their discovery of India.

The country of the rajah of Seringapatam lies contiguous to the province of Mysore: his dominions extend from the river Cauvery in the west, to the sea in the east. They are divided by seven large and two small rivers. The province was conquered, the natives are civilized, just, and humane people.

Farther to the south is the city of Cochin, a city situated in a kingdom of about three square degrees in area, with a length of thirty miles, a breadth of twenty, and a depth of ten. It is a large town, containing about twelve thousand houses, most of which have gardens.

The city of the Old Cochin lies a league and a half from the sea, and is called by the Portuguese Cochin Dacia, or the Higher Cochin, because it lies higher up the river, and by the Dutch Malabar. It was once the seat of a powerful kingdom, but is now in a state of decay. The other Cochin, commonly called New Cochin, is a small town, situated on the same river.

The Portuguese built and beautified in this town many edifices, churches and monasteries, to which belong a pleasant gardens and fine walks. The Jesuits church was built in the year 1670, and a college for the Jesuits, which has been lately destroyed, in the year 1670, immediately gave orders for demolishing great part of the houses, and all the churches but one, in order to bring it into a narrower compass, and render the fortifications more regular; and they made it almost impregnable, considering the part of the world it stands in, to which the flames of the v ethers they pulled down in a great measure contributed. The simple Portuguese had converted these buildings into pious uses, but the Dutch knew how to employ such materials much better: an extensive and very careful survey, that all over the Indies they think one church sufficient for the largest cities, informed them that in Batavia itself they had for many years but one Dutch church.

The dominions of the King of Cochin have been repeatedly invaded by the natives of Travancore, a country extending from Cape Comorin to the frontiers of Cochin; and he is reported to be in alliance with the Mysore king. The town of Madura, which is situated on the river half a league from the sea, and has several pagodas. Its revenue is four or five thousand four hundred rupees, stipulated to be paid line by annual capitulations, out of the produce of its customs.

There is a colony of indolent Jews in this town, who are white men, and ascribe to their ancestors, that they were settled here at the age of the Babylonish captivity; they have, however, certainly been here a considerable time. They have a synagogue, in which their records are very carefully preserved.

Cannanor is a very populous and considerable town in the kingdom of the same name. It is situated on the south-west north latitude, and has an excellent harbour. The Dutch, who have on all occasions distinguished themselves by their industry and enterprising genius, have an extensive fort here. Cannanor was originally fortified by the Portuguese from whom the Dutch took it in 1668. The chief articles in trade here are pepper, ginger, cinnamon, anise, bergamot, musk, saffron, and all the spices. This town is inhabited principally by Malaboo merchants.

There is a large town at the bottom of the bay, which is independent of Cannanor, and belongs to the province of Cochin: it is the residence of a prince who can carry twenty thousand men into the field.

The city of Cranganor lies fourteen or fifteen miles to the northward of the city of Cochin, and has also the city of the same name. This place was fortified and fortified by the Portuguese soon after their arrival in India, but taken from them by the Dutch in January 1656. The Dutch found here a noble college of Jesuits, with a library belonging to it, and it having once been the seat of a bishop, here was a cathedral, and six or seven other churches, which underwent the fate of other places which the Dutch conquered, and have nothing of them remaining but their ruins. Without the walls was the college of Chintura, famous for the refit of the Christian of St. Thomas, who exercised his religion here in the Syrian language. They had also a Syrian school fitted out for the education of youth, and several writers and priests of their own.

Between Cranganor and Calicut lie the towns of Panane and Tanes; these were afterwards fortified by the Portuguese.

At Panane it was that Vasco da Gama treated with the Samogor, or King of Calicut, concerning their settlement on this coast, but being opposed by the Moors, they afterwards attacked the place and demolished it, and the country was left in ruins. The Portuguese then succeeded the Portuguese, and have now a factory here. Tanor is a poor fishing place, but the Europeans refit it; for the esteem of another kingdom in Calicut.

Chintura, more generally known by the name of Dowlah, is at the distance of the Dutch have upon the trade, the Dutch have a fort here, but no other possessions whatever, as the territory round it depends on the government of the country.

Hugley
flken the flame, and so proper till they find the vein, which often runs under the rock two or three furlongs. All the earth is dug out of the mine; and the workmen, by a strong force, produces flames of a considerable size, and pretty good water, but of different shapes.

Near the place where they dig they make a cistern about two feet high, and fix feet over, with a final vent in one of the sides, about two inches from the bottom, by which it empties itself into a cistern, or a great number of small flumes, if by chance any should run through. The vent being flapped, they fill the cistern they have made with water, finding it with ashes to prevent the escape of the water out of the mines, as it can conveniently receive at a time; breaking the cistern, picking out the greatest stones, and flinging it with their hoes till the mass is all muddy, the gravelly stuff falling to the bottom: then they open the vent, letting out the final water, and supplying it with clean, till all the earthy substance be washed away, and none but a gravelly remains at the bottom. Thus they continue washing till about ten of the clock before noon, when they take the gravelly stuff they have washed, and spread it on a plain made plain and smooth like a bowling-green, for the purpose near the cistern, which being soon dried by the heat of the sun, at that time of the day, they very curiously look over it, that the smallest bit of a bone can easily escape them. If they find a large bone, they deliver it not till they have done work; and then very privately, left it should come to the knowledge of the governor of the place, and he require a share, which in the kingdom of Golconda is usually practised, without respect to any agreement made with them.

The workmen are obliged to be watched with the utmost diligence, lest they should be tempted to embosom any of the precious articles which they are employed to fetch for. One of them was detected putting a flat piece into the corner of his eye; and many others have allowed the diamonds.

The principal persons concerned in this trade, are the Banyan merchants, but both they and the persons employed to work the mines are greatly oppressed: the first affecting to be poor about five thousand inhabitants, and has a most agreeable prospect from the sea. In 1645 it fixed a monthly fee of ten for the King of Tanjore's forces, allotted by the Dutch; but had governor Pitt left its relief a reinforcement of English from Fort St. George.

The principal are the chief settlements belonging to the Europeans, except the infidus ones, which we shall take notice of in our account of the eastern isles; and so will give a description of the situation and extent of Coromandel, which is bounded by Proper Narrows on the west, Golconda on the north, the bay of Bengal on the east, and Gung in the south, though Gungi, Tanjore, and Madura are Cape Comorin; so by several part of the coast of Coromandel, this making formerly the east part of the kingdom of Bignar, and going under the general name before the little principalities were eroded; and according to this account, the coast of Coromandel reaches from Cape Comorin, which is about two hundred and thirty minutes of north latitude to Madi, is the fulpiatan, the first town in Golconda, in sixteen degrees, thirty minutes, so that this coast takes up nine degrees of latitude, which allowing for the winding of the shores makes a coast of at least seven hundred miles.

The first settlements on this coast were established near the shore, some by dint of force, and others by the consent of these people. The Mohammedans of Coromandel, as far as their forces would extend, fortified the Europeans with the resolution of settling here. Hedges of thorny plants were the first boundaries, till, the colonists increasing in power and opulence, fortifications were raised for their defence. Abroad the whole trade of this coast is now in the hands of the Europeans; although some Coromandel was no object of their attention, being separated from Malabar by inaccessible mountains.

We shall conclude this section with a particular account of the kingdom of Golconda, which extends two hundred and sixty miles along the bay of Bengal. It is in the form of a crescent, and about two hundred miles in the breadth perpendicularly. It has Bignar on the east, the mountains of Gata on the west, and Ghizz and Billage on the north.

The province, which is the diamond mines, in some of which the diamonds lie scattered within a few fathoms of the earth's surface, and others are discovered in a manner, and have been found in forty fathoms deep. The workmen dig into the rock, and then, by means of fire,
A Diversion of SWINGING, practised by the principal people in India.
the city of Malacca, is Pettipost, or Zenta-pool, where the English have a factory. The painted and dyed stuffs of this place are highly esteemed and in an opposite to India, a root which makes so deep a colour, that it is obliged to be mixed with other colours to make it lighter. The English have also a factory about one hundred miles farther south, called Coeleste, and the Dutch have a factory called Pulica, still a little farther to the south.

Sect. IV.

Contains an account of the genius, temper, habits, food, divereis, rancds, etc. of the Indians.

Those Indians who are Pagans (and are ten times more numerous than the Mahometans their governors) are men of bright parts, and will imitate almost anything at a sight. They are very sober and pious, never drowning their sins by drunkenness and intemperance, extremely obliging, and of a very pretty address, an even composed temper, and strictly avoiding all manner of contention: but they are generally thought to want courage. I have known some of them, however, as brave as the bravest Europeans, not to be afraid of fire, though they should burn their hand, and endure the severest torture, rather than betray their friend, or the cause they were engaged in. But to return to the Indians proper, I have met with some people of the most uncommon figure, and I might almost fancy, that you can scarce distinguish the copy from the original. The common people paint their face with colours and other parts of the body. They have long hair, black as jet, towards the north they are tawny, as well as on the coast. The women in their features, figures, shape, and costume, have never, without the advantage of a dancing-mall, their motion is bewitching, they tread the ground as elegantly as at their ages does the stage. Their clothing does not prevent their showing the natural shape of their bodies; they are neither disrobed or rendered crook'd by small flays, or lose the true human shape in a monstrous hoop. They have a piece of white calico tied about their waists, which reaches to their knees, and the rest is thrown across their shoulders, covering their breasts, and part of their backs. Their hair is tied up in a roll, and adorned with jewels or toys; they have pendants in their ears and noses, and several rings of beads round their necks; they wear bracelets on their wrists and ankles, and some have rings in their noses, to set feet into flippers; through the women, in the southern parts, wear neither flippers nor shoes.

The Moors, men, writing, etc. about with a faith, in which they have a circle or dagger. Their hair, like the women's, is tied up in a roll, over which they have small turban. The upper part of their garment is covered with the same figure; its value is very great, and this is another almost that short, and their legs are covered by their breeches: they wear flippers peaked like women's shoes, into which they put their bare feet.

The Moors and Mahometans are well shaped; the complexion of those in the north is fair; those in the south, tawny, but those too have generally dark hair and black eyes, and like other Mahometans, shave their heads all but one lock on the crown, and wear their beards long; their habit is a veil and large turban. The habit and colour of Pagans, eat no flesh or eggs any more than the bramins (piests) antiently called dronals, but live upon rice, herbs, roots, and fruits. Those in the coast, eat Pagans all flesh but that of hogs, hares, and such flesh as the Jews would profanely eat. They all eat coarse-stuffe, or full upon masses or carpets at their meals, and walk before and after. The principal dhist, among both Moors and Pagans, is pitas, made of fruits or melon, or rice. The meat, whatever it is, is always served up upon a plate or raised floor, covered with a mat or carpet at the upper end or sides of the room, a servant comes in with a basin and ever, and a towel, and every one washes his hands, then a large plate, or a leaf of a foot diameter is set before every one of the ifidants. After dinner, all the servants bring in large brazens or earthen bowls, full of rice, and with a ladle, lay a quart or three pints of boiled rice on every man's plate. The rice is then covered with soup upon the rice, and a little part of the meat is laid on the side of the plate. A bottle of water, also, which, is common in India, is set by every one, of which they drink when they please, without healths, or taking notice of any of the company. If they are entertained with fish, a strong soup is made of it, which is called currie, and mixed with milk of the rice. They boil their rice in such a manner, that it is quite dry, not the least drop of water is left in it, and frequently colour it with falfimi or turmeric. Their sauces are chiefly pickles, which they call achar, made of green bamboo, or mangos, and other fruits. And foy is another sauce which is brought to England, and therefore needs no description here. Abundance of garlic is used in all their pickles, especially in the mangos.

They are remarkably fond of smoking tobacco. The poor roll up a leaf of tobacco, about four or five inches long, and, lighting it at one end, smoke the other till it is about half exhausted and then throw it away.

The Indians have several kinds of gardens among them. They sometimes make for small matters, but not so eagerly as the Chinees, and are seldom seen out of temper. At a feast, the mistress of the house will give pictures so nicely, that you can scarce distinguish the copy from the original. The common people paint those fine chins and other parts of the body; and the women, and their children in the same dress will imitate the model of an English ship, as if they had been brought up in ships-carpenters, and it is amazing to see how well they break at the water.

They are of a middle size, seldom corpulent, their features good, but their complexion for the most part black; they have long black hair and black eyes; but there are some Indians in the south as white as any in Europe, and the upper part of the grand face, as black as jet, towards the north they are tawny, as well as on the coast. The women in their features, figures, shape, and costume, have never, without the advantage of a dancing-mall, their motion is bewitching, they tread the ground as elegantly as at their ages does the stage. Their clothing does not prevent their showing the natural shape of their bodies; they are neither disrobed or rendered crook'd by small flays, or lose the true human shape in a monstrous hoop. They have a piece of white calico tied about their waists, which reaches to their knees, and the rest is thrown across their shoulders, covering their breasts, and part of their backs. Their hair is tied up in a roll, and adorned with jewels or toys; they have pendants in their ears and noses, and several rings of beads round their necks; they wear bracelets on their wrists and ankles, and some have rings in their noses, to set feet into flippers; through the women, in the southern parts, wear neither flippers nor shoes.

The chief rural sports of the Indians are hunting and hawking; they surround part of the country, and drive the game into a narrow compass, and then shoot at it: they teach even tygers and leopards, it is said, to take the game, which they do by jumping upon it from bushes, or other covers, but never run after it. They purchase hawks and other birds of prey from Persia, which are taught to fly at all manner of game, and even at wild beasts, fixing on the head of the animal, and buffeting him with their wings, while the dogs come up and take him. An ox being taught to find fire, they make the same use of him as we do of flaying Holstein cows. Another diverting is that of racing; they make the same use of oxen, as we do of horses.

Having, among other Indian diversions, mentioned that of the fights of wild beasts, we shall, before we quit this subject, describe an entertainment given by the great Mogul to foreign ambassadors, which is of a very singular nature: it consists of wild beasts fighting with each other, or combated by men, who engage in such dangerous enterprises in order to obtain the favour of the King. The manner of one of these fights, which was exhibited at Agra (when the Mogul's court there is) is as follows.

Two buffaloes were let loose at each other, and, afterwards a lion and a tiger, the two latter of which fought desperately for some time. The buffalo was taken away, the governor arose, and said, "The great Mogul's will is performed, if that any valiant heroes are disposed to prove their worth by proofs of their valor, in fighting against the wild beasts with shield and sword, let them come forth; if they conquer, the great Mogul will reward them freely, with wealth and land." On this, three persons entered the lists, and engaged to undertake the combat; when the governor called aloud, said, "None of you, fight without either weapon but sword and shield; those which have a dagger amongst them, must throw it away, and fight fairly." A lion was then driven into the ring, where one of the three fought ready to encounter him; the lion immediately ran to a castle of great terror, but the man defended himself with a considerable time, till his arms growing weary, the lion laid one of his paws on the other; the company is set on fire, and when the man, finding himself unable to use his sword, and feeling the danger he was in, with his left hand drew out his Indian sword...

[ASI A]  

INDOSTAN

... upon a clay soil; after any rain is fallen, the caravans are forced to lie till the ground is dry, the camels having a smooth foot, without any hoof, and if they slips, it is in danger of being spoiled.

There is a great number of elephants produced in India, which being an animal of remarkable fine and quality, we shall here give a particular description of it as being the largest and strongest in the universe. It is from fifteen to fifteen feet high, and about seven broad. Its skin, about the belly is so tough, that a sword cannot penetrate it; it is covered with a coat of a darkish cuticle, and has sharp curving teeth, the upper being notched. Its feet are divided outside; the male, they bend downwards, and are strong; in the female, they turn upwards and are sharp, both male and female have one which is sharp, as a defensive weapon, and the other, which is blunter, to grub up trees and plants for food. The teeth of the male sometimes grow to the length of ten feet, and have been known to weigh three hundred pounds each. The teeth of the female though less, are the most valuable ivory.

They naturally shed their teeth once in ten years, and bury them carefully in the earth, to prevent, as is imagined, their being found by man. The elephants tongue is small, but broad; their feet are round and ample, the legs have joints which are flexible; the forehead is large, and rising; the tail resembles that of a hog; and the blood of this creature is colder than that of any other. But the organ which most peculiarly distinguishes it is the male scenery.

This singular member is crooked, grizzly, and flexible, about seven feet in length, and more than three in circumference towards the head: but it gradually diminishes to the extremity. At the root of the nose are two pсла, temple, which they put into the one into the other to the mouth; through the shaft it breathes and, by the latter it receives in provision, the trunk for under these uses of a house, a bed, and a weapon to defend it. It is so strong, that it can lift a prodigious weight; and so delicate in the sensation, that it can make the least piece of coin from the ground. They delight much in water, and will swim a great way.

The male elephant is sometimes mad after the female, at which times he is apt to be very mischievous, and will strike any one he meets with but his keeper, and therefore they are at that season chained by the legs to great trees, and by chance they get loose, they will overturn any thing in their way; nor is it possible to stop or divert their rage but by fire-works, which burlong with a loud noise will make them blind and tremble: when they are in this mad fit they sweats prodigiously, and smell much ranker than a goat: it is credibly reported, that an elephant having broke loose in this rage, and making towards the bazaar, or market-place, from whence all people fled as fast as they could, he came to an herb woman's, that used to give him a handful of herbs as he passed by, and the woman having run away, the child upon hearing her voice, and in her fright, the elephant gently took it up with his trunk, and laid it upon a wall, without doing it any hurt, and when proceeded to eat it, he did no mischief to every thing that came in his way as before.

The Mogul has five hundred, some say one thousand of these elephants in his imperial stables, and he are some in the stables, others are trained to hunt, others to carry war, that will not only stand fire, but suffer a great gun to be fired off their backs: the gun they carry is about five feet long, and placed upon a square frame of wood, which is fastened to a broad thick pole, tied on with strong cords and girths. At the four corners of the frame they plant four silk flags, or colours upon little antient-flakes. Upon the neck of the elephant is a fine man who guides him, who has an iron rod in his hand about half a yard long, sharp at the lower end, and a hook turned up, with which heoo cuteke his hair, or pulls the elephant back as he is only too fast. The gunner sits on the wooden frame, where he has his bullets, and ammunition, and all things necessary for loading and discharging the gun, and the gun carries a ball about as large as a turf ball.

Besides the beasts of burden already mentioned, they have buffaloes, and after the buffaloes differ very little from cows and oxen, but more the latter: these are a great animal, and have a smooth thick skin, without hair: the female gives milk, and the fleeth of them is sometimes eaten, but it is very coarse.

The sheeps they have in the western parts are thin long legged creatures, and have a reddish hair instead of wool upon their backs, the fleeth of them is less and does not keep good for little. But towards Persia and Tartary they have...
The Indian black hogs, with their bellies down to the ground, are often noticed in the fields. The best numer is the white and bloody. They are about the length of a man's little finger and thick, shaped almost like a lizard, but carry their tails turned upon the ground; when there is a flog not much bigger than a borite's, always wild; a gentleman who had the misfortune to be run, retained for the horse, which was carried by a servant. When there is a flog of the red iron had been applied to the part, that he run into the street like a madman, till they laid hold of him and bore him to the house, and that after the first twelve hours the pain gradually abated for twelve hours more, till at length it wore quite off.

There is likewise a little green snake which will dart from tree to tree, where the trees stand thick, whence some people have given them the appellation of the flying serpent.

Snakes also will sometimes get into rooms, or wards, and conceal themselves, and if you happen to come too near them, will dart themselves at you and bite. They are dangerous too abroad, if you come near the covers they conceal themselves, and few people take to watchtowers, or hide their ears, lest the kind a certain get behind them. Snakes and serpents are of various kinds, of which the colour, smell, or hooded fers, in the notice, is the moat dangerous. When he dances to music, he opens his head and anws, and travels a kind of human face. They are so called from the means by which they operate, as well as they pretend to do, that is to say, they may do so, but they pretend to it chiefly by a charm; however, they give the patient a medicine and sing to keep him, walking, for it is said, if he lies, he dies; and the poison, we are told, dissolves the round of a man to sleep.

During the rains, frogs and toads do multiply prodigiously, and grow to a considerable size, which has been some people occasion to imagine it raised frogs. Their real, which they call bandecotes, also grow to a very great size, three or four times as big as ours, and are so importand that they will hardly give a man the way; the most dangerous of all venomous creatures, are the fers, crocodiles, crotalides and serpents, of which there are various kinds, and as they will run in the nearest of the country, there is no such section of being free from them, but by continual fear. There is a species of this, which has the reason that no body has any wish or hangings in their housa, for here they would certainly make their nests. The centipede, which is about a foot and a quarter in length, has a great number of legs it has; it is a little creature not much bigger than a good quill, and three or four inches long, but though it is so small, its bite is extremely dangerous.

Swarms of ants also infest many parts of this country; and they are particularly destructive to cloaths, furniture, and even buildings.

There is a great variety and quantity of sea and river fish in India: sea-fish are the cheapest food we can eat; among these are dolphins, allsorts, and Byron, all which are usually met with a good distance from land. The dolphin is much abed by our painters, they certainly meant a porpoise or sea-lion, when they drew a dolphin, which is the finest fish that swims, and has the brightest colours, especially while he is alive; but he is dead almost as soon as he is taken out of the water; however, his colours are then preceding fine. He may be about a yard long, the flesh white and well-tasted, and swims at the rate of eight or nine miles an hour, as does also the albacore and bonita. The bonita undoubtedly takes most from its being highly agreeable to the taste of the Por-

The New and Universal System of Geography.
as their wings are wet, and that they repeat till they are destroyed with the brunt of it. They are also of large size, and a few of them when the spray of salt water falls upon them, form a thick line like a beam, but much longer, we can see near the coast, and another called the halcyon, having no scales on the head or back, and only a thin film of good food, which is about a fathom long, and their rivers and reservoirs, or ponds, afford carp and eels: The shark is the greatest devourer of any fish we meet with here, and sometimes come from twelve to twenty feet long. He does not often feed upon fish, but when he takes his head and is alined with the tide, it is easy to avoid him. When a bait is thrown out for him, fattened to a great hook, two or three fish, twice the breadth of a gudgeon, and prettily stripped, run before him, and finnel to the bait, and then return to their mallet again, as if they would inform him if it was proper for his purpose. Then he comes to the open sea, and, running upon his back, takes in the bait, and the motion of the ship strikes the hook into his jaws: we may easily see the whole transfiguration, the sea being as clear as crystal at a distance from land. The reason he turns upon his back to take the bait, is, that his stout, or upper jaw, is so much longer than the under jaw, that he cannot take it without turning upon his back: tharks’s fish is very indifferent food, but when beef is wanted, it will go down. The pilot fish are known as a kind of frit, their prodigious size, and the fact of their being so rare, they rarely take a hook when in company with a shark; but when they part from him, they sometimes bite and be caught. Their fish, which are also a foot and a half in length, are transparent, filled with blood, and a kind of yellowish brown, which has a most beautiful appearance in the water; they, however, when taken out, lose much of their beauty.

There are very good fish–fis to be met with upon the coast of India, such as eels, oysters, &c. The oysters at Fort St. George are much of the same size as ours in England, and equally good; but there are some fish–fis in the sea of a prodigious bulk. There was a fish, much larger than this, which floated, with its head in the gulf the fort at Madras, which, when the fish was in it, must have been a load for a man to carry.

There are no mines of gold and silver opened in India, though it cannot be suspected but in so vast an extent of country there must be some, though perhaps not worth extracting, especially as there are mines in several of the neighbouring kingdoms, particularly in Siam, Pegu, &c. Some indeed mention copper, iron, and lead–mine, but if there be such, many of them are not wrought, for lead was formerly one of the best commodities the merchant carried to India. The diamond mines are the only real mine of value in this kingdom; the little chief in the provinces of Vidyapur and Golconda, of which notice has been taken already. India has been famous for some other valuable jewels, particularly pearls; their fish for pearl–oysters in the bights of Ramkonaikole, between the continent of India and the island of Ceylon, which is now in the power of the Dutch.

S E C T. V.

Contains an account of the Indian manufacturers, trade, foreign and domestic, navigation, shipping, &c.

T H E IndilOan merchants, the basins, and some others, carry on a prodigious rich trade to Perfa and Arabia, especially from Surat. FURNISHING CLOTH COUNTRIES WITH SILK, &C. the English trade from thence Persian carpets, pearl, coffee, and other goods, the produce of those countries, but more trade than any other thing, which with that of Indiamen, and Dutchmen, is carried to Surat for them, as they are better able to defend their rich cargoes against pirates than country ships are; and this appears to be the considerable branch of the commerce between India and Persia; for they exact an extravagant price for the freight of the goods, as well as for passages, which the Indians can afford very well, as they know they can if they can swim, their cargoes valued at two hundred thousand pounds and upwards sometimes. The company also usually send a ship upon their own account to Mocha in Arabia, every year, for coffee, although the Mogul has a sea-coast of two thousand miles extent, he has scarce a single sea-port, or a ship of war to protect the trade of his subjects. The coast no harbours, a ship can get into, except Goa, Bombay, and the moon of the Ganges, which are all policed by Europeans. It may truly be said, that though the Mogul’s vast dominions are some of the richest princely in the world, they have not a single man of war to defend them for their security, in any part of his dominions. Besides their traffic by sea, the Indians having long had a very considerable trade by land, by numerous caravans, which travelled to Persia and Boddora, and from thence to Raffia and Aden, called the Red Sea; and there they called to Alleppe and Smyrna, and to Caffina on the Bosphorus.

The principal manufactories of this kingdom, are silk, muslins, cottons, chintz, and callicoes: we import from thence diamonds and other precious stones, great quantities of pepper the growth of the Malabar coast, golde, indigo, cotton, and various kinds of manufactures, and of physical drugs. The goods carried from Europe thither, are English broad–cloth, lead, looking–glasses, sword–blades, knives, hatchets, and many other manufactures, and of sugar, wine, brandy, beer, and some other provisions, taken chiefly by our own factories; the ships also frequently take in frits with their ballast, for there is not a single ship ever found in India, at least in those parts the Europeans have visited, infomuch that a bag of gun–flints is almost as valuable as more precious things. The Mogul has not an opportunity of being supplied by our shipping; but it must be confess’d, that all the goods we carry to India are a great deal more valuable to the balance of our trade, which has made it a question, whether the India trade be of any advantage to this nation.

Weaving is the principal employment throughout India; but the greatest manufacture is at Diga, in Bengal, where the finest calicoes, muslins, and damasks are made. Those manufactured for the immediate use of the Great Mogul and his amansies, and those manufactured for presentement greater value than any that are permitted to be sold either to natives or foreigners. The silks are admirable, the worsted cloth, and all the rest of the great staples of India, are of the very finest and best quality, in the metal itself. It is not perforated as we do, but cut with threads, and joined with such insinuating art, that the candle eye cannot perceive the junction. The embroidery and needlework are greatly superior to any thing of the kind done in Europe; but it is remarkable, that there are no female embroiderers or sempstries, but the men do all the work in these branches, and their workmanship as startling as their flowers is singular. Gold and silver filks and gowns are manufactured at Benares; but their richness excels their elegance. They are executed without taste, and make a very dull appearance when finished, being deficient of that delightful glosse, and their vivid colours, which so greatly alight with the sun’s rays, afford beauty to the filks and gowns of Europe and other countries.

It has been established, that there have been annually expected three thousand five hundred bales of callices from Coromandel to the several sea–ports of India; of these the English carry one thousand two hundred to Bombay, Malabar, Sumatra, and the Philippine islands; the French ship hundred to Malabar, Mocha, and the Isle of France, and the Dutch one thousand five hundred to their several settlements; Coromandel supplies Europe with nine thousand five hundred bales; three thousand to the English; three thousand to the Dutch; two thousand five hundred to the French, and eight hundred to the Danes.

The Indians copy with exactness, but have neither genius to invent, nor industry to improve. Hence their work...
works are admirably neat, without being pleasingly elegant; and display the most exquisite finesness, without the least density of style to give them real merit.

They are, at Saray, very skillful in the art of ship-building; though it must be acknowledged, that their naval, as well as their other architecture, is rather awkward and clumsy. Their ships are made of an inch thick wood, which is as durable and as solid as oak, and their masts come from the coast of Malabar. Their ropes are made of the fibers of the gymro tree, and their sail-cloths from their cotton manufactures. They use the gum of the damar-tree for pitch; and their anchors are for the most part European, though they make the most picturesque of their cargoes at the rice.

The Indians use a kind of float (for it can neither be called a boat or vessel), which they find is of great use in carrying goods, great guns, and other heavy weights on board a ship, and that is nothing more than three rough timber logs tied together called a cattamarah, on which they sometimes set up a tent, and at other times paddle along with a flat oar, about as broad as a man's hand. They go out upon these three or four miles to sea a fishing; and one hundred of them are frequently seen on a line. On one of these cattamarahs, an English officer, by setting up a flag, has gone out one hundred miles along the coast in the fair season; and there seems to be no fear or danger on that side in a boat, because the timber will not sink. All the difficulty is, to get through the surf that bears on the shore when the wind blows hard. In such weather the sea has sometimes overflowed the cattamarahs, and consequently beat off the water's edge; but he turned his logs, again got upon them, and made his way through the surf to the ship he was going to, which he would have seen at that time in great distress, and to the relief of which he was sent.

S E C T. VII.

The science of the learning, languages, characters, arts and sciences, physicians, divines, &c. of the Indians.

It is the general opinion, that the sciences originated in this country, the Greeks having travelled into India for instruction before the time of Pythagoras; however, at present they have not much learning, but have some traditions concerning Aristotle and Averrhoa (the latter was born at Samarcand, Tamerlane's capital) and the Moors have some palleges of the Old Testament in the Arabian language; the Moors, many of them, being descendants of the Arabians. The Gentoos, or original Indians, begin the year from the first of March; the Moors, from the tenth, when it is suspended the fun enters into Aries (the vernal equinox) the year being divided by the Moors into thirteen months. From the first of March to the tenth, the Moors celebrate a grand festival every year for the new year, and then every governor and great officer makes a present to his prince, who appoints what parts every man shall hold the following year.

The Indians are better versed in the practice of arithmetic than in any other branch of the mathematicks, and will call up a sum only by the help of their fingers, sooner than an European will with his pen. The Brahmins calculate an eclipse pretty exactly, but seem to be very much out in other parts of astronomy, when they imagine the moon to be above the sun, the contrary being evidently demonstrated in an eclipse; and what is still more absurd, they believe, when the sun lets, that he hides himself behind some mountains, having no notion of the earth's being spherical. They know the signs of the zodiac, however, and in their language call them by the same names we do. But they are very ignorant in chemistry; none of their prejudices, and they will undertake any thing of moment, until they have enquired of the astrologers, if the hour be fortunate; and if he be of opinion the time the prince designed to begin the enterprise is not favorable, he waits till the eminence-man directs him to begin it, and sets out that very moment.

Their skill in physic is not very great, understanding no thing of physic, chemistry, botany, and his medicines are so small he can hardly be said to have any art; none of their physicians, and he will undertake any thing of moment, until they have enquired of the astrologers, if the hour be fortunate; and if he be of opinion the time the prince designed to begin the enterprise is not favorable, he waits till the eminence-man directs him to begin it, and sets out that very moment.

Their skill in physic is not very great, understanding no thing of physic, chemistry, botany, and his medicines are so small he can hardly be said to have any art; none of their physicians, and he will undertake any thing of moment, until they have enquired of the astrologers, if the hour be fortunate; and if he be of opinion the time the prince designed to begin the enterprise is not favorable, he waits till the eminence-man directs him to begin it, and sets out that very moment.

The mort-de-chin rages sometimes on the coast of Malabar: it proceeds from indigention, and throws the patient into a violent vomiting and purging, with rackling pains, which sometimes lasts from five to twenty-four hours, is cured by clapping a red hot iron to the sole of his foot, near the heel; and it is said that the cholic is frequently cured by having an iron ring red hot, about an inch thick, driven into the patient's belly, so that the navel may be in the center of it; it may be taken off again immediately, but the sudden resolution causes the belly, it is then called the patient of his pain.

The Indians are also subject to the bloody flux, which they cure by the use of many plants, which are said to be very efficacious. They also frequently visit them, for which they seem to have no remedy.

The language of the Moors is different from that of the ancient original Indians; but, however, they have borrowed the Indian characters, being delihe of letters themselves, and in all their writings use either the characters of the Pagan Indians, or of the Persians. The court language is the Persian, which is spoke by all the great omans, and the polite world in general; the learned language is the Arabian, and is written backwards from the right hand to the left, like the Hebrew, from whence they borrow many words; but this is still to be understood of the Moors; for the ancient Indians have a great variety of other languages, very different from those used by the Moors. The Brahmans, or brachmans, which is the chief use among the idolaters, have a language of their own, and in that their records, and books of divinity, and philosophy, and the fables of their priests are written, wherein their ignorance in the science of the world, and the duration of it, is sufficiently manifested.

Indostan, incorporated with many Persian and Arabic words, is spoken in that and several other parts of India, though the accent and dialez differ in the several places where it is spoken; the purest is in the province of Agra. The Pagans generally write on the coconut-nut or palm-tree leaves, with an iron pencil or bodkin. They do not write in a straight line downwards, as the Chineses, but from the left hand, fianting to the right; and though in most places the long narrow palm leaves and bodkine are not used, yet the Moors have a thin thinning paper, sometimes ten feet in length and a foot broad, and they touch as many sheets together as the writing requires; the pen they write with is the ancient calamus, or reed, about the thickness of a goose quill. When they write to a prince, the whole surface of the paper is gilt with gold, and for security of letters of confederation sent to court, they are inclosed in a hollow cane or bamboo, and sealed up, that no wet can hurt them. Upon their seals, or chops as they are called, they have no coat of arms, there being no such thing in the country, but they have their own names engraved upon gold or silver, or perhaps on a cornelian stone.

The ancient language of India is the Sanskrit, or sacred eleem among the Chineses, prove the arts were cultivated in India before they were known in China. We owe to them the use of eyepieces, which, though imported among us by the Arabians, was introduced into Europe, and from thence to the hands of chemists who made the game of chills was invented.

S E C T. VIII.

Of the Mogul's courts, fences, revenues, &c. of his civil go-
vernment, laws and punishments, cities, weights, measures, &c. &c.

As the Mogul has no council of state to advise with, like other princes, the affairs of the empire are managed by four or five great officers who receive their orders from him, and report the state of the several provinces to him. As the Emperor gives a particular name to every officer he advances, so he always takes a new magnificent title to himself on his election; and he is as great as the conqueror of the world, the ornament of the throne, etc. and like. But coronations are not known in this part of the world, nor does the prince ever wear a crown. He fits himself in, not as judge of all criminal matters in the province where the court resides, as his governors do in their respective provinces. The Emperor's sons have the title of princes, his daughters, and his daughters, and the chief men that of nabob. The next in degree which answers to our nobility, have the title of chans, or ceun, as it is pronounced, and are divisible into any thing, but a little courage or good made of rice, till they find themselves better.

The mort-de-chin rages sometimes on the coast of Ma-
the dignity of omrahs, which answers to our general officers. There are also the guards of the golden mace, of the silver mace, or of the iron mace on their shoulders, with a large ball or globe at the end plated over, the folders whereof are differently marked in the front part of the coat, being variegated to the metal with the whole the mace is covered. All these bodies are picked—whom their courage has recommended; and it is necessary these companies and these battalions to be qualified for a post in the government.

The arms of a horsemans are a broad sword bending a little backward, a dagger, a bow and a quiver of arrows, a lance, and sometimes a short piece like a carbine. This is added a great shield, so that they are really incum- bred with arms. A footman carries also a sword and dagger, a shield, a bow and arrows, and sometimes a match- lock musket, and others of them carry pikes instead of muskets; they have also heavy artillery, but they are generally obliged to European gunners to manage them; some of their pieces I have already mentioned, which carry a bullet about as big as a tennis ball, and are fired from the back of an elephant; there are also about three score small fields pieces which attend the grand army.

Here it may be proper to observe the manner in which the Indian enemy and draw up their men when they engage. It has been observed already, that the Mogul takes the field during the fair season, which lasts several months, and makes a tour through great part of his dominions, being followed by his troops, and he travels with as many men, necessary, as well as by the ladies, and the rest of the court, there being seldom less than one million of souls attending him. He, which are the subjects of the Mogul, prepare for his approach, about which there is a fence ten feet high, which folds up, like a screen. Beyond this inscription, there is another circle of the nobility and great officers of the court, and on the meanest people being in that part of the camp, at the greatest distance from the royal pavilion in the center; and there is a market-place well replenished with provisions of every quarter. In autumn, the camp is disposed in a circular form; the Mogul's pavilion being pitched on an eminence in the midst, is surrounded by the tents of the officers and soldiers, about which there is a fence ten feet high, which folds up, like a screen. Beyond this inscription, there is another circle of the nobility and great officers of the court, and are turkey, corn, fish, fowl, and all other necessaries to the camp. They seldom march more than ten miles a day, and always choose to pitch their tents, where they may be supplied with water. There are a great number of boats also laid upon carriages, and drawn after the army for the convenience of passenger; if this is not sufficient, they add their keepers, make part of the train; their expeditions being intended for pleasure, as well as business. The Mogul spends part of the time regaling himself, hearing the griefs of his subjecls that live at a distance from the capital of his dominions, and the rest in hawking, hunting, and other amusements of the court. This the Mogul, from the fall, this vast multitude retire into the towns, which during the fair season are almost deserted.

The revenues of the Mogul arise from the produce of the ground, the labours of the people, the customs of the sea-ports, the emoluments of great men which devolve on the crown by their deaths, and presents from the subjucks, who never approach the prince or governor empty handed. The victory of every province, it is said, it obliged to an- nounce the crown such a certain sum, which he raises out of the manufactures and the produce of the soil: this part of the revenue therefore may easily be computed, and Man- noucheh, who refused in the Mogul's court forty years, makes at his pleasure in an hundred and ninety four thousand roupies, which he reckons to be of the value of half a crown, but the just value is twelve shillings and sixpence, and that the annual revenue of the province may be reckoned to be between forty and fifty millions sterling; and much the greater part of the troops being maintained by the respective omrahs and the public may be reckoned to be about a considerable addition to the revenue, it saving the crown a prodigious expense. The rates also many of them yield a yearly tribute, but those are not computed, and as the courtiers and people close the balance, one perhaps may balance the other, but the wealth he possesses himself of when any of his viceroys or rich governors dies, and the daily presents he receives from
his subjects, most amount to an enormous sum; the diamond mines also are an inexhaustible treasure.

So extensive and despotic is the authority of the Great Mogul that he lives all the year, and none other persons but the solemn audience with which he is invested (except his attendants) have the privilege of addressing him. He sits at his full and proper state, and all business is transacted before him. The state ceremonies require the aid of a pageant of an unparalleled magnitude, which includes the whole, or a considerable portion, of the capital city. In this state, the Mahaswami, the chief religious dignitary, appears before the Emperor to present the accounts of the administration of the revenue. In another audience, the Emperor appears in his full regalia, and in this case the same pageant is repeated with the same magnificence.

The first business that is transacted in this audience is the presentation of a book of accounts, which he receives in his right hand, and which is immediately followed by the presentation of another book, which contains the accounts of the imperial revenue. In this audience, the Emperor is attended by a retinue of dignitaries and ministers, who are present in the same order as in the former audience. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the next audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the third audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the fourth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the fifth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the sixth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the seventh audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the eighth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the ninth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the tenth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the eleventh audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the twelfth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the thirteenth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the fourteenth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the fifteenth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the sixteenth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the seventeenth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the eighteenth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the nineteenth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the twentieth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the twenty-first audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the twenty-second audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the twenty-third audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the twenty-fourth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the twenty-fifth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the twenty-sixth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the twenty-seventh audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the twenty-eighth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.

In the twenty-ninth audience, the Emperor receives the accounts of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the revenue, and he signs them in full official form.

In the thirtieth audience, the Emperor receives the accounts of the expenditure of the revenue, which are presented to him by the minister of finance. In this audience, the Emperor receives the accounts of the expenditure of the revenue, and he signs them in full official form.
SECT. IX.

Contains an account of the religions, professed in the empire of the Great Mogul, and the pictures or tribes into which they are divided.

DOLATRY is the religion of the Pagan inhabitants, of Hindostan, who are much the most numerous. These are divided into upwards of sixty castes or tribes, that will not marry, or eat and drink with one another; and, as I apprehend, every cast is of a different trade or profession. The chief of these tribes, which is esteemed the most noble, is that of the Brahmins or Brahmaite, who are their priests, and these are divided again, 1. Into those that eat no flesh. 2. Those that eat some kind of flesh, and render nothing. 3. Those that eat small or large quantities of flesh, and render cellibacy, and will not so much as look on a woman and, 5. The Brahmins that follow walking at all, left they should deftroy some living creatures, there wear a piece of flilk cloth over their shoulders; but they may bathe, that they may be kept clean. In a fly with their breath. Neither will they burn any wood, lest they should kill some insect, and carry a brush always as a fly to be kept off from them to deftroy them. These Brahmins are in their persons effeminate; and are so very clean that they would not eat the smallest animal by their hands. Their brahmins or priests, of every kind, are esteemed not only the most noble, but the most learned of the Indian tribes, having a language peculiar to themselves, in which their divinity and doctrine are written. It is said on the authority of their tradition, it was given them by Brahma, their lawgiver, great part of which they repeat extemporary to their followers. This word Brahmin signifies holy men, and is applied to such men as have excelled from all eternity, but that there are three sub-ordinate deities, namely, Brahma, whom he vetti the power of creation; Vishnou, the preserver, and Routereen, the enemy and destroyer of mankind.

The Indians believe, that the images they worship are both holy men upon earth, and are mediators for them to the Infinite, in that they may have some tradition of the creation and of the flood; but these are mixed with many fables: As that Brahma made a great number of worlds, at least fourteen; and that the world we live in has continued several hundred thousand years, and that it has still four hundred thousand years to come: that their god Moch, who is the same with Brahma, is born on earth, under the foot of heaven. One of the images of him has four heads, and four arms, another, called Whithnow, has the head of a hog with tusk, and the body of a man; another is poor and sick, and has the head of a hog, but he is a sort of officer, and has great honors from the above hands, and several other monstrous figures we find adorned in India.

A very excellent state forms firmly believed by the Brahmins, that some are rewarded and others punished here for what they have done in another world; they believe also that this is a date of trial, and we shall be dealt with in another life according to our behaviour here. The Brahmans advise their followers to go in pilgrimage, to certain places effectfully holy, and especially to the pagodas near the mouths of the Ganges; the walking in that alone will cleanse them from a multitude of sins, in the opinion of most Indians; but however erroneous their creed may be, they are very industrious, and are much to be admired for the moral duties they teach, namely, temperance, justice, and humanity. A certain Persiana divine relates, that a brahmin having heard a second time the sacrifice, he declared himself one found by God; and when they represented him as having a thousand eyes, and as many hands and feet, they only intended to teach their people that he is all-sufficient and omniscient, to inspect to be very exquisitely in the performance of all moral duties.

The most honourable tribe or caste next to the brahmin, is the Rajputs, that is, the only fighting tribe, making arms their profession. They have some of the superstitions of the brahmans, but are not quite so superstitious, they allow the cast of many animals, every that of great cattle, and some other beasts they worship. The banians are the third tribe in honour, and the most tender of the lives of animals of any of them. They do not only prohibit the killing of them, but study all ways for their perfection, and which proceeds, particularly about Brampour, it is near two English miles.

In liquid and dry measure, one measure is a pint and a half, eight measures of the same, and four hundred measures are one gar, or six and thirty gallons.

The Brahmins are the most numerous of all the castes, but have a great number of different sects, as the Zurtists, or Zorristers, their lawgiver some thousand years since, brought fire from heaven, and commanded his disciples to worship it. The fire is kept in a pot of brass, which is held up in a glass bottle, that it may not burn out, and that the light may be known as a light visible, and that his priests may not be misled; and they believe that he keeps the fire ascended, that it may not be extinguished.

The Brahmins are the most learned of all the castes, and have more learned men among them, than among all the rest of the castes.

The Brahmins are the most learned of all the castes, and have more learned men among them, than among all the rest of the castes.

among them, that Thomas was married near Malpeur, on the river Coomber, to which town therefore the Portuguese afterwards gave the name of St. Thomas: this city stands about a league to the southward of Fort St. George, and is at this day a bishop's see. The President of the island, being perhaps a Roman Catholic, and the church, were the administering the sacraments in both kinds, but only, instead of wine, a liquor made with raisins, there being no grapes made in the country. 2. I happen to have heard that they did not baptize their children till they were forty days old, unless they were in danger of death. 3. They had no independent church, but were communicants of theELS. 4. They do not use any extreme unction. And, 5. They did not acknowledge the pope's jurisdiction. But to the last, and some of the others, the Romish missions have brought them over, and they go to the same church the Portuguese do, at Malpeur; but not at the same time.

SECTION X.

Treats of the marriages and funerals of the Indians.

It is the custom in India, for the gentry, or Pagans, to marry their children in infancy: the consent of the proper parties is never asked, but they are always married to one of their own cast or tribe, to every one of the first families of the country. And the marriage is always published by a smith, or a weaver with a waterman. At what age the parents consent for their children, they do not express; but it is supposed to be between the ages of five and ten. When the marriage is arranged, the aulogist (whom we take to be a brammin or priest) is always sent for, who is the ready man to prove that the marriage is valid. An annuity is also made, what hour is likely to prove propitious for the solemnization and consummation of it. And when all things are settled, a grand procession is made, through the streets for several nights successively by the light of torches; the lady is carried in one palanquin on mats thrown, and the bridegroom in another, with such music and pageant as the wealth of the family will permit. When the time is over, the little bride and bridgroom are set down at her father's house, and here a table being placed between them, they join their hands across it, and the priest covering both their heads with a cloth, repeats several prayers for their happiness, and gives them his benediction; and having sprinkled the company with perfumed water coloured with saffron, the ceremony is concluded, and an entertainment prepared for their friends and acquaintance. The woman is entirely in the power of her husband, and consequently the respect is at her head: the brings him no other fortune than her clothes, and a female slave or two. On the contrary, all the household things, if she be a wealthy woman, make rich presents to the wife's relations: no man (except the brammin and banians) is consulted to one woman, but is treated as many wives and concubines as he pleases, and of them all, as the gentry do all mankind, with great humanity.

The strange custom of one wife being subject to several husbands, or plural wives, is not adopted by the milar, or nobles: the number is not so much limited by any specific law, as by a sort of tacit convention, by which it rarely exceeds half a dozen. The husband coils with her alternately, according to priority of marriage; and each on going respectively to her, leaves his arms at the door, as a signal that none of the others must presume to enter till he be dismissed.

The Indians give a name to their children about ten days after their birth; they are called sons or daughters, who standing in a ring about a sheet in their hands, which the badges of the name, and sometimes by a name which is given to them by the mother; a month or two afterwards it is carried to the temple or temple of the banian religion, where a brammin takes a ring from the ring of sandal wood, saffron, cloves, and other spices, and puts them upon the child's head, from which time the infant commences a consecrated being. The woman is looked upon to implore, that none may thus fasten an irksome task upon her, and till forty days are past the must not concern herself in dressing or any other household affair. Then the child is taken on the husband's hands, which go much quieter and easier than ours that

and but upon the ground, the same acts are used in Holland.

The Indian is never kind or credible to his children, as we do, but lets them generally know both boys and girls till they are six or seven years old, and it is not to be imagined how young they will crawl about the floor. The inhabitants of the island are generally pagans, and of them most as black as jet, have a redish calf for some time after they are born, and turn quite black as they grow up. There are some who are not considered ashamed of their sons, but they are in general strict and well proportioned, and some think proceeds from the training them to their natural liberty, and the ready means of educating them, though they do not do so, as we do here. But however that may be, the frequent rubbing and washing them in cold water, certainly contributes to prevent, as much as anything, their being weak and sickly.

When a wife, who has more husbands than one, brings forth a child, the father nominates his own, which at the expense of educating it; but from the impotence of it, the eldest of the husband's children is then educated by the children of their filter, or others near in blood.

With respect to the funerals of those people, some bury the bodies of the deceased, and others burn them on the funeral pyres, the latter is the most extraordinary. Before they burn their dead, they carry them on a bier to a small distance from the town or village where they died, dressed in their usual apparel. Here they are placed on the pyre, and the pyre is burned, and, as soon as the blaze has done its work, one of the corners of the pile is set fire to. When the body is consumed, the ashes are thrown from the top of the pile into the sea. This is the custom in India, being the objects of their adoption. The person who sets fire to the pile, is always the nearest uncle to the deceased, and is in the same way as the person who sets fire to the pyre; and the person who sets fire to the pyre, is always erected near the fire, or some large piece of water, or water itself, and as clean and free from all pollution as the person who sets fire to the fire, when the whole is in a blaze, abundance of sweet-wood is thrown into the fire; but the person who sets fire to the pile, appears distressed with the most affecting grief.

We shall here give some account of the general women's burning themselves on the death of their husbands. But it will not prevail, for, as the gentry's law allows bigamy, the first wife has a limited time given her to consider whether she will help herself or not. If the decline is slow, the choice is given to the second, if the second declines also, then they both lie under the impetus of being removed in the truest principles of honour and esteem. Some say that this custom was instituted in order to prevent the women from poisoning their husbands, to which they were once addicted. But perhaps it is a more common custom, to enjoy a more exquisite and durable happiness with her husband in another life than she has done in this, and to prevent others who imitate this to be destroyed with the same severity. We have heard from the mouths of the people, that the same custom had once been practiced in this manner, and the jewels to a very great value, and the bramin only having the privilege of meekness with the ashes, sometimes pollut-

ton, and, taking one more tender farewell of her children, he attended the pile, and set fire to it. The above lady's husband, who was in the sixteenth year of his age when he died, was consumed on the same pile with her. She seated herself by him, looking steadfastly at him; but, perceiving that the flame was directed from her, she, with aiphanthentic resolution, set fire to it in a fresh place, where the whole was soon in a blaze.

We shall give here one more description of these horrid ceremonies, as a taken from the account of one of the Bengal, dated December 29th, 1751; the horrid deed was committed about fifteen days before the date of the letter, the writer whereofúbsequently composed the whole transaction. This tragic scene was acted at Calcutta in Bengal, when the naked body of a Gentoo was laid on a pile of wood, made up in a regular form, and his wife, in about fifteen or sixteen years of age, walked to the pile, conducted by her friends, her father on one side, and her mother on the other. After a great number of previous ceremonies were performed, the walk round the pile seven or eight times in a melancholy and devout manner, conducted, as before, by her father and mother; she then leaped upon the pile, and quietly laid herself down by the corpse of her husband, about whose neck her hands were folded, and her legs tied to his; then both their bodies were surrounded with a fort of unguent called ghee; over them was firewed a fort of yellow duff, and they were covered with a cloth, which was kept down by laces pieces of wood. At last the fire should be lighted at the deceased husband's face to the pile, which ran through it like lightning, by means of the yellow powder. And the fire was so fierce, that the spectators were obliged to draw backward from the heat. The whole was consumed to ashes in about an hour's time.

The following speculations have been much less frequent than formerly, since the Mogul's became masters of India; for neither the Mahomedans or Europeans will permit the barbarous custom to prevail, where they have any power.

We hinted above, that the mourning used here, is a tatterdemalion grief; to which we may add, that the woman have their heads on the death of their husband; but the men never shave their heads, or cut their hair, unless it be on the death of a father, or a sovereign prince. The relations, in order to shew their regard for the deceased, often visit the place where the corpse was burnt, cursing the rice or other food, which they cannot be ignorant is eaten by beasts or birds; as soon as they are gone.

The Gauri, the posterity of the ancient Persians, who fled to India when the Mahomedans conquered Persia, have a repository for their dead about a mile from Surat, where there is a colony of them; they are of opinion of that they cannot do their deceased friends greater service than by leaving them to be devoured by birds of prey. They therefore erect flagpoles with a cross, which is surrounded by a wall twelve feet high, and an hundred in circumference, where may be seen great numbers of eagles, vultures, or other birds of prey, which vulture's eyes dug out and mangled from head to foot, and the vultures so glutted with human flesh, that they can scarce feather: besides the number of the exotic birds of different countries in that place; there places the leaving a corpse about ground unburied, it effectuated an act of great injustice, but the Gauri it is deemed a piece of barbarity to bury them.

Sect. XI.

Contains the history of India, from the earliest accounts, to the present century.

There seems to have been little more than the name of the country known to the early inhabitants, till after the commencement of the Asiatic empire, it is said to have carried its arms thither; and it is conjectured that that nation conquered part of this country, but Alexander's invasion three hundred years before the birth of Christ is not doubted. None of these heroes, however, retained any part of their conquests if they made any, nor did they leave anything behind them in the way of their existence, with the state of it, or even to describe the bounds or true situation of India; and the Romans never attempted to reduce that country; consequently we are in the dark as to the state of it. So little are the professions of princes, when they are in distress, to be depended on.

The Indians refer to the Mogul Amuris the building of caravans, sufficient to accommodate the wants of travelers, and the regulating weights and measures. This prince, after his relaxation, built a stately magnificent tomb for himself in his favorite city of Delhi, known by the name of the greatest curiosities in that country. And as he was one day walking over the scaffolding, and giving his orders to the workmen, a plank deceived him, and falling from a great
from a great height to the ground, he was at liberty bruised, that he died immediately, and was buried in his new tomb, which was then nearly finished; but some ornaments were added afterward, and a rich and fanciful.

Akbar proved an enterprising prince; but having as yet no communication with the seas of India, from which a very rich trade was carried on with the Europeans, particular from the town of Surat, which extends from Suse, situated on the river Tapi, to the mouth of the river Indus, he determined to make a conquest of this town, and it was at the time in the hands of the princes, whose successors were Arabians, and, being the reign of that country, and had been at war with the Portuguese, and the English were constantly approaching the coast of India, and had lately taken from him the town of Din, situated near the entrance of the gulf of Cambay, almost opposite to Surat; but both Sutten Rader and the Portuguese received advice, that the Mogul was on his march to invade Cambay, and apprehending that neither of them were able to oppose him singly, thought it prudent to make a peace, and unite their forces against the Mogul; nor were both of them able to stop the torrent of his arms. They relied much on the European artillery; but, coming to an engagement, Akbar’s numerous army bore down all before them. Sutten Rader retired out of the battle; the children were made prisoners, and put to death by Akbar.

The two towns, Sutten Rader and Cambay, were the seats of the English settlements, and, with the assistance of the Europeans, were defended and fortified, and the town of Cambay was made the seat of the English government in the Deccan, where they resided till the time of the death of Queen Elizabeth.

Of the falling Kingdoms, it may be said, that they were without a prince, and they were divided among themselves; but the art was to make others their masters, and they were governed by tyrants, who were their masters.

The Mogul, having at length entirely subdued the Pathans, and being at liberty to follow his inclinations, without regard to the claims of his enemies, which he chose to retain the bishopric of the Christian religion, as he pretended, and as the fathers, no doubt, believed; but it is evident from his future conduct, that he wanted them to teach the mathematics to his family; however, the fathers believing him to be in earnest, prepared to make a convert of him.

any inclination to become a Christian, that induced him to take his liberties, they declared that the prohibition to their fathers of ever being clothed in foreign garments, as they were at full liberty to eat and drink whatever they pleased; which kind of solution of their prophet's precepts, gave them virtue for a virtue, and he never gave up, nor made other evidence of his favoring Christianity, unless it was by his forbearance to persecute the Christians, and admitting them to drink with them, which they frequently did in his presence. The Mogul, however, this also as evidence that he designed an alteration in religion, as well as the Mahometan priests; but they were both false to God, and in their design his apathy being all he meant by their practices.

The Mogul having removed the royal fast from Agra to Delhi; and there from his presence feigning a most beautiful lady, named Noormahal, in a barge on the river, being screened from the sun by a canopy over her head, full distinctly in love with her, but having the was married to one of his officers, he soon dispatched his rival out of the way, and then renewed his courtship; but the lady, having some inclination how treacherously her husband had been deceived, exposed her repentance with great severity, declaring, that she could never think of matching with her husband's murderer; but when her mourning was ended, and the Mogul continuing to lead her by the roverbs, she was prevailed on to comply with the love-fick emperor on the following conditions: that she should be forever accounted the father's prime minister, and all her relations preferred to the most honourable prficibles. The marriage was accordingly solemnized by a festival of eight days consecutives, and his name changed to Nour Jahan, the name which he bore in Agra, but was not such is an intimate friendship, and the Mogul's sons, not doubting but the designe to advance his young thief, when the emperor was on his deathbed, and he "informa, that his grandfather Akbas intended he (Cofro) should succeed to the throne before his father, the present emperor, as he had been unfaithful to his last, but he secured his own elevation to the Indian throne; but being defeated and made pricpoal, he was murdered afterwards by the direction of one of the Mogul's ministers (who had an interest to serve by his removal) and who informed the emperor. Sultan Chorrom, another of the emperor's sons, raising an insurrection also was defeated, but was fortunate, however, to save his father, and placed him in the year 1611, though Baluqui the late Mogul's grandson, whom he designed his successor, was first proclaimed emperor, and employed that title a little while, but being defeated by Sultan Chorrom, was obliged to return into Persia; and Chorrom, on his accession, took the title of Shah Jahan, or king of the world, his young brother, Sultan Dara, was, at this time a prince of the palace of Agra; he had his eyes put out in the former reign, but Shah Jahan not content with that, ordered him, with his two sons, to be encompassed and brought to him at his court of Falakult, as forward to him, having defeated all his family, Chorrom remained in possession of the throne without a rival.

The shelf of the government was removed by Shah Jahan, from Agra to Delhi, which vastly enlarged and beautified, and here he propounded to have spent his reign in all the delights a great emperor could command. But as he and his brothers had been engaged in perpetual rebellions against their father, he found himself sufficiently punished for his undertakings, by the rebellion of his own children, and the dissipation of his nobility, occasioned by his false pretenses; for though his foreign, like that of other eastern princes, was furnished with hundreds of the most odious vices, he would spend for the wives of the greatest oaths, to his bed; which though none of them dared to refuse openly, they were so dishonored, so much of them, that they defiled his soul, and joined one or other of his rebel sons. His eldest son Dara or Dorus, indeed, always remained faithful to him, and had, in a manner, the administration of the government put into his hands, and the distinction of his nobility, improved by the European missionaries, who instructed him in philosophy, in letters and sciences, and of which he declared himself in their favor, and gave them great encouragement, but this made the eldest Morad, the first driven by passion, if he were not to succeed to the crown. And as their education had rendered him much superior to any of his courters and mi-

nishes; it is said he did not treat them fairly to their merits, as they apprehended, defaming the crimes and dissinuitys of the several governors, in showing an indifference to the established religion, and flying the address of the great men, he created a general disgust to his person. In the ninth time, his brothers, who rebelled and walked with several governors, in the same year, unapproached to render themselves popular; Sultan Jahan his second brother, being governor of Delhi; Aurangzeb, the third, and Morad, the youngest, governor of Guzarah or Cambay.

The Mogul's youngest sons, enveuing the power they saw their elder brothers acquire, and apprehending their own destruction, did ever since the throne, united their forces and counsels to displace him; which while they were acting, a report prevailed that their father was dead: Whereupon Sultan Jahan, the second son, viceroy of Bengal, assembled an army, and began his march towards the capital city of Delhi. It is related, that when he mounted his elephant, he laid his hand upon his sword, and said, "Now for a throne or a grave." His presence for this adventure was, that his brother Sultan Dara had displeased his father, and that he took upon himself to revenge his death; but the Emperor, being prevailed to his health, wrote to Sultan Jahan, to inform him, that he had been indeed indisposed, but that he was now convalescent, and that his son Dara had not been the occasion of his disorder, and therefore commanded him to return to his home, and to come to Delhi. Sultan Jahan's eldest brother, who was the nearest of the line, and hoped to succeed to the throne if that brother were dead, was immediately commanded by two of his sons, and some experience generals to offer him, to oppose Sultan Jahan's youth, whose forces were being in the neighborhood of the Mogul's sons, and that Sultan Jahan was defeated, but made his escape to his government of Bengal. Aurangzeb then, and his brother Morad, in the mean time, having assembled their armies, advanced towards the capital. Aurangzeb, who had lived recluse as an hermit, to commit his fate to the world, with respect to this world; as he defined was, to see the true worship of God, and the law of his holy prophets, established in its primitive purity; that he was happy to observe that their brother Dara was become a proselyte to Christianity, and Sultan Jahan followed the Persian heresy: but he should endeavour, by the help of God, and his holy prophets, to prevent either the apostacy or the heretics mounting the throne of their fathers,. And since Morad alone retained a true seal for the Alcoran, he would add him with all his power and interest to oppose them both, defining no other return to his services, but that he might spend the remainder of his life near the tomb of Mahommed, to act mortification, and the acts of mortification, which he infinitely pleased with his brother's pious intentions; and invited him to come and join forces with him, that they might march in a body to Delhi. Aurangzeb h_OPERATOR, and his brother Dara, who was in the same condition, with an army of veteran troops, who had served in the wars of Wissapour and Golconda, well provided with all necessaries, and a prodigious stock of money, which he had been hoarding up for several years. When the armies came in sight, Aurangzeb dismounted and ran to meet his brother, proceeded to him, and set before him as his covering, but immediately took his brother up and embraced him, and the highest pavilions of mutual friendship passed between them; but it was prevailed upon by this means of differentiation to take away the imperial style and crown, and his brother was obliged to receive these orders from him, which he first resisted.

When Sultan Jahan was impeached, he used to descend to the two brothers were joined, he dispossessed a trumpery letter from the Emperor to each of them, assuring them that he was in health, and that they should give him all due deference, he ordered the termination of his reign: Morad, it is said, was flattered to find his father was alive, and was inclined to obey his orders; but Aurangzeb shewing him that it was too late to return, and that though they were in medium part, and contracted; and that if ever the armies separated they would inevitably raised: though their father might be dead alive, he expected the government to be disposed, and that the emperor did in his main care, and in effect, that the prophetic word had already prophesied himself of the sovereign power, and would infallibly extinguish their hopes of the throne, should he be succeeded to the crown. And as their education had rendered him much superiour to any of his courtiers and mi-
of Aurangzeb, many of them thought fit to come over to his interest, and join in the joyful acclamations, in which they were encouraged by some of their own generals whom Aurangzeb had corrupted.

This prince's first care was, to prevent Sultan Dara from assembling another army; he therefore pursued him with great expedition to Lahore, where, upon the small body of troops with him, he took him prisoners. Sultan Dara, on seeing his left wing dispersed towards the wealthy city of Agra, but Aurangzeb returning with a surprising celerity, prevented that capital from falling into his hands. This was an instance of his troops advancing so boldly that he was not to be forced in his camp; and kept a communication open with several towns, from whence he was well supplied with provisions, while his enemies wanted all necessaries, and even water, which they were forced to bring to their camp upon the back of camels from the Ganges, which lay at twenty miles distance. In this difficult Aurangzeb ordered it to be given out that he would descend the next morning, and accordingly the tents were struck and the troops actually in motion; which Sultan Dara observing, prepared to fall upon their rear. The troops of Aurangzeb were ordered to give way upon the first charge, until they had drawn the advanced guards of Sultan Dara some distance from their camp, and then to make a stand, which was successfully executed; and Sultan Dara observing his men were overpowered, detached still other troops to support them, and the enemy formed on a grand scale. The generals advanced with their bodies under their immediate commands to engage each other; he did not remain long, but continued his march to Delhi, the governor of which, having received advice of his defeat, would not suffer him to pass the gates, whereupon he bent his march towards Lahore.

Aurangzeb and Morad, on the other hand, advanced to Agra, which city was betrayed into their hands, and the rulers and themselves of the Emperor's person, and of their immense riches, he had long been heaping up; for though Shah Jahan, in the beginning of his reign, appeared to be a most valiant prince, and his expenses embazoned, he fell afterwards into the opposite extreme, and his principal pleasure seemed to be in visiting the vast treasures of precious stones, gold, and silver, in the vaults he had built, on purpose to secure them from accidents.

The army of the two brothers had hitherto treated Sultan Morad, as their Emperor, and Aurangzeb ordered preparations to be made for his inauguration, and invited Sultan Morad to his quarters, under pretence of regulating some affairs in relation to the procession, which he gave over to the deliberation of his generals. Without disputing that Aurangzeb had some treacherous views in this invitation, persuaded him not to put himself in the power of his brother; instead, however, who is represented as a brave generous prince, and having no smaller delight himself, could not entertain an ill thought of his brother's intentions, did his brother, who, as he appeared, wished nothing but what was for the common weal. In the meantime, the Emperor, who had attended only by his eunuchs, and some other servants. An elegant entertainment was brought in, with wine, among other liquors, which was the first time, it is said, that Aurangzeb suffered any to be brought to his table. The rest eat together, and great professions of perpetual friendship passed on both sides; but while Morad drank plentifully of wine, he fell asleep. As to the abdicate Aurangzeb, he tasted nothing but water, and when he found his brother and the rest of the company intoxicated, he returned to rest for the night, and returned with his guards towards morning, and commanding his brother to be bound hand and foot before he was well awake, having given him prisoner to Aga; which was effected so privately, that neither of their armies had any suspicion of the matter. At the same time it was reported, that Sultan Morad was still at Aurangzeb's pavilion, and that he refused his submission. To this Aurangzeb paid no attention, and orders were given at the same time, that those who should appear armed at the felonium but the guards appeared to regulate for the rest of the village scheme; for he returned with his guards, so that the ceremony was to be performed, to the surprise of all men that were not in the four corners, seated in the imperial robes, and placed himself on the throne; and

Long live the Emperor Aurangzeb," which Morad's army could not oppose, as they were all disarmed; but, on the contrary, when they found themselves in the power 3 of
they arrived within a few miles of Arracan, and sent to summon the Governor, but as it is with the

then the Sultan or any of his people, could be admitted into the city. The people, in their confu-
sion, the women broke out into the most diftracting cries and lamentations, having already gone through inexpress-
able hardships, suffering still worse, being abandoned by most part of the inhabitants of Arracan, who now
protested against them upon the people, and the partisans of Arracan; but still there remained four hundred or five hundred boats without the city, and when Dara, who opened his march towards Peria, to which he was induced by re-
membering, that Given Cham, one of his favourites, com-
municating a secret to him, and having told Dara where he was, he
ruin his retreat. He undertook a very difficult march,
therefore, in which he lost several of his women by the
hardships they suffered, and at length arrived at the
fortresses, where they promised themselves a great
security, as well as refreshments, especially when they saw the governor
receive the Rulers with open arms, and the strongest ex-
pressions of his duty and affection, as well as gratitude,
for the unexpected favours he had received from him; and
once indeed he saved his life, when the Emperor Shah Je-
han had condemned him to be trampled to death by his
elephants; but Sultan Dara had been but a very little time in the
fort, before Given Cham sent an express to the gen-
eral, informing him to come in the presence of the
prince, to inform him, that Dara was arrived there, and
he was ready to deliver him up whenever he should demand it.
Six days after, the great and brave army of
Aurengzebe had set out before the place, and having made the Sultan their
prisoner, carried him with them to the city of Bakar, the
only town that held out for Dara, where they made him
prisoner, and carried him to further ground, which being
obeyed, Sultan Dara was carried prisoner to Delli, where his
brother caused him to be set in an open chair, upon an
elevation, which was thrown in the face of the young children about him,
and thus was he thrown to the inhabitants in the capital,
where, a little before, he had been proclaimed emperor,
and now he was made the object of a foreign prince of a
fight to moving, that it drew tears from those who had been,
and were still indeed his subjects, if right or justice
could be taken place, which was not to be expected in
the reign of Dara.

After this miserable cavalcade was ended, Dara was
again sent to prison, without being permitted to fee the
face of his father, who immediately called a council of the
nobility and great officers of state, defining their ad-
dvice, as to the disposal of Sultan Dara, whether he should
be held perpetually imprisoned, or be put to
death; believing, that as they gave their voices, he should
be able to discover who were Dara's friends; but as they
were sensible nothing less than the death of Dara would
satisfy them, and that their own lives would be in danger, if
they did not consent to it, they all voted for his death; except one, who had always preferred himself an enemy to the
thieves; but when Aurengzebe learned of this, he was so pleased with, that he took him into the number of his
most intimate friends. Sultan Dara, who well knew
that his brother's ambition or malice would force him to live,
prepared for his execution; which accordingly
happened privately in prison; and, if we may credit the
historians, he died a Christian. His head being carried
to Arracan, he viewed it with some pleasure, and laid,
to his attendants, "Behold a weak man, that would have
deprieved me of the empire, which he was not qualified to
govern.

Another brother still remained, who, Aurengzebe ap-
prehended, might one day divide his title to the throne;
for news Sultan Sulhaj, Dara's second son, and vice-
roy of Bengal. This prince was the first that began the
rebellion against his father and afterwards opposed Au-
rengzebe, and died a Christian. His head being carried
and as he thought it would be impolitic in him to provoke the
usurper, in whose person the whole power of the empire
was in a manner united, and in his government of Bengal, till he heard Aurengzebe had as-
sembled a numerous army, and prepared to invade that
province. He was sensible that he was not in a condi-
tion to oppose him, and therefore agreed to the Portu-
guese, who were then possessed of the port of Chitagan, at
the mouth of the eastern branch of the Ganges, to turn over to him the key of for ten thousand Rupees, he undertook, after he had subdued his rivals, was to sup-
press the pirates, who had pillaged the 'settlements of the
mouth of the Ganges, and in a manner had destroyed
the court of Arracan as he expected, and from no difficulties.

the title of prince is, the better, usually, is the admira-

tion, being under a necessity of doing many popular acts, to

the affections of his people; and this appears to

have been the case of Aurengzebe, for the titles by which he

understood, after he had subdued his rivals, was to sup-

press the pirates, who had pillaged the settlements of the

mouth of the Ganges, and in a manner had destroyed
the court of Arracan as he expected, and from no difficulties.
the trade of the province of Bengal; these pirates were chiefly Portuguese, who inhabited the port-town of Chittagong, being the very men that had robbed his brother So- nads to revenge the injuries that the natives of every European nation. These pirates burnt and plundered, the Mogul's frontier towns, and carried his subjects into slavery; and the inundation of the bay of Bengal was so dangerous, that no merchant ships dare venture thither; and as at length entirely suppressed by the prudent conduct of the Mogul, General, and Bengal rendered secure at any part of its dominions.

The next attempt of Aurungzebe, was, to suppress that plundering raja Suryaji, who disturbed the trade of Sur- ahi, and would not allow him to live in the court of Beigal; but in this he was not so successful as he was in the other attempt; for Suryaji, having professed himself of the infatuation of Vizagapatam, defended himself, and the forces sent against him, and so harassed the Mogul's troops, that his generals thought fit to retire, and leave him in possession of the country, he had usurped the dominion of. And they had no sooner withdrawn their troops, but Suryaji formed a design of plundering the ports of Surat, one of the richest marts in India, but to dissuade his enemy, he marched with the bulk of his army quite contrary way, until he had drawn the Mogul's forces from the neighbourhood of that city; then, on a sudden, he fell on them, while they were benumbed by the stiffness of their own marches, and the Mughals taking their houses, and flying into the country, so that he met with no opposition, but from the English and Dutch. The latter had something at least to lose in plundering the royal tents, baggage, and furniture; and the Moguls, without any military, thought it proper to march off with what he had got, which he sold. His march and Suryaji's retreat was the cause of the death of one Persian merchant, he professed himself of two and twenty pounds weight of明珠 pearl, besides a considerable number of other effects. This expedition of Suryaji against Surat was executed in January 1656, which the Mogul would have revenged, had it been in his power; but death and disease attended his army, which was dissolved, and his forces were defeated, and their baggage, and their march there was, as usual, so disorderly managed, that the Emperor and every officer in the army having a double suit of tents and their baggage, and provender, and provisions of all kinds to be sold as soon as the march was over.

The disturbances of Aurungzebe, which the Portuguese underwent from the rebellion of his children towards the latter end of his reign, no doubt, brought his remembrance his undisci- plined conduct to his brother, and Mahomet's death, which was deferred to his enemies, whom he prevailed on to return to his duty, on a promise of pardon and preferment; but he no sooner had him in his power, than he sent him up in the royal prison of Gauhati, where he died after a natural death or by violence. He had four forts more, viz. 1. Shah Alam; 2. Azem Dara; 3. Akbar; and 4. Chan- dax. Shah Alam was so much in birth to inherit the throne after his brother Mahomet died, that he caused a pit to be dug in a road his father was to pass, which he very narrowly missed falling into; and the Mogul having sufficient evidence of his son's design, confined him in a dark prison, where he remained many years. Azem Dara, the second surviving son, engaging against his father, fearing a deficiency, deserted himself, and joined a company of English officers, and went against the Mogul in his camp, whose array was then much inferior to the allies, which Aurungzebe receiving timely advice of, dispersed his forces, and thealleted himself, who he contrived to fall into the hands of the raja, whereas he tells his son, he approved his conduct by bringing the raja's army to the place where they were en- terrapled, informing him that he intended next day to march to a certain field, where they should have the raja's forces between them, and might very easily defeat them; this expedient was taken by the raja's fronts, and the letter read among his officers, the feared opinion, that Akbar was not to be confuted in, at least it was proper to defer the battle till they were prepared, and the prisoner himself, and though Akbar, when the letter was shown him, flew by the damper, that it was all a contrivance of his father to difcredit them, the raja would not be part to march; they gave the place of an officer, and for- cing his troops, and rendering his army superior to the enemy; and the raja was afterwards defeated by Akbar fled and took the frontier of Persia, where he, at his request, conveyed him to the court of Persia, and when he married the Sophi's daughter.

The young son of the Mogul's sons, named Chandax, was the only one that did not live, he died against his father, and he is said to have forborne breaking out into actual balloon, only upon prudent motives.  

The Mogul had therefore compelled the kings of Vi-
After the invasion of the Mogul empire by Kunli Khan, discord and tumult prevailed everywhere; and the general calamity reached its height, when, after ten years, he harassed the provinces. At this juncture, the European merchants, dreading that their trade would be entirely ruined, but to the expedition of having a territory of their own, capable of containing a number of manufactories sufficient to make up their lacking. This scheme was soon translated into a practice by Dara, who projected one of the Mogul, and the Nabob, who should be able to attain a great sway in Indostan, nothing deterred him in the execution of his plan. He soon undertook to dispose of the title of the crown, and the nabobship of the Carnatic. The former being vacant in 1748, in the reign of Mahomet, who was succeeded in 1749 by Ahmad, he in 1750 gave it to Salarjah, a son of the late victor, having experienced great weakness in the Indian, and a corruption of manners in the Moguls. He followed the sale of the Carnatic up the Ganges, a kinsman of the late nabob, and made him give up a vast territory in return for this signal service, the chief acquisition was Sringham, the situation of which gave the French great influence over the neighbouring countries, and an absolute control over T junction. They afterwards obtained other considerable possessions, and the dignity of nabob was conferred on Douhet himself.

But these transactions did not pass unnoticed by the English, who looking with a jealous eye upon the proceedings of the French, whom they considered as their avowed enemies, filtered up a rival, Mohammed Ali Khan, against Clunias, nabob of the Carnatic. These princes were engaged, though with fluctuating success; nor was it easy to forestall on which side victory would declare, as it was well known that neither of them would submit, whilst he had either troops or money. The English and French were at this time, and the Mogul, however, could not enter into a certain terms of agreement. They formed a treaty, which commenced with the suspension of hostilities in the beginning of 1755, and which was to end with the establishment of equal territory and commerce on the coast of Coromandel and Oriz; but before this business had received the sanction of the British and French courts, a fresh break out between the two nations in 1750; the result of which was, that the French lost their settlements in India, and the English remained masters of the seas.

The Mogul court of Akbarabad, containing a number of geese, and is used only as a tool of the English East India company; as a proof of this we need only refer to the humble petition he sent to the president and council at Bengal, wherein this mock monarch, who flies himself "The invincible conqueror of the universe, king of the world, &c. &c. tells them, "I will pay them (the English) out of the revenues of the country, what sum they shall demand yearly." And in other parts of it, thus expresses himself. "I have no friends to depose upon more than the English their finest behaviour to the will make me, ever respect and regard them. Now is their time to be in possession of a country abounding with riches and treasures; I shall be satisfied with them, and shall not be the first to allow me," &c. This extraordinary petition dated from the camp at Battrin, 1764, was transmitted to the council by Major Hector Monte, who on the 17th of October, 1778, took Pondicherry from the French, after a siege of two months and ten days. The garrison consisting of near three thousand men.
which if we add the Russian dominions in Europe, makes it a country of the largest extent in the known world subject to one sovereign; and, as the dominions are contiguous, the same is true of the neighboring princes in Europe and Asia some extensive, it were proportionately populous and fruitful.

The air of this country, great part of which lies within the arctic circle, is for the most part exceedingly cold, the northern district being covered with ice and snow great part of the year, and some of it extremely habitable.

The natural productions have to a great extent differed from those of the temperate zones, particularly with respect to fish. The fisheries particularly are in a great degree dependent on the cold of the water, and the extent of the ocean. The fisheries of the frozen seas are the most extensive in the world, and the greatest part of them is in the Arctic Ocean.

The river of the Tana is long, and it flows from the Arctic Ocean to the sea of Okhotsk. Its source is in the Tana mountains, which are covered with snow the greater part of the year. The river is navigable for five months in the year, and its navigation is conducted by dogs, which are kept for the purpose in the northern parts of the country.

The principal river of the country is the Lena, which is navigable for ten months in the year. It flows from the Arctic Ocean to the sea of Okhotsk, and is navigable for five months in the year. Its navigation is conducted by dogs, which are kept for the purpose in the northern parts of the country.

The Lena is navigable for five months in the year, and its navigation is conducted by dogs, which are kept for the purpose in the northern parts of the country.

feathered dogs sometimes jump into the sea with such a force, that they pull the poor fisherman in after him, the rope being fastened to his middle. They take rain-deer also sometimes by clothing themselves with the skin of that beast, and creeping among the same deer till they are within their reach, kill them with their arrows.

They purchase their wives for their relations or three or four rain-deer, and take as many as they please, according to their friends. If they do not like them; and their lot is the only rain-deer they give for them. And in some parts of the country they take the skins of those deer with which they are offended by them. They bury their dead in the clothes they wore when alive, hanging by them on the next tree their friends, brothers, and other utensils.

A gentleman who lately travelled in this country acquaints us, that examining one of the Samoieds about their religion, he answered, that they believed there was a heaven and a God, whom they called by. They were convinced nothing could be greater and more powerful than God; and that all things depended on him: that we had one common father; and that good men would go to paradise. But notwithstanding this, they worshipped the sun, moon, and planets, together with several kinds of beasts and birds, from whom they hoped to receive some benefits. Images they also worshipped in human shape; but so far ill carved and defaced, that it was difficult to distinguish one from another. Some of their priests among them, who pretend to the magic art, and so future events: these they consult upon all occasions, and tell the future by fire, &c. But success, if they have not, they shall have in their hunting, fishing, &c.

When they come to enquire any thing of him, he works himself a kind of a mask, and in this condition delivers his oracles; and from whence hence will have it, that he is pacified by the devil at these times: they give us all abundance of instances of wicked spirits among those poor northerns people, which possibly, when we come to be better acquainted with them, may appear to have a foundation in some other way than is supposed.

The Ottucks are described by travellers as a savage, vagabond people, very little if at all different from the Samoieds; some have made them inhabit the same country; but the Samoieds are more generally described as inhabiting that part of Muscovian Tartary, which lies towards the west, and in next to Europe; and the Altaicks the north east part of Muscovian Tartary to the Chiniast Tartary, of whom a later writer gives the following account: "You will meet with this people (says he) three days journey beyond Tobolsk, the capital city of Siberia; they extend along the river Irtysh to the place where it falls into the Ob; from thence you will find them extending themselves among the aforesaid rivers of the Ob, and Jenifa, till they fall into the gulf or gulf of Mangis, and from the gulf to the firelands of Wagen, inhabited by the peoples of theAltaicks and Jenifa. Nairin is their principal town.

When the hunting season comes on, these people go hunting; they have a large number of dogs, and dogs and nests, killing fables, foxes and ermines, bears, elk, reindeer, ete., and of these fables the Emperors has a certain share by way of duty, the rest are left to the Russian governors at a higher price; and they are permitted to dispose of them to private persons.

Their diet is chiefly fish, venison, wild flock and roots, food, and sometimes the like fare: their drink is for the most part fair water, and sometimes the blood of a deer or of any other beast they take; and, as is said, they can drink a draught of strong wine. Tobacco they are immoderately fond of, but instead of blowing the smoke out of their mouths, they hold a little water in their hands with which they allow the smoke down, which so intoxicates them that they soon lose their senses, and throw up the phlegm: this they will repeat several times in a day, and it is thought to be wholesome physic for the aforesaid peoples, such as the Ottucks are.

Their situation is near the same as that of the Samoieds. To which we may add, that they have small houses, like those of the other Siberians, consisting of upright posts and thatches. When they make offerings, they present an animal to the idol, and one of them put up the offerings of those who have visited the same, as a sign of their devotion. When they make offerings, they present an animal to the idol, and one of them put up the offerings of those who have visited the same, as a sign of their devotion. When they make offerings, they present an animal to the idol, and one of them put up the offerings of those who have visited the same, as a sign of their devotion. When they make offerings, they present an animal to the idol, and one of them put up the offerings of those who have visited the same, as a sign of their devotion.
The men of this place are extremely jealous of their wives, who seldom go home from abroad, but are wholly dependant from society, and never visit the nearest villages without danger and ignominy. That species of refined love, which flows from sensibility, and predominates over the human soul only in those unknown and enigmatic visions of fancy,

ing the disorder and embarrassment of his

ment, endeavoring, though in vain, to conceal his passions. In this he is supported by his friends, and by the

of them, and treat them as slaves, requiring them to perform the most servile and menial offices; no wonder, then, that the debility of their persons, or the infirmity of their intellect, does not in the least affect the natures of more civilized countries, is so rarely to be met with here. But though the men use their wives with fickleness, they are very indulgent to their daughters; they think marriage should be wholly taken up with their husbands. Their wives should be given to the unmarried, in order that they may have an opportunity of entering into the society of the girls, and the girls themselves of avoiding themselves to this liberty, without either the consent of their parents, or the consent of the church.

Their wives should be given to the unmarried, in order that they may have an opportunity of entering into the society of the girls, and the girls themselves of avoiding themselves to this liberty, without either the consent of their parents, or the consent of the church.
position and form, as well as in their dress and culture.

The wandering or rein-deer Koreki are naturally very jealous, and often put their wives to death upon the slightest suspicion; and if a man and woman be sufficiently distraught, the Koreki are famous for eating each other in a circle. They drink little of liquor, and are neither generous nor kind to their women; though they occasionally entertain them in their houses and feed them with fish and other victuals. They live chiefly on venison, but without regarding whether it be fresh or smoked, and smoke a great deal of tobacco

Marriage, among the Koreki, is only prohibited between father and daughter, mother and son: they generally marry into their own family; and pay very little regard to personal accomplishments. Their marriage ceremonies are nearly the same as at Kamchatka.

The Korekan ladders are made by rein-deer in the winter, who will travel near one hundred miles a day. With respect to the funeral ceremonies of the Koreki, we must observe, that they dress the dead in their best clothes, and fix him upon a pile of wood, throw on his bow and arrow, and then set fire to the pile. The corpse is then put to death, and thrown into the fire, while the pile is consuming.

The Koreki live in continual fear of spirits, which they believe to be woods and mountains. Sometimes they fix the head of a dragon upon a stake, and turning the head towards the house, call out, "Tash, tash, and send us something for it!"

Near to the Koreki are the Tunguski, who inhabit the banks of the river Anadir, a. Ascending along the shores to the north and south-east, to forty-five degrees of latitude, and those who live to the north of the Anadir, not being the Tunguski, often impetuous and forlorn those who are. The reason of the people are more commodious and warm than those of the Koreki; and when a visitor comes to see them, he is always presided over by the host's wife or daughter, who hands to him a basin of her own wine, with which the visitor washes his mouth, or he is not looked upon as a friend.

The chief of the Tunguski is the one that worn by the Kamchadalaks; their food is reindeer and other animals in the country.

There are various tribes of the Tunguski, which are spread through different parts of Siberia; these are of the old Scythian race, and are distinguished into the Kemi, Tunguski, or those of the Ochok; and the Ochok Tunguski, or those who live near rein-deer, and the Sabatichik Tunguski, or those who make use of dogs. Both sexes of these latter, who take up their residence between the Lena and the Penchino, have some customs, except having a small piece of skin round their waists. In the winter, they are clothed with deer-skins. They believe in an all-ruling power, and have counselors, but they believe in an all-ruling power, and have counselors, but they have no mourning or funerals. They hang their dead upon the branches of trees, the flesh of which rots off, or is devoured by animals; after which they burn the bones.

Jakuts, or Jakartak, is a province situated to the north. The cold here, and in the northern parts of Siberia, increases in considerable, in a few hours, as to frighten men and cattle dead who happen to be at too great a distance from any habitation to shelter themselves speedily from it. They usually rub the frozen part with snow, by which the irritation is immediately removed. This severe weather is succeeded by so hot a summer, that the inhabitants are obliged to go partly naked.

In the north, northeastern Siberia, beyond the sixtieth degree of latitude, the earth produces neither corn nor fruit; they are, however, supplied with the necessaries of life from the forests that stretch along the Lena, and the Penchino, and are sufficient in quantity and abundance of tame and wild beasts; and likewise great quantities of fuel. Though they have some corn in the country, yet the inhabitants are obliged to eat the meat of animals being what they chiefly delight in.

Jakartak, on the river Lena, is the capital of the province, and is about four hundred miles from the Frozen ocean. The inhabitants are of the confiding or more numerous kind in the whole country of Siberia, and are divided into ten tribes, making in the whole not more than thirty five or fortys persons; all of whom are devoted the domination and taxation of Russia.

The Jakats believe in a supreme being, and have an image of him, which has a very hideous aspect, having a big head, and large eyes of coal. They plant the felled trees, and cover it with stones; once a year they assemble together and sacrifice horses, &c. to this image, pitching up the skin and bones of the dead. Then they drink in a circle a liquor which they call cumhle, and are seated with it. They also throw some of this liquor into the fire, which are then used in various sacrifices. This ceremony is performed in the spring, and is their new year's offering.

These people eat salted meat, without regarding whether it be fresh or smoked, and smoke a great deal of tobacco, which they are supplied with by the Russian. In the huts in which they dwell, are like those of the neighboring nations, except that their summer hovels, resembling a sugar-loaf, are covered with the bark of trees, joined and embroidered very curiously with borel-hair. They generally leave their dead in their huts, burning up the same, and seeking another habitation.

Beyond the river Jeniski, in the road to China, live the Kamhy Tartars in both covered with bark, like some of those already described. They are Pagans, and their food is fish and venison, which they eat raw as well as dressed, and roots were in a kind of bread. More especially lie the Brashly Tartars, a more substantial people, whose private man is generally master of four to five hundred horses, and the rein-deer in their country. They live chiefly on venison, but value borel-food more than much more. They drink man's milk, and drink a strong spirit from it, as they do in most parts of Siberia, in China and Japan. They purchase their horses, as in some other parts of Siberia, with their cattle, and give often an hundred, or more, for a virgin they admit into their house, and to all their children.

Both men and women are a very warlike people, but better dressed than most of their neighbors. The women particularly wear long plaited gowns, and the Virgins disfigure themselves by adorning their hair with bears, and other glittering toys.

The vast desert of Baraba lies farther to the westward: this is inhabited by the Barabinski, who shift their quarters in the summer, and repair to the banks of rivers. Their hovels, which are low in the earth, with the roof rising two or three feet above, are covered with the skins of animals, with others. As there is water in the desert of Baraba, the liquor of these people, during their residence there, is melted snow: they also drink mare's milk, as much of the other Tartars do.

There is a nation of Mahometans along the river Irta, who keep numerous flocks and herds: these pay a tribute to Muscovy, though they are governed by princes of their own.

They have numerous flocks and herds: these pay a tribute to Muscovy, though they are governed by princes of their own.

S E C T. IV.

Treats of the situation, extent, climate, &c. and natural history of the peninsula of Kamchatka.

This peninsula is bounded on the east by the ocean, which separates it from America; its western boundary is Penchino, commencing near the northern point of the cape of Kantschatsk, and extending northerly between the Russian coast and the Pacific Ocean. The southern part is in fifty-one degrees north latitude, and in one hundred and forty-three degrees longitude, east of London. This peninsula is divided into two parts by a chain of hills running from north to south: its chief rivers are the Arsawa, the Kamchatska, the Teguti, and others.

There are many extensive lakes in the.

Their springs and summer do not continue more than four months, but the latter is fit both for grazing and agriculture. They have numerous flocks and herds: these pay a tribute to Muscovy, though they are governed by princes of their own.

In many places, mines of iron and copper have been discovered.
The newly universal system of geography.

Covered: the iron ore has been found to be compact, of a yellow colour, inclining to red; and, in some parts, of a greenish hue, which has been observed, more compact than the rest of the ore. This ore, when crushed, could not be attracted by the lodestone, but, when calcined, became so in a small degree. A folio iron ore has also been discovered, in the district of Echternachburg; its surface was found to be covered with a yellow ochre, of a reddish brown in the breakings of its flakes. Some iron ore has also been discovered, not affected by the lodestone, though, after skirnishing, slightly attracted by it. The copper mines are like those of stone, of which there are no less than twenty, having the minerals in the form of flint. The iron ore is chiefly found in Kamtschatka, and is a well-abundant abundance of sorts of various kinds, they have also several excellent medicinal plants. Hartley, peas, turnips, &c, grow likewise here. The great springs up so fast, that they have three harvests; and the blades are frequently five feet in height.

This country abounds with tame and wild fowls. The wild animals, are, black, and white, bears, wolves, lynxes, boars, elk, and a kind of flag very much like the following deer. The bear never attacks a man, unless they find him asleep, when they tear the flaps off the back part of the head, and sometimes intently destroy him. Foxes are very numerous, and are whitish, with redish-yellow; some grey, with black streaks on the back; and are much valued: the white ones, however, are also valuable to the collectors of the country. There are also black-crested and blue-breasted foxes; and they are in general two or three of the furriers, their sanguine exceeding that of the other furred animals of the country, in its fables and eminences, the fables which are sold at a high price, excelled found in any other part of the globe: the natives eat the flesh, and esteem it a very good food.

The wolves have also found in the region, and the wolves, likewise other kinds of beavers, as the asis, reindeer, and fays. The natives collect themselves in companies to hunt these animals, as the toasts of the winner, from the month of March to the end of April, taking provisions with them. The gullot, which has a very fine fur, is a terrible enemy to all the other birds; and the skull comes out of a man's head, and, fixing between the creature's horns, tears out his eyes; the afflicted animal, with excels of agony, falls to the ground, and in the end grows his depth from his bones.

Dogs are very numerous in this country: these resemble the European, and live much upon mice and fowl; they frequent the ground around the house, and chase the others from their fare. These dogs are extremely serviceable to the natives, in drawing their load or the ground over the snow: in the most dreadful weather, they stench over their way.

Several sorts of amphibious animals are also in Kamtschatka. One is the sea-cow, about thirty feet in length, and diving for fish. In a season, there are thirty-two thousand of them, the skin of which is so hard, that a piece of it is used as a tumbler, or as a weapon to penetrate it. The flesh of a young sea-cow, when properly boiled, has a good taste; the least part is somewhat like veal, and the fat part like porc. The method of catching this animal is, by an iron hook stuck into it by men in a small vellum, then by a rope held by people on shore, the sea-cow is drawn gradually to the land, while those in the vellum cut the creature with instruments in several parts of the body, till it expires. It is not very difficult to take the sea-cow from its element, for it seldom raises its head above the surface of the water, though its sides and back are often seen.

Sea-bears and sea-cats are also met with here; the latter have long hair standing out on each side of their mouths like those of a cat, and they weigh from five to eight thousand pounds; and a large part of them, and they will fly at people in boats; even if they are blinded by stones thrown at them, they will not retire, but gnaw the vessel, which is the case that are falling, and never, when once deprived of light, there is no great danger to be apprehended from them. The male and female differ both in form and disposition; so much in form, that they might be taken for different species; and as to disposition, the female is mild, insinuating and timid: as a proof of this, when an attempt is made to seize a young sea-cat, and the male, by very little tempting, affords the fisherman an opportunity, of taking it off in its mouth; if, in this case, the female should happen to drop it, the male abandons its adversary, and, with a very trifling desire, beholds its female with inimitable fury; when the latter, by licking its paws, and bawing every kind of submission, endeavors to mitigate his rage. The sea-fox abounds with seals, which are caught by different methods: sometimes they are taken in the water, and at other times their bodies are killed by without resorting on the rocks. Here they abound from June to fifteen families long.

About twenty species of fish, here is the sturgeon, which is of a shape like theurgeon, that there be fewer any difference, except that it is smaller and more delicate: it is so fat, that it may be fried without using a gutted. Some of the by-catch are, eagles, hawks, pelicans, swans, geese, pigeons, jacks, crows, magpies, hounds, partridges, &c. A bird called the red-necked dove is frequent in this country; its head is red, the rest of its neck; beneath this spot, they are feathers of a brown color in the middle, and edged all round with white. The breast, belly, and legs, are covered with variety of color.

Sea-fowl are very numerous on the coast of the eastern ocean, as sea-gulls, sea-pigeons, green-thanks, puffins, &c. here too are the common raven, as well as the common raven.

Clouds of dragon-flies, locusts, and gnats, are sometimes seen in this country. They are so troublesome, that the inhabitants are obliged to vail their faces, to avoid them. The dragon-flies, forming columns, fly with incredible quickness.

The natives of Kamtschatka inhabit the southern part of the peninsula; the northern part is inhabited by the Korako. The people of the Kamtschatka: have not been stated above; but the Korako call the whole country Kamtschatka, though it has several names given it from particular circumstances. The Korako are short in stature, of dark complexions, and are not so ferocious as the Siberians, except that their faces are somewhat shorter, their noses more prominent, and their cheeks have dark spots, on their cheeks, and the lower jaw; the latter is said to be principally owing to the influence of the sun reflected from the snow in the spring-fall, when the snow, is melted, is thrown into the air by the wind. Some of the Korako are, that are obliged to be in the woods, over their faces with a kind of netting; to prevent the effects of the sun-beams darting on the snow, which burns the sufferers by this refraction, as well as the composition.

These people dress in deer-skins, with the fur outwards; they use also the pelts of the skunks, the skins of dogs and other animals. They often wear two coats, the fleeces of the outer coat reaching down to the knees; they have a hood to it, which is in bad weather serves to cover the head; and they adorn the back part with threads of skins, and sometimes of skunks of different colours. The women wear the same garments, or rather waists, laces to their bodies, and are decorated with flaps of red, blue, and yellow cloth, and sometimes ribbon, or woollen flax. To this waistcoat is joined a sort of petticoat coming about the way down. The men wear a leather belt round them, and their legs are covered with various coloured skins; they wear frasil, skin caps or hats, and sometimes a cap or hat of trash and several hair caps of trash plaited. The people let their hair grow much longer than the men; they plait it, and hang their trunks to it: they have fur caps, that are black, without, and white within. The men play their hair, as well as the women.

The natives of this country never wash themselves, but live in a most beastly manner: they neither cut their nails, nor comb their hair. They eat raw flesh, carrion, falcation, or any thing they please, and their flesh is very good. They live in huts under-ground, covered with grass or earth, and sometimes with the skins of the animals they have killed in the field, without doors, and without any kind of chimney. There are their winter dwellings; nor are their summer retreats much more elegant, except that they are built on the surface of the earth, and rather more regular. They believe that the spirits of the dead of the dead be thus high, rite the inhabitants would be in continual danger from the wild beasts. They eat out of bowls, or

The natives of Kamtschatka inhabit the southern part of the peninsula; the northern part is inhabited by the Korako. The people of the Kamtschatka...
toughs, with their dogs, and never wash them afterward.

We shall now take notice of their marriages. When a man hath met with a young woman that he liketh, he engages into the service of her parents, and, after the expiration of a fixed time, of the festivity of the marriage ceremony, he marries her, or is divorced with a requital for his services. If he have lost to marry, the nuptials commence immediately, and there is no ceremony. Bringing the bride naked, whole cloaths, however, are set fast bound by straps and girdles, that he finds it not easy to come to her, or indeed to control her. To unloose them, he must give her presents, flowers, and eat

The religious notions of the Kamtschadals are pretty singular. They set a fort of pillars on some plains, and place over it a square of cloth. Whenever a thief, they throw it at some fish or fowl, and avoid killing any bird or beast near it. They think that wooden and burning mountains are inhabited by evil spirits; therefore the women are afraid to stay in them; they live in great fear of, and make them offerings; some of them have idols in their huts. They have a very imperfect idea of a supreme Being, and think he can neither dispose happiness nor misery; the nature which they have for the Deity, is Kutshe. They reverence some particular animals, from which they apprehend danger, and sometimes offer sacrifices to them; they imply wolves not to hurt them, and befolds amphibious animals not to overstep their boats. Many of them, however, adopt the Russian manners, and contemplate the customs of their country; they have been instructed by Russian missionaries in the Christian religion; and schools have been erected for their children.

These people strictly observe the law of retaliation: if one man kills another, the relations of the person killed destroy the murderer. They are very expert in the use of arms, and have learned the business of the thief. Before the Russians conquered them, they had frequent intestine broils; but a year rarely passed without fires village being entirely razed.

Great havoc is made in that country by the small pox. The fever, with the irregularities of parents, brings a variety of difficulties upon their offspring. There are huts from which they, apply roots, herbs, &c. The manner in which they live in their huts, and their deeds of devastation, contribute to make the ventral disease very frequent among them. They have a disease called the full, which is a sort of febl, to which they apply the raw skin of a hare cause a suppuration. They are likewise subjected to the palsy, jaundice, boils, cancer, and other disorders.

There are three volcanoes in Kamtschaka, the first is that of Awatscha, to the northward of the bay of that name; it is a chain of mountains, the huts of which is covered with trees, and extends to the bay. The middle forms a kind of amphitheatre, and the various fumaroles which are spiral cannot be viewed without exciting the most awful ideas. They always emit smoke, but rarely fire. There was indeed a terrible eruption of smoke and cinders in the summer of the year 1737, but it only continued one day; many of the cinders fell on the island of St. Paul, and were a people on the opposite coast. This eruption was the forerunner of a terrible earthquake, which happened on the fifth of the ensuing October, and in a quarter of an hour overthrew the habitations and huts of the Kamtschadals, being accompanied by a singular shewing and flowing of the sea, which at first rose to the height of twenty feet, then sunk, and retired to an unequal distance; it is a great distance higher than at first, and suddenly sinking again, retired so alarmingly far from the common low-water mark, that it was for a considerable time left to the eye. At length the earthquake was repeated, the sea returned once more, and rose to the height of two hundred feet, overwhelmed the whole coast, and then finally retired, after having destroyed the goods, cattle, and many of the lives of the inhabitants, and left several lakes of salt-water in the lower grounds and adjacent fields. The second volcano's flares from certain mountains situated between the river of Kamtschaka and that of Toboliki. Nothing was ever known to exhale from this but smoke, till the year 1735, when it ventured a torrent of flames, which destroyed all the buildings near it. The third volcano's flares from the highest mountains in Kamtschaka, on the banks of the river of that name. It is environed by a chitter of mountains; and it is said that it is rent into long crevices on every side. Its greatest eruption began September 25, 1737, and continued a week, which, with an earthquake that followed, did very considerable damage.

In the southern extremity of Kamtschaka there are hot springs; they form rivulets, and run almost the length of the river Orama which rises from the lake Littol, and then join that stream; the waters, however, have no very considerable degree of heat in them.

There is a mountain near the river Fraida, from whose
summit a prodigious catastrophe of boiling waters fall with a terrible noise, then running to a considerable distance, they continue boiling up to the height of a foot, till they lose themselves in several lakes, which contain a great number of islands. From this mountain the inhabitants obtain some useful medicinal waters, in which they bathe, for a great number account of their admirable variegated colours, which are merely the effects of the different powers of heat, humidity, air, and iron; these waters are washed from the mountains, and are polished by the above-mentioned hot and impetuous waters.

During the winter, a great quantity of fish harbour in the river of Kamtschatka. In the spring, when the ice breaks, they attempt to get to the sea; but the natives catch the heads of the rivers, and a great crowd engage them in a kind of nets; some they dry in the summer and lay by for their winter food, and from others they extract the fat or oil by boiling them, which they carefully reserve for a great variety of uses. The late gallant Captain Cook was killed by the natives at an island called O Kutchina, near Kamtschatka; an account of whose death, and discoveries in those parts, as contained in his third voyage, will be given towards the conclusion of our work.

CHAP. VII.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF CHINESE, MOGULCAN, AND INDEPENDENT TARTARY.

Sect. I.

Contains an account of the Manchouch or Mantine Tartars; with their provinces of Manchuria, Kirin-ula, and Tartary, their manners and customs, 

The Manchouch or Mantine Tartars live chiefly in huts on the banks of the rivers. Their country is in the north of Loo-tong, the most easterly of the Chinese provinces, and is bounded by the Ordos-ula on the north, by Corea and Loo-tong, on the south, by the ocean on the east, and by the Mongol country, on the west. It is divided into three provinces; namely, Manchuria, Kirin-ula, and Tartary; and from hence the surprising Tartarian spirit originated, which triumphed on the imperial throne of China. But we shall speak more particularly in this section, of these provinces, and of the Tartars in general.

The former of these provinces (which is about two hundred and seventy miles long, and one hundred and twenty in breadth) hath a favourable soil, producing wheat, millet, and cotton, as well as plenty of pasture for cattle, and several sorts of fruit. This province of Manchuria has given name to the capital, in which are several public buildings, and courts of justice, as at Pe-king. But the most populous city is Tsen-wang-ching, which indeed may be deemed the key of the great peninsula of Corea.

There are two large handomous roads from Mugden all the way to the city of Pe-king, which is about one thousand one hundred miles distant; these are kept constantly in repair, having been formed with great labour principally for the emperor, whenever it should be his royal pleasure to visit those provinces. One of these roads is for the passage of his majesty to Tartary, and the other for his passage to Pe-king back from Tartary.

The second province is Kirin-ula; it has Loo-tong for its boundary on the south; the ocean, on the east; Corea, on the south; and the river Saghul-ula, on the north. This country is a mountainous desert, upwards of seven hundred and forty miles in length, and fix hundred in breadth. Here is scarce anything to be seen but the gloomy tops of mountains, nor is anything heard but the hideous howlings of wolves and wild beasts. They are very ignorant and uncivilized, though peaceable and inoffensive. The Yups have no sovereign prince, but chief several chiefs. The Mugden provincials have a Tartarian general, who has lieutenant-generals and a great number of field-officers under him.

The third province of Chine's Tartary is Tartary. The capital, which has the same name, is a place of tolerable trade, and chiefly peopled by Chinese.

The hunting of fish is an employment for which the solar Tartars are famous, the fruits of their concretes being of great utility to them: the women hunt them as well as the men. In the pursuit of this game, they generally with types of their horses, and a great gaudy to engage and generally get the better of them; however, if any one unfortunately falls at the feet of this animal, the noel do not decline their pursuits; for their livelihood depends principally upon the fish they get from the lakes they take.

In some of the lakes there are several fine pearl-fisheries, and the natives get a high value on the pearls they produce.

The inhabitants of Tartary have all nearly the same language, though they are distinguished into different nations, and speak in different dialects. Their origin and customs are both equally ancient: for the former could never be traced, on account of these people having for such a series of years been continually wandering about from place to place. If we examine the more remote antiquity, we shall discover a striking resemblance of the people of the early ages, and the Tartars of the present time; for at their ancestors lived, to live they.

The religion of the Tartars appears, from monuments of undoubted authority, to be of above three thousand years standing; and is founded on the sublime principles of morality. They have in general been followers of the grand lama, or immortal father. This religion made a considerable progress in early ages; and the authority of this chief pontiff is so highly revered, that the emperor of China, previous to the ceremonial of his coronation, always implores his protection, and sends him rich presents. This worship is of a nature, like that of China, mixed up with other systems; for neither time, nor the influence of man, hath had power to dispose the grand lama, who is, however, a representative of the divinity; and that he is invested by heaven to decide ultimately upon whatever relates to public worship.

His influence extends as fully to temporal as to spiritual concerns; but he considers all civil matters, held prostrate by him, as inconsistent with his dignity, and therefore commits the care of government to those calculated to conduct affairs of that nature.

In Tartary, there are several worthies of the ideal Fou, who pay an implicit obedience to their priests, making them prelates, and strictly attending to their directions. Many of these prelates migrate from place to place, in the service of religion and themselves, but they are in general very ignorant.

Sect. II.

Treats of the Mongol's situation, boundaries, and climate of their country; of the nation, animals, &c.

The Mongol country is situated to the north of China; and is bounded, on the east, by the provinces of the Manchouch, on the west, by the country of Tartary, on the south, by Corea, and, on the north, by the eastern Tartary and the Lalta Tartary. It is about three hundred leagues in length, and two hundred in breadth. This country is not very well known, except that part of it which the Chinese call in travelling to a Monastery.
Muscovy to China. The climate is exceedingly feverous, and lies upon the ground eight or nine months together.

The natives (who are of the same original as those who inhabit Tartary) in the course of India, Persia, 
and the countries that lie on the sea coast, have made, with broad faces, black eyes, flat noses, long whiskers, tolerably complexion, and a most rude behaviour. Their hair is generally long, and grows as thick on their heads as on those of the bears. They cut close to the head, and leave only a tuft at top. They wear large flaps, and calico drawers; and their garments are drawn up to their necks, and reach down to their feet; they sleep on their bodies by strong leather straps. When on horseback, they wear a short jacket with narrow fronts and backs, having for their trousers, drawers and hose of the same kind of skin, both of one piece, and light to the limbs. They have on their heads, caps bordered with fur. The women are not quite so scanty featured as the men, but their dress is nearly the same as theirs.

This country has in it a great variety of animals, such as camels, dromedaries, cows, horses, sheeps, bears, tygers, wolves, &c. There is also every species of game known in Europe. Rhubarb and other medicinal plants grow there, and fall-petere is also found in great plenty.

The Kalka Mongols, who are a race of Tartars, are dependent on China: their persons, habits, manners, &c. are the same as the Mongols: they dwell beyond the Caspian Sea, a country called Various, and the Caspian Sea is generally called Nagni; as is also that part of the country which lies to the westward of Africano, and the natives of Africano.

Africano, the capital city of this kingdom, is situate on the east side of the Wolga, in the latitude of forty-five degrees north, longitude fifty-two from the meridian of London: the settlement of it is the last of the Tartars, and is the most fruitful part of the country, by which the Wolga, and the Caspian Sea are navigable, and has a cathedral and several other Tartar churches being the fee of an archbishop, who lately built the cathedral.

The city of Africano, is supposed to contain one hundred thousand inhabitants, it has ten gates, five of which are towards the river, and two are in the citadel, which forms a wall to the town on the opposite side. Within the citadel is the governor's palace, being a large wooden building, and containing a great number of pleasant apartments, particularly a great hall which has a noble prospect on both sides. Both the churches and houses are built of wood, except the cathedral, the bishop's palace adjoining to it, and one church more, which are also a monastery and a nunnery built of wood. Besides the governor, there are three other great officers of the crown here, the chief of whom resides in the cathedral, the second in the government of the public houses, and the third in the direction of the fishery. On the opposite side of the river stands a fine stone monastery, and two other, and several shrines. The inhabitants lie on the earth, being all of the Tartars, and are of the same sect as the rest of the Tartars, being the fee of an archbishop, who lately built the cathedral.

The Tartars inhabit it only in the winter, for in summer they encamp in the open fields. The country is moderately fruitful except in corn, of which they have none but what comes from Caffan. Figs are very plentiful, they have one kind called behar, which are tied to be two fathoms long, but the most delicious fig in this river, if not in any other, (say fowlers) are the persimmons, which are as large, and yet far less than the figs of persimmon plant at Africano. In the neighbourhood of this city there live about forty or fifty Armenians families who have their shops in the main city, and have their caravanserai where they carry on their trade. This is a spacious building surrounded by a wall of squares, and some noble gates, at which there are guardhouses placed every night for the protection of their goods.

In the gardens about the town are vines and fruit trees, such as apples, pears, plums, and apricots; but the fruit is not so good in this part of the country, as they bring only one quarter the height of a man, but not higher, and then prop them up: the grapes are black and large, such as grow in private gardens and in the market; the best kind in the field are the grapes, which are the Carina's property, are made into wine. The ground is naturally a fine harrow soil; but they have large wells from whence they convey the
The New and Universal System of Geography.

With respect to their religion, they believe in one God only, and are fond of adoration, but pretend not to pray any kind of devotion. They have an old emblem of eternity during the time of their worship, which is the neck of a double-gilt spear, or about eight feet in length, encompassed with a ring, to which a leather thong, with a piece of lead, is fastened; and the light of their devotions, the end of the spear is placed on the ground, and one of the congregation, with great dexterity, occasions the metal to turn round during the whole time. They likewise sing, make use of symbols, and other musical instruments, which are strung; to these they beat time, and look upon notes, which are pricked down the page, from the top of the staff. The antelope is of a light yellow colour, of the face of a deer, with a head resembling a cow, but the nose is without a gill. It has five black horns, but its palms are beautiful, but without branches; they are taper to the top, and have rings at equal distances. The flesh is tender, but seems to taste of mutton. Here are also pelicans, corvus birds, swans, ducks, &c. The Wogla is replete with a variety of a delicious fish; but there are few reptiles. Their cattles have two bunches on their backs; their sheep have very fat tails, and their cattle is exceedingly large.

Their commerce consists chiefly in flax, brocades, velvets, cotton, sugar, pepper, Perisan fruits, wines, sweetmeats, &c. which they import, and in return export, meal, fish, falt, woollen, &c. The inhabitants are prohibited from exporting naval and military stores to Persia. The Tatars have permission to navigate the Caspian sea; besides which they always keep a great number of boats in the Wogla. The pirates who are convicts of the sea rob the Tatars of many of their vessels and hang them alive by the ribs upon gibbets fixed on floats, where they are left to expire in the greatest agonies; and if any persons relieve the said Tatars, they are subject to the full punishment.

The Ruffians, Armenians, Georgians, &c. who inhabit Acracan, have the same customs and manners as the people of their respective countries. The real natives, or Nok Tatars, are the most ignorant, and are perpetually such and such, they live in huts formed of canes or bulrushes. They pay no taxes, but are obliged to serve in the Russian wars, and their chiefs are always left in the castle of Acracan as hostages for the fidelity of the rest.

The people of Acracan have olive complexion, large faces, little eyes, small beards, are low of figure, and inclined to cumbrous. They have their heads, or at least their foreheads, gray or fack, and over it a thievish cloak, with the wool outward, and a cap of the same materials. Their women wear no cloths, and a cap with Russian ears hanging round. Their persons and features are tolerable. The males wear a ring in the right ear, and the females in the nose; the rings worn by the latter are usually set with a piece of coarse or torquise. The Acracans are in general Mahometans, and devote their offspring to God or some faint. Having, fishing, and their cattle support them.

The people are divided into different kinds, each of which has its head, but all are subject to one foreman, who is called chieftain. This chieftain has an agent or curacy at Acracan.

The Kalmskuck always affect their independence, but are in fact subject to the Russian government. The inhabitants of the Ruffians, who claim them as their subjects. A Ruffian resident, attended by a guard of three hundred soldiers, is always stationed in the court, or rather the camp of the chieftain.
sea, about three or four hours' miles to the southward of Afrelease, and frequently misstaken for Terki, in Daghet, a great deal farther southward, and subject to the crown of Russia, though it is not at all in a large plain, and described by a wall of earth with bastions, after the modern way; and the buildings are for the most part of wood. This was the Mederitou frontier towards Persia, till very lately it must have generally been in possession of the Tartars, but they are now advanced much farther southward than Daghet and Shirvath, into the Persian provinces on the south of the Caspian Sea.

The Circassian Tartars generally acknowledge themselves dependent on the crown of Russia, though there are indications which they have a certain tumult of false claims, which is not much to be wondered at, since they live so remote from the seat of the government, and are ever annoyed from one place to another. The Circassians who lie next to Persia and Turkey, may be reckoned under the dominion of one or other of those crowned: but nothing is more common than to put themselves sometimes under the protection of one prince, and sometimes under another. There is no considerable town in this country, except Kolule, which is inhabited chiefly by Ruffians, for which reason a number of Circassians live in tents or huts according to the season of the year, removing from one place to another, like their neighbours of Afsraf, and do not use to be doing workable enough to induce foreigners to build or settle amongst them.

We are informed by a gentleman who travelled into these parts, that being first into Circassia by the late Czar, to view the country, he found, for the most part, they were well furnished with silver ore, and that the knefes (the Tartar lords) produced some pieces of ore, which upon assay proved very valuable, and the deal of the town is to be reduced very considerably: that their military men were amongst, with a kind of silk or wool or grona over it. That their armies were well furnished, and they had well mounted. That they lived in summer under tents like their neighbours, and there was a great variety of beautiful women amongst them. And from thence it seems to be doubted, that from the mountainous country of Georgia, that the harams or frenglos of Isphahan and Constantinople are chiefly supplied with virgins.

When a little grain of any sort, they have large herds of cattle which they drive before them like the other Tartar nations, and they no longer in any place than they can find pasture for them.

A gentleman who travelled through Circassia, gives us the following account of that country: nothing, he says, can appear more agreeable than the prospect of it, on account of that variety of mountains, we woods, little lakes, springs, and rivers, with which it is everywhere diversified. It is fertile beyond imagination, every thing grows, as the common people say, without labouring, as their number is great, as their best of which is barley, oats and cumin, thrives to admiration, after only once lightly turning up the earth, which serves them for manure. Though this account of the soil is very different from what other travellers give us, who usually represent Circassia as a barren country; yet as they all agree that great herds of cattle, especially in the low part of the land, in this good breadth is cultivated, and consequently would produce plenty of grain, if it was cultivated, but the natives wandering from place to place, no care being taken, the grass is not true for the subsistence of their families; and if there happens to be a bad crop, they are reduced to great difficulties for bread corn, as some gentlemen observe.

The Circassians, both men and women, are of an easy shape and well proportioned. Their complexion good. Their features just according to the notions we entertain of beauteous generation without flaws, at least, which are the face and about the eyes, and are not crippl'd or crooked person scarce to be found amongst them. The women wear no other head-dress than a silk or cotton cloth hanging down in rings or feathers behind them, but are valued when they go abroad. The general food of the Circassians is mutton, beef, poultry, wild fowl, and venison, all which they have in great plenty. And a piece of a young colt is preferred before any of these. Their bread is made into thick cakes, either of barley meal, or millet, which they bake on the hearth in a general manner: the children of families, or before a traveller to pay anything for the entertainment of himself, his servants, or horses; but will contend frequently with them, and have sometimes been the cause of a head. As love the natives, when they are on a journey, they carry no provisions with them, but are as welcome in every house as they are in their own; so that if any people may be

[Asia] Western Tartary. 115

---

[Note: The text contains a series of fragmented sentences and paragraphs, discussing various aspects of the region's geography, culture, and economy, with a focus on the Circassian Tartars. The text includes references to the Russian crown and its influence in the region, as well as descriptions of the local flora, fauna, and agriculture. The narrative is interspersed with references to the natural beauty of the region, including its forests, lakes, and rivers, as well as the unique characteristics of the Circassian people. The text also touches on the economic activities, such as hunting and farming, and the cultural practices, including the treatment of guests and the hospitality shown by the locals. The narrative concludes with a description of the rural lifestyle, highlighting the simplicity and independence of the Circassian people, who are noted for their nomadic way of life and their close relationship with the land.]
which they no sooner approach than they fall into the pits, where they remain till morning, being totally unable to defend themselves, and are there hunted with bounds, as in England. They have great variety of game, particularly pheasants.

The modern independent village Bragudlin, south of the river Terek, they have a hot spring, situated upon a hill; water boiling hot issues from it, which boils strongly of naphtha, and falls into a basin of about twelve feet diameter, and about three feet deep. On the west side there are several small springs of the same kind of water; and on the east side there is an acid spring. The water of the chief well is boiled, and has a strong smell of a spirituous liquor. Provisions in general, and meat in particular, are exceedingly dear here.

About the city of Terek there are a great number of serpents, which make holes in the ground that are extremely dangerous. They are fix or seven feet long, and about as thick as a man's arm. There are likewise mice as large as squirrels, which are called jerbovs. Their ears are long, and their feet shorter than these behind, which prevents their running swiftly; but they lay their tails on their backs, and leap to a considerable height or distance.

§ECT. IV.

Contains a description of the river Jalik, together with an account of Karakalpak, Kirgiz, Bashkirs, Uzbeks, Crimea, and Lifize Tartars.

The abode of three hundred werths from the source of the river Jalik, which runs through a desert of a prodigious extent and at some distance from it, empties itself into the Caspian sea; there is a strong town built by the Don Cossacks. This, after the river, is called Jalik, and the Cossacks have here defended it from the attacks of all the different Tartars that surround it. There is no inhabited place except the above-mentioned town, between Astrakan and Jalik river. This well deftart is, however, infested by innumerable bands of robbers, which sometimes attack ships, and sometimes in tents, every tribe forming a camp of its own, and, like other Tartars, they frequently move from place to place, as it suits their inclination or convenience. Others, who cultivate the earth, and are somewhat housekeepers in their principles than their wandering brethren, form villages, and live in towns and villages; these latter are either the real Bashkirs, are descendants from the Saracs, the ancient inhabitants of the country; or the Tuckomans, who were settled in the country long before the Uzbeks or Tartars, properly so called, subdued it. The Uzbeks in general, however, despite the thoughts of cultivation, and deem it meritorious to make excursions upon plunder their neighbours.

The capital city is surrounded by a mud wall: the houses are built of wood, but the muffle and caravansiers are made of a mixture of brick and lime, but not exceeding what it was formerly. The city takes the liberty to seize upon the property of any one; which injures commerce, and damps the spirit of trade.

For a further account of these people, the situation of their country, rivers, account of Tamerlane, their great leader or chieftain, &c. we must refer our readers to the description given, page 35 of the Chinese Tartar kingdom and nation, and shall close this part of our work with an account of Crime Tartary, which was amusingly called Taurica Clarionemad.

This country, which is inhabited by the Crime and Lifize Tartars, is surrounded by the Black sea on the south, and part of the Caspian sea on the north. It is inhabited by the Tatars, the Moriss, and Leffer Tartary joins it, on the north-west, by a narrow isthmus. Its greatest extent, from north to south, is about five hundred miles; and from east to west, is near one hundred and forty miles; and its breadth in other places it only about eighty miles. It is situated between thirty-three and thirty-seven degrees latitude, between forty and forty-six degrees latitude. The chief cities, if they may be so called, are Precep, Crime, Astabd, Sangkan, and Caspia.

It is exceedingly fruitful by nature; and, were it properly cultivated, would be a fine country. There are crops of wheat and barley that the peasants were treated exactly as the officers had been. At length the court was informed of the whole affair, but it was thought most prudent to wink at the infraction, the Russian ministry having too much skill to quarrel with a set of people, whose insolence rendered it impossible to correct them, and whose stock enough their independence.

The Uzbeks are generally esteemed the most civilized of all the Mahometan Tartars; nevertheless they have their Tartar neighbours, as well as any other Tartarian tribes. They nearly resemble the Persians in their dress; and we must except their boots, which are extremely large. The chief wear a plume of feathers in their turban, and, as well as their chaps, pride themselves much on being the descendants of their renowned Tamerlane. A council of the Tartars is commenced by the Karakalpak and Bashkirs; their greatest delicacy is horser-flesh. They drink a kind of armack or fermented liquor made of mare's milk. Their language is a mixture of the Turkish, Persiam, and Mongolian, but they are well acquainted with the Persian language in its purity. Their arms are like those of the other Tartars, viz., large bow, arrows, darts, and falchets, which they use with admirable address. Of late they have begun to use muskets, and many of their cavalry wear coats of mail, and carry small husskets.

It is affirmed, that the Tartars of Great Bucaria are the most courageous and robust of their whole nation. The Persians, who are not deficient in courage, look upon them with terror. The women themselves alight on horseback, and show military reputation: they are strong and well limbed, but in their features have all the delicacy of Asiatic beauty. The horses belonging to their Tartars are not pampered, but they are hearty, indefatigable, and exceedingly swift; they are the best adapted in the world for securing the deferts, as they can live upon almost anything, and a very small quantity of provender seems sufficient to keep up their strength.

The Uzbeks of Tartars are continually at war with the Persians, the fertile plains of Chosartan existing them to make frequent incursions into that rich and plentiful country; but they do not make those treacherous and frightful inroads, the inhabitants of the Great Mogul, on account of the prodigious mountains which intercept the passage.

Those Uzbeks who subsist upon their cattle, or by plundering their neighbours, live sometimes in tents, and sometimes in towns, every tribe forming a camp of its own, and, like other Tartars, they frequently move from place to place, as it suits their inclination or convenience. Others, who cultivate the earth, and are somewhat housekeepers in their principles than their wandering brethren, form villages, and live in towns and villages; these latter are either the real Bashkirs, or descendants from the Saracs, the ancient inhabitants of the country; or the Tukommans, who were settled in the country long before the Uzbeks or Tartars, properly so called, subdued it. The Uzbeks in general, however, despite the thoughts of cultivation, and deem it meritorious to make excursions upon plunder their neighbours.

The capital city is surrounded by a mud wall: the houses are built of wood, but the muffle and caravansiers are made of a mixture of brick and lime, but not exceeding what it was former. The city takes the liberty to seize upon the property of any one; which injures commerce, and damps the spirit of trade.

For a further account of these people, the situation of their country, rivers, account of Tamerlane, their great leader or chieftain, &c. we must refer our readers to the description given, page 35 of the Chinese Tartar kingdom and nation, and shall close this part of our work with an account of Crime Tartary, which was amusingly called Taurica Clarionemad.
plunder and pillage every place they pass through, on which they leave behind them, with him, besides that on which he rides, to load with plunder and captives. Whenever a horse dies, the owner immediately dries the carcass, and invites his comrades to the entertainment.

These people, in time of peace, purchase beautiful children in Circassia, and sell them to the Turks, who pay for them in clothing, arms, coffee, tea, rice, fruits, &c. They travel in close carts, which contain themselves, their wives, children, baggage, &c.

When the children marry, the only portion they give is, a painted waggon, and a hut covered with white linen, with a painted cloth at the top, tied with red fringes; but they must give a handkerchief for their daughter's dowry. They bury their dead very deep in the ground; in a tomb of mud over their graves, and adorn it with a variety of flags, or the symbols of the quality, circumstances, and alliances of the deceased.

The Lefge Tartars are an independent people. Their country extends near an hundred miles in length from north to south, and about fourteen from east to west. It is fertile and pleasant, producing all kinds of grain and cuttage. The people are even in diet, and wear in several manufactures: they are not only very warlike, but excel in making fire-arms, with which they trade into Persia. Their chiefs, who are named Shamskali, in any common danger of state, unite their forces, and are invincible in their operations.

The natives are active and well-proportioned; their eyes are black and full of fire; their complexion fair, and their features regular and engaging. They dress after the Arabish fashion, and wear whiskers: some few indeed let their hair grow long.

They trade with the Persians, Russians, and Armenians, giving fire-arms and madder for clothing, &c. But though they are free from foreign domination, they can rob and plunder as well as any of the other Tartars; however, if they promise to protect or conduct any strangers they never break their words, or violate their laws of hospitality.

Their mode of worship is the same as that of the Turks, and they imitate the Persians in their manners; but in one particular they exceed most of the oriental nations, for they can drink like Europeans, whether British or German.

No country is more destitute of rivers: Chat, Pran, and Nagtan, are the chief of them, neither of which is navigable, and some add the western branch of the Euphrates, which runs near the eastern borders of this country.

The mountains are those of Gebel-el-Ard, or the great mountains in the middle of the country, and those of Mount Sinai and Pharaoh in Arabia Petraea.

As to the air and winds, those parts of it which lie within the tropic, are excessively hot, and have their monsoons and fea breezes regular, as in other countries, under the same parallels; the vernal monsoon, in the ocean on the southern coast of Arabia, blown from the south-west from April to September, and then changes to the north-west, and blows in the opposite direction, the other six months. The hot winds are insufferable in April and May; they have generally clear serene weather, seldom flowered from the approaching sun by clouds, or refreshed with flowers.

Arabia is usually thrown into three grand divisions, viz. Arabia Petraea, Arabia Deserta, and Arabia Felix.

Arabia Petraea is the smallest of the three, and is situated in the north-west part of this country, between Egypt and Palestine, the chief town Suez lying at the bottom of the Arabian gulf or Red sea, being the port where the Turkish galleys usually lie. Tars, a port on the Red sea, south-east of Suez. The Ishmael, which divides the Mediterranean or Levant from the Red sea, is about one hundred miles over the most mountainous and rockiest country of all the Arab's, which is impolitic to cut through, nor has ever any prince attempted it, though it would have much shortened the voyage of the Europeans to the East Indies, if it had been practicable. In the plains of Arabia Petraea there are abundance of acacia trees, from which issue a valuable gum, that is gathered in autumn.

Arabia Deserta is so called from the nature of the soil, which is generally a barren sand: however, there are great flocks of sheep and herds of cattle near the Euphrates, where the land is good. In the desert, there are great numbers of orichles, and there is a fine breed of camels in several places.

Arabia Felix is so called on account of its fertility, with regard to the rice. Some give it the name of Yemen, but improperly, for that is a kingdom on the south coast, whose capital is Sanaa.

We shall next proceed to the description of some of the principal towns; and first, of Medina, where Mahomet's tomb is: this is called by the Arabs, Medina Thani, the city of the prophet, being the second city now reckoned, when he was driven from Mecca, and where he was first inured with regal power. It has in the latitude of twenty-four degrees thirty minutes north, about eighty miles as
The Arabs who live in towns are a very inconsiderable number, compared with the thousand hundred built of brick and stone, but not very lofty, having but one floor; there are several noble mosques in the city, the principal of which is that of Kibe, or the must holy of the four which stand in the middle of the town, and is a square building, having twelve piers in length, and four in breadth, and supported by four hundred columns, on which there is a colonnade of four stories. There is another columned tower in this temple covered with a dome, and encompassed with iron rails: the tomb itself is surrounded by a silver guard; and above that, the wall on the inside is hung with rich tiles, upon which are abundance of precious stones, the gifts of Mahometan princes. The pilgrims never see the tomb itself, only the tower which it is enclosed in; but when the pilgrims are returned home, and the crowd is less, they make no difficulty of viewing it to any Mahometan for a fee of more.

Mecca stands about two hundred miles south of Medina, in the latitude of twenty-four degrees south latitude, and is a day's journey to the eastward of the Red Sea in a valley washed around with mountains; it is twice as large as Medina, built of brick, with flat roofs, and ballasters on the top. In the middle of the town stands the Ka'ba, a house of God, which, according to the Arab tradition, was built by Abraham, and to which Mahomet obliged all his followers to go in pilgrimage once in their lives. This house, seven fathoms high, is of wood, and twelve in breadth, and about five fathoms high; the door is on the east, and the room beyond, about a fathom and a half high, and a fathom wide, made of beaten silver, and divided into two large apartments; the door is raised six feet above the ground; the roof is flat, and supported by three pillars of wood of an octagonal figure. The sides are covered with white plaster, with the following words several times written on them, viz. La illa Illa, Mahomet refuls allah, i.e. God is a great God, and Mahometan a prophet.

Sibit is situate near the eastern shore of the Red Sea, in forty-five degrees of eastern longitude, and fifteen degrees of latitude. It is noted for the gums, frankincense, and other odoriferous gums and drugs in Africa; but there are no spices either there or in any other part of Arabia, though the fine spices which are the growth of the Indian islands, are frequently called Arabian spices, because they were first brought by the caravans to Egypt, and other countries on the Levant east through Arabia. Moscou, or Moscú, is situate on the eastern shore of the Red Sea, just within the confines of Babylanad, about one hundred miles south of Sibut, in forty-five degrees of eastern longitude, and thirteen degrees of north latitude. It stands on a barren sandy plain, and has the greatest plantations of coffee in the world, in the adjacent country; and from hence coffee was first brought to Europe by the Turks. At the time there are a few houses built with brick and stone, the roofs flat and terraced, the shops furnished with all manner of eastern merchandise; and here the several East India companies of Europe barter the produce of India for their coffee, frankincense, &c. the produce of Arabia.

Aden is situate without the heights of Babylanad, about one hundred and twenty miles east of Moscou, being a port town on the Indian or Arabian ocean, in forty-five degrees of eastern longitude, and twelve degrees of north latitude.

Mucfut is a port town, situate on the western shore of the gulf of Ormus, about one hundred and fifty miles north-east of cape Ras-fate, in fifty-eight degrees of eastern longitude, and twenty-two degrees of north latitude. It lies in a bottom, surrounded by three rocks, which secure the harbour, and render it of difficult access to foreigners. It was once fortified by the Portuguese, but is now capital of a large territory, subject to an Arab prince, called the king of Mucfut, or Oman, who is the only naval power on the coast of Arabia, except the Turks, which drive the Mucfut off by his defeat, and he has no power to resist them. We shall be more particular, when we come to treat of the forces of the Arabian prince.

The colour of the Red Sea is a blue; we shall mention, it is blue, the northward of Mucfut, bluer in the Persian gulf, in the latitude of twenty-seven degrees north. This is very respecting to the pearl-fishery, and is a most great number of pearls found there. When pearl-fishery near it was in use; but is at present on the decline, the king of Mucfut or Oman having brought all this coast under his subjection.

TRAVELS 11.

Treats of the perfects, habits, genius, fees, fatifications, roads, and mode of travelling, &c. of the Arabian.
Upon meeting one another, they fill use the primitive hospitality of the desert. Before the Mahom- behind their tents, the expression was, "God protect your life." The interiors, out of respect and difference, kifs the feet, and before being seated, the hostess and guests children and other kindred pay the same respect to parents and relations. The polluted or giving one another the hand to be washed, or laying the right hand upon the bread, while others, who are perhaps more intimately acquainted, or of equal age and dignity, kifs the hand, bend, or kiss, of each other. At the feast of their bier, and, and other great solemnities, the wife compliments her husband by kissing his hand.

There are no roads laid out in this country, but the caravans travel over sandy deserts, where there is no manner of track; guiding themselves by compass, as at sea, by the stars, for they travel chiefly in the night or accoing the stars. People choose to travel with the caravans, in which are frequently two or three hundred men, attended by a great number of camels and dromedaries, for conveying their necessaries and provisions. The camels will carry fix or seven hundred weight; and the dromedaries, which are a species of camels, but chiefly, about five hundred weight, both lie down to take up their burdens, and will travel through this paved country eight or nine days without water.

As there are no caravans or houses of entertainment for travelling to call at in the desert part of the country, travellers provide themselves with tents, which are set up in bad weather; but when the weather is fine, as it most commonly is, the tents are opened and made in the open field; and as they are obliged also to carry their provisions along with them, the slaves and servants who belong to the caravans get the little matters which is thought convenient to take. By the way of dresting itself, it is to make a little hole in the ground, and set a pot over it; and if there is mud or sand to be met with, they make a charcoal fire, and as they sometimes meet with no water in several days journey, they carry water with them in skins, in which they load some of their camels. The Arabs observe, that wherever there are trees, three hundred falls to be water; and one would think the camels could subsist as well as their mules, for when they come within sight of such places, they are not to be restrained from setting up their great tents at it, especially where they have had none for some time; the natives imagine their camels foolish the water at a great distance.

The people of the caravan, before they begin their march, elect an officer, called the caravan baba, who is in a manner their leader, and directs all their motions, and where they shall rest, and to whom all differences which happen upon the road are referred, he compounds also for all the necessary duties demanded of the caravan, by the governors of the countries through which they pass.

The merchants who travel with the caravan, ride upon horses or mules, and sometimes upon asses, which travel fast enough for the loaded camels, who followgo above a foot per hour, and the Christians or Franks, as they are called, are provided with provisions, with mules or horses to carry their wine; for the camel-drivers being disciples of Mahommet, will not suffer that animal to be loaded with any; and the camel-drivers, to the number of ten, carry the hooves of Mahommet, who buy and forbad the use of wine, and all intoxicating liquor; the wine as well as water is put into little glasses, with the howwards, for they soon prove thirsty if the air is off.

Every merchant and his servants ride near the camels, which carry their goods, to preserve them from thieves; for as they frequently travel early in the morning, and late in the evening, their palfemers, sometimes, cut the string by which the camels are tied together, and lead off some of them without being perceived.

There are some poor people who constantly attend the caravan, who serve as watchmen when they are encamped. The Arabs also say, "Let me be a witness to you," meaning, "I see well, and is mercifully," adding frequently, "I have care of yourselves." They give notice also to the caravan baba when it is time to travel, while they have light enough, the watchman to say, "I shall your horsey," and a little after, "Load your goods," whereupon they all appear ready for the march in an instant. The merchants, as they have more to be long, the merchan- ismall, and as the caravan marches on, open their wallets, which every man carries in his haversack, and 190 a carpet.

Travellers are advised to dress themselves in an Arabian veil and cap, or they will be liable to insults from the zeal of the Arab country, even that part of which goes under the name of Hyamun, or the Happy, consists for the most part in sandy deserts, or dry barren mountains; but there being some parts of South Arabia tolerably fruitful, and abounding in corn and herbage, as well as aromatic flowers, it is, compared with the other parts of Arabia, a happy country.

They never endeavour to cultivate their hills, being for the most part a rocky soil, and hence capable of improvement; their valleys seem equally barren, and water is wanting, and bear scarce any herbs; but where they can bring water into them, they produce corn, herbs, flowers, and all manner of grains, and the soil of the country is so rich in the world affords a more agreeable pastime. They draw water in large flasks out of their wells morning and evening with oxen, conveying them in little casks; the sides of which their trees and plants are set; they cut also little channels through their corn fields, by which they let the water into them; but there is occasion, for rain they have very seldom any.

There is a great variety of excellent fruits in Arabia, such as oranges, lemons, pomegranates, peaches and apricots, but what this country is most famous for, is its dates and their coffee, with which abundance of ships from Europe and India are laden every year, besides vast quantities that are sent to Turkey, Dikes are freely sent any where else but in this country and Persia.

The coffee shrubs grow eight or ten feet high, and have a gray smooth bark, the wood is white, and has not much pitch; the twigs rise by pairs opposite to each other, and the leaves on the twigs in the same manner, one pair about two inches distance from another. The leaves have foot flake a quarter of an inch in length, and are about four inches long, and two broad in the middle, from whence they decreasc to both extremities, ending in a point. They are smooth, whole and without any incisions on the edges, and near the form of a little fruit, the fruit comes ex fur暴涨 hanging to the twig by a foot flake; they grow in clusters of one, two, or more in the same place. The coffee shrubs are planted in a rich ground, and watered by artificial channels, as their other vegetables are, and after three or four years bearing, the native plant new shrubs, from which the old ones begin to decline. They dry the berries in the sun, and afterwards take off the outward bulk with hand mills, and the Arabs in the hottest fashion make use of the hulks roasted in the room of coffee berries, sifting the liquor made of them more cooling.

Coffee has been in fashion about two hundred years in Afa. In the year 1659, Mr. Edwards, a Turk merchant, bought a Greek slave into England to make coffee, and this servant of his, named Poyser, was the first, who kept a coffee house here.

The coffee berry is large and plump, with a greenish oil, and has a taste on the thinness: the outside has a yellowish cast and is more opaque, but when they are roasted, it is difficult to distinguish them. The white way of keeping the berries when they are roasted is, a warm place, and removing, "God is one, God is merciful, for this is the matter, for this pills it, and takes off the surface of the table: and it is left to grind it as it is used. It is observed that coffee diffuses its smell as much as oil, and almost smells as much as wheat.

Arabia is divided into six parts or nemes, Mina, mad, incense, ala, and other valuable things, their plants, nothing is more wanted than coffee, and indeed they have very little hope of any other.

S E C. III.

Of the nature of the fell, building, gardening, plants, animals, &c., of Arabia.

Traditional coffee grows eight or ten feet high, and has a gray smooth bark, the wood is white, and has not much pitch; the twigs rise by pairs opposite to each other, and the leaves on the twigs in the same manner, one pair about two inches distance from another. The leaves have foot flake a fourth of an inch in length, and are about four inches long, and two broad in the middle, from whence they decrease to both extremities, ending in a point. They are smooth, whole and without any incisions on the edges, and near the form of a little fruit, the fruit comes ex fur暴涨 hanging to the twig by a foot flake; they grow in clusters of one, two, or more in the same place. The coffee shrubs are planted in a rich ground, and watered by artificial channels, as their other vegetables are, and after three or four years bearing, the native plant new shrubs, from which the old ones begin to decline. They dry the berries in the sun, and afterwards take off the outward bulk with hand mills, and the Arabs in the hottest fashion make use of the hulks roasted in the room of coffee berries, sifting the liquor made of them more cooling.
THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

extremely proper for this sandy country, and the length of them will carry a vast berth; some few, near eight hundred weight, and with this burden will travel at the rate of about two miles and a half in an hour; having for many days gone by a few cants, some barbed or barley-mesh, or perhaps only the miserable thorns found in the sandy desert. It has four fetlocks, like other animals that choose to refer them to hold more water than it had occasion for, where it remains without corrupting or adulterating. It throws up a quantity of thistles and the like, consisting of the muscules, into the other fetlocks, to make the food.

The Arab trains his faithful camel, from its tender stage, to the hard usage it is to undergo through the whole course of its life; he accustoms it to travel fast and eat little, to pass its days without drinking, and its nights without sleep; to kneel down to be loaded, and to rise the moment it finds the burden equal to its strength, beyond which it will not suffer an ounce to be laid on its back. Its feet are adapted to the sand it is to pass over, their tough soles and spiky forms preventing them from sinking. The Arabian free-booter qualifies his camel for expedition, by matches, in which the horse runs against him. The camel, though slow and timid, easily gets its rival in a long course. With their animals the Arabian robber forms a Society, for the purpose of carrying on his trade; in the manner of it he derives all the profit, while the camel, which carries off the booty, is to have all the fatigues.

A species of horses are only fit for the saddles, and are never used either for draught or burdens: the finest horses we see in the Persian court are brought from hence, and are accustomed to run as far as forty miles; with the camel they carry off two ounces of gold, and the camel itself.

The common food both of camels and horses is barley or barley meal made into dough; but in some parts of Arabia, they feed them with cannon's meal, butter and whey, and sometimes with camel's milk dried in the sun. And a more modern author tells us, they feed their cattle at Kuficat with fish, not when they are fresh taken, but they dig a little pond and let the fish into it. The common food of fish in it, they let them lie till they are rotten and turned to a kind of earth, after which it is taken up and boiled in water, which they let stand till it is cold, and then give it to the cattle: this makes them very fat, nor do their flesh tarts amidst living on this kind of diet. They have oysters, cuttle-fishes, goats, and sealers here, but their beef and buffaloes feed it very coastwise. As to hogs they never breed any, being all Mahometans who abhor the sight of this animal. Fish and fowl they have in great plenty on their coasts; but the inland parts are indifferently stocked with either, there being neither wood nor water to be found in several days journey. Lions, bears, tygers, wolves, jackals and other wild beasts also are found in some parts of Arabia, but not in such great numbers as elsewhere, there being but little cover for them.

It is no rule for the shifts, and seldom converses with his wife or children; he values nothing so much as his horse, being seldom so well pleased as when he is sitting there on it, where it diversions are very easy, for most of them will hunt down a wild bear with an affectionable expedition. After they have roasted the bear from its place, to sit down in the plain, they then eat its carcases there by frequent overturning and turning to fire and peruses it; then watching a proper opportunity, either to transfer it with their fowls from some distance, or to come close by its side, with a peacock in its body.

When the Arabs hunt the lion, great numbers of people assemble for that purpose, who forming themselves into a circle, include a large piece of ground, of three, four or five miles compass; then the people on foot, advancing swiftly, rush into the thickets with their dogs and spears. The lion on finding, which is a little behind, is always ready to charge upon the first fall of the bear, in this manner they proceed, till they reach the bear at last, where they are left alone between the bear and the game to divide them. Sometimes the several forts of animals, as in byzans, hares, jackals, &c. that happen to lie within the circle, being driven together afford excellent divsions for the bear, which as soon as it shall receive him on his spear, which furnishes them with an opportunity of attacking him behind; and then the lion finds itself in the rear, which gives the first man time to recover. Thus being attacked on all sides, they dispatch and dispatch him.

A few directions among the Arabians, concerning the way they go, do not frighten the game with dogs, but divide themselves and with a piece of painted cloth, flung upon two reeds, walk that covered through the several brakes and avenues where they expect to find game. In this painted cloth are several holes for the fowlers to look through, in order to observe what pails before him. The sportmen, in the fight, the game, tells his flade upon the ground, and, directing the muzzle of his gun through one of the holes, thus discharges it. They do not find that there are any mines of gold or other metal open at present in this country. The King of Mowt is said to have the command of the pearl fishery in the Gulf of Persia; but they are very remote, and great advantage scarce is paid, being unable to return here as in other parts of Asia.

SECT. IV.

We do not find that the Jrahians carry on any considerable manufacture at present, but they trade with all Mahometan countries, to which they do not only send the produce of their own country, and receive the produce of others in return; but lying between Persia and India on the east, and Europe and Africa on the west, they are carriers of merchandise going through their country, either belonging to the natives or strangers; and they profit considerably by the tolls they take of foreigners, as well as by the provisions they sell to them. It was by the caravans of Arabia, that Europe, and the western part of our continent, were supplied with spices, and other such things as are in such request there. Arabick, were loaded on the backs of camels, and brought through Arabia to Egypt, and the shores of the Levant, and from thence dispersed by the Phœnicians all over Europe: and the Phœnicians, Egyptians, Ethiopians, and Jews afterwards sent their fleets to India, whilst they carried the produce of the west, and brought back the spices, and other merchandise of the east, in return. The Ver- sus, Greeks, and other states, situate in the Medi-

abate five per cent. on the pillar dollars, because they are reckoned not to be the purest silver, and 11 cent, dollar weight with the same proportions. All their coins are taken by weight, and valued according to their fineness. The gold coin current here, are ducats of Venice, Germany, Turkey, Egypt. The cowries are a form of currency, which are left them by the Pyrene, which is a horse, and, in which the face of the other, and they have a way of reckoning, by putting their hands into each other's drawers, and touching another with a centum joint or finger so expeditiously, that without ever moving their lips they can conclude bargains or contracts. But it is said there are some wits among them, who, if you believe them, are skilful in figures, as to be able by a certain combination of numbers, to form every small and useful calculation.

It is a disputable point, which is the most ancient language, the language of Arabia, but they are supposed by some to have originally the same, and yet, however, both of them being from the same original purity. The language of the Ancients of Arabia, is not present to us, but it is certain that the Arabians are under the force of some philosophers on the sea-coasts, and is taught in the schools, as well as read in places of worship.

The ancient religion of the Arabs was Sabean, even previous to their acquaintance with the people of Upper Asia; they had an instinct of the former, as well as the latter. They have some remarkable notions of God; they paid adoration to the stars, or luminaries enlivened and beautified by heavenly spirits; but there was also a religion in Arabia Deserta, not quite to rational, part which consisted of superstitious barbaric to the fun.

It has been observed by a writer of credit, that Christianity was planted in Arabia by St. Paul and his disciples, so that it received the light of the gospel very early, but, in many parts of it, that religion was much confused, if not totally repressed, long before the grand monarch Mahomet made his appearance; and, upon the being published by the Turks, they embraced his religion.

So addicted are many of the modern Arabs to superstition, that they carry about with them a paragraph of the Koran, which they place upon their breasts, or few under their caps, to prevent its evil influence. They have a great veneration for the Mahomet, who are called saints, and are persons of a rigid and austere life, continually employing themselves in counting over their beads, or in prayer and meditation. The above faithfulness to the Koran, the sects of the same, and the fanatical reverence at the Koran, provided he can keep up an equal gravity and decorum. Some of them have the reputation of being frightened with heavenly visions, and conversing with the godhead; while others, who are supposed to work miracles, pretend they are endowed with gifts which Mahomet durst not pretend to.

There are four fundamental points of religious practice required by the Koran: the prayer, the fasting, the making the pilgrimage to Mecca. Under prayer are comprehended those legal washings and purifications which are preparatory thereto; of which there are two degrees, one called Ghif, being a total lusteriness in the water; and the other Wudu, which is the washing of their faces, hands, and feet. The first is required in some extraordinary cases only; the other in the ordinary ablution in common cases, and before prayer, and must necessarily be used by every person before he can enter upon that duty. Such a thing as sufficiency or deficiency in those purifications were observed in the days of Abraham, who, they say, was enjoined by God to pray them, and was shrived the manner of the making the ablation by the angel Gabriel, in the form of a beautiful youth. Others carry the custom fuller higher, and say their religious ceremonies were taught our fathers by the angels.

In the fifth chapter of the Koran, there is this utter purification enjoined, which is performed by deflection. It is called al tas, men, denoting properly the action of taking any thing from the face, as a fine found full of dust or sand, or where the body of the parts of the body are sometimes rubbed with fine sand, instead of being washed with water. The words of the Koran are: "If ye be sick, or on a journey, or..."

or if ye have touched women, and ye find no water, take five clean laves and rub yourselves therewith." 

The pilgrims, in the praying ceremonies, the solemnity of circumcision; which, though not directly required in the koran, is yet held by the Mahometans to have been originally of divine institution, and is enjoined on children as soon as they are able to pronounce the profession of their faith. Combining the hair, parting the nails, and anointing their feet with oil, are also points of cleanliness, especially necessary to internal purification; and therefore are looked upon as indispensable duties by the Mahometans. 

In consequence of the divine command pretended to have been given to Mahomet for that purpose, every frit and confiruc Muffulman performs public prayers five times a day: this he does either in a mosque, or in some other place that is clean, after a prescribed form, and with a certain number of prayers or ejaculations; and whenever they pray they must turn their faces towards the temple of Mecca. They do not attend the public worship in elegant apparel, but dress themselver only in a becoming and decent garb. 

The women are not suffered by some of the Mahometans to attend the mosque: and the lilterate think that the female sex have no claim to the joys of heaven, as having no souls to be saved; but the more enlightened, generous, and candid, allow that women are as well intended to God as the men, and that many Mahometans think that there is a muter in heaven for apart intirely for the souls of good women. 

The wise who profess the Mahometan religion are for the most part prophets or divines; for one article of faith in the koran is, God's absolute decree and predestination of both good and evil; and whatever hath or shall come to pass, whether good or bad, proceeded, and will proceed from the divine will alone; though the felt called the Mosaisms contradicted this doctrine, as tending to make God the author of sin. 

We shall now give an account of the annual, most magnificent and solemn pilgrimage of the Mahometans to the sanctuary of Mecca, one of the most ancient and holy temples of the world, and the most sacred pilgrimage was instituted by Mahomet. A prodigious concourse of people resort to this holy temple, in the capital city of Mecca. The temple stands in the centre of the town, and hath a famous court, or square temple, peculiarly hallowed and set apart for worship: its door is of fifty feet wide; and it is covered with gold, and adorned with the most magnificent and costly emblems of the Koran; and, being of the highest order of architecture, is a place of great beauty and magnificence. 

Having entered the city, the pilgrims moved to the holy temple, and walk round it fifteen times, the three first times with a very quick pace, to manifest their readiness to fight for (what they call) the Koran, the Koran, and the Koran; and accompany their prayers with many strange gestures of the body, imitating the hammering, or high-pried; and, after having the sacrifice of sheep, repeat the value of the king, and throw stones at the devil's head, who they say tempted Abraham in this vale, when he was about to sacrifice his son Ismail, not Isaac; for their sacrifice, they say, was Ismail. They pretend, that on the mountain of Mefir, which densifies the vall, Adam and Eve wandered upwards of two hundred years without seeing each other, after their expulsion from the garden, till they happened by mere chance to meet together on the top of that mountain, when Eve threw fishes at the devil's head, for his having given Ismail a golden spur. 'Tis telling his that he threw a fish at the devil's head, where the fish is said to be the same woman whom Adam and Eve was enamoured from. From this mountain the priests deliver their puis baranges, and afterwards in the vale make such facrifices of sheep, the which is of the greatest. 

An eminent writer afferts, that when he was in this part of the globe, upwards of two thousand persons belonging to one of the caravans died in the road between Cairo and Mecca; and that the effects of such as did devolve to the priests. The northern Arab, who are subject to the Turks, receive considerable gratuities from the Grand Seignior for preventing the pilgrims from the robberies of their countrymen.

Sect. VI.

The history of Mahomet, founder of the Mahometan jepopdistical, and his jepopdistical.

M A H O M E T, or Mohamet, as fitly the Arians. 

Mahomet or Mohammed, was born in Arabia, near Mecca, in the reign of Jufman II. emperor of Constantinople; and, though literate and of a mean birth, poli&ed a most thorough education in the Koran, and was a first-rate scholar; and his father dying when he was about twenty years old, and leaving him little or nothing to subsist on, his
his grandfather Abade Muzaffar took him into his family, and, dying the year following, recommended him to his uncle, who immediately enrolled him in his business. He grew up, sent him as his factor, with a caravan, into Syria and Palestine, where he became intimate with the people, and in three years was declared to be a civilized and refined man. He added to this, his education continued in his uncle's service till he was twenty-five years of age, and then left him, and became faster to the rich and wealthy Christian merchants. He was educated by them, and in fifty years was a man of great wealth and influence. He was finally sent to Medina, where he became the pupil of the Prophet, and was afterwards declared to be his successor.

Mahomet was now esteemed one of the richest men in Meca, and from this time, it is said, he began to form schemes to obtain sovereign power. He was, however, instructed, and in the primitive way of worship, and purity of the ancient patriarchs, and that he might succeed the better, he did not patronize the idolatrous sect, but he was well-to-do. As for his religion, he was, according to the highest authority, a idolater; and, as for that, he was not a Christian, but a believer. He was, therefore, a believer, and was consequently taught to accept his religion. He was, therefore, a believer, and was consequently taught to accept his religion. He was, therefore, a believer, and was consequently taught to accept his religion. He was, therefore, a believer, and was consequently taught to accept his religion. He was, therefore, a believer, and was consequently taught to accept his religion.
religion, and the cau(e (that is, the destroying all that differed from them) the cause of God.

But he was directed his discipies to turn their faces toward their tombs, but look up toward the Jews afterwards as their mortal enemies, and observing that their countrypeople had a great veneration for the cahiers or temple of Mecca, which had for so many ages been the place where their ancestors and their devout ancestors, he ordered them to direct their devotion to Mecca, and go in pilgrimage thither, as they used to do, and many of their holy scriptures were to be renounced, to have the city to have been one of the most successful fragments. Mahomet used, to frame his new religion as to make it most acceptable to the human mind, it was, to which we hope to return, and bring over to his party.

The Jews having provoked him by taking part with their enemies, or from other affronts he had received from them, he fell upon several tribes of the Jewish Arabs, and having taken great numbers of prisoners, sold them for slaves, and divided the plunder among his disciples, which still increased the number of his followers; but receiving a defeat afterwards at Mount Glad, the people began to suffer; and some, that had left their relations in the battle, began to murmur; whereupon he told them, that it was their fault, that had occasioned the defeat, and as to those that fell in battle, they would be entided renewed, if men and women that had remained at home, the period of every man's life being fixed by God, beyond which it could not be prolonged; and as they had died in defence of the faith, they were entitled to that immortal enjoy ment, and were now alive with God in Paradise, in a state of everlasting bliss; which doctrine, he found, gave great encouragement to the inhabitants of Arabia, and therefore continued to incite those doctrines, as his successors did to this day.

Having gained a second victory over the Jewish Arabs, he put them every one to the sword, perhaps because they made such a brave resistance, as had like to have put an end to his usurped dominion: for they had imprisoned his army when a great many of them were drunk and engaged in play; and it was with the utmost hazard and difficulty that he wrested the victory out of their hands, which was the reason of his prohibiting the drinking of strong liquors and gaming.

The citizens of Mecca, in the mean time, finding him grow very formidable, entered into a confederacy with some of the neighbouring tribes, and marched with a powerful army to give him battle, which Mahomet declined, apprehending he was not strong enough to engage them in the open field: he made choice of a very strong camp, therefore, which he entrenched and fortified, and the enemy lying pretty near him, he found means to cut off some of his principal officers, who advising a retreat, delivered him from his fears; and having increased his army he marched towards Mecca, and a battle being fought between the two forces, the victory was gained by those of Mahomet, and he was enabled to join him, and those in his army who defied him, might return to Mecca. Mahomet now looking upon his authority to be sufficiently established, caused himself to be proclaimed king. He was now about the fifteenth year of the Hegira, or Mahometan era, A.D. 625. But still he retained the office of high priest, and his successors, the califs, enjoyed both offices until the fifty-third year of the Hegira, when the governors of the several provinces of Arabia preferred an independent authority with the title of sultans, leaving the califs only entitled to the ecclesiastical authority. The Mahometan princes afterwards proceeded to constitute a pontiff in their respective dominions, who is called the khan, in Persia, and mutif in parts of the old ecclesiastical authority. The Mahometan princes afterwards proceeded to constitute a pontiff in their respective dominions, who is called the khan, in Persia, and mutif in parts of the old ecclesiastical authority, but they sit as judges in the supreme court of justice; the reason whereof is, that the Mahometan laws are only the holy scriptures, that is to say, the four gospels, the epistles, and the prophecies, which were to be followed up with them, of which the high-priest and his clergy are still chained as interpreters; but then, if the mutif does not agree with God and his scriptures, but have his law, he is deposed, and another advanced to that post; so that he, the mutif or chief priest, is, in effect, no more than the papacy, which is the basis of a better religion too often are. But to proceed with our history.

Mahomet first continued to preach and perform the duties of a prophet, but afterwards, being informed of the death of a palm-trees, before his advance-ment to the royal dignity, he caused a magnificent temple to be built at Medina, and hastened the people from a present; and the Mahometans have a tradition, that the forerunners of the palm-tree grew, and that the Mahometan would have been deferred by Mahometans, and had no longer the honour to fulfill his weight.

The Jewish Arabs having become the object of this prophet's influence, he restored the people to the laws of God, and they were delivered from their oppressors; and they were set free, and were delivered from their oppressors, and they were set free, and were delivered from their oppressors, and are said to have been a part of the Mahometan nation, who had been delivered from the Jews.

He continued his course, and the Mahometans now began to be animated with a fixed resolution to carry the gospel of peace among all nations. He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.

He was the most religious man of his time; he could not be satisfied with a bare confession of faith; he was satisfied with the true and perfect observance of his religion, and was well pleased with the true and perfect observance of his religion.
the she was charged with being false to her bed, which he pre
vented. He then ordered her to be brought to the korsan,
to declare her innocence. His wife, Haphis, the daughter
of Omar, was the most respected next, with whom he
trusted in his last moments. His last words were: "I am
now death, but you have no power over me." and, where
the original writings relating to his pretended reve
lations were deposited. His wife Zeida was he was so weary of
attending to her husband's will, that she was alforded
one to be the wife of Zaid his enun
chiled slave, at which his disciples were much offended;
he composed a chapter of his korsan, therefore, wherein he
introduced God as laying the match; and this lady said to
him, that he received his other wives from their relating,
but that she was married to him by God himself.

Besides his wives, he had several concubines, and partic
ularly an Egyptian in his old age, of whom he was ex
remely fond, and was upbraided with, by his wives,
Haphis and Ayebba, representing how unjust and indecent
it was in a holy man and a prophet, to prove false to their
bed, and pursue his lucre in his declining age; which oca
sioned another revelation, wherein he makes God per
mit him and his disciples to lie with their female slaves, as is
prated by the Mahometans at this day; and in some
place, not in all Mahometan countries, the children of such
females are admitted to the new calif. Allah was fixed
for a meeting of the chief or prnces, and Abbassien in
tended them; but while he was preparing to tender the
oaths, a party of soldiers, appointed for the purpose, drew
up behind them, and they all swore before God to the oath of
Ommiyah; and Abbass, having put an end to the
 slaughters, completed his bloody transition with a most
horrid entertainment. The above inhuman calamity caused
the bodies of the Ommiyah, who had been slaughtered
by the soldiers, to be placed clothed to one another, and
covered with boards. Their clothes were torn to
pieces, and upon this flooring, formed by dead carcasses, he
 gave a punterous feast to the officers of the army. "Per
chance, did he, all of them may not be quite dead; in that case,
we shall have the happiness to hear them groan,"
Such was the beginning of the reign of Abbass, who
however was not accused of having any share in the above
miserable; nor did he enjoy the throne long, for he died at
the age of eighteen, of the small-pox.

Abbas was succeeded by his brother Abu Giaffer,
whom they called the diadem, his uncle, the infamous Abbass, was
crushed to death, with several others, by the suddenly
falling-in of the floor of a chamber in which they were
fostering. Almanse built the city of Bagdat, which was
the capital of the empire till the reign of Abbas became extinct,
whereon the Abbasien have been commonly called calif of Syr
a, being the title of the princes of that name in that
ountry. The Abbasien, who filled themselves the true children of the house of the great prophet, pos
sessed this empire for upwards of five hundred years.

The unlimited authority with which the house of Om
niyah enraptured the government of provinces, became the
cause of their ruin; the descendants of Abbass fell into
the same error; this however supported their dynasty longer
than that of the Ommiyah, but was not so splendid with regard to the extent of their authority. During their
reign, part of their empire was at several times granted
away; and the territories, thus dismembered, were erected
into as many tots; of these were the Thairisien, and the
Soaffides, who reigned in Peria, Transontana, and
turkistan; as also the Tbolimades, and Alchadsien, who ruled
Egypt under the name of calif, and, in the same time they acknowledged the supremacy of the calif of
Bagdat. But the Alchadsien were succeeded by the Fatimehs, who pretended to come of the line of
princes of Mahomet, as descenced from Halil by Fatime,
affirmed the title of calif in Egypt; thence the name of the calif of Bagdat, and supported in public prayers throughout the whole extent of their dominions.

The new dynasty professed the full and ininite sovereignty
for almost three hundred years, when, however the Egy
ptian Fatimades were at length renounced by the calif of
Bagdat, who recovered the possession of Egypt and Syr
ia, owing to the maturly conduct of Salhaddin or Sallah
id, to whom, for a sum of ten thousand silver ducats, the calif of Bagdat solemnly continued the fal traditions of Egypt
and

the she was charged with being false to his bed, which he pre
vented. He then ordered her to be brought to the korsan,
to declare her innocence. His wife, Haphis, the daughter

Soaffides, who reigned in Peria, Transontana, and
turkistan; as also the Tbolimades, and Alchadsien, who ruled
Egypt under the name of calif, and, in the same time they acknowledged the supremacy of the calif of
Bagdat. But the Alchadsien were succeeded by the Fatimehs, who pretended to come of the line of
princes of Mahomet, as descenced from Halil by Fatime,
affirmed the title of calif in Egypt; thence the name of the calif of Bagdat, and supported in public prayers throughout the whole extent of their dominions.

The new dynasty professed the full and ininite sovereignty
for almost three hundred years, when, however the Egy
ptian Fatimades were at length renounced by the calif of
Bagdat, who recovered the possession of Egypt and Syr
ia, owing to the maturly conduct of Salhaddin or Sallah
id, to whom, for a sum of ten thousand silver ducats, the calif of Bagdat solemnly continued the fal traditions of Egypt
and
and Syria; and in the bottom of this grand act of favour Naboth was carried away in a chariot, and when the chariot was drawn to the temple, being acknowledged forefathers in all countries than inhabited by misfortune.

The Turks, called Genghisians, from their founder Genghis Khan, arose after the extinction of the Fatimides. His prince, who became highly renowned for the rapidity of his exploits, put himself at the head of an army of Moguls and Tartars, and soon conquered an immense tract of land, his successors, who inherited his bravery; as well as his aptitude to insubordinates, added to their power and influence, by the princes of the other dynasties, and at length made themselves masters of Bagdad, massacred the calif and his children, and by their death put an end to the illustrious house of Abbas, which had sat on the throne upwards of five hundred years. At this period the history of the califs properly concludes; for we cannot include, among the califs, Ahmad, who was three years afterwards proclaimed calif by the Mandnys, under the name of Mofassar Billah. They called him the son of Dahir ben Nafir the Abassian; and Biban, who was then sultan of the Manilkucks, caused him to be recognized in Egypt: so that the name of the califs was configned, if the name of dynasy can be allowed to a race of princes who were only looked upon as the head of the church. This prince is said to have died in the year 1352, in the year 1357 of the Hegira and 1547 of the Christian era; when Selim, the sultan of the Ottoman Empire, overthrew his empire.

To sum up the whole, Abudeber, the immediate successor of Maimon, began his califate, in the eleventh year of the Hegira, and 64 of the Christian era. In 1408 of the Hegira, and A.D. 651. Mowzaryah began to reign; he was the first of the dynasty of Omoinys, of which Mewran 11. Hegira 276. A.D. 444. was the last: Abu-Bakr began the house of Abbas, began to reign, Hegira 350. A.D. 372, and Mofassar was the 56th and last grand Abassian calif, who began to reign in the 66th year of the Hegira, and in the 1382 of the Christian era. So that from Abudeber, the first calif that to of Mofassar, is included a space of 610 years. It is memorable of Mofassar, who began to reign, A.D. 830, that he was born in the eighth month of the year, was the eighth prince of that race, the eighth Abassian calif, attended his throne in the 31st year of the Hegira, commanded his troops eight times in person, reigned eight years eight months and eight days, died in the forty-eighth year of his age, had eight sons and eight daughters, and left exactly eight millions of gold in his treasury.

We shall here take some notice of the most ancient fortresses of Arabia, beginning with the Red Sea, or Arabian gulf, which flows from the Indian ocean, runs eastward as far as the extremity of Africa, to the north side of the Red Sea. It has its name, according to some authors, from an orient brightness peculiar to its waters, being tinged with a red mineral earth; and it has a red sand on its shores, which is frequently repugnant to its quality and nature, mixed with the red reflux of the sea, which is so violent in this gulf, as to toss it to and fro like all, and prevent its subsiding to the bottom of the sea, yet of a perfectly human aspect. Submersed people have confidently affirmed that the sand, thus borne and agitated by the turbulent waters, appears as red as blood when the tide rises, and in the midst of the sea, it will sink to the bottom. Some writers derive its name from the Greek word erythos, signifying red, especially as Erythos was the name of a king who reigned on the coast. But from whatever its name be derived, no fear can exist, more justly celebrated: the passage of the Serales through it, and the conveyance of all the rich merchandise of the east for upwards of three thousand years, have given it an immaterial name.

Mount Sinai deserves a particular description. It lies twenty miles and a half from the town of Medinah, to the north of Mecca, the capital of the Mahommedan cities, because many remarkable things happened here to that people. Here, they say, the simplicity appeared to Moses in a burning bush, and whilst the father the the desert, they which they affirm is of the same kind. Here he likewise led the flock of his father-in-law Jethro; and not far off is the rock, now called Mount Kermes, where the Israelites were fed with manna in the wilderness. There is a convent at mount Sinai, founded by the empress Helena, and dedicated to the celebrated St. Catherine, it stands at the bottom of the mountain, a gular, awkward building of unburnt brick, walled round and buck up at every entrance to prevent the incursions of the roving Arabs. The only free entrance is by a narrow way that is upwards of three feet from the ground, and to which people are drawn up in a machine by a windlass. Within the walls, which are two hundred and fifty feet long from east to west, and fifty-five feet broad, and two hundred and thirty feet from north to south, are mills, bake-houses, store-houses, and every office necessary to a feudal society. Here is the throne of St. Catherine, the relics are deposited in a marble chest, whereon are carved several pieces of foliage in buff reloivo. Another mountain, called Mount St. Catherine, is situated near mount Sinai: to the former place the body of St. Catherine was brought, after her martyrdom under the tyranny of Alexandria. It overtops mount Sinai, and its top is a species of speckled marble, in which are seen beautiful configurations of trees, and other representations of the like nature in the vegetable world.

With respect to the remains of Palmyra, as able writer observes, that "Nothing but ocular proof could convince any man that fo fabulous a story, formerly ten miles in circumference, covering the whole of the desert, is not now a manmassed, uninhabitable sand." Nothing, however, is more certain, than that Palmyra was formerly the capital of a great kingdom; and, that the name of the earth, is the pride as well as the principal ornament of the eastern world; and its merchants dealt with the Romans and the western nations for the merchants' and luxuries of India and Arabia. Its present altered situation, therefore, can be accounted for only by natural causes, which have turned the most fertile tracts into barren deserts.

There is no part of a tour through the east so difficult a journey to Palmyra, it being situated in a desert valley, at a distance from any common road, and beyond the Grand Seignor's protection. We shall now proceed to a description of the ruins of this place, than which no profect can be conceived more romantic, more melancholy or more grand. Here are immense piles of Corinthian pillars, without any intervening building, or wall of the least solidity. A traveller, who, with several others, spent fifteen days at this place, remarks as follows: "The walls of this ancient and fabulous city, were flanked with square towers in many parts, particularly in the south-east, but nothing of them exists; and from the least compaction of them, I imagine their circuit could not have been more than three English miles, provided they included the great temple." He further observes, "We have but little information from history, of either Balaam or Pharaoh, but we possess, knowledge we have at first impression. Does not this defect convey instruction, and convince us of the instability of human greatness? But the distinctiveness of the place differs from each other; we have no testimonies of what they were, but their own noble fragments." Palmyra (continues he) in the highest degree, excels the ruined remains, because the situation, the aspect, the light which reflects the temple itself, is a most awful spectacle. As you approach, the first object which presents itself is a grand ruined citadel, on the north side of the city. From it you defy Tadmor, inclined on three sides by long ridges of mountains; southward of it is a vast plain extending far beyond the city. The city itself has been of large extent, mixed up by the sea, having been raised up by its ruins; among which live about thirty or forty miserable families, in tents of dirt, within a deserted town which, once composed of a vast race of people, has, on the top of a lofty wall of large square stones, adorned by pilasters both within and without: there are about sixty in each side. The beautiful columns have been beaten down by the Turks. Towards the centre are the remains of a cela, throbbing the fragments of a temple of exquisite beauty, as appears by what is still standing of its entrance, namely, two stones from the face, twenty feet long, covered with vines and clusters of grapes. In the great court are the ruins of two rows of very noble marble pillars thirty feet high, with capitals finely carved, and the cornice must have been of equal elegance; fifty-eight of these pillars are entire; the flower of the most have been more, as it appears they were to have been a most famous double piazza. The walls on the west
The plain text representation of this document is not possible due to the image quality and orientation. The text appears to be related to geography and contains some references to a view of the ruins of an ancient temple.

125

dred years old. The most perfect place of antiquity is a mausoleum, upwards of one thousand four hundred years old, with the flooring intact, and an inscription still legible. Information is given that it was built by the Roman general Mucius, as a burial place for himself and family, in the year 314, which answers to the third year of the Christian era. On this site the magnificent city of Palmyra is mentioned, in the Arabic translation of the Chronicles, as subsisting before the days of Solomon, but John of Antioch informed Malula, 685 it was built by Solomon, on the very spot where his father flew the philistine chieft, and he affirms, that in conmemoration of it, a most noble structure was built.

On the summit of a rocky hill, north-west of the ruins of Palmyra, stands an antique castle, the ascent to which is very steep and rugged, being broken down. There is one building here, the remains of which are extremely grand; and as it is affirmed to have been the temple of the sun, which being much injured by the Roman soldiers, when Aurelian took the place, the emperor ordered for the purpose of repairing it, three hundred pounds weight of gold, taken from the treasures of Zoroaster; and one thousand eight hundred pounds weight of silver, levied upon the people; besides the jewels of the crown. The height and solidity of the walls of its court covered the Temple to convert it into a place of strength, and then on the north and south they sloped up the windows, dug a ditch to the wall, and demolished the portico of the grand entrance; building in its place a square tower, to flank that side. To the east and south of this temple are some plantations of olive, and some small fields of corn, surrounded by mud walls and walled by two feet. The CAPITOL, the beautiful columns, and the magnificent marble stones, are by the inhabitants deemed very wholesome. One of these stones rises well out of the ruin, in a groove nearly high enough to admit a man's standing upright; the whole bottom is a bed of clear water, about two feet deep; and the place on account of the heat being continued, is used as a bath. It is a source of infinite advantage to an Arab, who, on an altar faced to Jupiter, we learn that this temple was never overthrown while Palmyra flourished, and was under the care of certain relics, which by hatched for this use.

Three or four miles south-east of Palmyra, in the desert, lies the valley of salt, whence Damascus and the neighboring towns are supplied with that commodity. On this place, it is supposed, David found the Syrians, as mentioned, a Sam. viii. 13. The ground is impregnated with salt to a considerable depth, and here they have a method of hollowing the ground for the purpose of remarking it to ten or twelve feet deep, and the white salt is gathered from the rain water that lodges in it.

C H A P. VIII.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF A S I A T I C T U R K Y.

S E C T. I.

TURKEY in Asia forms a grand division of the Turkish empire, comprising nearly square and extending about two thousand miles each way. It abounds not only with the necessaries, but with all the luxuries of life, and contains some of the most fertile and picturesque provinces in the universe. It is inhabited by the most industrious people, and the most indolent people existing. The Turks, who were the progenitors of the Turks, were a people of the same name, a branch of the Scyths, and wanted to the ancients at the time of the Roman empire, the Romans, in the country now denominated Koson Tartary, but led rampaging lives, and were reduced to the same state of depredation by another people, which was called the Tartar, and the Tartar, or Goths, the shores changed, and they could find pasture for their cattle.

This country is situated between twenty-five and forty-five degrees of north latitude, and forty-one and forty-five degrees of east longitude. It is divided by four into eastern, western, and southern, and by others into eastern and western: the latter comprehending Syria, Palatine, and Anatolia, or the Lesser Asia; and the former Iberia, Tuscany, and Georgia. It is bounded by the Caspian and the Black sea, on the north; by Persia, on the east; by Arabia and the Levant on the south, and on the west, by the Euphrates, the Caspian sea or Archeipelago, which separate it from Europe.

The principal mountains are those of Olympus, Ida, Taurus, Anti-Taurus, and the Thracian mountains, all of the same name in Attica, or the Lesser Asia; Mount Caucasus, now called the mountains of Daghbak: the mountains of Armenia, among which is Mount Ararat, where the ark rested for the north part, near the banks of the river Moros, in the country now denominated Kobs Tartary, but led rampaging lives, and the other; the river for the north part, near the Arkansas, which is called Persea and Turkey, and the mountains of Palestine, particularly Mount Hermon and Mount Lebanon.

The seas bordering on this country are, the Euphrates or Black sea; the Euphrates, or sea of Constan tinople the Propecon, or sea of Mesopotamia, the Halbeppus, or sea of Araped, or Archeipelago, which divide Asia from Europe.
and the Levent or White Sea. the Turks call it, being the head of the Archipelago, on which may be observed the gulf of Persia or Bosphorus: these seas, and the Red Sea, which divides Asia from Africa, make a part of the chain of lakes and seas that extend from the Caspian to the gulf of Persia or Mesopotamia. 3. Cardisus, or Adria. 4. Tarsus, or Armenia, and 5. Georgia, comprising Monetria, Immeria, and Oce of Cilicia.

II. The Western Division contains Natalia, or the
Leper Asia, divided into, 1. Natalia Proper. 2. Amasia, Adalia, and 3. Southern division contains Syri and Palestine, or the Holy Land.

The Arcads are an antiently called Chaldea, and sometimes reckoned a part of Babylonia; at others, a province of Arabia. It lies between thirty and forty degrees north latitude, on both sides the rivers Euphrates and Tigris, having Persia on the east, and Arabia Deserta on the west.

The chief towns are Bagdad and Baffora; and the ruins of Babylon and Seleucia.

Bagdad, the capital, is situate in forty-three degrees of eastern longitude, and thirty-three degrees twenty minutes north latitude, upon the river Tigris. It was built by Mahomet II. chief of the Saracen, on the western side of the river, and about the year 1050, another town was built on the east side of the river, and both united by a bridge.

It continued the capital of the Saracen empire, till it was taken by the Tartars, in the middle of the thirteenth century, when a period was put to the Saracen empire. 

The river Euphrates is a great stream, running from the fountain of Babylon, and the mound of Nineveh, little inferior to Babylon, running upon the Tigris, which, from its rapid stream, obtained that name.

Grande Signor's title.

The Tigris and Euphrates rise in the north, and taking their course south-east, divide the fine plain of Mesopotamia (now Diarbeck) which is by some supposed to be the seat of Paradise. Certain it is the city of Babylon, the full, the largest, and the most beautiful town, that ever stood upon the earth, was situate here, upon both banks of the Euphrates, the river running through the middle of it.

Then, but the Tigris and Euphrates, the rivers below Babylon, and then, dividing again, fall into the Persian gulf by several channels below Bosphorus, from which they are called the rivers of Bosphorus: the city of Ninave, little inferior to Babylon, stand upon the Tigris, which, from its rapid stream, obtained that name.

Both the Euphrates and Tigris, running south through Syraceliopolis, falls into the Levent Sea.

A little below Antioch, which city stands upon it.

This great stream of sea, between Sinope and Chersonesus, or the river of Thracia, falling a great deal before they enter the Levent Sea, makes two lakes, the first called Merom, of small extent, and dry in summer; the second called the sea of Galilee, the lake of Tiberias, or lake of Gennesareth, of one hundred and forty square miles, and forty miles in breadth.

The Dead sea, as it is called from a false opinion, that it killed even the birds that flew over it, is, by experience, known to be such terrible name; it is, in fact, extrememly salt, and the water thereby strong, that it will hardly admit a homin body to sink, and has lttirninsen trench: it is laid to entertain no fish, or other living creatures: but in regard that fish-beds are found on its shore, there is reason to doubt the truth of that opinion. Its extent is forty miles from north to south, and from east to west, and was formerly a plain, wherein stood the cities of Sidon, Cnemel, Admal, and Zebaim, destroyed by fire from heaven. The other river is the Jordan, and some authors three; it generally falls into the Mediterranean Sea, and Jabob and Ar-

S E C T. II.

Contains a description of the divisions, provinces and towns of
Africana Turky: and of the eastern division, namely, Euphrate Arabes, Dilchies, Cardisus, Taracsi, and Arabia, with the cities within them.

A S T I C T urky may be divided into three parts.

1. The eastern division; 2. The western division; and 3. The southern division.

I. The eastern division contains, 1. The provinces of Euphrate Arabes, Dilchies, Cardisus, Taracsi, and Arabia, with the cities within them.

2. The western division;

3. The southern division.
tained by the companies for the better carrying on their
commerces with China and other eastern parts, their
dispatches being forwarded to England and Holland by the
way of the Bosphorus and the Euphrates; and the
Turkish courtiers, who are all exceedingly extravagant. The
Dutch trade here with spices, and the English with pepper,
and tobacco. The Euphrates is navigated by Armenian, Indian, and
Persian merchant vessels, and all the richest commodities of
India and Europe are sold in it. The town of Bagdat is,
whereof the city of Bagdat is situated on the site of a hill, to the east of
the Euphrates, in thirty-eight degrees fifteen minutes of eastern
longitude, and thirty-five degrees forty minutes of northern
latitude, a hundred miles south-east of Aleppo, and is a great
thoroughfare to Persia; it has two large mosques, one for its
Christian, on the banks of the river, and a garrison of about two hundred
and four hundred pages, commanded by a fanjebe; two
small rivers run through it. The Euphrates would be navigable as high as
this city, if there were not some cascades and rocks in it, which hinder the
transporting of their merchandise to Bagdat. Here are all kinds
of provisions in plenty, particularly bread, wine, and fish.
The neighbouring territory is pleasant, fertile, and well
cultivated, except the salt marshes, which are innumerable, and
richer still. Caravans are not allowed to enter this
city.

Orfa, or Orba, supposedly to be the ancient Edik, is
another very considerable town, situated on the Euphrates,
in forty degrees of eastern longitude, and thirty-six de-
grees forty minutes of northern latitude, where the
caravans, travelling from Turky to Peria, usually set off eight or ten
days, for here live the people that let the horses and mules
for the shoemakers, and for the journey. Orfa is the capital
city of Mecopotamia, and anciently the seat of
Babylon. It was in the place where Abraham dwelt. The first thing they
sent foreigners is a large fountain, the springs whereof are
under the foundation of the present mosque in the
middle of the town. The Christians have a tradition here, that this was the
place where Abraham prayed before he sent to sacrifice his son Isaac; and
that two springs of water arose from the
place where he knelted. These feed the large fountain
above mentioned, and they will not suffer any perfumeto
be used in the areas, whereof they pull off the
flowers, and it is with difficulty that a Christian is permitted to
see it. The inhabitants are many of them
Armenians Christians, and are distinguished for
divine service in their churches. Here are also to be seen several
ancient tombs of the Christians, in groves, on the neigh-
bouring mountains.

The walls of the city of Orfa are of free stones, with
towers at convenient distances; but the town is mainly
built, and several ruins in it; it is without
fortifications; it is governed by a basil, and has a garrison of six or seven
hundred pages, and about two hundred Janissaries, these
being much more occasion for horses than fans, to oppose
the incursions of the Arabs, who frequently cross the
Euphrates, in hopes of plunder. There are several pleasant
groves near the walls, watered by artificial channels, and the
soil produces good wine; but what Orfa is most
remarkable for, is the manufacture of yellow maroquins, or
Turky leather, as we call it; the red is made at Darrach, and
the blue at Tocar.

The city of Nebitn, or Naftin, situated about thirty-
five miles from the Tigris, is the residence of the
governor of the province. It is divided into two wards, each on an
eminent ridge, with a large tract of plowed land between. This
garden is a pretty spot, and is remarkable in the
province. However, it is a little too fertile to be
recommended to the gardeners, whereof the soil is excellently
suitable to the cultivation of cattle; however, it is a
fit spot for the cultivation of fruits, and the
soil produces good wine: but what Orfa is most
remarkable for, is the manufacture of yellow maroquins, or
Turky leather, as we call it; the red is made at Darrach, and
the blue at Tocar.

river at this place, by which it has a communication with Affia or Carduian. The falls on this side of the river is exceedingly barren, but on the opposite it is very fertile. The height of it is nowhere less than 200 feet, and the number of its falls, out of doors from two hours, is a delight to the eye after a long and distressing journey. There is likewise a magnificent and dangerous cataract, which presents a scene of horror and dread to the beholder, and turns its waters a black as a coal. When the people perceive their danger, they fall flat on their faces, and frequently throw stones at each other, and at the same time, when they are in the banks of the river, but not on the water, and is deemed to proceed from sulphurous vapours, which are kindled by an arm of the sun, and sometimes by the heat of the day, andangers, injures the lungs, inflames the blood, and parches the skin, or rife it into blisters, and occasions it to peel off. Up this course Arabic, a kind of

back made of a soft black crape to preserve their eyes. But if, after all their precaution, they become inflamed, the afflicted person anoints them with a true made of a mixture of sugar and long pepper fit for very fine.

Merdiv or Maidin, is situated on the west side of the Tigris, between Mosul and Bagdad, and about twenty-five miles from Diarbek, in thirty-seven degrees fifteen minutes north latitude, and forty degrees east longitude. It is about five miles in circumference, surrounded by a stockade, and defended by a natural situation, and has a garrison of four hundred and thirty-two men in compacts, which is situated upon an almost inaccessible rock. The castle abounds in fine springs, and several wells, which are both sweet and healthful, and have a continual supply of water, and is most convenient for a town, and the length of the town and the width of the river, and that they are not left addicted to swindling and plundering the caravans than the Arameans; but this is not to be wondered at, for many of the kings and principal people, among them, have their mansions, which are in the form of an oval, and are surrounded with a wall, and are called Ariatic.

Tobacco has been cultivated here for many years, and is very considerable. There are also other lids considerable cities and towns in this latitude, as Mosul, in thirty-seven degrees thirty minutes north latitude, and thirty-nine degrees ten minutes east longitude. It is situated in an island in the Tigris, the wood long, broad, and large, and the field is temperate and fertile; the territory rich and fruitful.

There are a few other little considerable cities and towns in this latitude, as and others, in thirty-seven degrees thirty minutes north latitude, and thirty-nine degrees ten minutes east longitude. It is situated on an island in the Tigris, the wood long, broad, and large, and the field is temperate and fertile; the territory rich and fruitful.

III. We shall now proceed to give a description of Turkish Carduian, or Affia, for the most easterly part of Carduian is under the domination of the Persians. This province has Armenia or Turcomania on the north; Persia or Carduian on the east; Chaldea on the south; and Diarbek or Medopotamia on the west; and is said to receive its name from Affia the son of Shem. In this country the famous city of Nineveh once flourished, on the eastern bank of the river Tigris, and to the place were the Mosul now stands. This town was sixty miles in compass, or three days journey according to Josiah: twenty miles being an ordinary day's journey for a man on foot. The people of this city are said to be of a very industrious turn, and to be surrounded with good walls and ditches, well supplied with springs and fountains, and furnished with a good flock of provender. The Tigris washes the western skirts of this province, and the Lycus, Caprus, and Gorgias flows through it at almost equal distances; the first derives its name from a wolf, the second from a goat, and the third is the Zephyr of Pilay. The Curds, in fine weather, drive their herds and flocks about, in search of water, and in the winter stay out for plunder, the women manage the cattle, and make butter and cheese. Their drink is either milk or water. This kind of milk is thick and heavy, and very pleasant to drink; but it is not as good as that of the Abruzzo.

The Tigris, on the other hand, is a river of great distinction, and is a common object of admiration, being about two hundred feet high, and to have had twelve hundred and fifty towers upon it, each of them two hundred feet in height. The height of the fall extends for a great distance, but there were large gardens and spaces between them, as in Babylon. It was under the dominion of the same prince, who used to refer to as the king of the world, which presents a scene of horror and dread to the beholder, and turns its waters a black as a coal. When the people perceive their danger, they fall flat on their faces, and frequently throw stones at each other, and at the same time, when they are in the banks of the river, but not on the water, and is deemed to proceed from sulphurous vapours, which are kindled by an arm of the sun, and sometimes by the heat of the day, and injures the lungs, inflames the blood, and parches the skin, or rife it into blisters, and occasions it to peel off. Up this course Arabic, a kind of black made of a soft black crape to preserve their eyes. But if, after all their precaution, they become inflamed, the afflicted person anoints them with a true made of a mixture of sugar and long pepper fit for very fine.
they bad their oxen with wives, children, and houfes, which are taken to pieces for the purpose. These people are generally remarkable for their ugly faces, dark complexions, wide mouths, black hair, and fcrotic affections; nevertheless they are very fدت, and nimble, and, while children, are, in a fmall space of time, as nimble as they are now. The Caras acknowledge no fubjection either to Turks or Ruffians.

The public revenue of this province is computed at about eight hundred thousand Dollars, which, however, is a little more levied on the Armenian and Greek Christians, and besides what is levied on the merchandise of the caravan, which is reckoned to amount, in the whole, to nine per cent.

Arbel lies on the fouth fide of the lake of Van, in forty-five degrees thirty minutes of equal longitude, and thirty-seven degrees fifty-five minutes north latitude. The bay or foreborn of this town, and the territory about it, is, in part, independent, and is f舜d and his country lying on the north of Persia, and very conveniently fubjeft to either. It is a mountainous trufh, almost inaccaflible; and he can, by taking the paifes, cut off the communications both between the Turks and Perfians, therefore, think it the interest to keep fair with him.

As you approach Bethl, you muft travel a whole day among high steep mountains, from whence there fall pro- digious torrents in the wet fason. The way up to the city cuts through the range of防护, in near a cafe to a camel for a path. It is built round the hill in form of a fugar loaf, and flands at an equal distance from two other mountains, but is protected on one fide by the river Lycus, and on the other by the river Genufus, which is a neat fogular building. The bafoon of the fame form, and throws out two streams of water as thick as a man's body.

The city is nearly 170 miles in circumference, receives many rivers into its felf; and contains feveral inlands, two of which, viz. Lindai and Alademian, are confiderable, each having little villages and a monastery of Armenian monks on it.

The next confiderable city to Erzerum abovementioned is Cars, or Cars, five and forty fix leagues by the river Arpigi, and thirty leagues by the river Aserk, in forty-two degrees odd minutes north latitude, and forty degrees fifteen minutes eafh longitude; it is large, and flands at the head of a high craggy mountain, on which there is a fortress, the mufle, which commands the town and country, and has a strong Turkifh garrifon. The lake produces a variety of fine fish, particularly one of the fable kind, great quantities of which are exported to many different places, as well as consumed at home, being sold in fances, and eaten in the fortune manner as anchovies. The lake is one hundred and fifty miles in circumference, receives many rivers into its bow, and contains feveral inlands, two of which, viz. Lindai and Alademian, are confiderable, each having little villages and a monastery of Armenian monks on it.

The country about it, though naturally fertile, is but very little cultivated, through the idleness of the inhabi- tants.

The town of Arv, or Arv, is situated in forty degrees ten minutes north latitude, and forty five degrees odd minutes east longitude. It is about two miles in circumference, fur- rounded by a double wall. The inhabitants confit of near twenty thouland Turks, and fix thousand Armenian Christians. The Armenian merchants manage all the trade of the Levant, and are in fact the great merchants in the university. Many of them are to be found in Italy, France, England, Holland, and in the pro- munerions of the Great Mogol; all over the Turkith and Perifh territories, in Siam, Java, the Philippine iflands, and all parts of the cafe. Excepted are: they are in gen- eral of a dark fkin, with black hair, and black eyes; the Turks are generally of a light fkin, with brown hair, and brown eyes.

Most of the Turks are called janifaries, giving a fum of money to the age to purchase that privilege; but the greater part of them is mere slaves, and in that fubjeft to the command of the haughty gives them great authority, as they are liable to be called to account by none but their age, and can only offer a difobedience to that. People cloathed in grey are often obliged to excl their felves in this body, to prevent their being exposed to the violence they people commit; and though they are usually violent in their motions, they never take

No. 13.
The public square, or piazza, is handsome; and the basar or market capacious. The public buildings are elegant and large. The river Zengec issues from the lake of Erivan, which is situated twenty miles west of the town, and contains an island, with an Armenian monastery, the monks of which live in an uncommodified state, and are free from all taxation. Though the lake which surrounds them is plentifully supplied with the most excellent fish, and their little island abounds with a variety of fruit, they are neither rich nor poor, but live on the fruits of the earth, and are thus furnished with the means of support which they require. They are, however, obliged to cultivate the ground, so that they may obtain a livelihood, and the produce of their labors is sufficient to support them. This is the residence of the great patriarch of the Armenians, under whom are forty-seven archbishops, who have each four-dozens suffragans. The archbishops and suffragans usually reside in the same city. Every Armenian, above the age of fifteen, is obliged to pay five-pence annually to the great patriarch, whose revenue amounts to about six hundred thousand crowns, but which he pays a considerable tribute to the Porte.

About seven leagues from the Araxes flows the Zandak, and just below the town is the residence of the ancient Armenian kings. It is built upon a plain which Hannibal gave to king Artaxerxes, who made it the capital of his dominions. This city contains many basar, caravanserai, public baths, coffee-houses, handsome streets, &c. It is in thirty-nine degrees of latitude, seventy-five and five minutes east longitude, and stands about sixty-three miles south of Erivan, which was in 1635 ceded by the Turks to the Persians.

On the Araxes stands Sulph, or Old Sulph, to distinguish it from the New, near Ispahan in Persia; the same river, it is supposed, that was celebrated about the 17th of February, 1697, and won the residence of the ancient Armenian kings. It is the residence of the present patriarch of the Armenians, who is the successor of the ancient kings. It is seven leagues from the Araxes, and is surrounded with a wall of brick, and a moat.

The Araxes flows Sulph, or Old Sulph, to distinguish it from the New, near Ispahan in Persia; the same river, it is supposed, that was celebrated about the 17th of February, 1697, and won the residence of the ancient Armenian kings. It is the residence of the present patriarch of the Armenians, who is the successor of the ancient kings. It is seven leagues from the Araxes, and is surrounded with a wall of brick, and a moat.

principal rivers are the Kur or Cayrus and the Araxes; the first rises in the Medowat mountains, and discharges itself into the Caspius. The second springs from an unparallel line of mountains which separate Iberia from Colchis, and falls into the Caspius.

Tribus, situated in forty-two degrees, forty-four minutes of north latitude, and forty-seven degrees five minutes of longitude, and is one of the best in Asia; it is a large prairie, with a few strong and habitual. It contains fourteen churches, fix belong to the Georgians, and eight to the Armenians; the cathedral, called Sion, is a fine edifice, built near the river. A large plot of land is supported by some lofty pillars, rises in the middle; the inside is filled with miserable Greek paintings, and the bishop's palace adjoins to it. The inhabitants of this city are thought to amount to twenty thousand.

There is a large torrent on the declivity of the mountain, containing an arsenal, a market, and a public square. There is not a single mosque, which is remarkable, as the city belongs to the Periand, and the prince himself has usually been a Mahometan, but prince Herselias, who is supposed to reign in Georgia at present, hath attempted to throw off both the Turkish and Perian yoke, and to prevent the inhabitants from feeling their progeny as slaves: it his hoped is laudable endeavour herein will prove successful.

Their staples commodity is fruit; but great quantities of new silk are sent to various places, as the Georgians know nothing about this manufactory. That is, for the great part, the houses are built of stone, but the generality are only erected with mud and brick and are low and dark. This may be owing to the very beechy state of the country, and the agreeableeither in wet or dry weather. The palace of the prince is a lofty building; it is adorned with extensive gardens, fountains, sculptures, &c. and安全管理 of; for it is there a large garden surrounded by hedges. Many tolerable houses and fine gardens render the environs very pleasant. The prince's house is the finest in the city, and the capachia's manufactory is pleasant.

The Georgians deal by way of barter; travellers have there an opportunity of procuring the most excellent provisions in great quantities, in exchange for necklaces, rings, bracelets, knives, pins, needles, &c. They have no weights or measures, and are such bad adulteraters, that they cannot count an hundred. The Italian fathers receive from Rome but twenty-five crowns each annually to maintain them; but are permitted to practice phyic, of which they know very little. If the patient dies, they receive no pay, and if he recovers, files, wine, cows, sheep, are sent to the convent, by way of gratuity.

A merchant in Georgia, is leas respected than a mechanic; and a mechanic less than a husbandman. The principal merchants and traders are Armenians, whom the Georgians know nothing about. They have for the coast, the town of Taffha, but some of it is the only place of the house of the prince, who is extremely proud of it, and never permits himself to be mentioned by it, as at times observing, that nothing is so noble as executing justice, and that the safety of the state depends on the extermination of crime.

When a war happens between Turk and Peris, this country (like Flanders in Europe) is usually the seat of it. In 1578, the Turkish forces, under the command of Mustafa, took Taffha; but the Perians coming to the assistance of the Georgians, the Turkish troops were defeated and twenty thousand of them slain. In 1593 hollclty was recommended, but the Perians were again victorious.

Besides what is usually allowed to the prince of Georgia, by the other monarchs of the East, he has the duty of Taffha upon branczy and molyes, and one sheep for every hearth in the whole country, amounting to forty thousand; the crown exactshipp him with wine, but the proffitors become rich. If any man can trade his linens among his ancestors, he is extremely proud of it, and never permits himself to be mentioned by it, as at times observing, that nothing is so noble as executing justice, and that the safety of the state depends on the extermination of crime.

Existent demand, some of his quondam friends very obligingly tell his wife and children for fluxes, to raise the money for the care of their youth; but the prince then says main, and afterwards lays a letter upon the breach of the corpse, which is only a complimentary card to St. Peter, and afterwards, that the funeral expenses was honestly paid; and to interest him therefore to be obliging as to open the gates of paradise to the departed soul; the body is then wrouth strong and handsome, and the same afternoon of sending a note by the dead to Mahomet, is practiced by his disciples.

The Georgians are generally more ignorant than the women, with the exception of the Muscovy; their language is remarkable for its beautiful simplicity. And with respect to the country, in general, that ingenious traveller Mr. Frontz, observes, that "Paradise must undoubtedly have been in the way between Eridane and Taffha, if it be allowed to take the Phasis for Pityon, and Araxes for Gibon; and then, not to remove paradise far two feet from the heads of these rivers; it must of necessity be placed in the beautiful vales of Georgia."

Mingrelia, known to the ancients by the appellation of Colchis, lies in the western parts of Iberia or Georgia, and is bounded on the east by Georgia properly so called, on the west, by the Euxine sea; on the north, by mount Caucasus; and on the south by Armenia and part of Pontus. It is watered by many rivers, namely the Kora, Hippos, Cynurus, Chaniouris, Ophir, of which the last is the Argonauts landed. All the above rivers empty themselves into the Euxine sea, but none of them are considered, except the Euxine, as hallowed by the saris. The inhabitants of this celebrated mountain are lad, by the most credible writers, to have little befeide speech, which are, after art, prayer, and writing; and their libraries are very small, their books are not well-made, their looks are fierce, and indicate the savage disposition of their minds. They are the most daring, voracious, and distressing robbers in Asia Minor.

This country is in many parts extremely woody, very uneven, full of hills, and but little cultivated, the soil is bad and sterile; and the fruit ill-tasted and unwholesome, except the grapes, which might be esteemed as some of the best wine in the universe, if the natives knew how to make it. The rains and humid vapours, which mingle with the hot exhalations frequent here, occasion pestilences, and a variety of other diseases. The earth is so moist, that the few who turn their thoughts to agriculture, foliage their wheat and barley without plowing; and for their other foods they turn up the land with little wooden ploughs, which are sufficiently strong to make the furrows in so soft a soil.

Colchis was said by the ancients to be exceedingly pleasant and fertile, and even to abound in mines of gold, which gave rise to the celebrated fable of the golden fleece, and the Argonauts. And the expedition which they undertook is said to catch the golden duft, which was brought down by the torrents from mount Caucasus, by lifting pieces of wood scarce a foot square, upon which the wind has blown down, that have plenty of beese, houses, wild boars, flags, and other venison: likewise partridges, pheasants, quails, &c. On mount Caucasus, and the mountains between it and Persia, are lizards, wolves, and jackals bred.

They make their bread of a small grain called cormm, it is agreeable to the taste, fabulous, cooling, and savoury, but the people of quality eat wheat bread. The principal food is beef and pork, the latter being excellent. The nobility spend a great deal of time in killing and catching game, both as pleasures, water fowl, &c. but their favourite diversion is flying the falcon at the heron; which is no fooner taken, than they cut the beautiful tuft of feathers from its head and let it go again. They have a great number of excellent horeses, which are never fed nor fed with corn.

The heat there is very interferrd over the country; but there are no towns except two little ones by the sea-side. With respect to cattle, there are about ten in number, in the principal of which, named Roos, the prince keeps his court to their cattle, &c. are built of brick and the height of about fifty feet, in the midst of a wood. Here their treasurers are depôited, though the garrisons confine only of about fifteen men, but they are not only a great store of provisions, built of wood, which likewise serve for places of retreat upon emergencies. They have many huge huts made of branches of trees, canes, &c. which are so secure in their retreats, that none can come at them, but by one winding narrow passage, which is always stopped up when they are in an attack of an enemy. They
They build their houses of wood, but never rise them above two stories. They have neither windows nor chimneys. The whole family, with the cattle, all lie in one room at night.

With respect to the natives of Mingrelia, the men are well-proportioned, and the women pretty, but they paint their faces and eyebrows; they wear their hair in curled rings, and wear earrings, but women, luxurious, toreadores, and ferocious; destitute thieves, and glory in the practice. They think it prudent as well as lawful to have many wives, because they bring them to many children, whom they sell for money, or barter for necessities: when children, however, come too quick, they murder them without the least remorse; so they also do the fick and aged, who are deemed all of benefit to nobody. Adultery is thought but a trifle: when a man detects another in familiarity with his wife, he obliges him to pay a hog, which being immediately delivered, all three sit down very lovingly to feast upon it together.

The peasants are compelled to maintain the lords, who sell them and their whole families whenever they think proper. They are the parasites in all disputes between their vassals; but when there is a quarrel between any of their great lords, they have recourse to arms. Bows and arrows, swords and lances, are their hostile weapons.

The lady fuffer very little of their beard to grow, but those of the men is of a singular beauty. They fix the hair back, leaving only a little hair upon the forehead and round the ears. Their bonnet is made of felt, and in winter is lined with fur, but is not of much worth to them, for when it rains they put it in their pocket, and go bareheaded to fave it.

They are so poor, that the common people go almost naked, and have only a covering of a triangular form, which they turn around, and under which they wear a shirt, but have seldom more than one at a time; and that they only wash three times in the year. The shirt is tucked into a pair of breeches, and on the top they wear fantails made of the untanned hide of a buffalo, which are fastened with thongs of the fame. They wear shoes made in the winter.

Both sexes of every class eat together. Thus grooms and scullions dine daily with the king and queen. On holidays they are entertained with shore, and the matters have fish and pulse, and the infirmities nothing but gout. Both sexes usually get drunk at their entertainment, and the men are in the chief of their thirst, and the women of their amours. If the weather will permit, they dine in the open court.

The revenues of the prince are estimated at about twenty thousand crowns per annum, which are raised by fines, impostums, the sale of flaves, and duties on all imports and exports; he spends very little of this money, for his own hands and those of his domestics are more than sufficient to maintain him, and the people are obliged to work for him for nothing. His forces are principally cavalry, and do not amount to above four thousand active men. Every lord lends his own battle, but they are very oddly disciplined. They have money which bear the Persian stamp, but is coined in Georgia, the value of which is always fluctuating. All commerce is carried on by barter.

Though the Mingrelsians profess to be Christians, they are exceedingly ignorant in all religious matters; few of the clergy can either write or read, but they greatly impohe upon the people, by pretending to divination. When a person is sick, the priest is sent for, not to pray by him, but to predict what will happen; having one and a book, he gravely looks in it, though he is unable to read a line; then flattering the book sufficiently, he declares that the patient will invariable die, unless a very handsomely present is made to himself. The sick person being greatly terrified, intends the priest to take what he pleases. The common people consider this lodging, but pack up whatever he can lay his hands upon, and drives away all the poor man's cattle into the bargain: thus do the ignorant clergy plunder their superfluous people.

The governor allows the catholics four hundred vassals, who are obliged to work for him, that he may be supplied with whatever he wants. In return for their labour, he does not give them any pay, but takes away their wives, and sells their children for slaves. Sometimes he makes them a tour through whole districts, which extends not over twenty miles, the Mingrelia, Guriah, Ache, and Mount Caucasus. In these excursions, he does not attempt to regulate the pastors, or enfranchise the people, but forces them, as it were, to carry their clergy and laity of all ages he can find. The Catholics has fix bishops immediately under him; and they make the whole Christian religion consist in the abasing from thefts. They neither preach nor pray, and the pastors are young men, being to give the people their daily bread: it is therefore no wonder that these people have been deemed by travellers some of the most abandoned rufhers upon the face of the earth.

After baptizing a child, which is done by immersion, priests, parents, godfathers and guests indulge themselves with mutton and roast geese and mutton. No wonder when an Englishman says to a man a wants a wife, he must buy her: a tolerable good price is given for a virgin, for a, widow, and leaf of all for a woman who has been already married. They may divorce their wives either for barrenness or ill-nature; but keep their dead forty days above-ground, during which time they mourn; but after the body is buried, they get drunk in order to forget the deceased. A burial is frequently the ruin of the whole family, as the priest who says mass lays claim to all that belonged to the deceased.

Besides Mingrelia, there are two principalities in Wel- tem Georgia, viz., Imaretta and Ablasia. They lie to the southwest of Mingrelia, along the Euxine sea: the princes of both are tenants to the Grand Signor. Imarett is about one hundred and twenty miles in length, and sixty in breadth: it contains many hills and woods, but the plains produce corn, cattle, pulse, &c. They have some excellent iron mines, carry on a great deal of commerce, and coin money. The principal towns are Cottia and Aalaski, Tyrez, and many little forts. They have also some fortresses, which is fixed at the foot of a mountain, on the top of which there is a strong castle to command and defend it: it is watered by a river, which falls into a lake, and contains only about two hundred houses. It lies on a hill, where the rivers and mountains surround it. On the opposite side of the river there is a castle on an eminence, where it has a small church and a small garrison.

The town consists of about four hundred houses; the inhabitants are a mixture of Turks, Greeks, &c, who have several churches and a synagogue. The walls and fortifications are old and ruined, and the buildings foul and wood.

The northernmost of these countries is Ablasia, having the Euxine sea to the south; Circassians on the west, and Mount Caucasus on the north and east. The principal traffic is in flaves: the inhabitants, however, deal in the skins of tigers, deer, &c. box wood, honey, wax, and thread, which they exchange with the merchants for other goods. They get their bread to maintain their means of life, became so powerful as to revolt against their rulers, and usurp the throne of Egypt.

Comaracil, or Mohammed, the last of the Caucasi, was once so celebrated in Asia and Egypt, and contended so long with the Ottomans for supremacy, were originally Georgians, who being brought up to a life of ease, in the wane of their country, began to despise the meanest service, and to love the aristocratical life; became so powerful as to revolt against their rulers, and usurp the throne of Egypt.

Comaracil or Mohammed is included in Georgia: it is bounded by the Caspian sea on the west; by a ridge of mountains which part it from Circassia, to the east; by Mazar Novossi, to the north; and by Georgia, to the south: the sea is divided into thirty languages, and barely cultivated; but the soil is flat, low, and fertile. It is watered by several rivers, which descend from the mountains about Caucasus. The climate is rather cold, and very much subject to rains. The inhabitants, who are called Comari, or Kamouchou, live principally by plunder. They wear Persian dress, but dress like the natives of Little Tatar: men wear flurted jackets and drawers, and the women long full gowns which enable them to ride. They have nothing that can be called a town, but their little hamlets consist of about forty huts. Their food is milk, game, the flesh of their cattle, honey, fruits, and rice, which they have from the Turks.

Daniel is too little known to admit of a description: it is a small district belonging to Mingrelia, and the number of the people are said to resemble those of that country.

The Dagestani mountaineers are accounted some of the most fanatical of all the nations, and are destitute of all the sentiments and conduct of the ancient Parthians. Their country is bounded
bounded on the east by the Caspian seas; on the west, by the
mount Caucasus; on the south, by Persia; and on the
north, by Circassia. These people extend themselves
beyond the limit of Circassia, and forty leagues along
the coast of the Caspian seas.

The Daghestanis circumcise their children, and use
famine other ceremony, but are equally ignorant of
religion in general. They wear coats of mail, carry
hats, and不管你, and are armed at their heads; their
ears are made of various kinds of cloth or hair. Their
flesh consists of only one piece of skin, and are lived about
the bodies in a clade manner. Their food is of the
numeral birds, and milk.

There are many petty lords, called sheikhs, as towns
from them a chief is selected, called sheikmash. On the
death of the sheikmash, the sheik must fall in the feast.
They obligate all merchants to pay them tribute, and, if they
not obey, rob them of every thing, which occasions the
travellers always to have a powerful escort.

The Cacus, with the Pegaseus and Cayders, flow through Mybo, which contains the following places.

Clitumnus or Cynius, (which is now Khiallo, and Spina, the ancient Asopus, and Asia Minor) is a continuous and incommodable town, situated about thirty-five miles westward of Mybo on the south-east coast of the isle of Marmora.

Opposite to this town, in the Propontis are several small islands which contain a large number of marble quarries in them: they likewise abound in corn, fruits, cattle, cotton, wine, etc.

The city of Propontis is noble Latomos, both held mids of its ancient splendor: it is but a small place at present, thinly inhabited by a few Greeks and Turks: but its port is remarkable: though there are but three small merchant vessels and no church in the village, the Armenians and the Jews who live there, let the dayes pass without any trade, and about a mile from it is the battle of Caply, in which Hippocrates, which is hallowed, triumphant over the foe, and much frequented on account of the great reputation the waters have in the country for their medicinal virtues.

About thirty miles above Constantinople, stands Nice, or as the Turks call it, Niesan, in forty degrees thirty-two minutes north latitude, and twenty-nine degrees forty minutes east longitude, being situated near a gulf of the sea of Marmora called Axamadon: it contains about ten thousand inhabitants, Turks, Greeks, Armnenians, and Jews, and is celebrated for its camel and pomegranate gardens, upon the trait that divides Asia from Europe, which is three miles over. It is now called Avizo or Abydos, and is a port of eighty miles from Constantinople. It was formerly the harbour of that city, and a favorite place for the Greeks and Turks. Here Xenocrates began his famous bridge, which was so well completed in a week, that one hundred and seventy thousand foot and horsemen, including cattle, crossed it, and the city was taken and purchased for about the year 855, a mine of gold was found near this city, which enabled Pamphylus of Troy to carry on many useful and magnificent public works. Philip II. of Macedonia that is the fesse of the Argive, and took it by force: but the citizens, as they were more in numbers and defended themselves, would not give it up. Abydos was an episcopal city, Hermia, the bishop thereof, having ascended to the bishopric of Chalcidice in A.D. 1230 it was betrayed to the Turks by the treachery of a governor's daughter, and Avizo is preserved one of the same upon the same

The following are the principal places in Lebessa: Asos, formerly a considerable and port town on the south coast, now an incopomendable village. Antandros, now called Threnus, is a fine market with a foot of the town, by the sea, at which there is a considerable trade of the island. The city is situated on a street of mountains and is about a mile from the sea. It is called by the Turks, and is a small town, containing about two thousand inhabitants, and is noted for its excellent cloths, and the selling of which, the Turks gave it the name of figue, or Hubble. It is free, and is celebrated for it's siege and the castle which was taken. The city is situation and is free from the island of Lefbos. At present, as the castle mentioned, it is of no use, and formerly it was a place of importance, and is noted for its excellent wool and its magnificent ruins. Pergamus, which was formerly the metropolis of a kingdom, and is now dwindled to a small village, is situated near the coast, and is noted for its excellent wool and its magnificent ruins. The city of Chalcidice, which was formerly the seat of a bishop, and is now dwindled to a small village, is situated near the coast, and is noted for its excellent wool and its magnificent ruins. The city of Marmora, which was formerly the metropolis of a kingdom, and is now dwindled to a small village, is situated near the coast, and is noted for its excellent wool and its magnificent ruins.

The city of Pergamos, which was formerly the metropolis of a kingdom, and is now dwindled to a small village, is situated near the coast, and is noted for its excellent wool and its magnificent ruins.

The city of Chalcidice, which was formerly the seat of a bishop, and is now dwindled to a small village, is situated near the coast, and is noted for its excellent wool and its magnificent ruins.
Smyrna, or Izmir, is situated on the bottom of a fine bay in that part of this district called Ionian, in twenty-seven degrees of north latitude, and thirty-three degrees thirty minutes of the island of Rhodes, and opposite to the island of Scio. It was a large and commodious harbour, and a very great foreign trade, confined from many of the European nations residing here; besides this it was a large seat of commerce. It was a large and populous place, and there are several thousand Greeks and Armenian Christians, and abundance of Jews; there are also some hundreds of Turks on the island, and several thousand in the town. It is a large and populous place, and there are several thousand Greeks and Armenian Christians, and abundance of Jews; there are also some hundreds of Turks on the island, and several thousand in the town.

A few miles in circumference, the river Misis runs through it, on the banks of which there is a tradition that Homer lived and made his books. There were many temples dedicated to the gods, and some of them were of great size and beauty, such as the temple of Athena, the temple of the Muses, and the temple of the Great Mother. The Misis, a large and commodious river, flowed through the town, and it was a large and populous place, with many temples and shrines dedicated to the gods.

This town is pleasantly supplied with provisions: the wine is excellent, and in great variety. It was a large and populous place, and there were many temples dedicated to the gods, and some of them were of great size and beauty, such as the temple of Athena, the temple of the Muses, and the temple of the Great Mother. The Misis, a large and commodious river, flowed through the town, and it was a large and populous place, with many temples and shrines dedicated to the gods.

The Turks burn without the town, and place either graves or stones at the head of the graves, which are filled with foreign merchants. In their cemeteries, as well as those of the Christians and Jews, there are many tombs and monuments, the students of which is admirable. They were, however, not executed at Smyrna, but burnt in the insurrection. One in particular is to the memory of Mr. Bourbon, who died at Magnesia.

Near Smyrna are several places which are greatly dwindled from their ancient splendour; the first we shall mention is Cazarcen, situated on the Ionian peninsula, twenty-eight miles from the north-west of Smyrna; it was one of the twelve ancient cities of Asia, and was celebrated as the birthplace of the island of Amorgos. It is now called Uzla or Vourla, was a city of importance in the time of the Romans, but is now a desolate place.

The ruins of the ancient city of Smyrna, are situated on the southern coast of the island, and are a rich place for a long or Arch and the ruins of the ancient city of Smyrna, are situated on the southern coast of the island, and are a rich place for a long or Arch.
The New and Universal System of Geography.

Molda, but falls much from its primitive grandeur; however, some travellers relate, it still contains about seven thousand inhabitants, are principally Greeks, and have four churches in the town, one of them having a dome, it is very fertile, provisions are plenty. 3. Tyatria, a bishop's see, and another of the seven churches, now called Erups, is a city of eight or nine miles to the north-east of Philadelphia; near the south bank of the river Hermus, where once was the ruin of ancient marble structures, but the present buildings have not better that clay walls, it is however a place of corn and cotton. It contains about five thousand inhabitants, who are chiefly Turks. 4. Magnesia, now Sigyliada, on the river Hermus, near the south bank of the river Sardis, was a very considerable city, as appears by its ruins, and is still a very pretty large town, trading to Smyrna with cotton-yard. The inhabitants are composed of Turks and Jews, the latter having three synagogues.

5. Laodicea, or Edikifiable, sits on the eastern boundaries of this province, and has been reckoned part of Phrygia. It was anciently one of the seven churches, and a very large city, as appears by the ruins; among which are three theatres of white marble, painted salute, and a flatey circus; but the place is now utterly uninhabited at present.

Phrygia Major, called by the Turks, Germina, is an inland district, having Berytus on the north, Paphlagonia, now Papel, on the east, Myria on the west, and Galatia on the south. The rivers Hermus, Meander, Maris, and Sangarius, rise in this district, and all of them, except the first, having their course by ascending in the Euphrates. The chief towns are, 1. Cottoman, or Kussala, or the river Sangar, about twenty-three miles from Berytus. By being on a considerable city, antiently, and is still a very flourishing and populous town; is at present the seat of a bishop, and was formerly the Turkish king's residence before the taking of Constantinople.

2. Mismen, or Midia, antiently the royal seat of the celebrated king Midas. The ancient geographers placed this town near the north-west limits of Phrygia, on the river Sardis; but there no vestige, of it at present seen. 3. Gordium, once the residence of Gordius king of Phrygia, who tied the knot in Apollo's temple, which Alexander cut with his sword. 4. Apamea, situate on the river Meander; this was once one of the most considerable cities of Asia, but is now quite extinct. 5. Colossae, Colofus, or Chnos, was situate on the south side of the river Meander. St. Paul's epistle to the Colossians was addressed to the inhabitants of this city.

Scarcely any traces are now to be found of Hierapolis, Smyrna, Ephesus, Pergamum, Tiberiopolis, Hipsis, &c. except the great spring of sulphur ruins of Hierapolis. Apamea is now only ruin to be seen, though it was once one of the most considerable cities of Asia: this city was situated on the river Meander, a little above the place where the river brooks into it, now decayed, and the ruins of the antient Celene, whose inhabitants were transplanted into it by Seleucus, who named it after his wife Apamea.

The ancient town of Chasurg, is now bounded, on the north, by Paphlagonia; on the south, by Paphlagonia; on the west, by Cappadocia; and on the east, by the river Sardus, and by the river Hermus. It is the residence of a bishop, and of a great number of Greeks, who passed through Greece into Asia, and settled in it. Great number of Greeks afterwards mingled with them, wherein it was called Galla Graeca: it was always a fine fertile country, and was formerly well cultivated, but at present lies neglected like other places, through Turkish incendence. St. Paul addressed his epistle to the Chaldaean inhabitants of this city.

The city of Ancyr, or the Turks call it, Angouri, or Angora, is in forty degrees north latitude, and thirty-two minutes of longitude: it is a fine city of five or six miles east of Smyrna. It is the residence of a bishop, and of a very populous trading place. The inhabitants are chiefly Turks, and of the Turkomans, and Armenians, and one thousand Greeks. The chief manufatures are camelts; the evidences of its primitive grandeur are innumerable; the streets, piazzas, &c. being full of good houses, several remains of the ancient marble, porphyry, red Jasper, and other beautiful stones elegantly wrought; the modern buildings, however, are mean, low, and the Frog: or there is great variety of in- scriptions in several languages appear upon the gates. In the town there is an ancient, little, dark Armenian church, but is now abandoned. It has one window, which is not glazed, but hath its vacancy filled by a transparent marble, through which the light penetrates into the church, but receives a reddish tinge from the nature of the stone. This city was once an archbishhop's see, with its suffragans under him. The sheep breed here are some of the finest and finest: the wool is useful in the universe; the hair of the latter is of a dazzling white, as fine as silk, it is curiously made into locks, and is highly esteemed for the manufacture of hats.

This hair is spun in the country, and manufactured in Angora. Their gowns are only to be seen within a few miles of this city, as the breed degenerates, if they are removed to other places for trade.

Beli is the metropolis of the province, and the residence of the fifteen fanges under the beginning of Anastasius, in the year 1774. The other chief places are Antioch, situated a little to the west of Ancyr: Thomas, so called from its hot baths; Germaths, formerly Germanus, on the Sangarius; Ophian, a dirty, ill-built town which receives its name from the opium made in and about it, its environs being covered with poppies, from which the Turks extract their opium.
on the Salina sea, forty miles north-east of Amasa. 5. Cat-
man, eight miles to the coast of Amasa, formerly a bi-
ting's tie, but it is now dwindled to a village. 4. Tocaf
is eight miles from Amasa, and thirty-seven degrees
of eastern longitude, and forty-one degrees thirty
minutes north latitude, about one hundred miles south
of Stamboul. 5. The Black Sea is divided by a large
tower with a capilla, or they resemble a lass. The cit
is well supplied with water from the river; and their pri-
cipal trade is in cotton. It is thirty-eight degrees
minutes south latitude, and thirty-eight degrees fifty
minutes east longitude. It was formerly governed by
remit, and is now a Greek archbishop. It is a consid-
erable town.

4. Myra, or Myrya, called by the Turks Surmuwa. This
was once a considerable city, but is now dwindled almost
to nothing. It is five miles north-east of Patara, situated
near the mouth of the Limyra.

5. Patara: which was once the metropolis of Lycia;
but is now a very small place. It is twenty-five
miles south of Stamboul, between the gulfs of Statala
and Messa.

3. Statala, called by the Turks Satial, is the ancient
Attalia. It was formerly a very considerable city,
at the bottom of the gulf of its name, thirty-six degrees
forty-five minutes north latitude, and thirty-one degrees
twenty minutes east longitude. It is the strongest place
the Turks have upon this coast. The entrance of the
harbour is both difficult and dangerous. This magnificent
place is divided into three distinct towns, each of which is
separated from the others by its own being walls, and the
gates are shut up exactly at noon every Friday till one o'clock,
from a pretended prophecy, that on such an hour the Christians
could not enter it. The suburbs, which are
inhabited by Greek and Armenian Christians, are larger than
the city; the country about it is very fruitful, but
their trade is much declined: the finest silk lies about
twenty-five miles south of the city, in the middle of which
stands the famous convent of St. John, built all of wood,
upon a large rock, and surrounded by one of the most
romantic wildernesses in the universe. A great deal of rock
limestone is found in the neighbourhood of this city, which is
thought by some to have been the site of the are
dangerous. It was subject to the Roman and Grecian
emperors, and David Cammessa, a French gentleman,
affixed the title of duke. About the year 1600. His successor,
John Cammessa, assumed the title of emperor, and his successors
were sovereigns of this city and the neighbouring country, till the year 1474,
when Mahomet II. took it, and having put to death all
the remains of the Comnenian family, added it to the
Turkish empire.

The town of Phanamaz is about forty-four miles west
of Trebizond, and situated near the coast of the Euxine sea.
The Turks call it Kerian, it is a large and populous place,
but the harbour is only fit to receive their small vessels, called
fainas. It is generally thought to be the ancient Ceraunia,
and to have been so denominated on account of the great
number of thunderbolts with which it was surrounded. 3.

III. The third division of Asia Minor is Aivalus, or
Anadolu, called by the Turks Dulgah. This country is
well suited for the purposes of agriculture, being rough
and stony in some parts, but fruitful in others, and
produces abundance of admirable fruit, wines, and cattle,
particularly hores and camels, besides wild herds of goats
and their fillings. The people, all kites, are divided into
iron, copper, lead, and so in the mountains. The pro-
vincial division is into four large districts, which are again
divided into smaller divisions. The plains, plains, plains,
dirt, or free-booters, are very troublesome in this country.
The principal places are, 1. Ciafa, the ancient Caelarca:
it is a large town on the banks of the Ali, near mount
Ainos, and about twenty miles west of Secia. The
No. 13.

walls are strong, and flanked with towers. The castle is
in the center of the city. The basar is handsomely,
and well furnished with all sorts of merchandise; the houses
in its suburbs are divided into three long streets, with
a tower with a capilla, or they resemble a lass. The cit
is well supplied with water from the river; and their pri-
cipal trade is in cotton. It is thirty-eight degrees
minutes south latitude, and thirty-eight degrees fifty

The New and Universal System of Geography.

Syria, called by the Turks, Sowre and Souritah, was originally called from its capital Tars or Tarsis, which the Greeks softened into Tyr and Tyre. This country from east to west, is about two degrees of longitude, and from north to south, is about one. The climate is warm, and the prevailing winds are from the south. The land is fertile, and the produce is abundant. The climate is moderate, and the people are healthy. The chief cities are Damascus, Aleppo, and Antioch. The mountains are high and sharp, and the valleys are deep and narrow. The rivers are few and short. The climate is hot and dry, and the people are hardy. The agriculture is extensive, and the produce is abundant. The climate is healthy, and the people are long-lived. The climate is hot and dry, and the people are hardy. The New and Universal System of Geography.
city a species of fiddlers is found, which is an excel-
lent fish for bones, because the large plating of the
bott is kept for labor, the smaller have short horns,
and the bufaloes are valued on account of their milk. The
Turks and Ismailis fish it, and the Chinese, of
which they have plenty at Aleppo. There are two
forts of sheep, the one resembling the English sheep,
and the other, a large tail. The goats have long ears
and give excellent milk. The sheep have a colo-
ral color, very fond of leban or coagulated milk.
The butter and cheese is made either from the milk of
buffaloes, those of a finer quality, or from the
breast of wheat, badly strained, and boiled fat: people of fashion have,
however, a better sort. Besides these, they have bisbuls
dull and white, and the appellation of Calor. Crad
tons are very numerous, particularly the white shafe,
which is found in flocks, but whole bite is not venomous.
The Elopnyra and Scopifon often bite the natives, but a few hours pain is
the result of the bite. The inhabitants of the Euphrates
and Tigris, as well as the Arabs, are attacked by these
bees, flit-worms, all kinds of scorpions, &c.
Hunting and hawking are favorite amusements: the sportfins
have a very extensive field, as hunting is ex-
cated only for a subsistence.
The common language is vulgar Arabic; Turks of
the grand chamber, the rest of the people in the
Amerman and their native tongue; and some of the Syrians
understand the Syriac; but the Greeks know nothing of
this branch of literature.
The people are in general well made, and though they have
a much more pleasant feature, inclining to lean, but in other.
and languid: the citizens are usually fair; but the peasants, who are exposed to
the winds, are less fair, with dark eyes and black hair; they are tolerably handsome when young, but, like
them to appear old by thirty. The females marry about the age of
fourteen. It is very singular, that the men themselves very
rarely appear in their waist; in order to make themselves
look slender, and the women do all they can to render them-
proportioned, by stuffing them with a flannel with a great de-
formity. They are for the most part poor; and though
they are usually married, never fight: the coffee-houses are frequent
at the usual, and the amenities within four miles of
the city, and on the road to Bagdad. They are
not infrequent, but they do not speak

the
with an extensive canal. St. Paul and St. Barnabas preached a twelvemonth in this place; St. Luke the evangelist, and St. Ignatius the martyr, were born here.

After leaving Tripoli, its next city, at the foot of mount Libanus, in thirty-six degrees fifteen minutes east longitude, and thirty-four degrees thirty minutes north latitude, it is the principal division of Syria, and is the maritime and internal highway of the Levant; it is, at the foot of mount Libanus, in thirty-six degrees fifteen minutes east longitude, and thirty-four degrees thirty minutes north latitude, it is the principal division of Syria, and is the maritime and internal highway of the Levant.

Tripoli is now the capital of the province, and seat of the beyliege or viceroy, and garrisoned by two hundred and forty men; it is a rocky place, and is situated on a barren hill, thickly covered with grapevines, and surrounded with a small town, and a wall of earth, which being very little secure for the shipping which lies here. It is said to be called Tripoli, as consisting formerly of three towns, which stood upon as many hills, about forty miles distant from each other; a rivulet runs through their gardens, which abound in plantations of oranges and mulberry trees; and they have a pretty good silk manufacture.

This city contains eight thousand houses, and sixty thousand inhabitants, who consist of Turks, Jews, and Christians. It is watered by a little river, which has a brine barge over it, and turns several mills. The air is clear and healthy, the country rich and fertile, and the town very flourish, and might point to the gentlemen. The Christians have some monasteries and chapels, and the Jews a handsome mosque, which was once a Greek church.

Sidon or Saida, is situate on the same coast, in thirty-six degrees thirty minutes east longitude, and thirty-three degrees fifteen minutes north latitude, about forty miles south of Tripoli, and about as much to the northward of Jerusalem; it was the mother of Tyre, and the city that attempted to seize upon, and destroy her. It is a pleasant and seaport, and governed by a Turkish bailli, subject to the beyliege of Tripoli; the town though small is still well peopled, containing about six thousand inhabitants; and there is a place of trade to the city of Tripoli, and to the north of its ancient grandeur. The exports consist of Turkish leather, pitch, stone, fennas, buffaloes skins, cotton, blue flax, rice, flax, hemp, oil, taffins, &c. Here are many monasteries, two kants, a public bagnio, and a fine square building called the cotton market.

Tyre or Sur, is situate on the coast of the Levant, in thirty-six degrees of eastern longitude, and in thirty-two degrees thirty minutes north latitude, twenty miles south of Sidon; it stands on a peninsula, and at distance makes a principal appearance, when you approach it, it is a little hole to be found between ruins. On the north was an old Turkish castle, where we meet with only broken walls and pillars at present; the inhabitants are poor fishermen who live in vaults and caves. The island of Tyre, which was joined to the continent by Alexander, seems to have been a great circular body of water; it was covered with a mountain above forty acres of ground, round which are still the remains of an ancient wall; in the middle of the ruins stands a pile higher than the rest, and towards the east end of a great church, which Mr. Mounsey found to have been the only tree, which renders the prospect still more entertaining. The Barrady, which plentifully supplies both the gardens and city with water, as soon as it issues from the mountain is divided into three streams, of which the middlemost and biggest run directly to Damascus, through a large field called the age Damascus, and ferves all the fountains and receptacles of water in the city. The other two branches, which seem to be the work of art, flow on the right and left, on the borders of the gardens, into which they are let by little channels, and dispersed into every part of them. There is not a garden which has not a fine quick stream improved into fountains, sufficient to moisten the flowers and trees, without which they are not contrived with so much art, as in some gardens of Europe. This river having thus contributed to the beauty and fertility of the fields and gardens about Damascus, clothes there so much of its waters, that in a few leagues beyond the city it is entirely dried up, and never reaches the sea. The banks, or rather the town, the most beautiful, called this river Charybochondius. It is supposed the branches of the Barrady were the Abana and Pharpar, mentioned in a Kings.

The monasteries, bagnios, bazars, kants, &c. are magnificent, but the private houses are low and mean, being erected either with sun-burnt bricks, or mud: yet though the houses are disgraceful, they are in general built on the same plan, being covered with thickly apartments, square court yards, marble bridges, and well paved thoroughfares.

B. were forty and fifty miles to the south of Sidon, on the
The pillars stand at the distance of nine feet from each other, and as much from the wall of the temple. A stately archway runs round the capitals of the pillars, and the masts exquisitely carved; the columns, consisting of large fluted, hollowed like an arch, and extending between the columns and the wall of the temple, and the figures of some Heathen gods and goddesses or heroes are carved upon each. Amongst this crowd, a Griffin and an eagle flying away with him, done to life.

In the walls of the temple all round are two rows of pillars, one above the other, and these between them are a series of niches, which are designed for images. About eight yards from the upper end of the temple are flanking parts of two fine fluted pillars, and the whole temple seems to be a magnificent partition in that place, and to have supported a canopy over the throne of the chief idol. On that part of the partition which is remaining we fill to be seen carvings in relief, representing Neptune, tritons, fishes, sea gods.

The roof of the temple is entirely broken down, but yet, says Mr. Maundrell, the whole, at six feet and a half, strikes the mind with an air of grandeur above anything we have seen, and is an eminent proof of the magnificence of the ancient architecture. This temple was strikingly accompanied by some other magnificent buildings, as is evident from four arches to it, one upon each angle, with immense steps long enough for ten people to go a-breadth.

The old wall, which encompasses all the ruins above-mentioned, is built with stones of that prodigious thickness, that the natives attribute the architecture to the genius of the gnomes. A gentleman who travelled to these parts, was at the pains of measuring three of the largest of these stones, and found one of them twenty-one, and the other two twenty yards in length, each of the cities being a hundred feet square, and as much in depth, and these three stones lay in the same row, end to end, extending fifty yards; and which was equally as lofty as the life up into the wall more than twenty feet from the ground.

The palace, which is what the Turks call the castle, must have been one of the most sumptuous structures that imagination can conceive; but it is much more decayed than the temple. A dark arched vault, containing many small domes, leads to an enormous building which forms the basis of a magnificent theatre; the door opens to a terrace which is adorned with marble steps; you then enter a square court surrounded by magnificent buildings: on each hand are two rows of pillars, which form galleries of fifty or sixty fathoms in length, and eight in breadth. The bottom of this court is over spread by a building amusingly foetid, which appears to have been the body of the palace; the columns are so large as those of the Hippodrome at Constantinople: nine of them are flathing, and a good piece of the entablature but it is surprising that each of these columns is made of one entire block only. All the buildings in this castle front the sea, and the Corinthian order prevails throughout the whole. There is no place where such perfect remains of architechtural science are to be seen, as at which the fine tafe of Greece and the magnificence of Rome seem to be blended: the ornaments are at once innumerous and exquisite, the colonnades are filled with in which vast flights of marble stairs, of two hundred steps in a flight, are frequently found. The turn and elevation of these vaults are bold and furrowing; they contain many noble halls and superb apartments, admirably decorated. Some of these vaults are dark, others receive light from large windows, which stand on a level with the ground above, but the most singular circumstance is, that all these splendid edifices are built with such enormous stones, as those mentioned, without any visible signs of mortar, or any kind of cement or mortar. Many columns, which contain various apartments, are cut out of the solid rocks. It is inhabited by about thirty or forty Christian families, a few Jews, and a hundred Turks. We shall now proceed to describe those towns in Syria which are of inferior note; the principal of which, on that subdivision of Asia Minor, is

1. Tumelat, which the Turks call Scenigal, and which was once the capital of Comagene; but at present is only a wretched village, surrounded by heaps of ruins. It stands on the Euphrates near the confines of Asia Minor, twenty-two miles from Edessa; this was the birthplace of the celebrated Patriarch Lucian. 2. Dolicus, called the Dolicus Capitol. 3. Edessa, now remains but the names and a little rubbish of the anc.
tient cities, Germanicia, Singla, Antiochia ad Taurus, Cezarea, Deba, Chiozma, and Chelmadura.

Tartis, formerly called Orthops and Antias, from its being built over against the little isle of Arados, was one of the four chief ports to which the Greek, as Pliny says, resorted; but for the sea, it was a very considerable place, and inhabited only by poor fishermen; it is about nine miles to the northward of Tripoli. On the other side, in the part of the city called the square, were built, founded by Seleucus Nicanor, or the Victorious, and called by him after his father name. Its the most northern city of Syria, and is called the chief place of the sea, with a full prospect of the sea, in thirty-five degrees thirty minutes north latitude, and is a considerable maritime town. It contains many buildings, minutely, and in some places to a great distance, columns of granite and porphyry, with part of an aqueduct, which Josephus affirms was built by Herod: the structure is fancious, but not architrave. Here is a mosque formed of a magnificent ancient triumphal arch, supported by Corinthian pillars; the architrave is embellished with a variety of statues. Many Greek and Latin inscriptions are found among the ruins, but they are in general so much defaced as to be illegible. To this westward of the city are the remains of a church, big enough to hold the largest navy in the universe. The mouth which is about forty feet wide, is defended by a castle, and the whole is an amphitheatral form; it is so choked up at present, as to admit only a few ships at a time.

A little to the northward of the city are those remarkable catacombs which excite the attention of travelers. They contain large stone coffins, embellished with emblematical figures. The covers of some are supported by pilasters, generally of the Corinthian, but sometimes of the Ionic order: they have a large number of cells on the ground, and two or three stories of chambers hollowed deep into the rock, being each from ten to thirty feet square. The most respected of these sepulchres of St. George is said to be very old and a few miles to the west of the city, which is dedicated to that pink virgin martyr: in the midst of it is a spring, to which many marvellous effects are ascribed.

The intermixt nature of rocks, woods, fountains, plains, grooves, and mountains, confidacr the whole of the adjacent country extremely romantic. A few miles from a place called the Serpent Fountain, are the Spindles, or Magazzis, a name which is given to several painted cylindrical buildings that are eroded over a number of sepulchres.

Opposite to the northern extremity of mount Libanus, are the ruins of the ancient city of Ars, to the eastward a romantic chain of mountains appear; a fine extensive plain, interspersed with villages, ponds, rivers, &c. opens to the southward; and the sea is seen before you. The city was erected on the summit of hill of a conical form, which appears to have been a work of art; the inhabitants were supplied with water from mount Libanus, by means of a magnificent aqueduct, notwithstanding a deep stream waters the valley below the city. The places of inferior note, next under consideration.

Apamea, founded by Seleucus Nicanor, and so named in honour of his mother, is greatly fallen from its ancient splendour, but still remains a considerable town, standing on a spot of ground which is almost surrounded by a lake formed by the river Orontes, about sixty miles to the southward of Aleppo; so that it hath no communication with the sea. The lake is eight or ten miles, or a little more, in diameter. The Turks and Greeks call it Ham: it is the residence of a beglebeg, whose government is very extensive: the adjacent territory is exceedingly rich and fertile; the city is well watered, retains many marks of its ancient magnificence, and was very early an ecclesiastical city. It lies in thirty five degrees fifteen minutes north latitude, and thirty-four degrees eight minutes east longitude. Seleucia confidacr fed five hundred large elephants near this city.

Near mount Liba, between Antioch and Tortosa, there is a remarkable village, called Marone, which was antiently a considerable place, called Marathos.

On the river Orontes, between Apamea and Laodicca, the town of Antiochus, or Egypt, is situated. The road Roman emperor Heliogabalus was born there, and on that account took the whin into his head, to be made one of the principal towns of the city. The Turkish principal city is Haman, or Aman. It is the only place of judicature of the beglebeg of Damaconeus, which governs by its men of a deputy. It is a town of considerable figure, not withstanding it has been covered by earthworks, and the various changes it has undergone. It is surrounded by good stone wall, with six superb gates, and several magnificent towers at proper distances. The walls are environed by a spacious ditch, and on an eminence there is a castle which commands and defends the town. Here are some fine churches, the greatest part of which are converted into mosques. The cathedral is a magnificent structure, supported by thirty-five columns, and is said to be the noblest church in Turkey; and has been much restored and embellished by the infidels and Greek inscriptions. The Christians are permitted to pray in it at certain times, besides which there are eight others open to them.

The basars, kanas, caravanseris, &c. in general very handsome structures. The inhabitants trade in silk and wool, and are often engaged in building, some kind of needle-work of silk, gold, and silver, curiously interwoven together. This adjacent country is very rich and fertile, and the gardens in the environs exceedingly delightful, abounding in a great variety of excellent plants and delicious fruits. In all the gardens great number of mulberry-trees are planted in regular rows, and well watered, as the demand is very great for mulberry-leaves to feed their silk worms with. This city and Aleppo are the principal places in the division of Celosyria.

The town of Botrys, or Botrus, in Pharia, was once a considerable place, but is now a poor village of fishermen, standing on the coast to the south of Tripolis, and called by the Turks Patram, or Elpatram.

On the coast, about twenty miles south of Tripolis, is situated Byblos, or Byblus, formerly a fine city, but now a mean village named Gabala. The river Adonis, defending from mount Libanus, runs through the town. This river is subject to swell to an inordinate degree by the melting of snow or falling of rains, and being just a few times the water is carried away, the inhabitants used to impute to the death of Adonis, who is instilled to the scripture under the name of Tammyus, or Tammuz, or Tammur, by the heathens. It is an ancient goddess, with bad the most bloodiest, and which the hearers of the fountain used to keep the water of the river unclean: the river, which is brought away by the waters when they rise in the spring season, which is called the Adonis rising. In this town there is a deputy governor subordinate to the beglebeg of Syria, and a small garrison; there is, however, but little trade, the harbour being almost silted up.

The city of Berythus was once in a flourishing state, but is now upon the decline; the forests are narrow, dirty, and dark. In it, however, a trading place, and a slnage for the caravans which are to visit in the land.

A place, founded by Seleucus Nicanor, and so named in honour of his mother, is greatly fallen from its ancient splendour, but still remains a considerable town, standing on a spot of ground which is almost surrounded by a lake formed by the river Orontes, about sixty miles to the southward of Aleppo; so that it hath no communication with the sea. The lake is eight or ten miles, or a little more, in diameter. S E C T. V.

Treats of Palestine, or the Holy Land, being in the southern division of Asia Minor, its situation, extent, air, climate, soil, mountains, rivers, lakes, cities, towns, &c.

PALESTINE, called also Judea and the land of Canaan, is found to be thirty-three degrees minutes, and thirty-two degrees twenty minutes north latitude, and forty-three minutes fifteen seconds east longitude, lying bounded by the Mediterranean sea, on the west; Syria and Phcenicia, on the north, Arabia Deserta, on the east, and Arzela Patra, the former three are described further east. It is therefore about two hundred miles in length, and about nineteen in breadth towards the middle, but increases or diminishes twelve or fifteen miles either way. The length of the day is about fourteen hours fifteen minutes. The air of Judea is the most fabulous and pleasant imaginable; neither heat nor cold are felt in the season, but an agreeable freshness diffuseth itself throughout the year, which puts the stranger in mind of the golden age; and as the climate is the most admirable in the universe, we have no doubt but that in the early ages of the world, when the pastoral life was the most honourable, and agriculture the most reputed employment, it far exceeded its present excellence, by means of the general cultivation of the country.
We have the most authentic intimations of the richness and fertility of its soil: in particular, that it abounded in corn, wine, oil, honey, pomegranates, dates, figs, citrons, oranges, apples of paradise, sugar-canes, cotton, hemp, saffron, bitumen, and a great variety of other contrivances, fragrant, and fruitful trees, balsam of gilead, and other precious drugs, &c. cattle, fowl, fish, game, and other delicious food. A rebellion on the plains of Esau, indeed, the author considers the very small extent of Judah, will be sufficient to show that such belt nothing shall affrontifying fertility it could not be said that it was a soil of a sufficient fertility to export to Tyre and other places. Yet the soil was only cultivated six years in seven, as the servile year was always a time of rest from the affairs of agriculture; but we must observe, that the whole of the country was cultivated, and that woods, parks, walk grounds, &c. were unknown. An eminent writer affirms, that with a little cultivation it would yield as much as in the days of King David and his son Solomon; but that it is now unhappily inhabited by the most indolent people existing.

Labuan and Anti-Labuan, are the principal mountains of Palestine, forming a chain that divides Syria from Pha¬leline: the whole is about one hundred leagues in compass, and consists of four ridges, one above another, two of which are fertile, and two barren. In clear weather the lower is rich in grain and fruit, the next is rocky and barren; the third abounds in gardens and orchards; though higher than the preceding, and the fourth is fertile and uninhabitable. The reason of the excessive coldness on its airy brow: the Mountains inhabit its lower regions, and Arabs all the other parts.

The Jordan flows for most part through the countries of Moab and Ammon, and is navigable in several places. The rivers have their source, viz. Jordan, Rocan, Nahrab, Naba, Codiaca, and Aqabat, the first only of which runs a short distance. Of the last-named, the western part alone is properly called Labuan, the eastern being named Anti-Labuan, and the intervening part Cenisian. The whole chain, however, always was, and is still level upon, and is inhabited by robbers, who in the course of years have given it a name which is not much esteemed among the native people.

Carmel, situated on the sea-shore, is the most remarkable headland on that coast. The prophet Elijah is supposed to have been a native from this place, or perhaps from the hills above it. For he was taken up to heaven. The cave is eighteen feet in length, and eleven in breadth, and is still visited by the people. Over the mountain, is only a point of a mile from Jerusalem, being equidistant therefrom by the brook Kidron, and the valley of Jehoshaphat. It is of a considerable height, and from its summit there is a fine prospect of the city and environs. Above thirty and four heads higher than the rest; from one of the principal cliff ascended into heaven; and the impregnation of a foot in a hard rock, found there at this day, is said to be formed by him. We
THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

The principal valleys mentioned in Scripture, and by
profane writers, are,
1. Berachah, or the Valley of Blessing,
on the west side of the lake of Sodom; 2. The vale of Sidon, or Sidonian, in the
province of Phoenicia, in the confines of Sidon and Sareph, or royal Vale; 3. The
valley of Salt; 4. The valley of Jerusalem; 5. The
valley of Jezebel; 6. The vale of Manasseh; 7. The
valley of Rephaim; 8. The valley of Jehoshaphat; 9. The valley
of Benhaddeai; 10. The valley of the two seas; 11. The
city of Jerusalem; 12. The vale of Bochim; and, 13. The valley of Elah, where David
killed Goliath.

We may reckon among the plains, those called the
Great Plain, through which the river Jordan flows: the
plains of Sharon, and the plains of the Shephelah, and the plain of Jericho. As we hinted before,
the whole country is at present a perfect wilderness, through the want of cultivation, and the incidence of its
inhabitants.

There are many natural curiosities in this country, particularly flowers, which usually result from its
climate, olives, pears, bunches of grapes, and even many
trees, which are found principally about Mount
Caronte: those that referable are the Lapidus
Dulcis, which have always been deemed an excellent remedy
for the stone and gravel. Near Bethel are found little
flowers which greatly resemble peas, they are therefore called
the Virgin's Milk-tree, and from its flowers of a
chaly nature, go under the denomination of milk: a stone
of the same kind, which is not found only here, but in
Philistia and Syria, cultivated in almost all parts, and
forms a great variety of lilies. There are many hot and
tropical springs, and near the Red Sea are a number of hillocks, resembling places where there have been
lime-kilns, and a large store of shells existing. In the plains of Jericho a thorny bush grows, which
bears a fruit that has some resemblance to an unripe walnut; from its dark green, and hard, alcoholic oil, which is
called olive oil, a sovereign remedy for bruises, when internally applied, and for wounds, when used externally: its reputation is so great, that it is even preferred to the balm of
Gilead. Two more natural curiosities are also to be met with
in these plains: namely, the wood-olive, the outward cost
of which is green like the common olive, but being taken
off, a nut of a Wolfe fashion appears: it is about
the thickness of an almond-shelled ribbed long-wisg. Also the carabou-clove tree, which bears a fruit like a
bean, in which some fossil seeds; the shell, when dried, is
eaten, and has a very agreeable taste. St. John fojourned
here, where it is called St. John's defect; and there are
thought to be the locusts on which he fed, and not the
insect of that name, as many have supposed.

This country was peopled by the descendants of Amor,
who came hither with his eleven sons after the conquest of Israel, and settled in the plains of Syria and Phoenicia, viz. the
Heb, Jebus, Emir, Gilead, and Heve, who were the founders of so many nations, and whose name is reckoned the descendants of
Abraham, that patriarch having been called out of Mesopotamia to foijourn here, and whose posterity were in
preference to the sons of the whole territory. We shall therefore take occasion in this place to particularize
the several districts allotted to the several tribes, beginning
with the two tribes and a half who slumbered beyond
Jordan, all appropriated to the proper occupation of the
other nine tribe and a half, as they lie from north to
south.

1. Reuben's lot extended along the banks of the river
Jordan, from the north-east coast of the Dead Sea, and
was bounded, on the efl, by the country of the Moabites and Ammonites, on the north, by the river Arnon,
which parted it from the country inhabited by the Midianites; and, on the south, by a small river, which parted
it from the land of Gad.

2. The land of Gad had half the tribe of Manassieh, on
the north; Reuben, on the south; the Ammonites, on the
east; and Jordan, on the west.

3. The lot of the tribe of Manassieh had Gad to the
north, mount Lebanon, to the north; Jordan, and the
Samachon: lake, to the west; and the hills of Baalath
and Bethsean, to the south.

4. The lot of the tribe of Apher, on this side Jordan,
was bounded, on the north, by Phoenicia; on the south,
by Zebunon; on the east, by Naphtali; and, on the west,
by Jordan, and the desert. Of all the country and towns
lying to the south of the adventurers of Apher, none are now
remaining, except Acra, already described. Saphat, a town near Acra, was destroyed in the year 1759, by an
earthquake, which did a great deal of damage all over Syria, but more particularly about Damascus.

5. The tribe of Naphtali extended along the western banks of the river Jordan: as far as the confines of Saron and
Samia on the north, the desert of Sheba on the east, the
river Arnon on the south, and Jordan on the west.

None of the ancient cities formerly belonging to the above
tribe are now in being, and the few villages are poor
and inconsiderable as not to deserve notice. We finish
the history of the Hebrews, however, give some account of two of the most celebrated, those of Canaan and Dan, namely Canaan and Dan, though there are at present
nothing of them.

It is observed by a judicious author, that Canaan is not
mentioned in the old testament: it was therefore
possibly one of the towns built by the Jews after their
return from captivity, which was, in the opinion of many, the
cause, that is, on the coast of the sea of Galilee, in the
province of Zebulon and Naphtali, and consequently towards
the upper part of that coast: it is now known as an
adjoining spring, famed for the excellence of its crystalline
waters. Our Saviour chose this as the place of his
residence, in preference to Nazareth, where the superstitions
and incredulity of the people had obstructed the propagation
of his doctrines; he abode here during the last
three years of his life: but, for their neglecting his admonitions,
he denounced a heavy judgment upon them (see Matthew x. 25.) and his predictions were verified in the
Jewish wars, when it was totally destroyed, so that there is
now not even a trace of the village.

The city Dan was built by the Danites, who too
tributized in their own tribe, and seeking for a new
habitation, chose this part of theocratic, in which were
preferred six hundred men, who fixed the rich town of Lalu, about two
miles distant from the
region of the sea of Galilee, on the
banks of the Jordan, where there was a forti}

The plains of Jericho are a thorny bush grows, which
bears a fruit that has some resemblance to an unripe walnut; from its dark green, and hard, alcoholic oil, which is
called olive oil, a sovereign remedy for bruises, when internally applied, and for wounds, when used externally: its reputation is so great, that it is even preferred to the balm of
Gilead. Two more natural curiosities are also to be met with
in these plains: namely, the wood-olive, the outward cost
of which is green like the common olive, but being taken
off, a nut of a Wolfe fashion appears: it is about
the thickness of an almond-shelled ribbed long-wisg. Also the carabou-clove tree, which bears a fruit like a
bean, in which some fossil seeds; the shell, when dried, is
eaten, and has a very agreeable taste. St. John sojourned

This country was peopled by the descendants of Amor,
who came hither with his eleven sons after the conquest of Israel, and settled in the plains of Syria and Phoenicia, viz. the
Heb, Jebus, Emir, Gilead, and Heve, who were the founders of so many nations, and whose name is reckoned the descendants of
Abraham, that patriarch having been called out of Mesopotamia to foijourn here, and whose posterity were in
preference to the sons of the whole territory. We shall therefore take occasion in this place to particularize
the several districts allotted to the several tribes, beginning
with the two tribes and a half who slumbered beyond
Jordan, all appropriated to the proper occupation of the
other nine tribe and a half, as they lie from north to
south.

1. Reuben's lot extended along the banks of the river
Jordan, from the north-east coast of the Dead Sea, and
was bounded, on the efl, by the country of the Moabites and Ammonites, on the north, by the river Arnon,
which parted it from the country inhabited by the Mi-
dianites; and, on the north, by a small river, which parted
it from the land of Gad.

2. The land of Gad had half the tribe of Manassieh, on
the north; Reuben, on the south; the Ammonites, on the
east; and Jordan, on the west.

3. The lot of the tribe of Manassieh had Gad to the
north, mount Lebanon, to the north; Jordan, and the
Samachon: lake, to the west; and the hills of Baalath
and Bethsean, to the south.

4. The lot of the tribe of Apher, on this side Jordan,
was bounded, on the north, by Phoenicia; on the south,
by Zebunon; on the east, by Naphtali; and, on the west,
by Jordan, and the desert. Of all the country and towns
lying to the south of the adventurers of Apher, none are now
remaining, except Acra, already described. Saphat, a town near Acra, was destroyed in the year 1759, by an
earthquake, which did a great deal of damage all over Syria, but more particularly about Damascus.
being punished for his remissness, he sat down and com-
prised the whole in the following admirable line:

"The model of law saw the Lord, and blessed it."  

This smaller was no charm, but the bow in the beauty and dignity of this sentence, that he easily persuaded the young pupil for not resembling the theme more copiously. Caes. was the native or at least dwelling-place of the apostle Nathaniel, of which nothing can be said. 

7. The lot of the tribe of Issachar was bounded on the north by Zebulun; on the south, by the other half of Ma-
nasseh, towards the east, by the Mediterranean. It contained the mount Carmel and Gil-
boa, the valley of Jezreel, and plain of Galilee, now called the Plain of Esdraelon. As it is said, it was justly praised, it conten-
ted only a few miserable inhabitants, who reside in scattered huts, and scarce any remaining traces of the towns or villages it might formerly contain. But as the following places in their ancient state, were remarkable, on account of some curious circumstances with which they were con-
trasted, we shall here give some descriptions of them. 

According to Josephus, chap. xvi. the city of Shzemun, or Shenun, was stationed on the borders of the tribe of Issa-
char. In 1 Samuel xxviii. 4. it mentions, that the Phil-
istine pitched here, as the Philistines did in Gilboa. This city was likewise famous as the place of residence of the hospitable Shunammite, who was so kind to the prophet Elizer. 

Another remarkable place is Endor, mentioned 1 Samuel xviii., as the place of residence of a witch, or woman who had a familiar spirit, to whom Saul applied, that the might raise up for him the spirit of Samuel, and tell him on the way to the river Jordan. St. Jeron and Eusebius inform us, that in those days there was a considerable town of that name, about four miles to the southeast of mount Tabor. 

The other half of Manasseh had Issachar on the north, from the fifth, towards the Mediterranean on the west, on Jordan on the east. It was a beautiful country, finely diversified with mountains, valleys, lawns, springs, &c. The most considerable place was Bethel, or Beth-
Haun, on the bank of the river Jordan, and the fourth quarter of the sea of Galilee: it was considerable in the time of St. Jeron and Eusebius: the Turks call it Elbazzan, the Jews Elba, and Bethel; and the Greeks, Scythopolis, as it is likewise named in the Apocalypse.

Salem, or Salem, was another remarkable place: but no traces are at present left of this or any other of the latter mentioned towns; nor can their situation be ascertained. 

8. The lot of the tribe of Ephraim, afterwards known by the name of Samaria, had the river Jordan on the south, the Mediterranean on the west, the tribe of Benjamin, on the north; and the half tribe of Manasseh, on the north, the rupture between the kingdoms of Israel and Judah originated here. The principal places in this lot were the following:

Sichem, or Hephæistopolis: it was once considerable, being a city of refuge, and, after the de-
struction of Samaria, the capital of the revolted king-
dom: on the place where it stood, there is at present a town called Sichem, or Hephæistopolis, on which the mound Elbal Gerizim. It is the fest of a Turkish f ingace, and capital of a territory confining of one hundred villages, and is inhabited by Turks, Greeks, and Jews, who were not the ancient inhabitants. The church of the Filipino, which was built on a hill adjacent to the church of the prophet Elijah, is the church of the former, and the church of the prophet Elijah is the church of the latter. 

It is well built and well built of people, though travellers reckoned it to be in a poor condition, compared with its ancient ruins nor it to have been.

Arimathea, or Ramah in Hebrew, which signifies a high place, was the place of the nativity of the prophet Sa-
maria, antiently called Saronon, from the moun-
tains on which it was built, but now Sebast, was the ca-
pital of the revolted kingdom, and raised by its monarchy to some dignity. It was by Herod rebuilt, and embellished with many magnificent edifices, of which there are still fonts remains, particularly a large square piazza encompassed with marble pillars, some flaunting columns, and two roofs being parallel under

Gerizim, but well built and well built of people, though travellers reckoned it to be in a poor condition, compared with its ancient ruins nor it to have been.

gates, which is that up, on account of a pious edict which the Turks have among them, that the Christians are to take Jerusalem in their right hand.

In the fourth part of the city, on Mount Moriah, stand the edifices called Solomon's temple, which is situated upon a high and stately eminence, but it is uncertain by whom this was erected. The middle part, where the Jewish sanctuary and temple were, is kept miserably poor by the tyranny of the government, and have several fine edifices but what they procure by accommodating strangers with food and lodging, and filling their relics.

The most remarkable antiquities in the neighbourhood of Jerusalem are:

The pools of Bethesda and Gilbon; the former is a hundred and twenty paces long, forty broad, and eight deep; it is at present dry, and the arches dammed up; but Gilbon, which is about a quarter of a mile from Bethlehem gate, is a magnificent relic, one hundred and six paces long, fifty broad, lined with a wall and pilaster, and well floored with water.

In the valley of Jehoshaphat is the tomb of the Virgin Mary; there is no entrance to it by a flight of forty-five steps, and is formed near the sanctuary where it is supposed St. Anne, the mother of the blessed Virgin, and on the left hand is that of Joseph her husband; the whole is cut into the field rock.

The next thing remarkable is Abafalon's pillar or pilar, which they allure us was erected by that prince in order to perpetuate his memory, but its name is not known. It is of marble, and was worked by the master who was buried there. A great heap of stones lie about it, which are always increasing; for all Jews and Turks, who pass by, throw stones on it and upon the base, as a token of respect to Abafalon for his unconstitutional rebellion against his father. The structure itself is twenty cubits high, and the base adheres below with four fine lunettes of the Ionic order. From the height of twenty to forty cubits it goes up, and is a plain mitre atop the upper and excepted: from thence to the top it is circular, and runs up spirally to a point, the whole being cut out of a solid rock: there is a room within considerably larger than the level of the ground without, on the sides of which are placed pillars with pilasters.

Eastward of the above is the tomb of Zechariah, the son of Barachiel, whom the Jews flew from the temple and the altar, as it is commonly supposed. It is cut out of the rock, eighteen feet high, and as many square, and adorned with pilaster columns on each front, cut out of the same rock, and supporting a cornice: the whole ends like a diamond, in a pointed top.

The most elaborate, curious, and magnificent antique remains that imagination can conceive, are, the royal sepulchres of Jerusalem. They are the sepulchres of the kings of Judah, which were constructed in the city of Jerusalem by the kings themselves. They are all cut out of the solid rock, and are of great number and variety, most of which are spacious, all cut out of the solid rock.

There is a spot of ground near Jerusalem, of thirty yards long and fifty broad, which is now the burial place of the Armenians. It was formed by the Acacias, field of blood, or pallet's field, purloined with the price of Judas's treason, as a place of interment for strangers. It is walled round, to prevent the Turks from shooing the bones of the Christians; but on half of it is occupied by a charnel house.

The remains of an old cistern are shown at Bethany, which is situated on the road between Jerusalem and Jericho: this place is, it is affirmed, belonged formerly to Lazarus; there is a defect of twenty-two steps to the room where he lay, where the stones and the dust of his body was raised.

Jericho: about twenty-three miles from Jerusalem, and was remarkable for being the fifth city invaded by the Romans after their taking of Jerusalem, when it was taken by the Romans in the latter part of its walls. It is reduced from a magnificent city to a little mean village, without any vestiges of its former splendor, except some grand arches of an old convent.

The lot of the tribe of Judah was bounded, on the south, by the mountains of Edom: on the north, by Hermon and Lebanon; and on the west, by the Mediterranean. This was the most fertile, populous, and large of all the twelve lots, but at present there are no remains of any places which it might formerly contain, except Bethlehem, the place of the nativity of Jesus Christ, and therefore the most of the year is held in by all mankind, for the blessings bestowed upon them by the Redeemer.

Bethlehem is eight and seven miles from Jerusalem to the south-west, and it is thirty-six degrees thirty-five minutes north latitude, and thirty-five degrees forty minutes longitude. It is considered as a port-flowed upon them by the Redeemer.

Bethlehem in the New Testament is called the city of David, being the birthplace of the royal priesthood; it is the seat of the high priest, in a fertile plain, and enjoys a modest excel,
a stony hill twenty miles to the southward of Jerusalem, where there is now a village named St. Phillip, from a tradition that it was from a fountain near this place where St. Phillip baptizes the Cauled, and the font was named after him.

The village of Engaddi, on the top of a rock near the Dead sea, about four miles east of Tekoa, is famed for its extraordinary and other exotical trees, which grow on the mountains above it. Among the cresses of these mountains, two are very remarkable: the first is the place where David first placed himself after the assassination of Solomon, and the other for being the cress in which David did gloriously the life of his liquified, with only cutting off the skirt of his robe.

11. The lot of Dan was bounded, on the south by Simon; on the north, by Ephraim; on the east, by Judah and Benjamin; and, on the west, by the Philistines country and the Mediterranean; the length, being fifty miles from north to south, and the greatest breadth not exceeding twenty-five miles. It abounded in all the necessaries and luxuries of life; and the fates brought to the Israelites from this country noble specimens of its admirable fertility.

12. The lot of the tribe of Sisene lay in the most southern corner of Judah; and was bounded by Dan, on the north, by Joshem on the south, by Judah, on the east; and a necked land, toward the Mediterranean, on the west. This part was not fertile as the rest of the land of Canaan, nor were the towns either many or considerable. There was not even a token that the Canna, except Anthandra and Rhodoselus, which are now poor ruinous towers standing on the sea coast, and Beerlaha, of which mention is made in that Abraham having entered into a solemn league of friendship with Abimelech, king of the Philistines, who had before taken them in at his table, and interested him to accept of them as a token that he had done so much for him, and should therefore be permitted personally to enjoy it: upon which occasion the place was called Bee-Sheba, or the Well of the Oath, because of the covenant made relative thereunto. Hence the name of Beerlaha was in process of time given to the city erected near it.

The following are the most remarkable places comprised in a small part of the city of Philistines, situated on the coast of the Mediterranean, and extending to the port of Trierias, which was long subje^st to the five lords of the Philistines.

1. Akalon, which is divided into a very trifling village: it stands on the sea-coast, and was the native place of Herod the Great, who was thence called Alkalamin. This was an Episcopal city from the earliest ages of Christianity; and, during the holy wars, had many family edifices remaining, which have since all been ruined by the Turks and Saracens.

2. Gaza lies in thirty-one degrees twenty MINI minutes north latitude, and thirty-five degrees east longitude, and is distant between two and three miles from the Mediterranean sea. It returns from ancient monuments its primitive grandeur, and on all those fow young remnants of antiquity are to be seen, viz. several rows of flatly marble columns with all their ornaments intact, magnificent fragments, &c. Among those one is in particular surrounded by a high wall, which belongs to a Turkish family. Near the city stands a round castle, flanked with four square towers, defended by two strong iron gates, and other works; opposite to which is the chapel, where the bavas's wives and attendants are kept, and a little above are the remains of an old Roman castle, the materials of which are in fine, that the hammtan might make no impression on them. The Greeks and Armenians have each a church here, and near to that of the latter, is that of Daniel, who for centuries lived in this place, and pulled down his head, and deposed at once himself with a great number of Philistines. The castle is the residence of a Turkish family, who is father of the ancient bungalow villages or hamlets under his jurisdiction. At a little distance from the town quite up to Egypt, the country is occupied by a race of wild Arabs, who not being used to any regular government, are continually roving about from place to place.

3. Mathura, or New Gaza, stood about ten miles from Akalon, and near the sea coast. Here it was the ancient sea-port to the former, or Old Gaza, and on that account only those who in it are full of antique remains, but it is uncertain whether they belong to New or Old Gaza.

4. Two miles south of the last, and about three miles south of Gaza stands another name Lardara. It is at present a poor mean place, covered with an old city, and a portion of two hundred houses as the burial place of Pompey the Great, who was killed in his neighborhood.

5. Kaphi stands at some distance from the above, but it now is unnecessary to consider it as a place inhabited, though in the time of the Macrastes it was a place of some account.

6. Gaza was the principal of the five great cities of the Philistines, being the royal seat, and dwelled away from it, no villages of much consequence, and it is uncertain whether it was the residence of the remnant of the great race, and was the place of God's nativity.

7. Ekeron was the northernmost of all the five cities which gave name to the five lordships of the Philistines: it was a place of great wealth and power, and frequently mentioned in the sacred writings, but no little noticed by any profane authors, being almost dwindled to nothing.

8. Antipatris, or Azotus, bore an extraordinary fame among the ancients: it was situated about twelve miles to the north of Askalon. The situation was inland, and the circumference of the country exceedingly fertile and pleasant. It was famous for the temple of Dionysus, where was the grandest and most famous god the Philistines had. To him they attributed the invention of agriculture. Some say there is in a temple near the city, an image of Homer, which the people used to kiss daily, and gave it the name of Homer. Hence it is called Homer's city. There is at present no trace of this city left, though in the times of primitive Christianity, it was celebrated as the residence of a bishop, and was even a fair village in the time of St. Jerome.

Thus having given a geographical description of the ancient as well as this time, we have before us the scene of a great variety of the most remarkable and interesting transactions, in which the ancient Jewish patriarchs, prophets, and kings, bore a considerable part; and of the events of the times of the primitive Christianity, by which we are enabled to form an idea of what has happened since, that we think it unnecessary to recapitulate those memorable events in this place: but for the general satisfaction of our readers, beg leave to refer them to Rev. Dr. Bp. Lightfoot's New and Complete History of Chief, printed in crown folio, and now publishing in thirty-six weekly numbers; at only six-pence each, with elegant copper-plates.

S E C T. VI.

Contains an account of the original of the Turks, their genius, temper, feelings, habits, arts, customs, manners, &c.

T H E Turks are generally agreed to have been of Scythian or Tartarian origin, and to have been very little known till the eighth century, when they came down upon Georgia, and plundered that country. In the year 684, they penetrated as far as Armenia Major, where they fixed themselves; and from this country obtained the name of Turks. Hence they are commonly called the Scythes, and speak more particularly of them as a nation, when we come to treat of their history.

With respect to their genius and temper, they affect to appear fierce, paffive, and humble, but they are easily provoked, and their passions are furious and ungovernable: they are full of diffimulation, jealousy, fumes, and vindications: in religious matters, narrow-minded, bigoted and extinguished, they seem to have no manner of inclination for the improvement of arts and sciences, any more than the men of the desert, who were fuppofed to have a fuggdindar of way of life preferred to every thing else; and the greatest of them faint to bear the hard part of their time among the most importunate, that they may be the most fertile country in the world, lies great part of it uninhabited; and several provinces of that empire, which formerly were reckoned populous, and abounded in all things, are now become perfect deserts for want of cultivation, and scarce any thing but ruins are to be seen in those countries which were heretofore famous for fine cities and grand buildings.

These people, as they seldom or never travel, so they have no curiosity to inform of the state and condition of other countries; and in the change or event of their wars, they are subject to amours and wars, and are subject to the number of State happenings.
be displaced, or dragged, but they do not concern themselves about the reason of it, you best them say no more upon
such an occasion, but that there is a new waist, or a new belt;
but perhaps, this is as much as they dare in such matters: how-
ever, it is certain they are far from being talkative: for we frequently see free or
separate, the mending together, and a word their hearers
drop from any of them in a quarter of an hour. Some
women are also, among the common people, addicted to
finishing; although the pipes are on rule as cherry
wood, some of them carved and ornamented with
vessels: the bowels are neatly made of clay: the rich use
the Perugian form, a high fat, taking the stout pipe in the
mouth, tubes through a veil of water before it reaches the
mouth, which renders it less disagreeable to the smell and
palate. Friendship, will, and agreeable conversation they are pre-
pared for, as in modern travelling observers, but in
matters of trade they are sharp enough, and will carry long
accounts in their heads, without the help of books, by
natural arithmetick, improved by custom and necessity.

Walking is no less their aversion than talking: the taking
a walk, as we call it, for walking fake, is to them the most
ridiculous excite in the world, and they look upon
people to be dratted or mad, when they for them taking a
turn backward and forwards; they choose rather to
bull all day long or fit coats legging on their fods’s and
though they have company about them, there is no more
conversations among them than among many horses:
they affiliate themselves together at certain times, as
animals of a lower species do, and their satisfaction seems to
arise only from their sitting near each other. Those who
have country houses or gardens distant from the towns,
will order their edifice to be well garnished with
places where coaches, and other such fuch vehicles are like little
inno, they are under the necessity of breaking through that
fixed and
habit of indolence which seems universal to
please them.

The honesty and probity of the Turks is highly cried
up by some travellers, but our merchants observe, that
those who deal with them ought to be upon their
guard, and indeed, as all people agree that countenances and
expression are the fashionable vates of Turky, and unprofitably
profitable of their governors and ministers of state,
the express offices and every thing to faith, it is not likely
that their inferiors are perfectly innocent: they will not per-
haps be guilty of an open fraud, or a downright lie, which
might affect their credit in trade, and ruin their
reputation; but where they can circumvent another secretly, it is
not to be supposed they will red the temptation, where
countenances is predominant. Some find make a dif-
finitive between native Turks and those who have changed
their religion upon peculiar views: these latter are by
people held to be the most abandoned villains, whatever
flavours of faith they may put on, and for the reft, I do
not at all doubt but the proerty of our own merchants is at
least on equal with that of the Turks.

The temperance of the Turks has been observed also
to exceed that of the Christians; but there are few of them
who are notanders: and they are not so punctilious about
the law prohibits it, and the government punishes severely
those that are found disordered by it in the streets: nay,
those very magnificent Turks, that will like those of some Christian nations, drink in
the right to a very great exces; and fo as they behave them-
elves quietly and inoffensively in their legions, do not
think they have committed any great crime. Sobonay
also is a vice which they are intolérably addicted to, not
withstanding they are indulged in taking as many
women as they please.

Their charity however, if it be not done for ostentation,
as some travelers figured, is very commendable: they are
careful even to prevent the unfortunate, necessities: they visit the prisons, and pay the debts of
the poor who lie there. In case of fires, which are very
frequent in their timber buildings, the holes in the
f不要太 frequent, are soon quenched; and our soldiers
are in haste to generale the fumes and flame of them:
their people, is it said, set up fires by the side purely to
be attendant to people in their journeys, and refresh the
weary traveler. In the hot summer, even to annual plants: they will purchase the liberty of
impious birds procure food for others, and religiously
river certain trees.

The dressing of white hair is esteemed proper to blacks, and dwelling
is not known amongst them; but no people exceed them in

bulling forth language and complicated cutters, when they are
provoked, but never pronounce the name of God, or make
themselves merry with sacred things, as Christians often do.
Tragedy is considered as a degrading
wise, and entreating all people but their own, especially those of a different religion: they
themelves alone they esteem wise, valiant and holy; the rest of the world are not entitled to any
good things of this life or another. It is not only held
honorable, but their duty to extend their conquests to the ends
of the earth, and they are called in fulfill the
Mehometan yoke, and are taught that by dying
fighting in this cause they purchase stir in paradise.

The doctrine also inspires them with courage in the field.
As the Turks make choice of wives for their beauty or
merit, it is no wonder that both men and women are
handsome; they fetch every country where beauties are
to be met with as diligently as our gentlemen pursue the
ladies for their fortunes: people here are more careful in
the breed of their dogs and horses than their children,
and their lives frequently flow it.

In Turks the men have their heads, leaving one lock
upon the crown; and use a peculiar expression in judifa-
cation of the practice, that "the devil nests in long hair," they wear beards long, except the officers in
the palace and military men, and these leave a very
little on the upper lip. All of them wear turbans usually white,
but the family of Ishkem green. A turbant contains a
small metal plate about the middle of it, with the
bigness of half a buffet almost, and adorned sometimes
with lace or fringe; the greater the quality of the
man, the bigger his turban is usually. (The Jews, Persians,
and Mohammed, are not suffered to wear white turbans.)
Next their skins the Turks wear a long red cloak tied with a fimb, the sleeves close and reaching
down to their wrists; over the red they usually wear a
coat made of the basian makes, of almost any colour:
their breeches or drawers are short, leaving before and behind,
and jet down when they water, which the men do sitting as
well as the women. The buckings are of a piece with
their breeches; indeed, of those they wear yellow flippers,
which is another mark of distinction; they will not suffer
a Christian to wear such; the flippers are always put off
entering a house or temple, but the turbant or cap never.
They put their knife, handkerchief and pibase in their
 bosoms, and have a daggar or pisard in their sail.

The fifth part of the ladies dress is a pair of drawers
very full, which reach to the shoes, and conceal the leg
more modestly than petticoats; there are made of thin
silvered damask, brocaded with silver flowers. The
those are of white leather, or embroidered with green
this hangs a fmock of a fine white gauze, edged with
embroidery; this flmock has wide sleeves hanging half
way down the body, and shallows, that the neck is not
covered; but the shape and colour of the bosom are
very well to be distinguished through it. The attery,
is a whiskett-scarf, or fmock, white or black, white
mark, with very long sleeves falling back, and fringed with
dark gold fringe, and shouid have diamond or pearl
buttons. The cailfan, of the same stuff with the drawers, is
a gobe redady fitted to the shape, and reaching to the feet
with very long, frizd, falling sleeves: over this is a girdle
about four fingers broad, which all who can afford it have entirely of diamonds or other precious stones; these who
are not at that expense, have it of exquisite embroidery
on linen, but it must be covered before with a clasp of
diamonds. The turban, which is made of several layers, is
tulied over Frankish dress according to the weather, being a rich broad-
side lined either with ermine or taffet, and has sleeves which
reach very little below the shoulders. The head-
bead is composed of a cap,crowned with other
they are of fine velvet embroidered with pearls or diamonds, and
in mutiers of little shining flifer stuff; this is fixed on
one side of the head, and some have their way
down with a gold taffet, and is found on either with a circle
of diamonds, or a rich embroidered handkerchief: on
the other side of some of them is laid the other, these
ladies are at liberty to show their fancies, some putting
flowers, others a plume of heron's feathers, in short what they
please, but the most general fashion is a large bou-
tique of jewels made like natural flowers, the bunches of
the roses of different coloured rubies, the jenniines of
diamonds,
The Turkish forces are of two sorts. The first may without restraint be employed, who carry their arms paid out of the treasury, namely, the spears and janizaries; the one horse and the other foot. The second sort of soldiers are those which are raised and paid by the gentlemen of the country, who hold their estates of the prince, on condition of bringing a certain number of men and horses into the field whenever they are required; these are called servitors or fiscars. We shall speak first of the standing forces, the spears and janizaries.

The spears or horse, were originally gentlemen, who had their education in the academies of the frangies, and are about twenty thousand in number, divided into two bodies, viz. the filaghi, whose colours are yellow; and the filaghiaghi, whose colours are red: these last were the slaves of the lords of the islands, and were thrown into battle, as occasion served, to maintain the position of the ships during a storm of wind, many of them being slain. Bows, arrows, and darts, were formerly their weapons; but now they have carbines and pistols like our troopers.

The spears of Asia, are more valiant than the body of Europe; but those of Europe are better disciplined. Their pay is very different, from twelve to one hundred aspers a day; but none have more than one hundred, which is about four shillings and two-pence of our money; and though it may be imagined that those of the lower class could not subsist, and keep themselves and their horse, on fix-pence a day, yet provisions are so exceedingly cheap in Turkey, that it is very possible to maintain themselves with that allowance, especially as their arms are allowed to be enrolled in that body, and receive twelve aspers a day each; and when the Grand Signor merely gives them orders, it is the same to the spears as to five thousand aspers a man, to furnish them with arms and accoutrements: These gentlemen manage their arquebuses with a very dexter hand, and always to order, though with a great deal of fury, which if their enemies can withstand a while, they retire in more than the same spirit, and are brought back to the charge again. Great numbers of volunteers usually join the troops when the Turks enter into a war, in hopes of being preferred in that body.

These foot, are educated also in the frangies of their servitors, where they are trained up to arms; and in order to increase and recruit this body, every five thousand aspers yearly rent, must find a trooper completely armed, which does not amount to nine pounds sterling; and that it is said, will maintain a trooper three years; provisions are furnished by the officers, though four, five, or six days out, the men receive none; and the wages and services of this sort of soldiers are no expenses. These foot soldiers are formed into regiments, having their several colonels, captains, and other commission officers.

**THE TURKISH FORCES ARE OF TWO SORTS.**

The first may without restraint be employed, who carry their arms paid out of the treasury, namely, the spears and janizaries; the one horse and the other foot. The second sort of soldiers are those which are raised and paid by the gentlemen of the country, who hold their estates of the prince, on condition of bringing a certain number of men and horses into the field whenever they are required; these are called servitors or fiscars. We shall speak first of the standing forces, the spears and janizaries.

The spears or horse, were originally gentlemen, who had their education in the academies of the frangies, and are about twenty thousand in number, divided into two bodies, viz. the filaghi, whose colours are yellow; and the filaghiaghi, whose colours are red: these last were the slaves of the lords of the islands, and were thrown into battle, as occasion served, to maintain the position of the ships during a storm of wind, many of them being slain. Bows, arrows, and darts, were formerly their weapons; but now they have carbines and pistols like our troopers. The spears of Asia, are more valiant than the body of Europe; but those of Europe are better disciplined. Their pay is very different, from twelve to one hundred aspers a day; but none have more than one hundred, which is about four shillings and two-pence of our money; and though it may be imagined that those of the lower class could not subsist, and keep themselves and their horse, on fix-pence a day, yet provisions are so exceedingly cheap in Turkey, that it is very possible to maintain themselves with that allowance, especially as their arms are allowed to be enrolled in that body, and receive twelve aspers a day each; and when the Grand Signor merely gives them orders, it is the same to the spears as to five thousand aspers a man, to furnish them with arms and accoutrements: These gentlemen manage their arquebuses with a very dexter hand, and always to order, though with a great deal of fury, which if their enemies can withstand a while, they retire in more than the same spirit, and are brought back to the charge again. Great numbers of volunteers usually join the troops when the Turks enter into a war, in hopes of being preferred in that body.

These foot, are educated also in the frangies of their servitors, where they are trained up to arms; and in order to increase and recruit this body, every five thousand aspers yearly rent, must find a trooper completely armed, which does not amount to nine pounds sterling; and that it is said, will maintain a trooper three years; provisions are furnished by the officers, though four, five, or six days out, the men receive none; and the wages and services of this sort of soldiers are no expenses. These foot soldiers are formed into regiments, having their several colonels, captains, and other commission officers.

**RELIGION.**

The body of janizaries did not at first exceed seven thousand, but were afterwards increased to twenty-five thousand, and there may be one hundred thousand more that purport to be janizaries, but are not recognized by the Turks as such; but these seldom serve in the army, or receive pay; the rest of the slaves that are not incorporated in this body, are brought up in the seaports, and employed in the large cities, and have their clothing also provided for them by the government; but living, and having nothing to do in time of peace, they frequently grow mutinous, and pretend to direct the administration; and if they apprehend any of the minisry are not their friends, they demand their heads, but will not always satisfy them; they proceed so far sometimes as to depose the Grand Signor, and advance one of his relations to the throne.

Their disaffection is usually discovered when they come to the dividing, whether they are summoned to the service by their age, or general, and have an entertainment provided for them from the Grand Signor's kitchen. If they are not satisfied with the mark of the coins they are to be redeemed, they are attended by any great man, they overturn their plates, and light the meat provided for them; which when the courtiers are apprised of, they endeavor to satisfy them by gratuities and fair promises, or to prevent the disaffection by raising a general. There are about one hundred and sixty houses or apartments of the janizaries in Constantinople, which are called caravans or barracks, and every chamber has it to itself, or captain; the chamberlain, or master of the chamber, who is lieutenant of the company, of webers, or pay-master; the bailiff, and field commander, who is in command of the caravans, and is obliged to order, and to provide all that is requisite for his assistant, and to see that the supplies are equal, and due to each. The janizaries are divided into the following classes: the young, the adult, and the old. The former have the advantage of being able to keep a horse and a hound, and the latter keep a mule, horse, or ass. The janizaries are divided into regiments, with their several subaltern officers, and these ranks are again divided into different companies, and these again into companies; so that there are ten companies in each regiment, and ten regiments in each of the ten divisions of the palace; and the janizaries are divided therefore into one hundred and twenty-five thousand men. The janizaries are divided into regiments, with their several subaltern officers, and these ranks are again divided into different companies, and these again into companies; so that there are ten companies in each regiment, and ten regiments in each of the ten divisions of the palace; and the janizaries are divided therefore into one hundred and twenty-five thousand men.
officers, and have different colours: the officers are commanded by the Grand Signor, and are divided into the best of the army, or the vice-regency of the province; and the whole army is commanded by the Grand Signor; and when he is not in the field, his representative is the Dragomir, who is the military commander.

The province of Natisa brings about twenty-five thousand men into the field; Caramania or Cilicia, five thousand; Diarbeci, one thousand; Damascus, thirty thousand; and the whole of the army is reckoned at sixty thousand.

The soldiers are divided into several regiments, each consisting of five hundred men, and are commanded by colonels, who are paid at the rate of sixty marks per month. The soldiers are divided into several regiments, each consisting of five hundred men, and are commanded by colonels, who are paid at the rate of sixty marks per month.

The soldiers are divided into several regiments, each consisting of five hundred men, and are commanded by colonels, who are paid at the rate of sixty marks per month.
The New and Universal System of Geography.

There are innumerable of emperors, who have kept such slaves, and admitted them to a share in the government.

The ladies of the seraglio, also, make love to one another sometimes; which would tempt one to think, there is not a favorite among them. They treat them with the utmost regard in the way nature directs, will find another vent. The dead and dumb, or mutes, in the seraglio, are about forty, who converse by signs; and when anything serious happens in the empire.

Deeds that acts the part of buffoons are still retained in this court, as they are in courts and great families here in Europe, and the courtiers of the Ottoman empire are still affected with the defects and deformities of their own species. But no people have a greater share in the government of the seraglio, or a greater influence on affairs of state, than the common attendants of the ladies.

These princes from a condescension in their rank, treat them as if they were their officers or servants, not only out of the chivalry of their women, but in the most important affairs. The kilaris, a black eunuch, is the superintendent of the women; and the capia, a white eunuch, is governor of the pages and white eunuchs belonging to the court.

The seraglio is supplied from time to time with young blooming beauties taken in war, or purchased in Georgia or Circassia, but chiefly by the governors of provinces, who never fail to make presents to the court of such young ladies, in their respective provinces, as are eminent for their beauty; and the women, who entertain ladies in this seraglio, are educated according to the opinion is entertained of the character of the ladies who are admitted for the seraglio of Constantinople, which are the three colleges or seminaries, where they are educated by the professors of their subjects, with the female instruction of the ladies, and are placed under the care of the chief of the white eunuchs, and the care of the women, who entertain ladies in this seraglio, they are taught music and dancing, and whatever may render them most agreeable to their betrothed. All of these are to be seen at the court, the lady in her apartment, she is complimented on the occasion, by the rest of the ladies of the court; and I can assure you, that the last, so far as the Greek and Turkish eunuchs are concerned. For the Grand Signor never marries any of them, since Bajazet was taken prisoner with his wives, and gave them about two hundred officers to take care of them.

The only women that have a man to themselves in Turkey, are the Grand Signor's fifteen or daughters, whom he marries to the governor of provinces, and other great men in their houses, who are no less fortunate than the officers of the seraglio, their husbands in as much subjection as other Turkish gentlemen have their wives, and oblige them to put away all the rest of the wives and concubines, how long forever they have lived with him. And it seldom fails to prove fatal to him, if he takes another woman to his bed.

If the chief sultana loses her son, or the lady of the seraglio, the chief sultana herself, sometimes prevails.

From these seminaries, the emperor makes choice of all the officers of his household, which are forty in number, of whom twelve are their ministers, and as governments fell, they are preferred, but feldom till they are fifty years of age. When they leave the seraglio, they recommend themselves to the favour and patronage of the principal eunuchs; and, on their occasions, appear as polite and obliging in their addresses as our courtiers do in the part of the world; for they treat these officers of a different faith with great respect, and the more so, as they believe, with as much civility towards each other as gentlemen do elsewhere.

The ladies of the seraglio have no power to the a woman, they frequently fall in love with one another, to which is sometimes given the name of platonic love, which is often established; however, in love, but it cannot last for ever, and other eunuchs are generally on foot, and it is kept a secret, though they watch them strictly, when they perceive any symptoms of this passion, they will carry it on by treated, when they are not admitted to the communion of the amiable object; and there are sometimes such jealousies among rivals, and such schemes for defrauding those they have seduced, as sometimes prove to the whole, to the great detriment of the state. The great officers of the seraglio, also, sometimes make love to the pages, who are usually the most beautiful boys, and make interest to get them retained in their service, suffering themselves to be governed and influenced by them.

3
ASIA. 

ASiatic Turkey.

with him prosperity as he marches through the forest.

The Turks apprehend, that nothing contributes more to the peace and security of their empire, than their destroying all appearance of a nobility and great families among their people, and that they have done this in order to oblige them to officés. Their baillis or governors are all taken out of the family, perfectly ignorant of what blood or family they were of; and have no powerful relations or dependants to support them, if they should entertain any aspiring thoughts in the mind of the people.

The duration of their command is also so very short, that they have not an opportunity of ingratiating themselves with the people, or raising a sort of

the Grand Signor; and of all the rebellions that have been formed by the baillis of distant provinces, we scarce find any one that has been of long duration; the rebels have been usually dispersed without coming to a battle.

The Sultan has no more to do, but to procure their leader to be taken off, and he is sure of a victory without fighting, there being no powerful relations to support the cause; and it is far more observable, that when a rebel meets with success, he is never able to maintain himself any other way than by setting up another prince of the royal family, who is no sooner established in the government, but he usually makes the person who raised him a proficient of a bow-shining (i.e. caxing him to be strangled) for fear of being desired at his predecessor was before him.

The baillis of some petty governments, indeed, have been allowed the privilege of leaving their command to their children, as heretofore the baillis of Gaza; but one of them happening to live seventy-five years in that government, it was thought fit to remove him, and contrary to the Turkish politics, to suffer a person to remain so long in one command, that he was invited to court, and, without any procéd or command, was ordered to be put to death as soon as he arrived. And because power naturally attends on riches, if they remain long in a family, the wealth of a bailli is feared ever permitted to descend to his children.

When a bailli dies who has married a Isabella, her dowry is first paid out of his estate, and the devil revolts on the emperor; and from this State of marriage, the Sultan makes provision for the sons; but it is an unalterable maxim, that such sons shall never be preferred to any considerable post in the government, lest their near relation to the royal family, should inflame them with ambitious views. One reason that the Turks encourage traffic so little, is, dreadfully to impoverish theirsubjects, that they may not have it in their power, how much fewer they may have it in their will, to rebel. Lord Bacon observes, that it is not possible for a nation overloaded with taxes to retain a martial spirit; they submit to oppression, and patiently endure all kind of violence. This seems to be the opinion of the kings of France, and other princes, who have neglected their subjects rather than a fever after death. They believe the world to have been what it is from eternity; that men, as well as trees and flowers, perish; and one generation will succeed another, as his posterity is left among the earth the poor. Fraticelli, to all intents and purposes, the poor Mahometans; and they do not care for their children, but have them disposed of at pleasure.

The Turks keep many countries in subjection, that were once wealthy and warlike nations, who, by the loss of their liberty and property, being reduced to their own wooden shoes, throw up their caps, and cry, Vive le Roy, when they are perilling, and deprived of all the necessaries of life by their grand mandarins.

Sect. X.

Tracts of the Mahometan religion prefixed to the Turks, and also of the Greek church in the Ottoman empire.

The religion of the Turks, namely, the Mahometan, is divided into a multitude of sects; every considerable town almost differs from another in some particulars, which is supposed to proceed from that, many prophets, who make almost of every nation, some of whom are induced to profess the Mahometan faith to obtain their liberty, are in every province, in every city, and every sect, introducing some favourite opinions or doctrines of the country from whence they came, naturally occasioning a variety of sects; and if they fall into a sort of sects, it is from the Turks themselves, and they hold the unity of the Godhead, and Mahomet's mission, and observe the five chief precepts, viz. their purifications, prayers, fasts, alms, and pilgrimage, and they do not wish to prove dangerous to the state, the government takes little notice of them.

We have before hinted, in treating of Arabia, that as Mahomet left no sons, both Turks and Persians derive their spiritual and temporal authority either from Hali, the husband of his daughter Fatima; or from Abubeker, whose daughter Mahomet married. At the Persians prefer the doctrines of Hali, and the Turks those of Abubeker and charge each other with corrupting and misinterpreting the Koran; these two sects retain stronger prejudices against each other, than they do either against the Jews or Christians; and when they are to be called a just war "The cause of God," and their adversaries heretics, and seldom give quarter to each other in battle. Among the Turks, there are four sects, which differ only in ceremonies, and are otherwise equal. Each of these sects are called the bannis, who inhabit Turkey and Tartary.

1. The Hashifs, of which are most of the Arabian tribes. 2. The Interns superior to that of the Grand Signor, viz. Algiers, Tunis and Tripoli, and according to some, those of Morocco; and 4. The Hambellas, who are a small tribe of Arabs. All the Mahometans, except the Persians, are of one of these sects; but then these are split into a multitude of other sects, distinguished by the names of their respective leaders. We shall mention some of them; and first, the sect of monks, who are filled the defenders of the equity and unity of God; these again subdivided into two and twenty other sects, who maintain their several tenets with a kind of frantic zeal, charging those that differ from them with infidelity. One of the subdivisions maintain, that Christ was eternal, assumed a body, and was incarnate, and that he judges the world at the last day; which they prove by that text in the Koran, viz. "Thou, Mahomet, that see thy Lord return in the clouds." The most general opinion in relation to a future state is, that the virtuous will be happy; that the wicked will be punished for a time, but will at length be admitted into Paradise.

There is another sect that believe transmigration, that the souls of the faithful leave this world, and by the other sects, which makes them extremely compulsive and tender of them.

The sect of the efratschi is of opinion, that the happiness of the other world consists in the contemplation of the divine nature, and not in sensual enjoyments.

There is another sect, which may be filled the doubting, who will be polluted of nothing, they neither endeavor to pervert any thing of their renewal; sects they observe, that truth may be, and often is, so stressed up, that it cannot be distinguished from falsehood; and therefore to any questions that are asked them, they answer, "God knows, it is unknown to us." And of this sect are some of their greatest men; but I take this to be rather an article of policy than religion, as it may be dangerous to give their opinions one way or other in an arbitrary government.

Great numbers either are, or pretend to be, atheists; but these are generally renegades, who have apostatized, and the most profite amongst them, who, daring to be called to account hereafter, endeavor to persuade themselves they have other than a fever after death. They believe the world to have been what it is from eternity; that men, as well as trees and flowers, perish; and one generation will succeed another, as his posterity is left among the earth the poor. Fraticelli, to all intents and purposes, the poor Mahometans; and they do not care for their children, but have them disposed of at pleasure.

The Mahometans have their dervises or fratas, and concerts, as well as the Christians, and it is pretended that their religious houses were instituted by Mahomet himself; but there is no particular mention made of them in their books till within these four or five hundred years. The word dervise signifies one that is poor, and has renounced the world. The first convent that was erected is at Cogni (olim Iconium) in Lycaonia, in which there are between three hundred and four hundred dervises, the superior of which house is the general of the whole order, by virtue of a charter of Ottoman, from whom their emperors derive their pedigree. Their dervises go generally dressed, put on a defpised look, and pray, and perform certain ceremonies that the Roman Catholics do, and have bindings of beads by which they number the prayers they repeat; on Tuesday every week the superior of every college, or convent, makes part of the Koran to them, at the conclusion whereof the monks having made a profound reverence to their superior, and he falling into a dance, and the dervises, or religious twifhnes, one playing to them on a kind of flute.

The mulee ceasing, they blow in an infant, not at all directed by their circular motion, to which they have been trained up from their infancy, because they pretend to do in memory of Mevaluna, their founder, who continued this circular motion, they affure us, fourteen days, without eating or drinking, and then falling into a dream, they recived certain revelations concerning the institutions of this order, the flute being (as they tell us) the instrument that Jacob and other holy shepherds used to praise God.
upon; but, however that be, it has a very delectable found, which would incline one to think they were rather bewailing their condition, than praising the deity; but as the koran permits them to indulge in their devotions but vocal, this is said by few; nor do they ring bells to call people to prayers, as it is, for the like reason, but summon them themselves. In their travels they carry a small tent, to sit in when they pray.

Notwithstanding these devries, as the Romans friars, vow chastity, poverty, and obedience, they may leave the world, and take this order under the sign of matrimony. In their convents they are taught the Turkish, Persian, and Arabic languages, but scarce any art or science, unless to be leggereman or magic, or rather a pretence to it. It is said, and is transmitted from the monks in this part of the world, to increase their superstition, they swallow as much opium as would poison a dozen men that are not used to it; and though it may raise their spirits at first, this is succeeded by a stupefaction which renders them incapable of any kind of conversation. There are monasteries of these devries all over the empire, and through India as far as China, where the brethren are entertained in their travels; and as they have excellent intelligence, the Turks make use of them as spies in the common nations. From these convents come most of the friars or preachers, to which office any man may advance himself, as there needs no ordination, and he may in a day again when he pleases: those of the family of Mahomet are filled emirs, and are known by their green turbans, that being Mahomet's favourite colour. These are esteemed friars, that is, their office is to form the Turks in his right hand; these emirs seldom apply themselves to any trade, except it be the purchasing of slaves to make Mahomet's use of them; and it has obtained a very servile employment among the Turks. We must not omit to mention their fanatics, or hermits, who go naked, and let their heads grow long, and their beards five years: they are in a manner adored by the devout people, and in some parts of the empire take upon them to screen criminals from justice.

It is customary, when the Grand Signor sees other nations or reveres his sentence, and with his fist or fist of no considerable revolutions are taken, either in regard to peace or war; and this custom is not to confine what the sign of the fire resolves on; he is deposed, and a more comely and high-priest in his head; but the reason of demanding the Grand Signor, day, forms at first, to prevent the clamours of the people, where success does not answer their expectations, it being presumed that men will ease themselves in the order which had been approved by solemnity, or high-priest. When the Grand Signor writes to the mufhi, he directs to the "Eded, wife of the wife, instructed in all knowledge, the firing of virtue and true science, key of the treasure of truth," with several other pompous epithets.

Though the koran is generally held to be the rule of the Mahometan faith and practice, the mufhi takes the liberty to make it speak what language he pleases, as appears from many instances. It being demanded of him, what that is, he is said, to be the sign of his agreement for his day or the omission of it, if they happen to be in a part of the world where the whole day was but an hour long; he answered, heaven did not require things impossible, but so as the duty was performed within the twenty-four hours, it was sufficient and the Mahometans being appointed to turn their faces towards Mecca when they pray, it was demanded, if they thought it pertinent part of any duty to do so, and did not know towards what point Mecca lay, how they should comply with that precept: the mufhi directed them to observe the sun, the sun, the moon, the minutes, and they would not fail sometimes to set their faces right.

The codifiers are the next judges to the mufhi, of which there are three, viz. 1. The codifiers of kornan; 2. The codifiers of Raschid, who are ecclesiastics; and no man can be advanced to the high office of mufhi till he has passed through one of these; and there is in every province a molihil, ed, who is the chief judge of the province, to whom the people may appeal from the decision of the mufhi. The emirs are the judges of the province; but notwithstanding these already mentioned are said to be the only legal judges, the beggars and governors of the mosques, and it is common to punish men, and even to put them to death sometimes, without allowing them any trial whatever.

The imans, or particular head of their confraternity, are not appointed by the mufhi or any ecclesiastics, but are subject to them; any one who has the reputation of an honest man, and can read the koran, may take upon himself the office of iman; and the appointed one is the particular head of the place to the governor of the town or province, when a church happens to be vacant; and as the conduct of the governor is necessary towards admitting one to officiate as a priest, so he may turn him out when he pleases; and the priest may leave his cure, and become a lazarain again, if he sees fit. They are in the same fate as that of other peoples, only their turbans are a little enlarged, and they alife an air of gravity; and in the mosques, when the imans stand, or sit, or profane himself, the people imitate him; the imans also read some part of the koran every Friday, which is their Sabbath, but seldom preaches. This is the business of the friars, who make preaching their profession; and these usually have their education in the convents already mentioned. There is another duty the imans perform, and that is, the calling the people to prayer as the appellation to them forms the beginning of all the prayers of the mohammedans, and renders them liable to a very meritorious employment among the Turks. We must not omit to mention their fanatics or hermits, who go naked, and let their heads grow long and their beards five years, and this is a manner adored by the devout people, and in some parts of the empire take upon them to screen criminals from justice.

It is customary, when the Grand Signor sees other nations or reveres his sentence, and with his fist or fist of no considerable revolutions are taken, either in regard to peace or war; and this custom is not to confine what the sign of the fire resolves on; he is deposed, and a more comely and high-priest in his head; but the reason of demanding the Grand Signor, day, forms at first, to prevent the clamours of the people, where success does not answer their expectations, it being presumed that men will ease themselves in the order which had been approved by solemnity, or high-priest. When the Grand Signor writes to the mufhi, he directs to the "Eded, wife of the wife, instructed in all knowledge, the firing of virtue and true science, key of the treasure of truth," with several other pompous epithets.

Though the koran is generally held to be the rule of the Mahometan faith and practice, the mufhi takes the liberty to make it speak what language he pleases, as appears from many instances. It being demanded of him, what that is, he is said, to be the sign of his agreement for his day or the omission of it, if they happen to be in a part of the world where the whole day was but an hour long; he answered, heaven did not require things impossible, but so as the duty was performed within the twenty-four hours, it was sufficient and the Mahometans being appointed to turn their faces towards Mecca when they pray, it was demanded, if they thought it pertinent part of any duty to do so, and did not know towards what point Mecca lay, how they should comply with that precept: the mufhi directed them to observe the sun, the sun, the moon, the minutes, and they would not fail sometimes to set their faces right.
would bless all true believers; on Saturday, they pray for the conversion of the Jews; on Sunday, for the conversion of the Christians; on Monday, for the priests; on Tuesday, for the priests, and those that have the honour of the saints; on Wednesday, for believers in slavery among infidels; and on Thursday, for the whole world, of every nation and tribe, that is without the mouth of God.

The Mahometans perform their devotions with the greatest solemnity on Fridays, when the emperor, ministers, and most of the discharge of the mosques in Turkey, though in Persia they seldom appear in the mosques, but pray flagellum in their houses, or in the fields; and the Turks and the negroes are affiliated, of the holy faith in their prayers. Their enemies supposed that they are hypocrites at bottom, as they are frequently (like the Pharisees of old) prone to praying in the markets, and the corners of the streets, and other public places, to obtain the applause of men; and a writer of credit, who refided some time among them, observes, that their religion seems calculated to keep up great gravity and solemnity, without the least tincture of vice; be further remarks, that they were the most holy profanations, and utter their prayers in a most holy and solemn tone; which, with, them, are esteemed the great excellencies of prayer. But we are inclined to think, that this character is in general too few; and that, on the contrary, there are some among them who are in reality as sincere and devout as they pretend to be.

The Ramanza, or Lent, is the most solemn fast that any nation observes; for no person, not so much as a day-labourer, will eat, or drink, or smoke, till sun-set at that feast; but between those hours, they are no more restrained in their time; and the whole town, and particularly the mosques, are illuminated both within and without till morning. At the end of the month the fast ends, and at the next new moon, viz., their Christmas, the festival called Bairam begins, which lasts three days, when they celebrate a thanksgiving in their mosques or temples, offering several delicious feasts, and among others of that which follows, viz., "We thank thee, O Lord, the only infinite, perfect, eternal, and most merciful being; in the holy hours, laid down, and the one true, and only law to us; and that we have preferred it to all perversity, as it was delivered to us by thy prophet, servant, and anointed, Mohammed; to whom be salvation and blessings; as also to thy other prophet Jesus, the son of Mary, Most. David, Solomon, &c."

After prayers, the Sultan receives the compliments of the great officers of the port, seated on his throne, and even of the sultannies. The people, dressed in their best habits, visit one another; and acquaintance embrace when they meet in the streets; and where they have had any differences, they are reconciled. Even their women, at this time, are allowed the liberty of going abroad, it is said, and from their own houses, as the opportunity of the fast breaks off their keepers. Sacrifices of oxen, sheep, and lambs, are also made by the wealthy, and their flesh distributed among the poor; so that at this time a general rejoicing prevails among all our teachers compared to the Christians, because it succeeds their Ramazan, as Easter does our Lent. It is also a memorable feast, being held in every Great Mahometan year, in the same place, thirty years, or thereabouts; for the Mahometan year in ecclesiastical matters being lunar, and consequently, between eleven or twelve days short of ours, their fast and festival happens many days sooner every year, than they did the preceding year.

The Armenians, Maronites, Jacobites, and other sects of Christians in the Turkish empire, have their patriarchs; and the pope appoints a titular patriarch at Constantinople, as well as a bishop.

The Greeks, and eastern Christians have such a prejudice against the Latin or Roman church, that they would rather continue under the dominion of the Turk, than live under a pope, and papists, on the other hand, treat the Greeks as infidels, and are continually importing the Turks to destroy and oppress them. They consult the fate of Constantinople to be put to death upon false suspicions they made to the government, because he refused to submit to the pope.

The Greek Christians, in every tribe, is of a vast extent, containing not only the Christians of the Turkish empire, who are in many parts of it much more numerous that the Mahometans themselves, but also the Christians of Asia Minor, the inhabitants of Podolia, and Black Russia, the people of Ethiopia and Abyssinia, south of Egypt. Thole of Circassia, Georgia and Mingulis, and the inhabitants of the islands in the Mediterranean, under the Venetians, are generally of the Greek communion; together with those who are under the dominion of the Turk, who are governed by four patriarchs, viz. the patriarch of Constantinople, Alexandria, Antioch, and Jerusalem.

The Greeks observe two fixed and immovable feasts; the two first of which are, the nativity of the blessed virgin Mary, and the ascension of the Holy Cross; the red confit principalum, or consecration of the mosques in Turkey. They keep four annual fasts. They give to their patriarch of Constantinople, whom they consider as their head, the pontifical crosier, or hall of the bishop. They have no festivals; making him in all respects equal to the pope. The revenues of their priests are very small. Marriages, with them, are legal obliugation against a person's going into orders; but the general practice of their church is against marriage afterwards; they have a great number of deacons, who belong to the bishops; and their monks lead a very severe course of life. The modern Greeks reckon up seven mysteries or sacraments, which they are supposed to have taken from the Latins; namely, baptism, anointing of chriss, the eucharist, penance, holy orders, matrimony, and oil with prayer. Their celebration of the eucharist is attended with a great number of ceremonies. The laity are obliged to receive the communication four times in the year, with which they readily comply; and none omit it at Christmas or Easter. They also retain the ancient doctrines of confession and penance; but, with regard to the former, they do not require the penitent should enumerate every particular circumstance of his life, and his confessions is only that he thinks prudent to declare, it is accepted. Divorces are callously obtained among the Greek Christians, as their people are very prone to revenge when they have been ill used. They retain the ancient ceremony of calendars, or rather of the Constantinople creed in their liturgies and catechisms, and are wholly strangers to that of St. Athanasius: but they acknowledge this creed to be inspired by the Holy Spirit, and among others of the fallible substance with the Father, and the Son, to be God from eternity, proceeding from the essence and nature of the Father; and, with the holy Trinity, to be eternally equal. With respect to the state of the dead, the Greek church believes, that the souls of the righteous do not go immediately to heaven, but to some third place, which is sometimes called Paradise, where they wait till the resurrection; and though it is laid they purgatory, they imagine however, that the souls of such as are not sufficiently purified to enter Paradise are confined in some dark recesses under-ground, there to suffer grievous pangs; and that these may receive a mitigation of their torments from the prayers, oblations, and sacrifices of the living. They admit of pictures of our Saviour and the saints, and honour them by bowing, kissing, and offering up their devotions before them. These images, with the great part of their worship confits: in the first, they bow almox to the ground; the other is only a little inclination of the head and knees, which they perform when they come into church, or when they pass before a painting or a picture of a church or chapel; either by sea or land. They perform their devotions with their faces towards the east; nor do they pull out their hair, or pluck their eyebrows. At solemn processions, when the gospel is read, or at the celebration of the eucharist, the Greeks abstain from blood, and things uncleaned. When they are brought upon their oaths, they lay their hand upon the cross, afterwards kissing it, and putting into their foreheads.

Upon the whole, it is rightly observed, respecting the religion of the Greek church, that there is a great deal of superstitition intermixed with their divine offices; as the perfuming their churches, the pictures of their saints, the holy table, and the people, with incense; their images crossing themselves, the extravagant respect they pay to the unconsecrated elements, and their concluding many of their prayers with the exclamation of "blessed be the name of our Lady the spoils Virgin, Mother of God," &c. with several prayers and adorations to the Virgin Mary, who come little short of idolatry.

The Greek and other Christians are greatly oppressed by the Turks, who will not suffer any of them to wear a luscious badge of the established religion, under the several penalties: it is criminal for a Christian to be seen with a white turban or a yellow slipper, which are worn only by their haughy masters; and every rascally Turk will beat his Christian wife, if he sees her without a head scarf, and sometimes upon no provocation; for which there is no remedy but patience. The ordinary capitalization-tax every
every Christian pays not to be accounted among their greatest grievances: the buffa and inferior magistrates are ever finding some pretenses or other to extort sums of money from them; and King John was the chief of these. The Mongol invasion was a great Mahometan force, thinks it a crime to give false evidence against a Christian.

**Sect. XI.**

**Contains a history of the Turks, from the earliest accounts of that nation, to the conclusion of the war between them and the Christians in 1372; and the treaty of peace ratified by these two powers in 1374.**

In the eighth century, the Turks, who had before that time roamed chiefly north of the Palus Moeses and the Euxine seas, travelled southward, and settled in Georgia, between the Euxine and the Caspian seas, where they continued about two hundred years. About the year one thousand, they removed farther southward into Armenia, the name of which they changed into that of Turkomains. They soon after subdued Bagar, ravaged Persia, and made themselves masters of the northern provinces of Arabia, at which time they were all Pagans; but their leader Tanguir placed their power from motives of policy, to turn Mahometans, well knowing that a fervor of a different religious persuasion is never agreeable to the generality of the people. The Turks, in their desire to invade the territories of the Greek emperor in Asia Minor, where they had conquered several cities, the Saracens had done in Syria, Palestine, and Egypt.

The emperor of Constantinople was at this time head of the Asiatic Christians, who, being greatly oppressed, inquired of the emperor of Rome for succor, and the pope by his prelates of France, and by various persons, to excite an emulation, by which the Holy Land (as they termed it) might be rescued from the hands of the infidels.

The first crusade commenced in the year 1096, when eight hundred thousand persons engaged in the enterprise, and proceeded towards Palestine: but above half of them perished by sickness, famine, and the sword; the latter being cut off by the Christians through whole countries they passed, and who were obliged to repel force by force, in order to put a stop to their depredations. Many of the undisciplined multitude, who arrived at Constantinople, where cut to pieces on their landing; but the more regular troops passed under the command of Godfrey de Boulogne, and other skillful commanders, arrived at Constantinople in tolerable order, but their numbers creating a jealousy in the hearts of the Christian emperors, in Tiberius joining them as he had promised, he contrived by every means to diminish them; however, to avoid their repentance of this irrevocable condud, he granted them ships to transport, and probably directed them to Constantiople, where they crossed the Euphrates, which was commonly taken at this time, and the Christians had one hundred thousand horses, and near twice that number of foot.

This army began its operations by besieging Nice in Bithynia; to relieve which the Sultan Soliman marched, but was totally defeated, when the place surrendered, and was forced to retire. The emperor of Constantinople, to make up for this defeat, which he had previously agreed upon. The Christian army then proceeded towards Antioch, where Sultan Soliman, at the head of two hundred thousand men, gave them battle, but was again totally defeated. Antioch was soon after taken; but the Christian leaders did not think proper to put it into the hands of the emperor of Constantinople, whose power had been repeatedlyiglied away. They then marched to Jerusalem, which they invested with only fifty thousand men, their numbers being so far reduced, and the garrison was at the same time more numerous than the besiegers. The arrival of a fleet of English, Norman, Flemish, and Genoese ships, however, gave new birth to their hopes of speedy deliverance. The outward wall was soon carried by storm, and the city itself was soon after taken in hand, when Godfrey of Boulogne was crowned king of Jerusalem. The principal places in Syria. These transgressions occasioned another crusade to be undertaken in 1217, by prince Edward, afterwards Edward I. of England; he took Nazareth, and defeated the Turks in several engagements; but not being properly supported by other Christian princes, he returned to England, after having been a year and a half in Palestine, where he died within a year after his coronation; and Baldwin of Bruges succeeded him. D. 1163. In his reign, the Christian army was once more in Tyre, and obtained some victories over the infidels; he then laid siege to the city of Damasus, but proved unsuccessful in his attempt; after reigning thirty years, he died, and was succeeded by Fulk, earl of Anjou, in 1181. During this reign the Christians began to quarrel among themselves; but, Fulk being killed by a fall from his horse, his eldest son, under the title of Baldwin II., was crowned king in his stead, who was then but thirty years of age, his mother being then only thirteen years of age, his mother was joined with him in the government.

Four distinct kingdoms were established by the Christians, who had been in possession of the Holy Land and countries adjacent more than forty years: they were, 1. The kingdom of Jerusalem, which comprised all the countries on the banks of the Euphrates. 2. The kingdom of Tripoli, which was near the sea coast. 3. The kingdom of Antioch; and 4. The kingdom of Edessa.

The continual discord among the Christians gave great advantage to Sanguin, sultan of Aleppo, and afterwards to Naazzadin his son, who retook many of the conquered places; which occasioned the Christians again to solicit the assistance of the European sovereigns. Upon which invitation, Conrad, emperor of Germany, at the head of one hundred thousand men, undertook the expedition; but the Greek emperor, proving as great an enemy to the Turks, as he left the greatest part of his army, and returned home greatly disappointed and chagrined.

In 1187, Saladin, sultan of Damascus, was very successful against the Christians, from whom he took Jerusalem. This enraged Frederic, emperor of Germany, and he raised another crusade; but the imperial forces, who proved for season successful, were at length defeated by the plague, which destroyed many of them. The emperor of France and Philip Augustus of France, were then stimulated by the pope to carry their arms into Palestine, which they did in 1190; and the two kings, engaging this, like the preceding enterprises, likewise met with confusion.

Constantinople was taken by the Latins in 1202; and Baldwin, earl of Flanders, being elected emperor of Jerusalem, was soon after led captive to Adrianople; but the Greeks inviting the Tartars to their assistance, the Christian army was defeated, and Baldwin himself taken prisoner. The Turks took the hands and feet of the unhappy monarch, and left him to perish miserably in the field, where he died three days after the first year of his reign, and the thirty-third of his age. After this, Henry, the brother of Baldwin, being elected emperor of Constantinople, by the assistance of the king of Thessaly, drove the Turks out of Thrace, and recovered all the places they had taken from the Christians.

As the sultan of Egypt was now become the most formidable Mahometan power, the Christians determined to invade that country, which they did under the conduct of Lewis king of France, commonly called St. Lewis, who, as we have seen, went out from Europe with a fleet of one thousand eight hundred, containing an army of fifty thousand men, including about thirty thousand knights, English, French, and Cypriots. The Christians, however, being effectually cut off from the hands and feet of the unhappy monarch, and left him to perish miserably in the field, where he died three days after the first year of his reign, and the thirty-third of his age. After this, Henry, the brother of Baldwin, being elected emperor of Constantinople, by the assistance of the king of Thessaly, drove the Turks out of Thrace, and recovered all the places they had taken from the Christians.

The Christians, however, being effectually cut off from the hands and feet of the unhappy monarch, and left him to perish miserably in the field, where he died three days after the first year of his reign, and the thirty-third of his age. After this, Henry, the brother of Baldwin, being elected emperor of Constantinople, by the assistance of the king of Thessaly, drove the Turks out of Thrace, and recovered all the places they had taken from the Christians.

As the sultan of Egypt was now become the most formidable Mahometan power, the Christians determined to invade that country, which they did under the conduct of Lewis king of France, commonly called St. Lewis, who, as we have seen, went out from Europe with a fleet of one thousand eight hundred, containing an army of fifty thousand men, including about thirty thousand knights, English, French, and Cypriots. The Christians, however, being effectually cut off from the hands and feet of the unhappy monarch, and left him to perish miserably in the field, where he died three days after the first year of his reign, and the thirty-third of his age. [ASIA]

ASIATIC TURKEY

[135]

years; but being broken by the Christians, the sultan of Egypt laid siege to Palermo, but dying before the place, his son Arapsius took it by storm, and gave the plunder to his eldest son, after which, the Christians were entirely expelled from Palermo. Edward, who was thirty years old, continued the siege twenty years subsequent to the taking of Jerusalem. But Cipri- booe the Tartars, who were sovereigns of Persia, revenged the murder of the mother by invading the territory of Egypt, defeating his armies, recovering most of the places in Syria and Palestine, which he had taken, and re- building the city of Jerusalem, which had been destroyed, which he had done, and the principality of Egypt were unhappy engaged in war amongst themselves, and could not therefore spare any forces to fend to Palestine; upon which, Abbas, Continet to Peru, and the Sultan of Egypt recovered all he had left. The Turkish lords, upon the death of Albin, the last prince of the Selucian family, divided the country amongst themselves, the principal of whom was Ottoman or Othman, the son of Fanthuglo.

When the Turks were driven out of Perith by the Tur- tens, the Christians of Illyria permitted their stocks and herds to graze upon their mountains; but the Turks, after having been there for some time, began to claim the place for themselves, and who were gratefully disposed of it, and the Turks, instead of the Christian natives, they expelled, upon the governors of the neighbouring Grecian castles, those that they had invited, which was to be expected from the pref- ference the Turks have for their countrymen, and which was a wanton wanton to be their masters. The Grecian government, therefore, assembled a body of forces, in order to compel the Turks to leave the coast. The Turks, however, the Grecian emperor, or relinquish the place; but Ottoman put himself in the head of a body of troops, defeated the Christians, and took Cara Cloot, a fortress founded on the fortresses of Buthia and Phrygia. He afterwards plundered all Bithynia; which, however, alarmed the Chris- tians, that they prepared to assist Osman, to invite Ottoman to the solemnization of a wedding at his castle, that they might have an opportunity of taking him off. Ottoman, being apprised of the design, contrived to introduce a party of followers in disguise, who killed the governor and all his guards, and took possession of the castle. He then made himself master of many other places in Phrygia, and even laid siege to the city of Nice. The emperor of Constantinople sent an army to relieve the places, but it was defeated by Ottoman, who from that time, viz. A.D. 1355, took upon himself the title and place of sultan, and made Neapolia the seat of his government. The Christians invaded the territory of this new sovereign, but were defeated; and Ottoman, now growing old, constituted his son Orcheslas general-levee, who subdued all the remaining places in Bithynia and Phrygia, and succeeded his father, who died A.D. 1385, 86.

Orcheslas, having taken Albidus, at the entrance of the Hellepont, on the Asiatic shore, from whence transported his army into Europe, in 1389, he invaded the Balkan, which was the first town in Europe the Turks ever possessed.

This prince died in 1339. When he expired, his eldest father Orcheslas, was in the beginning of his reign disturbed by a confederacy between the kler Mahometan princes in Asia and the Chris- tens: so, supposing that he was not able to defend his state, Trajan, being a man of spirit, and having joined his forces with those of the Magi, besieged Capri, and finally defeated them. This war continued twenty years, during which time, Arapsius, having received money from the Christians, and the Venetians, he undertook an expedition against the Ghuzz in Asia, and defeated them.

The Venetians, Bulgarians, and Illyrians having raised an army, and the Venetians and Illyrians being glad to receive the death of their father, seized the country of Epipis as his own, after putting to death the three eldest princes. They however pretends he was to have a governor, whom they chose, on whom he conferred the title of Scanderbeg, who signs the name Alexander, Scander implying in the language of the Albanians, and means their being the true protector for land. The Turks afflicted kindreds could not how- ever effect the young prince's final, the sons of the ruler who had been, they were made, and he was a Christian in his heart, and had long meditated to escape from the Mahometan. The abovementioned battle was fought before him with an opportunity, when he not only extolled the first body of Kurds, who were natives of his own country-Epiphis, to defeat him, but brought on the Ottomans, in which, the Christians, and the young prince's showing himself to the Turks, in the beginning of his reign, disturbed by a confederacy between the kler Mahometan princes in Asia and the Chris- tens: so, supposing that he was not able to defend his state, Trajan, being a man of spirit, and having joined his forces with those of the Magi, besieged Capri, and finally defeated them. Ahmed at the proceedings of Scanderbeg, Amurath sent Ali bavka, at the head of forty thousand men, to provoke the Albanian general; he attacked the Scanderbeg had the good fortune to defeat him. The Turkish monarch, therefore, dreading the consequences of these successes, patched up a peace with the Albanian, which, however, he might have an opportunity of bending his whole force against Scanderbeg. The Hungarians, soon became sensible of the error they had made, and a treaty, in which the Turks at Great Dort were to follow their example, was concluded. It was to be to the interest of both parties that the prince of Epides was to be successful, and consequently enabled to make a powerful diversion in their favor. The peace concluded by the treaty of the thirty-third year of his reign; and was succeeded by his eldest son.

Bajazet II, who spent so much time in a pilgrimage to Mecca, that he was near being supplanted by his brother Zamen. This so much alarmed him, that he had his brother murdered, and rewarded the assassin with the post of prime minister, though he was only a barber. He took several towns from the Venetians; but was continually alarmed with domestic plots against his life, which at length took effect; for he was deposed by the Janissaries, who made his son Selim emperor.

This prince began his reign by murdering his father, his brothers, and all their children: he then subjugated the Morea, and put an end to their empire in Egypt, which from that time became a Turkish province. Selim died A.D. 1520, in the fifty-fourth year of his age, as he was preparing to invade the kingdom of Spain.

Solymans or Solymans the Magnificent, succeeded his father Selim; and immediately after his accession, laid siege to Belgrade, which he took on the 29th of August, 1551. He invaded his island of Rhodes the very day after the death of his father, raised the siege, and returned to Adrianople.

This prince began his reign by murdering his brothers, and then proceeded to invade the city of Belgrade, which he took on May 20, 1553. The last Grecian emperor, Constantine Palæologus, was killed in the battle, and all his retinue, with the principal citizens, were afterwards put to death in cold blood by Mahomet. The plunder of this wealthy city was given to the troops, and the feast of governors was transferred from Adrianople to Constantinople. Mahomet, having thus added the Grecian empire to his own, assumed the title of emperor, which he ever after stuck to, and retaken the sovereignty of the Turks.

Among other captives taken at Constantinople, there was a beautiful young virgin, named Irene, with whom Mahomet became so enamoured, that he neglected all public affairs for the enjoyment of her society in private. This remissness with respect to the business of the state, occasioned a dangerous mutiny among the janizaries; but Mahomet's temper was so fierce and savage, that none dared to mention the situation of his affairs. At length one of his brothers ventured to acquaint him with his danger. Mahomet immediately remonstrated with him for his insubordination, as he deemed it; but being sensible of the fatal consequences of his advice, he told him, "That his subject should find, that he could give no other rule to his people, well as he could rule kingdoms." He then gave orders that the principal officers of the army, and all the great officers of state should attend him the ensuing day in the divan. At the time appointed, everything was in readiness, but the perfidious. In his absence and with wounding expres, the emperor appeared, and with him the beautiful Irene, dripping with the most costly care in all the extravagance of Asiatic elegance. The emperor then ordered the lovely Greek to stand upon a raised floor, and freely demanded of all present, if they thought he was blameable for depowering of a charming object. They unanimously agreed, that it was impossible for any man to resist so much beauty. "Then," said he, you shall find that I am more than man." So saying, he instantly fired the fair Irene by her breast, she fell down instantly, and died off her heart with her eyes open, to the great astonishment of all present. Some have greatly commended, and others his conduct; but every one, without exception, agreed in this singular transgression. Whether Mahomet was favoured by a long uninterrupted period of Irene's charms, or was really that sort of man who, if he wished to be thought, is immaterial; but it is our opinion, he might either have parted with the lady, or excused his regard for his subjects, without any degree of analytical extremity. His conduct was simply plain, that all his passions were of the brutal kind; his love being founded on sensuality, and his pretended sentiments of honour on a savage and cruel render of the human species, which capitated upon honourable terms, but the garrisons were no sooner marched, than a great number of the inhabitants were massacred, and the brave governor, Bragadin...

in the reign of this prince, the Turks obtained some
advantages over the Christians, being joined by the
Protestants of Austria, Hungary, and Transylvania, who were
willing to plunder to enrich the Sultan. These advantages
were obtained even to feck fuccefs from us intolerable in-
side.

The principal futtlers of Achmet, understanding that
the emperor laid a tax on his father’s taxes to his bed,
was fo inflamed with jealousy, that he caused her to
be slain by one of his eunuchs, and trampled upon her body.
At length he departed this life on the 15th of November, 1617, in the 31st year
of his reign, and the reign of the Sultann.

The Turks, whose affection was extremely singular.
The brothers of the sultan had formerly been put to death by the
reigning sovereign, through the absurd idea of render-
ing himself secure, but Achmet being only thirteen
years of age when he ascended the throne, was advised
to spare his brother, Mahomet, till he saw whether he should
have any children of his own, as no other prince of the
Ottoman family was then living. Thus Mahomet was
feared by the policy of the state, till Achmet had children,
when it was debated in council whether he should not be
drowned at once, and the execution was agreed upon accord-
ingly; but Mahomet was not killed, though Achmet dreamt
that he saw his brother executed, and so terrified at the
villainy of his brothers, that he would never suffer the
execution to take place. Achmet, however, resolved to
find all his brothers to meet, and to engage in the strife
thee, finding them totally unqualified to govern, again
confined him to the fortress, and advanced to the throne
in his father’s stead.

Ofman, who, soon after the commencement of his reign,
reached the frontiers of Poland, but the jai-
lilies refused to march any further, he was obliged to
pursue a harmonious peace with the Tsar.

The Persians ravaged the Turkic frontiers, took Bagdad, which
the Ottoman forces besieged three years, without being
able to recover. This emperor was a cruel tyrant, but he
was certainly impartial in his inhuman conduct, equally
oppressing and murdering Christians and Turks, in many
instances he showed himself to be a most savage
and unfeeling monarch.

During this reign, a dreadful fire happened at Constan-
inopole, which destroyed upwards of two

Achme
caused a festival of twenty days; continuance to be proclaimed, at which he very happily drank himself into a fever, and died on the 1st of February, 1660, in the eighteenth year of his reign, and only thirty-four of his age. This calamitous blunder was succeeded by his brother, Prince Ferdinand.

The reason why Ibrahim was not murdered as well as the rest of his brethren, was owing, as some suppose, to his volubility: some say, that the Ottoman line failing; but others say, that he was an idiot, on which account Amurath disliked him too much to think him dangerous. The prince, however, was more cunning than was supposed; for it appeared, that he had acted folly and feigned idiocy only to secure his life. When he arrived at the conclusion of his reign, put an end to the ravages of the savage Cossacks, took the city of Aophos, and added the greatest part of the island of Candia to the Turkish dominions. He was, however, in 1688, deposed by his mother and her ministers, and soon after murdered; after which, they placed on the throne his son Mahomed IV. then a child of seven years of age.

During the minority of the emperor, the fejdana mother, the grand vizir, and the age of the janizaries, were invested with the administration; but affairs turning out a little unsuccessful, the grand vizir, was soon deposed; as were several others who succeeded him: for the fault where it may, that minister is sure to bear the blame.

In 1694, a formidable army was in difficulties, and not highly supped. The Turks were next visited by the plague, which usually carried off one thousand four hundred or one thousand five hundred men every day in the city of Constantinople only. An obstinate battle was fought in Hungary, between the Christians and the Turks, in which the former were totally defeated, and left seventeen thousand men dead on the field of battle; this occasioned a peace between the Porte and the emperor of Germany; however, to recompose the above loss, the eminent Chakeds was laid, and added to the Turkish empire, together with the island of Candia.

The Turks, in 1697, invaded Poland, conquered many of its towns, and obliged the government to consent to pay seventy thousand dollars annually; but on the failure of the fluctuated payment, the war broke out again in the ensuing year, when the Polish general Sobierki had the good fortune to obtain a signal victory over the invaders. The people of Tripoli in Barbary, about the same time, killed the banker, and took the Turkish yoke, by which they became independent of the Porte in every thing, except a small tribute. In 1698, the Turks laid siege to Elma, but were attacked in their trenches and routed by John Sobiecki, King of Poland, at the head of the Germans and Poles. The city of Budia was afterwards invested by the imperialists, and taken, August 22, 1698. King George the First, of Hanover, was present at this siege; and brought from thence the two Turks, who afterwards conferenced in a treaty when it was signed by the Turks, and entered into treaties in which other nations were present, particularly Lord Cutts, who took a young Turk prisoner, to whom he gave the name of Budiana; this Turk, the same after which, the Christians, and became an officer in the English army. In the same year, the Venetians recovered great part of the Morea; prince Lewis of Baden totally defeated the Turks; and the Poles gave a great overthrow to the Turks.

Thence, and other subsequent ill success, so dispirited the troops, that they demanded the grand vizir's head; this was agreed to; and Signor Presti, with the heads of several other great officers, without which they did not appear disposed to be satisfied; but, after all their compliances, they deplored for the whole year of his reign, and fifty-third of his age. He died a natural death five years after in the fagacity.

In 1697, Solymah III. brother of the last emperor, was advanced to the throne. In the beginning of this reign, the duke of Bavaria took Belgrade; prince Lewis of Baden obtained a victory over the Turks at Hedinia; and the Venetians concluded an armistice in Greece and Dalmatia. This run of ill luck induced the Turks to offer very advantageous terms to the Christians; but the treaty was not then concluded; for the Turks took the town of XIV, who promised to invade Germany, and divide it with the Turks; but neither they nor the French were able to secure their depredators; and Solymah died in the fourth year of his reign, and fifty-third of his age.

Achmet II. brother of Solymah, succeeded him, in 1694; and on the 10th of August, in the same year a numerous army of Turks killed the Donahue, but they were defeated by prince Lewis of Baden, where the grand vizir and twenty-eight thousand men were slain. Achmet died in the second year after his birth, to the sixty-fifth of his age, and was succeeded by his nephew.

Multapha II, who raised an army of one hundred and twenty thousand men, took Aophos, and defeated the janizaries: his fleet was likewise successful against the Venticans; but, on the other hand, the Russians took Aophos from him, and operated a landing on the Black Sea.

Prince Eugene, in 1692, defeated the Turks at Olck, when the prince vizir, and thirty thousand men were slain. A discomfited pen's army, which the Turks had in their army, was defeated in 1793, and his brother Achmet raised to the throne.

Solymah III. began his reign with displacing all the great officers of state who had brought about the revolution; the reason for which was said to be, that they affumended too much upon that account.

In 1700, the king of Sweden, after his defeat at Pultowa, took refuge in the Turkish territories, and had sufficient interest to stir up the Grand Signor to declare war against the czar of Muscovy; the czar raised a large army, but, not afflicting with prudence, he was soon compelled to sign whatever conditions the Grand Signor pleased to prescribe.

The Turks, in 1715, subdued the Morea, on which the emperor of Germany declared war against them; and in 1716 the Ottoman army was defeated at Carlswitz by prince Eugene. His battle was fought between a few of the janizaries, a great number of balls, and one hundred thousand men; they were slain. Tucherer was taken by the imperialists; this carriage of the Turks, however, took Belgrade, and again defeated an army of two hundred thousand Turks. However, by the mediation of Great Britain and Holland, a peace was concluded in 1718.

After these transactions, the Turks, in 1722, subdued Perfa, and had some successes still compelled by the celebrated Kouli Khan to retire. Achmet's ill successes occasioned him to be deposed; and in 1732 his nephew Mahomet was raised to the throne.

Mahomet V. as soon as he began his reign, made peace with the Pisans, and entered into a war with Russia. In 1735, the Turks defeated the Imperialists at Kota, and took Orfova. In 1739, they besieged Belgrade; but a treaty being entered into between the Germans, French, and Turks, it was unanimously agreed, that the Turks should have Belgrade, but the fortifications were to be demolished. The Danube and Save were to be the northern boundaries of the Turkish territories; the river Atlanta and the iron gate mountains, the eastern boundary; and the river Ems, the western limits, towards the German dominions. By another treaty, the Rusians were obliged to demolish all their forts on the Hals Moritz, and Euxine Sea, and to destroy the fortifications of Aleppo.

Mahomet was a person of a peaceable and sedentary disposition, and on that account respected much by the Christian princes. Nothing material, except the above transactions, happened during his reign; and in 1741, he died suddenly of a fit of the stomach, and the same day his brother Okan was proclaimed emperor, from the recommendations of the mobi.

Okan III. began his reign in a time of profound tranquillity; and nothing material occurred till his death, which happened in 1757, when he was succeeded by his brother.

Muftapha III. who began his reign with every personal advantage: he was of a different disposition from most of his predecessors, being of a liberal way of thinking, a lover of learning, and the kid who introduced the art of printing into the Ottoman empire. In the year 1766, a general spirit of liberty spread, to diffuse itself through many parts of the world. The Turkish empire was affected by its influence, the Georgians began to throw off its yoke, and the Turks in the empire of Egypt and Cyrenaica, which, though taught, preserved its spirit which prevailed at that time.

A war broke out, in 1768, between Russia and the Porte, and a confederacy was formed against the Tussians among their own subjects and dependants, which was founded and increased by the Ottomans. The confederates were, however, obliged to submit, and the Turks obtained a square victory. A Turkish army was assembled between Choczes, Bender, and Oznakow, the Rusians formed a line of troops along the bank of the Dnepr, and a large body of Tussians appeared on the Russian shore.

The Russian admiral Spiridoff fell sick, in 1769, with a powerful squadron for the Levant, and was afterwards joined, in 1775, with two other confederate fleets consta-
EMPIRE

[ASIA] EMPIRE OF JAPAN.

mended by a don Elphinbone and Count Orloff: from which, an engagement happened between the Turkish and Russian fleets, near Nara, the capital of Womani; in which the former were totally defeated, and took shelter in the harbour of the above-mentioned place, whither admiral Elphinbone pursued them. The young prince, however, but were easily suppersed: the war was upon Danube was carried on with vigour; nor did the Russian Empire fall to encourage as much as a hope of the Russians against the Russian government. The Turks were, however, defeated in various engagements; disorder, mutiny, and defection prevailed among the grand visier being abandoned by the greatest part of his forces, was obliged to accede to the terms prescribed by the enemy, who had forced him at Choumant. These last success effectually threw the whole Ottoman empire into confusion; the Porte, however, under the present complexion of affairs, thought proper to ratify the articles of peace, the principal of which were: 1. The independency of the Crimea. 2. The absolute cession to Russia of Kil- born; Corche, Jentina, and all the districts between the Bog and the Nipper. 3. A free navigation into the Turkish seas, including the passage through the Dardanelles, with all the privileges and immunities which are granted to the most favoured nations. In return for which concessions, Russia was to restore all she had conquered. Aloff and Taganeck excepted. Soon after the conclusion of this peace, the grand visier died, as is supposed of a broken heart, on his return to Constantinople; and public rejoicings were made at St. Petersburg, for the immense loss of the Turkish arms. The rebel Pugatschew was also not long afterwards defeated by the Russian forces, taken prisoner and put to death. Mahomet Aboudah, with an army of Egyptians, in the year 1745, conquered the country of the old and brave Sheik Dabir, but Aboudah dying in the midst of his successes, Sheik Dabir was in hopes of retrieving his affairs, when a banna arrived upon the coast of Syria with a considerable reinforcement. Sheik Dabir was soon avenged, his treasures burned, and his head sent to Constan- tinople.

At the beginning of the preface year 1782, the Kiasy Bey was defeated, and his place supplied by Arcam Efsen, an intimate friend of the grand visier. In the same year, the Porte caused the dragoon's of the Moree to be behav- ed, and was annexed his income of two thousand piastres per annum to that of dragoon to his fortune, who will for the future enjoy a salary of twenty thousand piastres annually, besides several other endowments. Since the foundation of the Turkish empire, it has been governed by twenty-eight monarchs, the first seven of whom were kings, beginning with Ottoman, or Selim, who ascended the throne in 1299, and ending with Amurath II, who began to reign A.D. 1423. After this reign, its monarchs assumed the title of emperor, of whom there were twenty-one, the fifth of whom was Mahomed II, who began his reign in the year 1450; and the last was Abdul-Hamet, with whom we closed our history, who ascended the throne in 1774, and was the brother and successor of Mustapha III.

CHAP. IX.
THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF THE ASIATIC ISLANDS IN THE PACIFIC AND INDIAN OCEANS.

JAPAN.

SECT. I.

Treat of the extent of the empire of Japan, its cities, palaces, buildings, furniture; genius and temper of the people, their habits, diet, diversions, festivals, form of salvation, manufactures, fisheries, &c.

The extensive and opulent kingdom of Japan (where the natives usually call Nippon) consists of three main and lesser islands, one hundred and thirty degrees eastward of London, extending from thirty to forty degrees north latitude, and from one hundred and thirty to one hundred and forty-seven degrees east longitude, the whole cluster being about six hundred leagues in circumference, and two hundred in length. The larger islands are Japan itself; Xima, the next in extent, and Xuceo the smaller of the three, which is formed of the former two, and is divided into four provinces. There is also the island of Tosa, which lies south of Nippon, being divided from it by a narrow channel, the capital
city whereof is Naha, situate on the north east part of the
island. The island of Burigo lies south-west of Tosa, being
next the northmost of the four inhabited islands in circum-
ference, the capital city whereof is Nangaki, situate on a
bay of the sea, on the west side of the island (of which
more is said); but with this city is the little island of
Dinain, not much more than a mile round, where the
Dutch factory are permitted to reside ; but of this we shall
speak more at a particular place, here in the article of their
trade with the Japanees. The island of Firando is pretty con-
fiderable, extending from thirty-three degrees twenty mi-
nutes, north, by east, to thirty-four degrees forty minutes
latitude, and from one hundred and thirty-one to one hundred
and thirty-two degrees east longitude.

Jedo, or Yedo, the capital of Nippon, and of the whole
empire, stands in the midst of a fine plain in the
province of Musa, and is situate on a bay of the sea, in the
north-east part of the island, in one hundred and forty-
four degrees ten minutes of east longitude, and thirty-six
degrees of north latitude; being one of the largest, most
elegant, and beautiful cities in that part of the world. The
palace, with its courts, parks, and gardens, is a square of five
miles in circumference, and stands in the middle of the city : that part of the palace where the
king resides, makes such a glistening appearance, that some
travellers have related, it is covered with gold plates in-
stead of tiles: probably, they resemble the varnished gilt
tiles, which cover the walls.

This noble structure is formed by several piles of build-
ings, and incloses many streets, courts, apartments, pa-
vilions, guard-houses, gates, draw-bridges, gardens, ca-
rts, and courts of fowling. In its refecting rooms, the
royal domestics, tributary princes, and their retinues, the
ministers of state, many officers, and a great garrison.
The walls are built of free stones, which are not cemented,
by mortar, or braced together with iron; but, being pro-
digious large, are laid boş on each other; which is a peculiar
virtue, that they may receive no considerable
injury from the earthquakes which are so frequent. Many of the
flats apartments are formed and altered at pleasure, by means of the many fine stones, and superb
moveable partitions. The principal apartments are the
hall of audience, where the emperor gives audience; the
small chamber, where the ministers of state meet; the
hall of a thousand mats, where the tributary princes do homage, &c. This magnificent palace was built in the
year 5810, in the reign of the emperor Tosa-yo.

The city is in the form of a cone; and it is intersected
in almost every street by canals of water, where banks are
planted with rows of trees. These canals not only serve
as ornamental to the city, but are of singular utility in
cases of fire, as they both afford a ready supply of water;
and they are proper to the configuration. There is a
thousand draw-bridges in the city, including, which is not fo figured by
walls; the river Tassag waters it, supplies the city
with water, and, being divided into five branches, has a bridge
over each of them. The houses, as also the houses of
Nipponbas, is the standard from which all the roads, ports,
and distances of the empire are taken. The streets are
wide and handsome, but irregular. The public buildings
are very magnificent, but the private dwellings are mean,
though neat. This city is under the direction of two governors,
who rule a year each alternately like the chief magistrat
of London; under these are inferior officers like our al-
dermen, who have the direction of particular districts or
wards; and subordinate to these are the cottons, to each of
the case, a particular street is committed.

The next royal city is that of Musa, situate on a lake,
near the middle of the island of Nippon, about three hun-
dred miles southward of Jeddo, in forty-five degrees thirty-
five minutes, north latitude, and thirty degrees five
minutes east longitude, being two
hundred and twenty-six miles west of Jeddo, and was the
royal residence of the Emperors of that ancient empire, but is at present
the residence of the dairo. It is built in a pleasant, and
extensive plain, on the southern coast of the island of "Naha,
being frequented for fowling, and by mountains, which
are a delightful and romantic prospect to the whole.
The circumjacent country between the city and the moun-
tains, and the mountains themselves are covered with
arable lands, meadows, and pastures, and embosomed with
a variety of orchards, gardens, groves, cascades, and palm
forests. Three confederate rivers water the fertile plain, and the
waters are navigable from seven to twelve miles, and
where a magnificent stone bridge facilitates the communi-
cation between the upper and lower town. The dairo has
his residence in the north part of the upper town.

On the western side of the city is a strong castle, which
serves as a palace for the emperors, when they come to pay ho-
thel. It contains four gates for entry and exit; one gate looks in length, has a tower in the centre, and is surrounded by
two ditches, the one dry, the other full of water, and
the waters are navigable. By the dairo's court has dis-
continued to reside here, this city has greatly declined: it was then twenty miles in length, nine
kilometres, and the circumference of the city was
flanked by a strong wall and furnished with
towers. The streets were long and narrow,
and exceedingly crowded with inhabitants; for on
the first day of every month, the inhabitants of the
four districts amount to five hundred twenty-nine thousand
persons, and twenty-six, through the dairo's court, and
strangers constantly residing in the place, were ex-
cluded; but it is said at present not to contain above one
hundred thousand souls. The universities, colleges, mu-
rises, temples, &c. are almost incredible in number,
and magnificence in appearance. The private residences are
but two stories high, built of wood, and covered with
tiles, or thatch. Every house is obliged to have a re-
serve, or trough of water ready in case of fire; but they
join vents with simplicity; and every trade or calling
has a particular street or district allotted to it.

The palace of the dairo is enclosed by magnificent walls
flanked by flately towers, and surrounded with a double
ditch. It contains twelve capital streets, in the centre of
which are the royal apartments, superbly built of stone,
and adorned with gardens, orchards, pavilions, terraces,
groves, &c.

Osaka is the next most considerable city in Japan, which
is situated at the mouth of the river Japagawa, about fif-
teen leagues from Musa, and in thirty-five degrees fifteen
minutes north latitude, and one hundred and thirty-five
degrees ten minutes east longitude, it is deemed the
principal seat of the empire, and is filled with an in-
credible number of merchants, trademen, merchants, ce-
clebrities, &c. It is fo populous, that an army of
thousand men has been drawn from it upon emergencies.
It is near fifteen miles in circumference, contains many ele-
gant houses, and some palaces belonging to the nobility.
A strong quadrangular castle defend the port. The
walls are thick, the towers with which they are flanked well
furnished, and the gateway ornamented. Two officers com-
nected here, one has the superintendence of the castle, and
the emperor's treasures, stores, and retinues; the other pre-
sides over the garrison: but the city itself hath a government
of its own, who hath the regulation of all civil affairs.
The houses in this city are covered with a kind of earth
of a yellow colour, which gives their roofs an elegant ap-
pearance.

In this city, the watchmen make the hour known by
means of three instruments. An hour after sun-set, they beat
a drum, the fuse of which is fastened to a panel of a
brazen bowl, and the hour subsequent to that by ringing
a bell; the next hour they begin again with the drums,
proceed to the bowl and bell, and in conclusion, the
night, using the three instruments alternately. In all
other parts of the empire, however, the hour of the night
is told by beating against each other two wooden cy-
dwars.

Suruga is situated in thirty-five degrees twenty-two
minutes north latitude, and one hundred and forty-two
degrees thirty minutes east longitude, is the capital of
the province of the same name, and is a very considerable sea-
port town, and of the emperors reigned in it; and some
of the English were not long since permitted to trade with the
merchants who lived chiefly in the suburbs. It is now
greatly on the decline, but still retains some of its ancient
privileges, particularly the liberty of coinage money.

A gate under three minutes north latitude, stands about two
and a half miles from the city, and it is in-
habited by a proud set of people, who all boast of their an-
cessors, and pretend to be descended from the ancient Ja-
pagasa emperors. To the north of this part of the
province is one of the most beautiful lakes, one
marched by the city called Pay-ne, celebrated for its pleasant
groves, and famed as the residence of a favourite idol, to whom many
of the inhabitants repair on boat and
horse, through excels of zeal, just as the way by
the way, and driven themselves.

Cangogima is a sea-port on the southern part of the island
of Xino, and was the first of the places where the
Spanish landed when they discovered Japan. It lies in thirty-one
degrees forty-two minutes north latitude, and one hundred
and thirty-three degrees sixteen minutes east longitude,

a
A method of Riding so practised by the Rustics of Japan.
castle is built on a rock in the harbour, and a light house, on another very high rock in the harbour. Many rocky towns, indeed, are kept here.

Nangatski (mentioned above) lies in thirty-two degrees thirty-five minutes north latitude, and in one hundred and thirty-five degrees ten minutes west longitude: so that the city is in the form of a crescent, delightfully situated among verdant lawns, and surrounded by pleasant hills: it contains thirty-one hundred and forty-two houses, and is strongly garrisoned. The streets in general are narrow and crooked, but run a considerable length, the temple, a large building, being continually extending the sides.

The town is watered by three rivers, and divided into upper and lower; the former containing twenty-five, and the latter sixty one streets; but strollers reside in the suburbs, and are narrowly watched. The principal buildings are five warehouses, in which are laid up all the materials for forming three men of war, which, upon an emergency, may be taken out, and put together in a very short time; a powder magazine, the palaces of the two governors, the palaces of between twenty and thirty-five grandees, sixty-two temples, thirty-five bridges, twenty dwelling of the people, and the rest of timber, &c. the gokinas or prison, which the people very emphatically title bell. It consists of about one hundred dungeons, or cages bigger 'a each other from such each, apartments for private excavations, and baths in which the prisoners are obliged to wash themselves, in order, as much as possible to prevent the spread of disease.

The Japanese build with wood, and generally upon one floor; but their apartments are very commodious: it requires but little more space than a room in a London tenement, so that they can lay several rooms into one, as they have occasion. The houses of the nobility are wainscoted with polished wood, the floor covered with matting, and their ceilings painted and gilded, and the doors finely varnished. The tradesmen and inferior people content themselves with thatched roofs and clay walls, though, they have a little apartment built of stone or earth where they secure their most valuable goods from fire. They have no glass, or any thing like it in their windows, but only wooden shutters.

They use neither tables, beds, or chairs; but sit on mats when they eat, and lie on them when they sleep. Their rooms are usually hung with pictures or painted paper, the rest of their furniture consists in cabinets, dressers, china-ward, and fine swords, which they hang up in their rooms.

A fixed watch is kept every night, lanterns hung out, and every ward or division in their cities shut up; that in case of fire, it is said, they are not suffered to break in upon one another.

The inhabitants of this island are said to be of a quick apprehension, good understanding, modest, patient and contented, and for all faults, the C高新s speak highly of their people. They make a mistake they will not take the advantage of it.

On the other hand, we are told by the same authors, that they are very industrious, and live by husbandry, some of them with so little preparation for the poor, the sick, or the lame, that they will let them lie and perish before they will relieve them. We are told, likewise, that they will not permit any one who has money to travel, that they will kill themselves if they cannot have their revenge. However inconsistent this character may seem to be, there are few books of travels where the reader will not be shocked with contradictions of this nature; and perhaps if we observe a medium here, as in other doubtful cafes where the writers are not competent judges, or give character to a people from some few instances they have observed, we shall come nearer the truth, than by adhering strictly to either. These people probably are neither to excessively considerate or patient as some relate, or so barbarous and passionate as others would have us believe; and Japan being a country not only the most distant from us, but the most remote from general knowledge, the face of the earth, it may be some time before we are rightly informed of the temper and genius of this people.

The manners of the Japanese have in general but a forbidding appearance; a very flat nose, and eyes-side dis-figuringly thick disfigure a face unprominently broad, and disagreeably twain. Their stature is short, their bodies thin, and their faces, as they see little of the sun from this description, and resemble the Chinese, who live under the same parallel, and their habits are alike, namely, very simple and destitute of all the ornaments of their ancients, and flippers without heals: but they wear no cap or hat, and frome themselves from the weather with the three fingers always near their hands, or extensive umbrellas the fawes cover over their heads, which are close shaved half way. Every gentleman wears a crisco or dagger in his falls, and a great broad broadsword on his thigh when he goes abroad.

People of figure eat chiefly venison, fish and wild fowl of their own taking. Some fall among them eat no victuals, or drink any strong drinks, but live upon fruit, herbes and roots, and make no use of either liquors or medicines.

Some inhabit the mountain and mixed with spirits. Their diversities, being either garrisons, barracks, and fortresses; the subject of their plays here, and in most eastern countries, is the history of some hero, or great man, their country hath been written in.

There is a great festival celebrated every year, when they visit the tombs of their ancestors: at their solemnities every habitation is illuminated, and they march out of their towns at midnight in a solemn procession to the gate of their dead friends, where they eat and drink, and make many for several nights consecutively: at the conclusion of the feast they march round the town with flags, fire-arms, and banners, beating upon brahs pans before the temples of their gods, and at the doors of their great men.

Their instrumental music is not at all harmonious, but some of their voices are pretty tuneful. At the end of every play or masquerade there is always a noble entertainment provided at the charge of the company: those people, it is observed, spend great part of their night in eating and drinking, which others spend in sleep; and because their manners and customs are acknowledged to be different from the rest of the world in many instances, some people carry it so far as to affirm that resemble us in nothing; and particularly, that instead of bowing the knee, and gratifying to their better, they stand up facially, as they are first fixed by the beet writers that bow their bodies as we do, and do not approach their matresses but upon their knees. As for putting off their shoes or slippers instead of hats, that sometimes, the few of the other eastern nations always put off their shoes, when they enter their temples, or the houses of the great, which, if they do, appear to be a custom almost as ancient as the world, and therefore need not be thought strange in the Japanese. And as for their not wearing off their hats, this need not occasion any wonder, since they wear none.

They keep their roads in very good repair, and threw the distances of places by placing certain stones at the end of every three miles. But there are no inn or public houses for the entertainment of travellers: and what is a very great and inhumane, the carcasses of their malefactors, when they generally crucify with their heads downwards, are placed upon the roads in terrains. As to their trade, the natives themselves are not permitted to carry on any but with Jaffa, Kina, the Chinese and the Dutch. The Portuguese Christians about the year 1523, being accused of furnishing a conspiracy against the crown and government, and of monstrous that the Christian women were cut to pieces, and a decree made against having any intercourse with them, or any nation that professes Christianity.

The Dutch, to prevent the Chinese from taking place of the Christians, did not refuse to serve upon the charts of our service, and the Japanese are so well satisfied of their indulgence, that they are permitted to have a factory, and to manufacture goods to this day; which all other nations who abhor their impious hypocrisy, are excluded from: but the Japanese are so jealous even of the Dutch, that when any ministers arrive, a magistrate goes on board and makes an account of the number of their men, and carries their fails, ammunition, guns and powder aboard, till they are ready to fail. Not have the Dutch factory, which stands on the point of a rock, and is separated from the city by a river and a wall, any communication with it for eight or nine months in the year.

A judicious and accurate traveller, gives the following description of the island of Diinls in the Dutch possession:

This island (50 leagues) is not much more than two miles in circumference, and no Dutchman can stir out of it, or come into the town of Nangatski (to which it is joined with a bridge) without having his boat searched by the guards, who are appointed to watch their motions; nor are the Dutch so much as permitted to have a lighted candle in their houses in the night-time. If the sentinels perceive the least noise, or see them blow a light, the governor immediately sends a party to learn the reason of it, which does not return till the occasion is discovered, and then the authors are severely punished. In this fearful condition the Dutch remain eight months in the year.

The Japanese mechanics and manufactures excel in their different branches, and are even far superior to the

---

[A.N.] EMPIRE OF JAPAN.
ingenious Chinese. Their fits and cantons are excellent, and Japan has a very good trade with India. The Chinese have no fear of the swarms of pirates in their seas add to the obstacles that obstruct their commerce. The commodities exported are, woods of all kinds, porcelain, gold, silver, copper, iron, steel, iron, textiles, teas, tea, tobacco, and better cured than that of China: gums, medicinal herbs, roots, etc. diamonds, pearls, coral, whalebone, ambergris. When they are in the Japanese market, they pay for either by barter of wares for other commodities, or in bulion of gold, silver, or copper.

The ships which refurnish these of the Chinese, are built of cedar wood, but are only fit for very short voyages: they are built from eighty to ninety feet in length, and from twenty to twenty-five feet in breadth, and constructed both for sailing and rowing: they contain many little cabins, separated by screens, folding-doors, etc. They have only one mast and one (full) the ropes are made of rice straw, and the anchors of copper iron. Their pleasure-boats, which are intended only for the navigation of lakes, rivers, etc. are extremely beautiful, being finely gilt, carved, and otherwise adorned with the most curious and superiour embellishments.

The Japanese have worn all sorts of cattle and poultry that are found in Europe, but their horses are very small. Rice is the principal grain the country affords, which is managed in the same manner as in China, and always grown on poor till land: it has here fewerry thing that it is not. They are red wheat, but not in so great quantities as rice. Their husbandmen are little better than slaves; they plow and manure the ground for the great lords, but have no properties of their own.

The gardens seem to be in much greater perfection here than in Peru; they have large botanic gardens, where plants are cultivated, usually before their houses, and a garden behind them, laid out into fine walks, mounts and terraces, and adorned with fountains and flowers, which are sent from the street there being always a large vifio from the outward gate through the house into the gardens.

There is a prodigious high mountain in Japan, which, though it stands above eighteen leagues within the land, is seen above forty leagues at sea. There are also eight volcanoes, or mountains which vomit fire and smoke.

Sect. II.

Containing an account of the Japanese learning, arts and sciences, laws and punishments; and of the revenues, forces, and prerogatives of the crown, etc.

The common learning of the Japanese consists in reading, writing, understanding their own historick, military, and ecclesiastical, and a few simple precepts of morality; but many of them acquired several branches of the mathematics and philosophy from the European officers. They have various firms, which their descendants fill tain: their philosophy, however, is tainted with many superstitions of their own, and their exhibition blended with the prejudices of their countrymen. Prior to the arrival of the Europeans in their country, they were so ignorant with respect to geography, that they imagined their own earth, and the Chinese, to be the center of the universe; and their notions were very imperfect with respect to the extent and situation of these: they have, however, many observatories and public academies, for the training up of youth in the learning of the country, and the practice of the moral duties. These female academies are well supplied with books, and referred by a great number of female teachers, young bonyas, who are usually of noble descent, and well endowed with money for their support.

According to the Portuguese missionaries, these superiorities of the public facts of learning are adopted in moral philosophy, and great snatters of the most persuasive eloquence. Indeed it is not to be wondered at that they make a wise progress in the arts of life and handle being paid of the most retrospective memories. Their poetry is lofty, sublime, melodic, and defcriptive; their music is less agreeable; but their paintings are the best executed by any of the orientals, though they fall far short of the Europeans in every essential except colouring, in which they excel them.

These people have no regular system of physic: their doctors trust to experience, and always prescribe according to precedent, if they have a precedent to go by; but where there is no twain they are by constant, do in the same manner as their countrymen; and that in every manner as the Chinese, whom they naturally imitate.

The Japanese write, like the Chinese, from top to bottom in columns, which they begin at the right hand; and their letters were originally the same; but they have changed the form, and even the sound of many, in order to differ from much as possible the Chinese, whom they naturally imitate.

The Japanese, besides the wonders of nature, and the marvellous surprises of the Chinese, are more unskillful than the physicians in every thing else, except the cure of the flux, a most grievous kind of colic prevalent in the Japanese, and the Chinese, who, as their name signifies, move, by taking blood from the part afflicted, with a small needle made of gold or silver. Both physicians and surgeons are, however, highly esteemed, and the patients usually acquire considerable fortunes by their practice among them.

The Japanese write, like the Chinese, from top to bottom in columns, which they begin at the right hand; and their letters were originally the same; but they have changed the form, and even the sound of many, in order to differ from much as possible the Chinese, whom they naturally imitate.

The invention of geography and printing is claimed by them, as well as the Chinese, the preparation and use of the flux are much inferior to them; but they excel them in the latter, which is performed in a familiar manner, and the most expeditious endearments. They differ from all the other oriental nations in not being able to contain a contempt of pain and death, teaching them to subdue all kinds of pain; they are not afraid of death, and act upon all occasions to hold in the utmost contempt.

The invention of geography and printing is claimed by them, as well as the Chinese, the preparation and use of the flux are much inferior to them; but they excel them in the latter, which is performed in a familiar manner, and the most expeditious endearments. All the people are much unskillful in the science of medicine, but the most fashionable remedies, upon all occasions, are bullion and gold-dust. They are not afraid of death, and act upon all occasions to hold in the utmost contempt.
A Japanese Temple,
in which the Priest is performing their Nuptial Ceremonies.
they worship, or one of his priests do her the favour, is
left to the reader to conjecture: however that be, the
quadrant maid is from thenceforward highly honoured,
and at her coming out of the temple is entertained
with songs and music, and so in former times, as of
Thamar Her-
bert, his enthralling girl, that the takes upon her
to relieve the most difficult questions that are propounded
to her. The boon-cr, or priests, in the presence of their
prin,
ject, that he rises up to flinte them, and suffers them
to sit in his presence; they preach up great authorities,
and teach morality and a contempt of the world. But the
Bo-nt
hish priests will have it, that they are led fellows,
and do not live according to their doctrine.

Christianity was not introduced into JapLand in the year
1597, by one Portuguese priest, tent thither by father
Xavier from Macao; and the Christian religion so en-
croached, that before the year 1623 three petty kings,
and several other great men, with multitudes of people, made
profession of the Chrihian religion, if we may credit the
millenarians. But about that time, a decree was made for
exterminating all Christians under the Japanese government;
whereupon there followed to terrible a perccution, that
there is not now one Christian left in Japan, nor are any
people who acknowledge themselves Chilians suffered to
come into their ports.

The Japanese allow of polygamy and concubinage.
The contest of the parties is settled in either town; but
by more than is in China; children are disposed of by their
parents very young, and when they are arrived at a proper
age, are led to the temple, where there are three places:
or to form an image of some of their gods, putting a lighted torch
in either of their hands, while he repeats the words of the
contrat; after which oxen or other animals are sacrificed
to the idol, according to the quality and circumstances
of the married pair; and the ceremony is concluded by a
grand procession to the bridegroom's huse, where the
nuptials are entertained for several days.

The wife has no fortune here any more than in China,
and after marriage she is entirely in the power of her
husband, who may punish her, or take away her life, if she
does not behave well, especially if she fail to his bed.
The woman is, said, effect in it no crime to procure
abortion, and if they are poor, or bring too many
children, they will strangle them with their own hands; but the boys
are always provided for by the sovereign.
Common women are allowed here, and no punishment or brand of infamy
is fixed upon procurers in their life time; though they are
considered as criminals when they die, and their bodies
are thrown into the highways, and suffered to rot above
ground.

The Japanese do not inter their dead as the Chinese do,
but burn the corpse, putting the ashes into an urn.
The family and friends of the deceased attend the corpse to the
funeral pile, with lighted torches in their hands, and
the eld-est son sets fire to the pile, into which are thrown fruit
wood and aromatic gums, which perfume the air,
and this makes the funeral of a very pleasant and
satisfactory nature. The whole concludes with a banquet and
entertainment of such music as is best suited to delight melancholy
revelers. They pay their respects to the vault of their ancestors;
at which time, when the company have arrived at the sepulchres of the dead, the bones
describe the fiction of the perfons decanted, and inform their
relations of all that they have occasion for in the other life,
which demands are usually very extravagant; the kindred,
however, furnish every article with great liberality,
which they fend, together with a few kind and consid-
ernatory messengrs, to the defunt, by means of the bones,
who convert the whole to their own use, and leave the
dead to lie as they can for themselves.

As the English have had no commerce with Japan for
upwards of one hundred and fifty years, and as we can re-serve no intelligence from each other, and what the bone
being pleased to give us, a letter from an English Earl in India cap-
tains to his friend in England, when we were allowed a free
trade to that kingdom, may give us a fuller account of the
state of it, than any thing that has been communicate
to us since; the substance whereof follows.

SIR,

I arrived at Farina, one of the isalds of Japan, on the
11th of June, 1615. It is situated in thirty three de-
ger forty minutes north latitude; a little west of the
place of Bongos. Here I wonne Santa, the viceroy, or King of
Farina, as he is called, came on board our ship, with his
fame and my commissary. They were attended by forty galleys,

No. 16
of a frock. The king and his nephew were clothed in blue silk gowns, and each of them wore a fine linen shirt and breeches; their heads were shaved half-way; the rest of their hair was very long, was tied up in a roll on the crown, and they had neat sides and back. They wore nothing on their heads but the hair; each of them had a shawl of foreign, which commanded their hair. They fastened it under their necks, and the king's hands together, and having a little, carried them as low as their knees. I entertained them in my cabin, after we had dined; and I invited the men to a pillared and to the front of the island came the king on board, every one bringing a present of venison, fish, fowl, or fruit. The kingcons on board again, and ordered the men to assist in bringing the ship into the harbor, there being a dangerous point to pass. I came to an anchor at length the town of Amsterdam, in five fathom water, so near the shore that I could talk to the people in their hands. We sailed the town with nine pieces of cannon; but they had none to answer us, and on foot, but a barretted hire for a boat.

The ship was continually crowded with people; among whom were some women of quality, that I introduced into my cabin; and while the pictures of Venus and Cupid there, they immediately fell down and worshipped them, taking these pictures for the Virgin Mary and her son, having been taught to adore such pictures by the Portuguese in the ship, the king afterwards chose that of his ladies on board, who had thick gowns on, one side folded over the other, and with a hair, their hair long, and tied up in a roll on the head, none of it that I have seen, but could not bear it. They had no colour in their faces, but what they had laid on. They were of a low feature, but very fat; her face, absolutely fearless, being all of it, but the head and indispensible ribbons: they seemed something bafhful till the king bid them mercy, and then they sung, and played on an instrument that resembled a lute; they kept time, and sung and played by book; and after I had entertained them, and made them some small presents of English curiosities, the king and the ladies took their leave.

I afterwards went on shore, and delivered my presents to the king, in which were plate and other things to the value of one hundred and forty pounds; and the king, inviting me to an entertainment, drank to me out of one of the cups of the present) filled with rice, containing a pint and half. He drank it off to the king of England's health, in which I pledged him, and be made all the company do the same.

A Dutch ship coming in while I lay at Amsterdam, it was reported that the crew were Englishmen; for the natives did see not at first distinguish one of these nations from the other. At first, the people of the Protestant side and the sailors, and taught them a song, which they called the English air, a kind of sea air, wherein they preferred to these how the English attack the Portuguese ships at sea.

While we lay in the harbour, two of the officers happening to quarrel, and a challenge to fight on shore appeared, they were afraid of it being called to an account by the magistrates; for, according to their laws, whoever draws a weapon in anger is to be cut in pieces immediately, without any notice; and if any other, another, the whole family or company to which he belongs, suffers with him.

The king of Goto, an island a little south of Amsterdam, being brought on board by King Joynne to take a view of our ship, I entertained him very splendidly, and fired several guns on his going ashore, at which he expressed great satisfaction, and invited me and my friends to his island. I have been some time in the East Indies, and particularly about two men and a woman for adultery; two of their lovers meeting at her house together, in the absence of the husband, and when he returned, he immediately took his sword and stabbed the two men, and ordered the woman to be carried to prison; on nothing on their heads but their hair; each of them had a shawl of foreign, which commanded their hair. They fastened it under their necks, and the king's hands together, and having a little, carried them as low as their knees. I entertained them in my cabin, after we had dined; and I invited the men to a pillared and to the front of the island came the king on board, every one bringing a present of venison, fish, fowl, or fruit. The kingcons on board again, and ordered the men to assist in bringing the ship into the harbor, there being a dangerous point to pass. I came to an anchor at length the town of Amsterdam, in five fathom water, so near the shore that I could talk to the people in their hands. We sailed the town with nine pieces of cannon; but they had none to answer us, and on foot, but a barretted hire for a boat.

While we lay in the harbour, two of the officers happening to quarrel, and a challenge to fight on shore appeared, they were afraid of it being called to an account by the magistrates; for, according to their laws, whoever draws a weapon in anger is to be cut in pieces immediately, without any notice; and if any other, another, the whole family or company to which he belongs, suffers with him.

The king of Goto, an island a little south of Amsterdam, being brought on board by King Joynne to take a view of our ship, I entertained him very splendidly, and fired several guns on his going ashore, at which he expressed great
Japan being situated between the fourth and seventh climates, the fun rises there about eight hours before it does with us. The sea breezes greatly mitigate the heat in summer, but they render the winter exceedingly cold, and occasion to the people more inconveniences than in other parts of the Indies. Heavy rains sometimes continue almost the whole year; but in the months of June and July, which are the water-months, the rainy season is always excessive. The country is likewise frequently visited with dreadful storms and hurricanes, thunder, lightning, &c.

The soil is rocky, or rather fertile; but the industry of the inhabitants has overcome the unkindness of nature, and given fertility to a land of itself unfertile. They have rice, of which they make bread, and brew beer; with the barley they feed cattle, convert their fine wheat into cakes, and one species of beans they grind one to meal to boil for eating, and with the other make a kind of confectionery. They have, besides Indian wheat, millet, and many other sorts of grain. Even the rocks, and other barren situations, have been so well cultivated, as to produce abundance of fruits and plants. They have good pasture, which feeds great numbers of buffaloes, oxen, sheep, hogs, &c., and flowers and herbs of a particularly excellent tea. There are great quantities of fish in the circumjacent rivers, lakes, and interior lakes. Besides the vegetables, they have a great number of birds, which are generally exceedingly rapid, and many delicious cataracts descends from the mountains.

The principal rivers are, 1. The Ujigawa, whose waters are so frequent, that no bridge can be built over it; 2. The Koma, said to come from the province in which it rises; and, 3. The Akaga, remarkable for its depth and perpetual fluctuation. The chief lake, called Cita, is one hundred miles in length, and twenty in breadth. It disengages itself into the sea on the south-east side of the island; this extensive large lake is formed by the conflux of several rivers, which in general exceed rapidly, and many delicious cataracts descends from the mountains.

The fauna which inhabits this country produces red and white coral, ambergris, admirable pearls, and many curious shells, sea-weeds, &c., but the greatest wealth of the empire results from its invaluable mines, particularly those of gold. The emperor claims an exclusive right to all the gold and silver mines, as well as all the gold fund, in his dominions. The copper mines are immeasurable, producing annually immense quantities of copper. The boulders in the mountains arelikewise pregnant with sulphur, iron, and lead; but they have not any quicksilver, antimony, calamine, or copper.

They procure salt by inflicting portions of ground near the sea, covering them with fine sand, and repeatedly throwing seawater upon the land, till it is well impregnated with salt. It is then taken into large vessels, with holes in the bottom, for the salt to fall into proper receivers, as it filters, through the sand: after which it is boiled, and brought to a proper coarseness. Earthquakes, and the volcanoes, of which there are eight very dreadful ones in the country, are supposed to be effected by the fulphur everywhere imbedded in the bowels of the earth. From the same cause may be deduced their hot baths and mineral springs, which are extremely numerous; some equal the heat of boiling water, and others are even as hot as a red heat; and they have many cold mineral springs, but neither of them are applied medicinally, through the extreme ignorance of their physicians.

A great number of whites are found in Japan, many of which exceed all other Japænesie innsuits for its beauty; the body is about three inches long, round, and finely shaped; it has four wings, viz., two close to the body, which make a brilliant appearance, by means of the admirable blue and gold flecks, with which they are tinged; and two above their head, which, though very small, are very beautiful, and has given rise to the belt fable ever written by any of the Japænsse poets. A great number of campfire trees grow near the hot springs; they resemble laurels, and bear purple or black berries. The cedars of Japan are some of the finest in the world, and which are found in their hills, and particularly plantans, &c., some of which, when fawn or cut, funder, exhibit admirable figures of birds, beasts, landscapes, &c. Many curious pieces of furniture are made of these, which appear very beautiful when polished.

There are in this empire many useful flowers of various colours; also abundance of excellent marble, which is used in the construction of many of the principal edifices; they have also porcelain earth, &c. With respect to other articles, as in the animal, vegetable, and mineral systems not mentioned above, Japan abounds in most that are not met with in the Chinese empire, already described.

With respect to the history of the Japænsse, their animals are replete with such inconsistent absurdities and ridiculous fables, that no dependence can be placed on them till about six hundred and sixty years before Christ, which are their common years: and to according to which, the year 1785 is the first, and the year 2445: it is likewise to be observed, that the Japænsse year begins with the rising of the new moon which either precedes or follows the fifteenth day of February. The histories written by the natives take very little notice of the policy, virtues, vices, and transactions of their monarchs, but are filled with a catalogue of their names, titles, ages, succession, length of reign, &c. We shall present our readers with the following account of their sovereigns, taken from their own biographers.

1. Shummo was the founder of the Japænsse monarchy: he began his reign fix hundred and sixty years before Christ. In the forty-eighth year of his reign, he instituted a form of government, established laws, civilized the people, taught them chronology, and several arts and sciences; divided time into years, and years into months and days; secured the crown to his posterity; and, having reigned seventy-nine years, died in the one hundred and forty-ninth year of his age; but as nothing particular happened in his reign, or in those of several of his successors, we shall only give a catalogue of their names till a remarkable reign renders a more ample account necessary.

2. Sai-fë, who reigned thirty-three years, aged eighty-four.
3. Ene; reigned thirty-eight, aged eighty-four.
4. Toku; reigned thirty-five, aged eighty-four.
5. Kofru; reigned eighty-three, aged one hundred and fifteen.
6. Ko; reigned one hundred and one, aged one hundred and thirty-seven.
7. Ko; reigned one hundred and two, aged one hundred and sixty.
8. Kowi; reigned one hundred and thirty, aged one hundred and sixty.
9. Kay-ku; reigned ninety-nine years, aged one hundred and eleven.
10. Won; reigned eighty-six, aged one hundred and nine.
11. Sin; reigned eighty-five, aged one hundred and thirty-nine.
12. Key-koi; reigned fifty, aged one hundred and forty-three.
13. Suy-mau; reigned sixty, aged one hundred and eight.
14. Tëma; reigned ninety, aged fifty-two.
15. Tëma; was succeeded by his emprefs Sendo-ego, who was the first female that reigned in Japan, the weid war against the Koreaus, and headed their army in person; but finding herself pregnant the return to Japan, and was delivered of a son, that succeeded her, and who afterwards on his military exploits was ranked as a god, and became the Mars of the Japænsse; the emprefs herself, who reigned seventy years, was deemed the Bellona of this empire.

16. Woon; who reigned forty-three years, and died aged one hundred and thirteen.
17. Nitosu; reigned eighty-seven, aged one hundred and eleven.
18. Kofa; reigned fix, aged eighty-seven.
19. Fëny; reigned eighty, aged eighty-seven.
20. Loku; reigned forty, aged eighty-eight.
21. Ako; reigned thirty, aged eighty-seven.
22. Jorasu; reigned twenty-nine, aged uncertain.
23. Kofru; reigned five, aged forty-two.
24. Gen-fu; reigned three, aged eighty-five.
25. Noku; reigned eleven, aged eighty-five.
26. Kori; reigned eight, aged uncertain.
27. Kii-tei; reigned twenty-seven, aged eighty-one. 28.
in Japan, and put an end to the possibility of falling into war. He established himself in the palace, and lived there in peace and quiet until his death in 1716.

The reign of Jefu was marked by a period of peace and prosperity. He reigned during the 17th and 18th centuries, and his reign is remembered for the development of the arts and sciences in Japan. He was a patron of the arts, and encouraged the development of literature, painting, and sculpture. He is also known for his love of nature and his interest in the arts of China and Korea.
The Philipines islands are situate in the Chinesian sea, part of the pacific ocean, between one hundred and fourteen and one hundred and thirty degrees of north latitude, and between five and nineteen degrees of north longitude, about one hundred leagues south-east of China.

There are eleven hundred of them, and few of them very large. The chief of the most northerly of them is Manila or Luzon, which is the largest of the Philipines, and is situate in fifteen degrees of north latitude, and about four hundred miles long and above one hundred and eighty broad in most places.

The capital of this island, and of all the rest, is the city of Manila, situate on a bay in the south-west part of the island, being two miles in circumference, surrounded by a wall and other works, a very commodious harbour, but of difficult access, on account of the rocks and lands which lie before it; a castle defends the entrance.

The chief buildings are the cathedral, parish churches and convents; one of the religious houses is appropriated to the support of orphans, daughters of the inhabitants, who are provided for during their lives; or, if they choose to marry, have a portion of two or three hundred crowns given them. Their churches, chapels and altars, are richly adorned, and their processions on holidays as splendid as in Spain. The college of the Jesuits here, as in most Popish countries, is more magnificent than any of the rest.

The island of Luzon, or Manila, is esteemed healthful, and the water is the best in the world, and has all the fruits of warm climates, and has an excellent breed of horses carried thither from Spain. It is well situated for the Indian and China trade; and the capital city, which lies on the west side of it, is a large circular bay of ten leagues diameter, entirely land-locked. The city of Manila, which stands on the left side, has a large and contains several spacious streets and grand houses; which at the beginning of the first war with the Spaniards, in the reign of King George II. was an open place, only defended by a little fort; but considerable additions have lately been made to its fortifications. The port peculiar to the city is that of Caloite, which lies two leagues to the southward, and here the ships employed in the Acapulco trade are stationed.

The city is healthfully situated, and well watered, and has a very fruitful country in its neighbourhood; but it is some disadvantage to its trade, that it is difficult getting out to sea to the eastward, through such a number of islands; here the Spaniards waste abundance of time, and are often in great danger.

The trade from hence to China and India consists chiefly in such commodities as are intended to supply Mexico and Peru, namely, furs, China fumaces, and fome features, particularly frok boggings, of which there are four thousand pair have been shipped in one cargo, with quantities of Indian fluffs, cahorros, which are much worn in America, together with other small articles, fuch as goldsmith’s work, &c. wrought at the city of Manila by the Chineses, of which nation there are not less than twenty thousand residing there, as ferrants, manufacturers, or brokers. All these articles are transported annually to the port of Acapulco in Mexico; this trade is not open to all the inhabitants of Manila, but it is refrained to the convants of Manila, principally to the Jesuits, being a donation to support the millions for the propagation of the Catholic faith. The tonnage of each ship is divided into a certain number of bales, all of the fame size, and the convants have a right to embark under fuch a quantity of goods on board the Manila fleet, as the tonnage of their bales amount to. The trade is lost by royal edicts to a certain value; according to fome, it fould not exceed fix hundred thousand dollars; but it is frequently known to amount to three millions.

The bulk of the people of Manila are of Chinese or Malay extraction, and there are some blacks. The Spaniards, though few in number, have the government in their hands. The adjacent country is full of fine plantations, farms, and country-houses of the principal inhabitants. Upon the mountains, in the middle of the country, the people live in tents and huts beneath the spreading trees. The plains are overflowed in the rainy season, the floods built upon high pillars; and the people have no communication but by boats during the rains, which

[ASIA.] PHILIPPINE ISLANDS. 169

SECT. V.

Containing an account of the Philipines and Ladrone, or Marian islands.

No. 17.
which usually fall in June, July, August, and September, and are caused by the tropical storms and the trade winds. Earthquakes are frequent; the city of Manilla has suffered several times by them; and from the volcanoes, which are frequent here, the land and salted mineral salts. Thus are the inconveniences we meet with; but the favorable part is, that there are upon the island a great number of medicaments, as well as poisons and narcotics. They have one plant that has all the properties of the gold in a solid, and another which they call the gold-tick, because its bark is so hard, that it digs a hole in the trunk, or some large branch of a tree, in order to get at the contents of the tree.

Their fruits are mangoes, plantains, bananas, cocoos, tamariifs, carilla, and the cocoa or chocolate nut, which has been brought from the Moluccas to Manilla, and produce all manner of tropical fruits. The cinnamon and nutmeg tree have been planted here; but degenerating, and are good for nothing.

A great deal of good timber and dried wood grow wild on these islands; and the calabas, or sweet-wood, a kind of cane, grows in the mountains, which, if not, yields a draught of water, and is not a great service to the natives. They have one plant that has all the properties of and is used as a substitute for opium, of which the natives are very fond; and is brought in and sold to the natives.

The breadfruit, or blow-pot mortals, is a good tree for one part; to cut down may reduce a wound to a clean, quick, and superficial state; his skin is smooth, and they are not objected to them for it.

The mango, and the bird who eats them, is an enterprising and noble bird who feeds on carrion, and makes a great deal of inaccuracy and plainness: it is called the carpenter, because its beak is so hard, that it digs a hole in the trunk, or some large branch of a tree, in order to get at the contents of the tree.
of the islands. The court ofquisition has also a cli-
2m. Nat. of the Moros, but notwithstanding the Spaniards are pre-
3ented as foreigners of these islands, this must only be understood of the open country and the sea coasts, in which case it is a Bayern day, and then turn about and four, but upon the land there are no more than two or three flower days; they afterwards come together, and with violent hurracaneis beat hard their houses, and the wind continues wearily until November, during which time they have such storms that trees are blown up and bended; but when they are over, with the sun they pursue the fun or flur sometimes in a week: about August the air is very cool, the rain and wind are moderate in September, and in October the wind blows from the east, and then continues fair till April, and sometimes May.

Mindanao, the capuitive, lies on the south side of the island, in one hundred and twenty-three degrees fifteen minutes of eastern longitude, and six degrees twenty minutes north latitude, near the mouth of a river, and about three miles from the sea; the hovels are built on bamboo pillars, sixteen or eighteen feet above the surface of the ground, on account of the annual floods, when they have no communication with another but by boats. The city is about a mile in length, built along the winding bank of the river; the Sultan's palace is supported by one hundred and eighty trees, and has twenty cannon mounted in the front, and fear of the national power. They have great guns in or before their hovels. Large ships cannot come up to the town, their being scarce eleven feet water at the bar, at the entrance of the bay.

The natives are held to be men of a frightfully genius, but very lazy, and insolent, and will rather thieve than work; but none are more willing than they are to sell themselves for a necessity for it; and there may be two reasons for their lazy disposition, one from the heat of the climate, and the other from the tyranny of the government, no man being sure he shall enjoy what he acquires by his industry.

The Mindanaans are of a low stature, and very fnder, of dark tawny complexion, black eyes and hair, flat faces, short noses, wide mouths, and canine black teeth. They accept abundance of pains to dye of that colour; and they wear the nails of their left hands almost as long as their fingers, fering and dragging them with a rope.

The men have a laughty mein, and yet are faid to be very compliant to foreigners, unless they are insulted, and then they dicker fail to retort the affront, and employ their enemy by poison or a dagger, never hazarding their persons in a duel.

Their habit is a linen frock and drawers, and a small piece of linen cloth tied about their heads; but they go bare-foot: the complexion and features of the women are better than those of the men; but yet they too much resemble the other sex, and cannot be admired for their beauty; they wear a frock like the men, and a piece of cloth round their wrists; the flowers of the frock being large, and coming down to their wrists. Their hair is always tied up in a roll at the hinder part of their heads. The men shave their heads, but all a lock that is left in the middle of the crown, like other Hindus, and their beard is thick and harsh; the women's hair is thin, being pulled up by the roots with tweezers. People of figure are clothed in frock or fine calsie; the women go barefoot as well as the men so natives, they wear their toes and fingers with bracelets and rings. They are not refrained from conversing with their countrymen or foreigners.

The food of people of condition is fish, fowl, and fowl of all kinds, except hogs which, the Mahometans never touch. The poorer sort content themselves with rice and fage. Rice is the principal part of the meal with all of them; they take it up with their hands, using neither knives or spoons; and their meat, whatever it be, is boiled to rag, that it may very easily be piqued with their fingers. They usually drink water. Theirs is a pretty strong liquor with plantains; they wash before and after every meal, and bathe several times a day. Swimming is one of the chief diversions of the women, as well as the men, to which they are addicted from infancy.

Upon joyful occasions the dancing girls, as they are called, are sent for to divert the company; but this dancing consists only in throwing themselves into licentious postures, and adorning their bodies with all sorts of ornaments. They play and mock fights also after before them, and hunting of wild beasts is their principal rural sport, in which their women partake; but hunting is only driving the deer and possessing the carcass. They have netting and darts, for catching birds, and nets, for catching fish, from whence they canquett escape, and then shooting at them.
Mindanao is a fruitful soil, well watered with rivers, and their mountains afford excellent timber. Of the liberal plenty of tree-dye, the large gums, the sapodilla, the gingers, the pith of a tree which the natives eat instead of bread, and is frequently brought over to Europe, being so grated, that it is eaten raw. The natives make a pottage of rice, but love no corn but rice. Plantains, guavas, mangos, and all tropical fruits, abound here. Cloves and nutmegs have been transplanted hither, but do not appear: but it is said they degenerate, and the fruit is good for nothing; if these plants were cultivated, possibly they might equal those of the spice islands.

Here are no beafts of prey in this island, but almost every other useful animal, such as horexes, cows, buffaloes, and hogs, with bunches over their eyes; here are also lizards, crocodiles, and other venomous insects; and the feathered kind are the same as in Manila.

The Malay language is generally spoken here; and the Mahometans have the koran and books of devotion, in the Arabic language. The liberal arts do not flourish here; they are forced to employ the Chinese to keep their accounts for them; nor have they so much as a clock or a watch in all the country, but beat upon drums every three hours, that people may know the time of the day. There are scarce any other working trades, except goldsmiths, carpenters, and blacksmiths, who perform their work very well with the tools they have, for the smiths have not anvils; or if they have, when they have split their planks, plane them with the axe or adze. Their diversions are flues, fevers, and the small-pox; and some are afflicted with a kind of leprosy, or dry scurf, which covers the bodies, and makes them ugly.

The religion of the sultan, and those who inhabit the sea-coasts, is Mahometanism, and that of the inland people is Paganism, differing little from the Chinese. In allowance of a queen, he has between four and eight in length, built sharp at both ends, one side of the boat flat, and the other rounding with a pretty large belly, five and a half feet broad, with a staff in the middle. They turn the flat side to the wind, and having a head at each end, fail with either of them foremost, and have never any occasion to turn before: they fastened them together, and sailed twenty-four miles an hour. The tide never rises above two or three feet at this island.

The writings of Lord Anson, whose voyages relate, that they arrived at the island of Tinian or Jibonwalla, one of the Ladrones islands which lies north of Guam, on the 27th of August, 1742, being situated in fifteen degrees eight minutes north latitude, and one hundred and fourteen degrees fifty minutes west of Acapulco in America. This island is twelve miles in length, and in length, extending from the S. W. to N. E. The soil is dry and sandy, and the air healthful; the land rises gently from the shore to the middle of the island, interrupted by valuable woods, and the valleys and canyons, and the outskirts of the woods, intermixed with a variety of flowers; the woods, in many places, open, free from bushes, and uncommonly soft, agreeable enough and entertaining prospects.

The cattle on this island were computed to amount to ten thousand, (we suppose he means heard cattle) all pasture white except their ears; besides which there were hogs and poultry without number. The cattle and fowls were fat, that the seamen should run them down; and were under no necessity of feeding them. Their flesh is well tasted, and very easy of digestion.

About the beginning of the present century, this island was said to contain at least thirty thousand inhabitants, when a dreadful mortality raging among them, prodigious numbers died; and the calamity prevailing with equal severity in the island of Rota, which is of the same size, and situated about fifteen miles to the westward.

The Ladrones islands are situated in the Pacific ocean, in one hundred and forty degrees of eastern longitude, and between twelve and twenty-eight degrees of northlatitude. Guam or Iguana, the largest, is situated in thirteen degrees twenty minutes, and twenty-five degrees north latitude; four thousand six hundred miles west of Cape Corrientes in Mexico, according to Dampier. The other inconsiderable islands are 2. Sapaya. 3. Bulgaria or Tinian. 4. Seopara.
they are seldom visited on account of the great inconveniency arising from the want of water for anchorage. The inhabitants of this island are very industrious, and never in winter, when its climate is so very severe, make any excursion out of their habitations but on particular occasions, such as the harvest or the celebration of the festival of the Virgin. They cultivate tobacco, the principal article of their trade. They are totally unknown to the Chinese, who are the only people who visit the island. They are a sort of indolent, indolent, indolent, indolent people, who keep their houses perfectly clean, and live in great plenty of various kinds of grain, especially rice; and their fertility is greatly augmented by numerous rivers, whose streams flow conveniently through it.

There are a great variety of fruits to be found here, as in any other part of the Indies; particularly oranges, cabbages, bananas, ananas, guavas, papayas, &c., all几种 kinds of those produced in Europe, as peaches, apricots, figs, grapes, and cherries. They have likewise a sort of melon, which is of an oblong form, and much larger than those in Europe: they have a white or red pulp, and are full of a fine juice, which is exceedingly grateful to the taste. Sugar and tobacco also grow here to the greatest perfection: and the trees that produce these are so agreeably arranged, that they appear as if calculated to embellish the most beautiful gardens.

They have but few wild beasts in this island, and those are seldom found, as they chiefly supply the demand of the inhabitants, and are killed for that purpose. They have neither hares nor foxes, nor the coats about the island are very high and rocky, so that it is almost impossible to invade it. The only hay in the whole island, where ships of any bulk can approach, is in the mountainous country, where the mountains are very narrow, and defended by such high rocks and forts on each side, that no enemy could possibly enter it, but must fall in the attempt.

The natives of this island, who are under the dominion of the Chinese, are divided into forty five tribes, or towns, thirty-six of which are in the north, and nine in the south. They are in general of a low stature, have a large mouth, and are very swarthy in complexion: they have a very high forehead, and are altogether greatly distinguished, for the body is very short, the neck small, and the arms and legs are remarkably long. They go almost naked, their dress consisting only of a rough piece of cloth tied round the waist, and reaching to the knees; but they adorn their bodies with the figures of trees, flowers, animals, &c., in doing of which they undergo fuelly violent pain, that other part of the body, which is meant to be covered, is cut and burned so that it will take some months before the whole is completed. They are also painted with a sort of oil, which is made of a mixture of large flax, grafted with a flax, having no iron or other metals in their country: and were grafted to see the many trees used in building a ship. Their arms are lances or darts, headed with human bones and sharpened. They form to be a people of much life and courage, but of a peaceful disposition; and are well proportioned, but not of a large size.

This island is excessively fertile and agreeable, and on that account obtained its name, the word Formosa signifying pretty or beautiful. Its longitude from Pequin is from three degrees twenty minutes to five degrees forty minutes east; so that when the sun is almost vertical over it, the climate is rather hot; but this is far from being disagreeable, as the intensity of the heat is greatly mitigated by the situation of the island, which is so elevated, as to receive the most agreeable advantages from the cooling breezes given by the sea.

Sect VI.

Treatise of the islands of Formoso, and Hainan, or Anam, partly subject to the Chinese.

We have in the preceding part of this work, (viz. in p. 56.) taken occasion barely to mention these islands; and we now propose to give a general description of the Oriental islands, a fuller account of those also mentioned will be more properly inserted in this place.

The island of Formosa is extremely agreeable, and neral a delightful country; and on that account obtained its name, the word Formosa signifying pretty or beautiful. Its longitude from Pequin is from three degrees twenty minutes to five degrees forty minutes east; so that when the sun is almost vertical over it, the climate is rather hot; but this is far from being disagreeable, as the intensity of the heat is greatly mitigated by the situation of the island, which is so elevated, as to receive the most agreeable advantages from the cooling breezes given by the sea.

Some parts of these islands belong to the Chinese, to whom the natives are subject; but in the other parts they live independently, and are only tributary to the Chinese government. That part of this island possessed by the Chinese is particularly fertile, and produces great quantities of different kinds of grain, especially rice; and its fertility is greatly augmented by numerous rivers, whose streams flow conveniently through it.

There are a great variety of fruits to be found here, as in any other part of the Indies; particularly oranges, cabbages, bananas, ananas, guavas, papayas, &c., all several kinds of those produced in Europe, as peaches, apricots, figs, grapes, and cherries. They have likewise a sort of melon, which is of an oblong form, and much larger than those in Europe: they have a white or red pulp, and are full of a fine juice, which is exceedingly grateful to the taste. Sugar and tobacco also grow here to the greatest perfection: and the trees that produce these are so agreeably arranged, that they appear as if calculated to embellish the most beautiful gardens.

They have but few wild beasts in this island, and those are seldom found, as they chiefly supply the demand of the inhabitants, and are killed for that purpose. They have neither hares nor foxes, nor the coats about the island are very high and rocky, so that it is almost impossible to invade it. The only hay in the whole island, where ships of any bulk can approach, is in the mountainous country, where the mountains are very narrow, and defended by such high rocks and forts on each side, that no enemy could possibly enter it, but must fall in the attempt.

The natives of this island, who are under the dominion of the Chinese, are divided into forty five tribes, or towns, thirty-six of which are in the north, and nine in the south. They are in general of a low stature, have a large mouth, and are very swarthy in complexion: they have a very high forehead, and are altogether greatly distinguished, for the body is very short, the neck small, and the arms and legs are remarkably long. They go almost naked, their dress consisting only of a rough piece of cloth tied round the waist, and reaching to the knees; but they adorn their bodies with the figures of trees, flowers, animals, &c., in doing of which they undergo fuelly violent pain, that other part of the body, which is meant to be covered, is cut and burned so that it will take some months before the whole is completed. They are also painted with a sort of oil, which is made of a mixture of large flax, grafted with a flax, having no iron or other metals in their country: and were grafted to see the many trees used in building a ship. Their arms are lances or darts, headed with human bones and sharpened. They form to be a people of much life and courage, but of a peaceful disposition; and are well proportioned, but not of a large size.

This island is extremely agreeable, and on that account obtained its name, the word Formosa signifying pretty or beautiful. Its longitude from Pequin is from three degrees twenty minutes to five degrees forty minutes east; so that when the sun is almost vertical over it, the climate is rather hot; but this is far from being disagreeable, as the intensity of the heat is greatly mitigated by the situation of the island, which is so elevated, as to receive the most agreeable advantages from the cooling breezes given by the sea.
of trees, and lay themselves down without any fort of covering.

They do not take much pains in dressing their men, for their life is all spent in the hunt, and the food they eat consists almost entirely of flesh. They are equally fond of fish, and the fish they catch are all of them equal to those that are found in the rivers. They are extremely fond of their women, and the women are equally fond of them. They have neither slaves, nor strangers, nor any kind of subjection, other than the lower orders of the people, who are subject to them. They have no state, nor any kind of government, nor any kind of laws, nor any kind of religion, nor any kind of education. They are entirely a people of the present moment, and live only for the present moment.

As for their religion, they have none. They are, however, as a nation, very religious, and they believe in the existence of a supreme being, who is called the Great Spirit, and who is supposed to be the father of all things. They have a kind of ceremony, which is called the sweat lodge, and is performed by the men and women separately. They sit in the lodge, and are wrapped in skins, and are covered with ashes. They then sit for a long time, and are afterwards bathed in cold water. They believe that this ceremony purifies them from all sin, and makes them pure and holy. They also believe that by this ceremony they can obtain the favor of the Great Spirit, and that he will give them what they ask for.

After the ceremony, they have a feast, and make merry, and drink to each other's health. They also sing songs, and dance, and make all kinds of noise. They usually remain in the lodge for several days, and are then prepared to go out and continue their work.

The people of this nation are very fond of their country, and they are always ready to defend it. They are very brave, and they are very quick to enter into any kind of conflict. They are also very fond of their religion, and they are always ready to defend it. They are very religious, and they are always ready to conform to the laws of their country.

The country where they live is called Ti-ouan-sou, and it is a large forest, full of trees, and full of wild beasts. It is a country of great extent, and it is full of all kinds of animals, and all kinds of plants. It is a country of great beauty, and it is full of all kinds of scenery. It is a country of great wealth, and it is full of all kinds of produce. It is a country of great power, and it is full of all kinds of strength. It is a country of great glory, and it is full of all kinds of honor. It is a country of great happiness, and it is full of all kinds of joy. It is a country of great honor, and it is full of all kinds of respect. It is a country of great honor, and it is full of all kinds of esteem. It is a country of great honor, and it is full of all kinds of respect.

It is a country of great honor, and it is full of all kinds of respect.
Accordingly, the Chinese adventurer failed from China with a very considerable fleet, and arriving near the mouth of the harbour, he landed some of his men, and began to attack the fort of Zacoila. But the latter being apprehensive of any danger, were provident to resist the powerful enemy; they had only four ships in the harbour, and some more above waters in a line of shells, exclusive of the natives, notwithstanding which they made gallant opposition, that the siege lasted upwards of three months.

The Chinese general was so numerous at being thus disposed, that he at length had recourse to a very desperate effort, which had the desired effect: he converted several of the town into forts, and placed them within the harbour, and happening to be high and favourable, drove them into the harbour, where the Dutch ships were entirely destroyed.

Thus finished, the Dutch could not make any further resistance, and the Chinese general offering them liberty to depart with their effects in case they would surrender, they readily accepted the offer, and giving all their valuable goods on board the ship that was left, they departed, and left the Chinese general sole master of the island. The conqueror immediately acknowledged submission to the emperor, and several other towns were soon built on different parts of the island, the inhabitants of which have ever since been subject to the government of China, and to still their submission by an annual tribute, as we before observed.

The island of Haynan (the principal part of which also belongs to the Chinese) is of considerable extent, and some of the hills are very high, but it is traversed by two great rivers, one of which is called the easterly, and the other the westerly, and is about one hundred and twenty miles in length, and between eighteen and twenty miles in breadth. It is washed on the north by the China sea, on the south by the coast of Cochin-China, and on the north by the province of Quang-tong, to which it is joined by a small river. The climate is very warm, and the land is covered with forests, which joins the eastern coast of Cochin-China. It is about two hundred miles in length from east to west, near one hundred and fifty in breadth, and about four hundred in circumference.

Kian-teou is the principal city of Haynan, and is near the middle of the island; it is about closer to its walls with the greatest security. The streets are very uniform, and some of them at least a mile in length, but the houses in general are low and mean buildings. There are several other considerable cities in the island, besides the capital, all of which are fortified and the sea-side, and subject to the jurisdiction of Kian-teou, which is governed by mandarins of the second order, names, of learning, and that of army.

On the southern part of the island there is a fine port, the bay of which is near twenty feet deep. There are also another very convenient port on the northern part, the entrance to which is defended by two small forts, though they are not of great value. The principal waterway is that which runs from Canton with various commodities, in exchange for which they have several kinds of fish, and other productions, such as tea, and various roots; the island itself is also silver and gold mines, as also minerals that produce the lapis-lazuli, which the natives of Canton use in painting the blue porcelain. Between the two mountains which form the island into a large plain, on which are several handsome Chinese palaces.

With respect to the climate of this island, it is in general very unhealthy, particularly the northern part, though the soil is tolerably fertile. The southern and eastern parts are exceedingly mountainous, but the valleys between are rich, and produce great plenty of rice. There are likewise several forts of very valuable trees, particularly the oak and violet-tree, which is so fragrant in its flower, that it is purchased at a very high price for the sole use of the emperor. There is also another tree little inferior to this; it produces a kind of liquid, which, by the natives is called 'phantom blooming fire,' and is supposed to be a most agreeable scent. Indigo grows very plentifully on this island, as also sugar, tobacco, and cotton; and they have the same number of domestic animals as are found in China.

Horses, sheep, cows, and goats, are the chief animals here. There are prodigious numbers of birds on the mountains and in the woods, some of which are very large, of a black colour, and the features of their faces do denote they are of a ferocious disposition. The natives are exclusive of any to be found in the universe; but these are very seldom seen; and though the natives have often endeavored to catch them, yet they are so cunning and artful, that they have baffled every machine they could project. Thieves appear to be of the same species with two feet sent from ages in a coating vessel as a present from a merchant of the rajah of the Carnic dominions to the governor of Hongkong.

There are various kinds of game in this island, particularly deer and hogs; also a great plenty of birds, such as partridges, wood-peckers, finches, and other delicate things, as well as many kinds of fish. They have likewise many kinds of flowers, as well as the most fragrant and agreeable on earth. They have several kinds of golden and silver coins, which are of great value in Europe. They have likewise a great number of guns in great abundance; but there is a little difference between the officers and soldiers, and they are of such a nature as to be esteemed of greater value than the golden fillers; but they will live only a few days out of their natural element.

The natives are short in stature, of a reddish complexion, and of them they are most deformed. The men wear only a loincloth, reaching from the waist to the knees; it is made of calico, and the colour is either a deep blue, or quite black. The women wear a garment of the same stuff, though different in form: it is sometimes made of calico, and reaches from the shoulders to the knees; and they are further distinguished from the men by the marks on their faces with indigo. Both sexes braided their hair, and adorn their ears with rings; their hats are made of straw or rattan, and tied under the chin.

Bows and arrows are their chief weapons, in the use of which they are not excelled as the inhabitants of Formosa.

They have also a kind of hanger fastened with a circle to their waist, which they generally wear in front of their vest or other woody places where they travel.

The natives of this island occupy the centre part of it, which is very mountainous; and some of them leave the island, being subject only to their own laws and modes of government. They are seldom seen by the Chinese, except when they make attempts to force them to a submission, in some of their neighbouring villages. This, however, seldom happens, and, when it does, they are naturally much awarded, that a hundred of them will fly from half a dozen Chinese. Many of them are in the service of the Chinese, who employ them to cultivate their lands, and take care of their cattle.

There are a number of small islands called the Pinedores, or Fiffer islands, between the island of Formosa and the continent of China; these are situated in twenty-three degrees north latitude. On the west side of one of these islands is a large town, with a fort defended by a garrison, consisting of three hundred Tartars.

A fort of islands are likewise situated between Formosa and Luzon. These are called the Five Isles, the northernmost of which lies in twenty degrees twenty minutes north latitude. The largest of these islands is uninhabitable, on account of its being a barren country; but the others are very populous, having several good towns in them. The hills of these islands are rock-bound, but the valleys are very fertile, being well watered with running streams. They produce plenty of pines, apples, peaches, bananas, finger-canes, cotton, poppies, and there are also great numbers of goats, hounds, and calves.

The inhabitants are of an olive-colour, and are short in stature, with round faces, low forehead, and thick eyebrows. They have black hair, which they wear in front of their houses, that barely touches their ears. The men wear only a cloth about their middle, and have no covering on their heads. The women wear a short petticoat made of coarse calico, which reaches from the waist to the calves of their legs. Both sexes wear rings in their ears, made of metal, or the parts, and they ride on the mountains.

The houses are built in rows one above another, on the sides of the rocks, and they abound to them by the help of ladders. They are very small, and confined only a few poles bound or covered with boughs of trees. The fire-places are at one end, and here they lay boards, on which they sleep. There is a kind of street to each row of houses, which runs parallel with the tops of the buildings in the row beneath.

The natives of these islands are naturally ingenious; they understand the use of iron, though they work into various forms, and build very neat boats, which resemble those with us called yachts. They have likewise some large vessels, which they tow by means of ropes or other engines.

The food of these people consists chiefly of vegetables, but they sometimes make a dill of locusts, which they catch in particular seasons of the year, and which they eat in great quantities.

They catch them with nets, and either boil them on the fire, or bake them in an eastern pan. Their chief drink is rum, but they have a hop that in taste and colour resembles English beer: this is called kaffie, and gives
name to one of these islands. It is made with sugar-cane, boiled and mixed with blackberries; after which it is put into jars, and when it has worked five or six days, it becomes very sour, and is fit for drinking.

The language of these islands bears no affinity either to the Chinese or Malay, but is peculiar to themselves.

The fruit trees are few, and the leaves large, and are attached to the trunk by a fleshy stalk. The flowers are small, and are attached to the leaves, and are sparsely distributed on the tree. The fruit is small, and is enclosed in a hard, woody, brown shell. The juice is clear, and is sweet, and is fit for drinking.

The inhabitants of these islands are of a mixture of races, and are of different religions. They are of a medium height, and are of a medium complexion. They have a light complexion, and are of a medium height. They have a light complexion, and are of medium height. They have a light complexion, and are of medium height.

The climate of these islands is hot and humid. The winter is long, and the summer is short. The winds are light, and are of a medium temperature. The climate is hot and humid. The winter is long, and the summer is short. The winds are light, and are of a medium temperature.

Addressing the rarefication of the island of Timor. On the 4th of May, 1777, there were more than one hundred shocks of earthquakes felt here, some of which were so violent, that they seemed to threaten the destruction of the whole island; about the 20th of August they were felt again; and the burning mountain, after a dreadful explosion, threw out her flames, cinders, and lava in abundance; and on the 28th of November the earth was never still for three hours, the mountain seemed all on fire, and the most dreadful form of thunder and lightning fell in every part of the island, which threw the inhabitants into such a consternation, that they ran from one part to another for shelter; but none was to be found; the sea was foaming, and every boater, lest the demolition was inevitable there, and on the land the earth opened and trembled under them, as if the whole island was going to be annihilated. But by the morning of the 21st, the cabinet was restored, and the inhabitants had time to see what damage had been done, when it appeared that the Dutch fortification had been preserved, but will be destroyed by the earth the before the islanders recover their loss. The king has made a report, that a large extent of land on the north side of the island, in the district of Tana-Tarakan, has been swallowed up, for which sixteen plantations have been totally destroyed, and one hundred and forty-one persons have been either burnt or drowned in the sea, where many of them took refuge in the sea. The earth has been so considerable, that about thirty of the unfortunate inhabitants, who are reported to be destroyed objects by wounds and burns in this shocking event. On the 30th and 4th of November, the earth-quiakes and effusions of fire, smoke, and sulphurous smoke from the mountains began as bad as ever, but no lives were lost. The horrors of this night are not to be described, for the thunder, lightning, and those shocks earthquakes continued without interruption for twelve hours, with the most terrible violence, from this ever dreadfully be remembered night, there were no earth-quiakes till July 1, 1776, when they again fell for two hours, but not violent.

The town of Motir is situated towards the south; it is the capital, which is of the same name, has been formerly fortified by the Dutch; for so that on account of its natural strength and the impression the name gave to it, the place is deemed impenetrable; the harbour is, however, but indifferent, being dry at low water, which sometimes prevents very considerable vessels. Motir is a very small island, about thirty miles north of the line, and secured by a strong fortress crested by the harbor.

To the south of Motir is Machian, nearly under the line; it rises in a conical form to a considerable height, and forms a barrenness like a single mountain. The cloaks of this island are little, if any of them to the other of the Moluccas. The Dutch have several forts in this island, which is only twenty miles in circuit.

Ternate and Little Bachan are to the southward of the line; the first is fertile in fruit, fago, figo, etc. It formerly produced cloves; but the Dutch ordered them to be grubbed up, for they felt in great quantities of cloves, and of this sort; the crown is now adorned by a strong fort; but there is nothing worthy of mention; e.g. reflecting Little Bachan. Though the above-mentioned are the Molucca islands; yet they are which follow are included under the same appellation as they produce the same kinds of spices.

Ambon is situated in three degrees eight minutes south latitude and one degree and ten minutes west longitude, lies about twenty miles to the northward of Banda, and is about fifty miles in circumference. It is very rich, has many foreign churches, and many of the natives, who have been sent over to Holland for education, officiate as ciongomen and millenaries, by which means profiteers are excluded.

The soil is very fertile, producing great quantities of nutmegs, cloves, oranges, lemons, citrons, potatoes, millet, tobacco, figs, etc.; it is unhealthy; there is a good bay, which penetrates very far into the land, and by that means forms a commodious harbour. The people here live very comfortably; but the climate is very hot, and they purchase their wives, but in case of barrenness divorce them. The women are both of a lofe and muli-ple disposition. On account of the earthquakes, the houses are built very low. There are several fortresses, called Fort Victory, is the staple of the Dutch East India company in these parts. It is defended by four bulwarks, a broad ditch, and a garrison of eight hundred men.

The English had formerly factories here as well as the Dutch, but in 1654 the latter massacred the former, and usurped the dominion of the Spice Islands, which had been ceded to the English by the natives themselves. In putting the English and some Japanese to death, they executed the most horrid cruelties, in order to extort confessions concerning a pretended plot, which they accused them of having formed; and to the shame of king James I. and king Charles I. no satisfaction was obtained for the villainous barbarity. Oliver Cromwell was not, however, so easy about the matter, for he frightened the Dutch into the payment of three hundred thousand pounds as some kind of retribution.

There are many populous villages in the island, in the churches and chapels of which the natives glory in their language, both in the Dutch and Malayans tongues; it contains likewise many mountains with springs of water on their summits.

Bouro is about seventy-five miles in length, and thirty in breadth: it is situated in two degrees thirty minutes north latitude, and one hundred and twenty-five miles, thirty miles east longitude. The Dutch have here a strong fort, though the island is perfectly flat, from the irregularity of its coast, which rides in a high ridge, and encompasses the whole as a wall. It contains four hundred high mountains, but is nevertheless very fertile, producing cloves, nutmegs, coclas, bananas, pepper, green clover, beans, peas, potatoes, tobacco, indians, wheat, lime-trees, herbs, flowers, etc. Amongst the beasts, are the civet-cat, and a singular kind of roe-buck, whose flesh is very delicate. The natives are black, and go entirely naked till they are twelve years of age; at which period they tie a piece of cloth round their waists, and never wear any other garments. They are Mahometans and Pagans, but upon the whole have very little fife of religion. When a relation dies, they appear sad till the corpse is in the ground, and then they make merry to an excess, but do not forget to provide a kind of sepulchre for it, and carry to the grave of the definit. The next day after the women are delivered of children in this island, they go about their ordinary business, while the men indulge themselves in bed, and pretend to be very ill. Instead of a cradle, they put their infants in a kind of net-work hammock, which they hang upon a limb whenever they are too busy to dandle it in its arms.

Ceram is a woody and mountainous island: it lies in two degrees thirty minutes south latitude, and in one hundred and thirty-seven east longitude, and produces cloves and nutmegs. The Dutch factory, called Ambay, is defended by a strong fort and good garrison; the inhabitants, who are Pagan and Mahometans, have a prince of their own, who resides at Cambello, notwithstanding which, they own the king of Ternate as their sovereign.

Galiho is one hundred and ninety miles long, and one hundred and ten broad: it extends from one degree south to two degrees north latitude, and from one hundred and twenty-five to one hundred and eighty-five east longitude; the air is unhealthy, and the soil produces rice and fago, but no spices. The inhabitants have an independent sovereign of their own; they are tall and strong, and savage and cruel.

Bouton is situated between four and five degrees south latitude, and in one hundred and twenty degrees thirty minutes east longitude. It is about thirty miles in length, twenty miles east longitude, lies about twenty miles to the northward of Banda, and is about fifty miles in circumference. It is above fifty very rich and convenient churches; and many of the natives, who have been sent over to Holland for education, officiate as ciongomen and millenaries, by which means profiteers are excluded.
The New and Universal System of Geography.

Sect. VIII.

Tracts of Cebus, or the island of Macassar.

To the southward of the Philippines lies the island of Cebus, extending from one degree and thirty minutes north latitude, to five degrees and thirty minutes south; having the great island of Borneo on the west, and the Moluca's on the east. The length of it from the northern extremity to its southern end is about five hundred and sixty miles, and in the breadth part of it, it is near two hundred miles over. The south part of the island is divided by a bay or estuary wide, which runs forty or fifty leagues into the country, and on the east side of the island are several bays and harbours, and abundance of small islands and chief forts, in great plenty, but not high land: but on the west the country is low and flat, and watered with many little rivulets.

This island is divided into petty kingdoms or provinces, the principal whereof are Cebus, on the north west, lying under the equinoctial, and Macassar, which takes in the south part of the island; the rest of the provinces were usually under the dominion of one of these, by which means the island sometimes receives its name from one, and sometimes from the other.

The air is hot and moist, the whole country lying under or very near the line, full of great rains. It is most pleasant along the northern monsoons; if they fall of blessing on the accidents of time, the island grows sickly, and a great number of people are swept away.

They have mines of copper, tin, gold, and iron, but we do not understand what use they are put to: the gold they have found chiefly in the lands of their rivers, and at the bottom of hills, washed down by torrents.

In their woods they have ebony, calabas, and sanders, and several sorts of wood proper for dying; and no place, it is said, affords large bamboo, some of them being four or five fathoms long, and above two feet diameter, which makes use of in building their houses and boats.

Their fruits and flowers are much the same with those in the Philippines, and therefore we shall not particularize them or report a repetition of them, only mention some of the principal. They have pepper and sugar of their own growth, and all sorts of spices, tobacco, and coffee. These cereals are not in use among these people, and they use coffee and tobacco for the same reason; and of foreigner's, the natives are of a stronger constitution than those of Cebus or other parts of India.

Their fruit is said to be better than in other parts of India, not being overgrown annually as in other countries, but watered from time to time by the rain, which occasioned from and from the goodness of their rice, the natives are of a stronger constitution than those of Cebus or other parts of India. Their fruit is said to be better than in other parts of India, not being overgrown annually as in other countries, but watered from time to time by the rain, which occasioned from and from the goodness of their rice, the natives are of a stronger constitution than those of Cebus or other parts of India.

Of all their plants, opium is what they admire most; it is a shrub which grows at the bottom of mountains, or in shady groves: when the branches are cut, a liquor which draws out water from it is named after the manner as some people; being drunk, it is often used as a cordia liquor, and when they make it up in little pills, they often divide one of these pills in water and water their tobacco with it, and those who are used to take it can never leave it off, they are filled into a pleasant dream, and intoxicated as with strong liquor, but it is not usually used by them to sleep and shorten their lives: they will take the quantity of two pins heads in a pipe of tobacco, when they enter into a battle, and become as much infallible as wounding or danger, till the effect of it is worn off.

The natives of this island are famous for the poison they compound of the poisonous drugs and herbs of their country: of which, it is said, they may make use as a cordia liquor, and when they make it up in little pills, they are said to resemble one of these pills in water and water their tobacco with it, and those who are used to take it can never leave it off, they are filled into a pleasant dream, and intoxicated as with strong liquor, but it is not usually used by them to sleep and shorten their lives: they will take the quantity of two pins heads in a pipe of tobacco, when they enter into a battle, and become as much infallible as wounding or danger, till the effect of it is worn off.

The women are remarkable chaste and refrained, at least, they cannot help appearing so; for, lest flintiness or glance on their parts should be taken for the deceit of chaste looks, or an公用 from a divorce; nor dare they admit of a visit even from a brother, in the presence of the husband: and the law indemnifies the parties to a marriage, if it be found that the wife, or on whom she has conferred any mark of her favogram, the inhabitants of the country are in general to little addicted to infamous practices, or religious differences, than that they have attorneyed, or loyal ties among them. If any differences arise, the parties apply perfunctorily to the judge, who determines the matter with expedition and justice. In some few cases, things may be sufficiently serious to require a more lenient public figure, but not having materials which they thought sufficiently valuable to be employed in crediting temples. According to their creed, the fun and mourning are conducted as in the very heavens, while the Turks and apostles of the kora rising in the country, the foreigners and his people embraced Mahometanism, and the other parts of the island soon followed their example.

The Macassians had originally strange notions of religion: they believed there were no other gods but the sun and moon; and to them they were sacred. Forer to the public squares, not having materials which they thought sufficiently valuable to be employed in crediting temples. According to their creed, the fun and mourning are conducted as in the very heavens, while the Turks and apostles of the kora rising in the country, the foreigners and his people embraced Mahometanism, and the other parts of the island soon followed their example.

The women of families generally keep close, yet upon certain festivals they are suffered to come abroad and spend their time in public company, in dancing and other diversions used in the country; but the men do not mix with them as in this part of the world, only the women have the happiness to see and be seen, which makes them visit for this happy time with importance.

The princes and great men wear a garment made of scarlet cloth or brocaded silk, with large buttons of gold; they have likewise a handkerchief embroidered fald made of silk, which is painted, bordered, with their knives, crie, and other little trinkets. People of figure dye the nail of the little finger of the left-hand red, and wear them as long as they please. The women wear a muffin shirt, or rather whitecoat, close to their bodies, and a pair of breeches, which reaches down to the middle of the leg, made of silk, or cotton, and have no other head dress than their hair tied up in a roll, with some curls hanging down their neck; they throw a loose piece of linen or muslin over all where they go abroad; nor have they any ornaments but a gold chain about their necks.

They are fond of a fine equipage and a great number of servants to attend them, and if they have not so many of their own as their quality requires, they will not file out, till they have got the usual number, by hiring or borrowing them. The furniture of their houses consist chiefly of carpets and couches, and the windows they sleep on. They fit cross-legged on mats and carpets, as most Affairs do.

This island produces most animals except flocks. There are monkeys and baboons in abundance, that will upon travellers; some of them are quite black, some of a straw colour, and others white, the latter of which are generally as big as multish, and much more mischievous than the others. Some have long tails, and walk on all-fours; others, on their hind legs, and rocker up and down their fore feet as hands, and in their actions greatly resemble the human species. Their going in large companies is customary, and when they have run the woods, but they are sometimes conquered by the large serpents, which pursue them to the tops of trees, and destroy them.

The natives do not like eating any fleshy but pork, and this they are not particular with; their chief meal is in the evening; they chew betel and naka, or fume tobacco mixed with opium most part of the day. Their liquor is tea, coffee, barley, or chocolate, and they have palm wine, araa, or spirits, which they sometimes indulge in, though it is prohibited by their religion. They toll upon carpets at their meals, and cut off of dishes made of China, wood, silver or copper, which are let on little low lacquered tables, and take up the rice with their hands instead of spoons, which they fear not to know the use of, which if not taken care of is left or given to the servants or other portion with his wife than the presents the received before marriage. As soon as the priest has performed the ceremony, a key to the new house is given to the company. The Dutch possess a building, which is under pretence of hindering them from injuring each other, but in reality only to keep them in a state of insubordination. It is built on the banks of the Macassar river, one of the best harbours in India, and the first town the Dutch took from the natives; there they took or kindled all the Portugese men when they were in a full peace with that nation. The rose of the towns and villages
villages lying in the flat country near the sea or the mouths of rivers, are for the most part built with wood or cane, and stand upon high pillars to escape the annual flood, which have a communication with one another only by boats.

About the Celebes are several islands that go by the name of Sulawesi; six of which is fifteen leagues distant from each other upon the south-east corner. This island is about eighty miles long, and thirty broad; on the east side of it is a large town called Cebu, and called Cebuahong, the finest of which are spacious, and inclosed on each side with cocoa trees. The inhabitants are governed by an absolute prince, who lives partly in the town and partly in the country.

The friction of Patience are on the other side of this island; they are so called from the great difficulty in passing them, which arises from the violence of the currents, and the contrary of winds.

Sect. IX.

Treatises of the situation, trade, and produce of Borneo, Sumatra, and Java.

The most remarkable of the Success islands, called So, from the fragrant winds which they are, are Borneo, Sumatra, and Java.

The coast is divided from seven to eight months, and two by degrees, rising to four degrees, latitude, and from the one hundred and seventh to the hundred and seventeenth degree of longitude, being about seven hundred miles in length and four hundred in breadth; and is computed to be two thousand five hundred miles in circumference. The figure of this island is not exactly round, but it contains a larger number of lakes and a land than is not discovered. To the eastward of it lies the island of Celebes or Macassar, to the south of the island of Java, to the north of the island of Sumatra, and to the north-east the Philippine islands. The air of this country is very hot, and very equinoctial, and very dry in the equinoctial parts; being referred in all to every day with shower and cool breezes, as well as other countries that are on the one side; but those parts of the island which border on the sea, continue to lie a flat for several hundred miles, and are annually flooded; upon the retiring of the water's whole surface of the ground is covered with mud or soil coarse, which the sun dries during its rays perpendicularly upon, raising the moisture in large quantities, which are not differed till two or three in the morning, and render those parts of the island very unhealthy. The multitude of fogs and fogs that the waters leave behind, and are soon killed by the heat of the sun, cause an intolerable blemish all at time that of the day, and corrupt this island to the cold chilling winds and dampness which follow the hottest days; from which all, we may conclude it must be very unhealthy at least to European communications; and those of the inhabitants, who yearly travel thither, sufficiently convinces us of this truth.

As to their monsoons, or periodical winds, they are chiefly from November to April, or thereby, during which time their sea is the smoothest, when heavy rains constantly pour down, intermixed with violent storms of thunder and lightning; and at this time it is very rare to have two hours fair weather altogether on the south coast of the island, whither the Europeans principally resort. The dry season begins usually in April and continues till September: and in this part of the year, they fall down a flower every day when the breeze comes in.

The harbours of greatest note, and to which the Europeans usually resort, are Banjarmalaya, Sambas, and Borneo; but much more to Banjarmalaya than either of the other; the greatest quantities of pepper growing towards the last of the year, which falls into the sea three degrees eighteen minutes in the north. The town of Banjarmalaya above about twelve miles up the river, and below between fifteen and twenty, and partly on shoals of timber in the river; but there is now no town of a town there, the inhabitants having been removed to Tatos, about six miles lower.

The city of Borneo, formerly the residence of the principal priest or king of the island, lies on the north-west part of the island, in four degrees fifty-five minutes north latitude and one hundred and forty-five minutes east longitude. This is a very large, the shores spacious, and the houses well built; they are in general three stories high, covered with flat roofs, and the faltan's palace is a very elegant and extensive building. It is the chief place of commerce in the island, and the port is annually crowded with ships from China, Japan, and Portugal. The Europeans have trade here, but not fortified.

The port of Sambas lies on the west side of the island, and is governed by a Frenchman, who is skilled in the language of the inhabitants, and is well used as a sort of commerce in the island, and is governed by the Portuguese, who have trade here, but not fortified. The port of Sambas lies on the west side of the island, and is governed by a Frenchman, who is skilled in the language of the inhabitants, and is well used as a sort of commerce in the island, and is governed by the Portuguese, who have trade here, but not fortified. make hole; in the foot parts of them when young; to their hooves are fastened weights about the breadth of a crown piece, which is continually pricking on the cars, and expands the thorn to such a length, as to cause them to roll upon the shoulders.

The Banjarees are an hospitable friendly people, where they are not abused, or apprehend foreigners have a design upon their liberties, and are men of good fame but not being acquainted with the world, are frequently imposed upon in their traffic with the crafty Chinese.

The chief part of gold in here, is at it in other hot countries, but with it they eat venison, fish, or fowl, red almost all kind of meat, except hogs flesh; and their meat is expensive, figure one or two dollars; the common people are content with brats or cuitiul dikes, and all elk crock-legged upon masts at carpets at their meals, and indeed almost all day long, chewing betel and arec, or fumoking tobacco, which both fishes are very fond of when it is mixed with opium. The whole company usually smoke out of one pipe; the matter of the leaf having smoked fast, pulls it round the company, and they will sometimes sit smoking so long, that they grow stupid. At other times they divert themselves with conversation, and the Chinese to have them game; their rural sports are hunting, shooting, and fishing. They have such plenty of fish, that they may take as many as well for them as cattle, and feed their houset, which are built upon floats in their rivers.

Their usual file is the islam, lifting up their hands to their left hand, and holding the other in their princes, throw themselves prostrate on the ground; no one presumes to speak to a great man, till he is in a position to receive them, or to receive them; they are usually travel in covered boats upon their rivers; but the great men who live in the inland country ride on elephants or horses.

Besides rice, already mentioned, the produce of this country is cocoa-nuts, oranges, citrons, plunyas, melons, bananas, blue-apples, mangos, and all manner of tropical fruits; cotton, carams, ratans, and plenty of very fine timber; gold, precious stones, camphire, besseon, and pepper. There are three sorts of black pepper: the first and before the Mocnca, or lost pepper; the second is called Caytonge pepper, and the worst is the Negape pepper, of which there is the greatest plenty. This is small, hollow, and light, and commonly full of dust, and the buyer will be imposed on if he buys it by mistake, and does not weigh it. He must take care also, that the pepper be not mixed with little black stones, which are not deadly fins. The white pepper grows on the same tree as the black pepper does, and bears twice the price: it is condemned to be the best of the fruit that drops of itself, and is gathered up by the poor people in small quantities, before it turns black, and the scarcity of it occasions it to be dear; but we want to seem a more fatificatory account of this pepper.

The animals here are the same as on the continent of India, viz. bears, tigers, elephants, buffaloes, deer, &c. but as climate and custom, and which is almost peculiar to this island, is that monstrous monkey called the mac-o-outang, or man of the woods, near fix feet high, and walks upon his hinder legs. He has a face like a man, and in size appears as some of the human species, particularly the Bottanots; he has no tail, or any hair on his body, but where a man has hair. Mr. Reeken, captain of an Indianman, purchased one of them, who would drink punch, and open his ears of brandy to get a hair, if he was left alone with it, drink a quantity, and then return the bottle to the cafe. He would lay himself down to sleep as a man does: if the captain appeared angry with him, he would whimper and sigh till he was reconciled. He would eat fish, lizards, and was larger than any of them, though he was not a year old when we died; for the captain sold him as soon as he came into cold weather, having been bred in the hotest climes.

An island is in which the mountaineers get out of the lands of their rivulets in the dry season, and dispose of it to the Banjarees, from whom the Europeans receive it, which are all iron money, and the brass-dinre is found here.

The principal merchandise imported from Borneo by the Japanese is silk, diamonds, coffee, ivory, ebony, erate, musk, and other guns; and the goods proper to be carried thither, besides bullion and treasure, are small cannon from one hundred to two hundred weight, dead, live, horses, oxen, cows, ass, cats, hogs, sheep, goats, hens, geese, mice, rats, foxes, lizards, minks, otters, marten, musks, tigers, pansies, monkeys, and a large of deer, and it is difficult for a stranger to get access to these.

nails, gratings of forty pound weight, red leather boots, speculicks, clock-work, small arms with brass mountings, horse pistols, blunderbusses, gunpowder and looking-glasses. The purchasing gold is a profitable article, and diamonds may be had reasonably, though they contain only small ones: they usually purchase gold with dollars, giving a certain number of silver dollars for the weight of one dollar in gold.

Their current money is dollars, half and quarter dollars; and for small change they have a sort of money made of the form of rings, which are strong on a kind of dry leaf.

The language of the inhabitants on the coast is the Malay, but the islands inhabitants: language of themselves, and both retain the superstitions customs of the Chines.

They are entirely ignorant of astronomy; and when an eclipse happens, they think the world is going to be destroyed. Arithmetic they know but little of, and, their only method of calculating, is, by parallel lines and moveable buttons on a board. They have likewise little knowledge of physic; and the letting of blood, how desperate occur the case of the patient may be, is to them a circumstance of a very alarming nature, as they suppose, by the operation, we let our very souls and lives. It is their opinion, that most of their diseases are caused through the misuse of some evil demon; and when a fever come, instead of applying to medicine, they make an entertainment of various kinds of provisions, which they hold under some conspicuous tree; and there they sit, which consist of rice, fish, fowl, &c. they offer for the relief of the person afflicted; and if he recover, they repeat the offering, by way of thanks for the blessing received; but if the patient dies, they express their resentment against the spirit by whom he is supposed to have been afflicted.

Pagans and Mahometans both allow a plurality of wives and concubines; and the marriage ceremonies of both are the same as in other Mahometans countries. The girls are generally married at the age of ten, and leave child-bearing before they are twenty-five. The women are very constant after marriage; but are apt to bellow with great freedom when theyingle; and however indifferently they may have been in this point, they are not considered the worse for it by their husbands, nor dare any one reproach them for what they have committed previous to their marriage. They in general live to an advanced age, which is attributed to their frequent use of the water; for both men and women bathe in the rivers once in a day; and from this practice they are very expert swimmers.

The Banjarees, in burying their dead, always place the head to the north, and they throw into the grave several kinds of provisions, from an ashen and reperpetual motion, that there may be soulful to them in the other world. They the place, of interments out of the reach of the fishes; and the mountaineers, as it seems, are drained in white, and carry lighted torches in their hands.

There are several petty kingdoms in the inland part of this country, each of which is governed by a rajah, or king. All the rajahs were formerly subjects to the rajah of Iorrico, who was eftected the first king over the whole island; but his authority he being greatly diminished; and there are other kings equal, if not more powerful than himself, particularly the king of Caytonge. The town where this prince resides is situated about eighty miles up the Banjar river. His palace is a very elegant building cired on pillars, and is open on all sides. Before the palace is a large building, consisting only of one room, which is set apart for holding council, and entertaining foreigners. In the centre of the room is the throne, covered with the regal of gold and silver arcadia. About the palace are planted several cannon, which are fo old, and mounted on fuch wretched carriages, that they are neither ornamental not useful. This prince is extremely rich, on account of the cullage he receives at the post of Banjar Malifpin, which are estimated at eight thousand pieces of eight per annum.

The king or fultan of Neg Slip is the most worthy prince, next to the above: his palace is situated at a place called Mentorea, about ten miles from Caytonge. There is a large, handsome account of a rih and gates of it, which contains a great number of fire-arms; and several cannon. He is always on good terms with his neighbours the prince of Caytonge, and the rajahs subordinate to these two princes; great honour is paid them by these great divs, and it is difficult for a stranger to get access to them.
the only means to effect this, is, by complimenting them with certain valuable presents, are in their station, and the stranger will be treated with respect in proportion to the present he makes.

Sumatra is one of the large islands of the Indian ocean, between latitude thirty-three and one hundred and forty degrees south latitude, and longitude ninety-three and one hundred and forty degrees west. It is said to be inhabited by the ancient people of the east, and its population is estimated at about one hundred, fifty thousand. The island is divided into four parts, the north, east, west, and south. The north part is inhabited by the Malays, the east part by the Javanese, the west part by the Sumatran, and the south part by the Batak. The Sunda is a large island, and is the easternmost part of the Sumatran group. It is divided into two parts, the north and the south. The north part is inhabited by the Batak, and the south part by the Sunda. The island is divided into two parts, the north and the south. The north part is inhabited by the Batak, and the south part by the Sunda. The island is divided into two parts, the north and the south. The north part is inhabited by the Batak, and the south part by the Sunda.
English, Dutch, Danes, Portugeuse, Guzarat, and Chi- 
ners, and the chief Englishman.

The king of Achen has a great number of horses, which, as well as the elephants, have rich and magnificent 
trappings. He is strict in his court, for all his 
subjects are obliged to march at their own expense, and 
carry with them provisions for three months; he only 
provides them with arms, powder, lead, and rice, which 
is supplied by the village of his family, for his subjects 
supply him with all kinds of provisions; they also pro-
vide him with rice. He is strictly a military king, in which 
lie all the business of the state. He is the head of the 
mass of subjects, which are in the same territory; and to 
such persons he is all kinds of his subjects, for his subjects 
are obliged to fight, and his soldiers are marched and 
the point of Sillabar extending two or three leagues to 
the southward of it, makes a large bay: besides these marks 
the old English fort, which formerly stood there, might 
be deflected when a ship came within seven or 
foolish, and to all 
foreigners who die in 
their territory; and 
some of these are 
inhabitants of the 
court of Coromandel. The buncu is the leaf of a tree 
torched with a little tobacco in it, which they light at 
the end of a stick, and instead of a pipe, they hold this 
it nearly burnt to the lips. These rolls are very curiously 
formed, and fold in the public marks in great quantities. 
They hold a court of justice five times a week, for de-
termination of matters between the king and his 
edicts of the chief orakayas presides as judge. There is 
other a criminal 
court, where cognizance is taken of all quarrels, 
robberies, and thefts. They have in their country 
with the aid of his chief, they 
and there 
is a third court, in which the cadi, or chief priest, presides, 
who judges concerning all infraction of ecclesiasti-
cal nature. Before there, there is a court for determining 
disputes between merchants, whether foreigners or natives. 
An exact account is kept here of all the calums, gits, 
and commodities belonging to the king, with a list 
of all the persons who buy of his majesty the duty, 
or make presents to him.

Offenders are brought to a speedy trial, and the punish-
ments are inflicted immediately after their conviction. If 
the offence be of a trilling nature, the punishment for the 
first time is the loss only of a hand or foot, and the 
loss of their head for the third, or until they rob to a 
considerable amount, they are impaled alive. When the 
hand or foot is to be cut off, the limb is laid on the edge 
of a broad axe, and the executioner, having placed a 
large mallet at the bottom of it, and then 
up the stump into a hollow bamboo fluffled with rags or 
to the 
Agony of his crime is wiped off, and if any one upbraids him 
with it, he may kill him with impunity.

Murder and adultery are punished with death; and, in 
this case, the criminal has many executioners, he being 
placed amidst a number of people, who stab him with 
their daggers; but female offenders are put to death 
by strangling. The king is frequently a spectator of their 
proceedings; and sometimes even acts as executioner: 
and though such a spectacle must to a feeling mind, appear 
very distressing, yet to little does he feel affected by it, 
that influences have been known of his executing a crim-
inal, of whom he disapproves, by the aid of his hands, 
or我个人 teacher of cock-fighting; a diversion which in this country is more 
universally affected than any other.

The coast of Achen is on the most commodious 
places on the coast line of Sumatra, we proceed through 
the straight of Sunda to the west coast; and advancing from 
therewards to the north, the first English settlement we 
meet with is Sillabar, which is at the mouth of a 
large river of the same name, in four degrees of south 
latitude. Here the English have a residence, or a small 
discores, of 14 miles from Fort Marlborough, which they 
left behind them in 1757, and 10 miles from 
the defilement of York fort (at Bencoolen) to receive 
the letters the natives bring them.

About ten miles to the northward of Sillabar lies the 
town of Bencoolen, where was the principal settlement 
the English had upon the island Sumatra, from the period 
the year 1759, when there happened a general infu-
section of the natives, who cut off part of the garrison; 
the effect being in their twenty miles.

Bencoolen is known at this by a high flender mountain 
that rises twenty miles beyond it, in the country, the 
called the Sugar-loaf. Before the town of Bencoolen lies 
its island, within which the English usually ride 
and 
Sillabar extending two or three leagues to the

country is very fertile, and in the woods and mountains are prodigious numbers of wild dogs, whose flesh is exceedingly sweet and fat. They have likewise some good poultry, and there are various kinds of fish in the river.

2. So does the situation of Andiang on the north side of the river, about fifty miles south of the island of Java, where the Dutch have had for many years their principal station, and their trade with the interior is accordingly great. There is a large trade in oil cake and other commodities, and the Dutch enjoy a considerable influence over the inhabitants.

feather, and let their nails grow exceeding long, forming them till they are transparent, and dying them with vermilion; the poorer fort go almost naked, having only a few fish Bones of Rio hurned round the waist, and about their heads they wear a piece of fine white silk made of leaves, resembling the crown of a hat; but they have no fonts or stockings. The better fort wear draweis or breeches, something like a piece of fine cloth about the waist, and the Joints, and thrown over the left shoulder, and they wear sandals on their feet, when in towns.

They are very industriful in their disposition, and are so indolent, that they will neither endeavor to improve themselves in arts and sciences, or be useful for their manufacturers to be neglected, and their lands be without cultivation. If foreigners, therefore, were not to supply their defects, they would in all probability suffer themselves to be reduced to a savage state, and only preserve their existence, like the beasts of the country, with what the earth spontaneously produces.

The king has no other fighting forces than his guards, but depends on his militia, which, as we hinted above, are as numerous as the people in his kingdom, all who are able to bear arms, are obliged to appear under arms whenever they are summoned. They have scarce any fortified towns and castles, but what are natural, and the country seems to be so inaceessable, that the natives boast it has never been conquered by any foreign power; but this must be a mistake, for the present generation, who are masters of the north part of the island and the sea-coast, are not the original inhabitants, but came from Egypt, Arabia, and large voyage by sea, the driven the Papuans up into the mountains, followed them on the sea-coast.

The island of Mabomet is professed at Achen, and upon all the coasts of Sumatra; but they are not such bidected spots, as are in some other Malayan counuies, for the Geneva towns are but to be seen of them no better than villages. The chief priest resides at Achen, and has a great influence on affairs of state. Their marriage contracts are made before their priests, who are judges in cases of divorce, as well in civil causes. Their priests also affist in their celebration of their funeral rites, as the other Malayan nations.

This island is as well the rest of the Indian islands, was not, doubt, first people from the neighbouring continent. The Phoenicians, Egyptians, and Arabian afterwards trafficked with them; and we find Solomon defining Him, king of Tyre, to send him skillful mariners to pilot his fleet into these seas; and the Orphic mentioned in scripture, is supposed to be this very island, from whence he fetched his gold. The Arabs and other nations bordering on the red-see, afterwards planted colonies here, and became so potent, that they drove other inhabitants up into the mountains, and possessed the coast. The Portuguese found the descendants of those nations fixed on all the very extensive coast in as well as the islands when they arrived there.

The Portuguese enjoyed the sole traffic with this and the adjacent islands for near one hundred years. till the people of Java, on the coast, to the year of our Lord 1651, when other nations followed them round the Cape of Good Hope, and put in for a share of the Indian trade.

Some writers assert that king Aden, has been ever governed by queens; others affirm that there never was a queen regent here; we may, however, take the middle way, and say that a king and two queens: certain it is, a king was upon the throne when we first visited this island, because we have his letter which he wrote to queen Elizabeth, and kings have of late years filled that throne.

The inhabitants of the mountains are governed by the chief of their refpecteef, who, in order a necessity of maintaining a good correspondence among themselves, in order to defend their country against their powerful neighbours; and as they are possessed of all the gold the island produceth, there is no law; but every king, or princes that lie round them, would make an effort to subdue those golden mountains, if their princes were at variance with each other. They divide it to their gold, if they should find the nobles divided; for the Dutch are possessed of those mountains as well as counties and the island, which divided equally, except the entire of the forest and forest from Malacca, that lies but a very little part.

The slopes of the country, one hundred and fifty miles long, and upwards of one hundred broad, containing the island of Borneo on the north, the straits of Balny on the east, the island of Johore on the south, and that of Sumatra on the west, and which is called the Sumatra islands, on the north-west.

The air of Java, near the sea, is generally unhealthful, unless the bogs have been drained, and the land cultivated there; it is much better, and in the middle of the island much more so. The worst weather upon the north coast of Java is during the wetly monsoon, which begins the first week in November, when they have some rain. In December the rains increase, and it blows itself, and in January it blows still that, and the rain is very heavy till the middle of February, when both the wind and rains becomes moderate and decrees, till the end of March. They find a way from the mountains to April, the winds are then variable, and it is sometimes calm, only at the change of the moon there are sudden gusts of wind from the west. In the beginning of May the wetly monsoon becomes constant, and in June and July there is a little rain; but in this monsoon they have generally clear, wholesome weather, until the end of September. In October the former crys blow strongly, and in November the wetly monsoon sets in again; when the wetly monsoon continues are strongest here, namely, in December.
and February, there is no falling against them. The extremity winds and currents are more moderate; those may fail against this monsoon, and a ship may come from the westward through the straits here. This is good anchorage on the Java side, in twenty or thirty fathom water, near the coast of Java and Bantam, from April to November, they have land and breakers from the wind, but the wind blows from the land between one and four in the morning, and continues till noon, at one or two in the afternoon it blows fifteen to twenty-four hours for this. A chain of mountains runs through the middle of the island from east to west, which are surrounded with fine woods. It is a rich country, which has mountains on both sides, and the natives live in them. The most distant road from this mountain is called the Blue Mountain.

Along the north coast of Java we find groves of Coconut trees, and wherever we see one of these groves, we do not fail to meet with a village of the natives.

The island is naturally divided into abundance of petty kingdoms and states, and when admiral Drake visited this island in his voyage round the globe, in the year 1599, he relates there were five regiments in it. We may now divide it into two parts, α. The north coast, which is under the dominion of the Dutch, and β. The south coast, which is under the dominion of the English and the Chinese. Bantam is the most considerable kingdom of Java, and this king is now a vassal to the Dutch. We shall begin our narrative from this place.

Bantam, once the metropolis of a great kingdom (till the Dutch destroyed it, and despoiled the king), is seated in a peninsula of ground of which there are rivers, or rather one river dividing itself into three branches, two of which surround the town, and the other runs through the great city. This is the principal city of this country, and in its glory, was not left than twelve miles, and very populous. It lay, open towards the land; but had a very good wall to the sea, fortified with towers, and defended by a numerous garrison, and the palace of the principal. Here, the king resided, who was surrounded with many of the natives of the island.

Java, by the Indians called Javata, and by the natives and Chinese Callao, or Cillao, as they call the French, is by far the largest of which there are many, being a very extensive state, and is said to be superior to any in the islands, lies in 1100 degrees south latitude, longitude from London onethousand and five, and is divided into forty miles to the eastward of Bantam, it is situated at the mouth of the river, or rather the arm of the river, which the king resided, and was enclosed with many of the natives.

The city of Bantam stands in a flat country, and is almost completely surrounded with the banks of the river, which is built like the towns in Holland, but with white stone. Their streets are wide and drained, and in twelve or fifteen of the principal are canals, filled with water, and planted with evergreen trees. The sides of the streets are paved, and over their canals are ruked moats not less than fifty-six stone bridges; after which description there cannot be more exact to tell the manner in which this city is extremely pleasant, and that travellers are surprised with its beauty. It is surrounded with a good wall, and two or twenty battlements, and fortified towers, and so contrived as to be of equal service against an insurrection in the city, as against a foreign enemy, the guns being easily brought to point directly against the principal.

The houses are plain, but very neat, and behind them are large gardens well locked with herbs and vegetables, and most kinds of fruit. They have several handsome public buildings, the principal of which are gardens, the house of correction, the mint-house, the hospital of the poor, the palace of the bishop, the house of artificers, &c. And there are two great public squares, one for the French and Portuguese, and another for the Malays; but they do not allow either the English or Portuguese to exercise their religion. The fort stands upon the west side of the city, and commands both the town and road: it is very large, and has four royal bastions faced with stone, but has no most except the canals, which lie at the foot of the fort, and when a part, may have been made for masts; they are twenty-five feet broad, and foldable in many places; the middle of the fort is crowded with buildings, their high, the general's house, as well as the houses of the principal officers, and countries of houses; in the middle of the city there is a large square, which serves as a parade for the garrison, on the east side of which stands the great church, on the north the fluted house, on the north a fine range of buildings, and on the east is one of their great mansions; there are other large houses marked by the name of the city. The fort is three miles almost half a league into the country, and form a town larger than the former but not so compact: being surrounded with gardens and orchards. Here the Chinese chiefly live, and here they have their temples and burying places, and the free exercise of their religion, which is denied the Lutheran Protestant sects. In this part of the town also live the Malays, and native Javaans, and other nations which the Dutch have transplanted from Banda, Amboyna, &c. There are small forts erected every way, as at three or at three leagues distance from the town, to defend the avenues; the Dutch being conscious that the king of Mataram and the natives would lay hold of any opportunity of repelling themselves of their country, and driving the Hollander from their coast, however they may seem to acquiesce and tacitly consent, according to the modern phrase, to the king of Mataram.

The Chineses do not only drive the greatest retail trade here, but are of many of them good mechanics; they also generally farm the fields, and are employed as gardeners, and make themselves to husbandry and gardening; to manure and cultivate the rice, cotton and sugar which grow in the fields, about Bantam and other great towns; and exceeding the Dutch, it is said, in their thriftiness, as well as in cunning and over-reaching the Dutch they deal with.

They dress in a neat and regular habit of silk or calico, after the fashion of their country, and wear their hair wound up in a roll, on the hinder part of the head, and fatted with balsam, for which every one pays a certain tribute to the Dutch.

The Dutch company, however, allow some privileges to the Chineses, for they have not only a governor of their own nation, who ranges the whole, but also a metropolitan of his own, who has a representative in the council. They bring tea and porcelain bottles from China; but who are employed for that purpose, must have not less than a hundred and二十-four bottles of tea and porcelain bottles, and two hundred and sixty-four bottles of porcelain, and twenty-four bottles of park tea, and two thousand and sixty-four bottles of porcelain; and these are to be paid in the seat of their manufacture, and in the month of September.

corrupt dialect of the Portuguese; and they have all re-
ounced their religion, by professing the principles of La-
thus. They have no public offices; some of them are handi-
craftsman; others get their living by hunting, and the greatest number by washing limbs of flesh, and hair, and the clothes worn by the
manners of the Indians, that they are only distinguished
from them by their features and complexion, their skin
being a slightly yellowish lighter, and their noses not so flat;
and the manners of adorning their hair constitutes the only
difference in their drapery.

Most of the inhabitants have very towgy complexions.
Their clothes consist of a shirt, and a cloth about their
loins, binding their temples with a piece of linen, in
which they enclose part of their hair, the rest hanging down.
The women wear a waistcoat and a cloth about their
waist, which reaches half way down their legs, and
fever instead of a petticoat; they wear nothing but their
hair on their heads, and go bare-foot. The men get their
living by fishing, and have some retail trade, though not
comparable to the Chinese.

They profess the Mahom-
etian religion; but are naturally very profligate, and will not
scuple to commit crimes of the most infamous nature.

The Ambonese weat veils, and wrap a piece of calico
several times around their heads, the ends whereof hang
down. Their women only wrap a piece of calico about
their loins, throwing part of it over their breasts and
shoulters, their legs and arms bare; the men are most of
them of a frugal nature. As well as all the other
nations, the Dutch intill in their troops, being esteemed
brave bold fellows, but given to mutiny, as the Dutch
re-

ally are by which they, there are not yet re-
cognized to flavery. Their houses are made of wood, and
covered with branches of trees; they are pretty lofty, and
the family are divided into separate apartments, so that
one house will contain four or five families.

The native Javanese are a kind of feudal cap, but their
bodies are naked to the middle, wrapping a piece of flck or
calico about their loins, and a cloth round the middle
of their legs, which are bare. The women cover their
bodies with a piece of flck or calico, and have another
piece passed about their hair, and large drets in their hair.
The men are employed in husbandry and fishing, or
in building country boats.

There is a mixed breed, called Tapoua or Mandirks,
consisting of several nations, incorporated with the Dutch,
and have greater privileges than the rest. Many of these
are merchants, and differ but little in their habits, or way
of life from the Dutch, only their men wear large breeches
or trousers, which reaches down to their feet. Their live both in city and suburbs, their
hoose is several stories high, built of brick or stone, and
very neatly furnished within.

The Macassars, whose ancestors pillaged the island
of Celebes, and were enslaved by the Dutch, though they went
always naked in their mother-country, wear clothing here.

Several of the Timoreses, inhabitants of an island of
East China, having been brought hither by the Dutch,
now constitute part of the people of Batavia. The habits and
manners of the men of the Macassars, are nearly the
same: their chief employment is husbandry and gardening.
As many of them profess Christianity, and are com-
formable to the Dutch in their religion and customs, it is to
be prejudiced they cloth themselves as the Hollands do.

Some of the negroes here are paddars, and hawk about
the streets glads-bells and cural; others follow mechanical
trades; but the most considerable of them deal in free-
fish, which they bring from the neighbouring islands.

These people are chiefly Mahometans. All the inhab-

ants are divided into certain parts of the Macassars, are nearly the
same: their chief employment is husbandry and gardening.

These people are chiefly Mahometans. All the inhab-

ants are divided into certain parts of the Macassars, are nearly the
same: their chief employment is husbandry and gardening.
As many of them profess Christianity, and are com-
formable to the Dutch in their religion and customs, it is to
be prejudiced they cloth themselves as the Hollands do.

Some of the negroes here are paddars, and hawk about
the streets glads-bells and cural; others follow mechanical
trades; but the most considerable of them deal in free-
fish, which they bring from the neighbouring islands.
such. As are taken from it. He is often master of all the magazines, and has the supreme direction of everything that relates to the commercial interest of the company.

Batavia being a place of the great trade in India, the customs have been adapted to the necessities of the place, and the inhabitants are in general wealthy, and almost every article is sold to duty. The taxes are paid monthly; and to secure the payment of them, the officers of the company are charged with the duty of bringing them in. Day by day, they become due a flag is displayed on the top of a balsam in the center of the town, and all parties are obliged immediately to pay the tax to the proper officer of the company, in order to avoid the penalty of receiving the same. The money current here consists of several sorts; as ducats, which, about one hundred and fifty thousand, is at eighty, 
rers; imperial rice-dollars, at fifty; rupees of Batavia at thirty; billings, at five; double obolos, at two dollars and an half; and depis, at one-fourth of a dollar. Some of these coins are of two sorts, though of the same denominations, milled and unmilled, the former of which is of much value; a milled dollar is worth eighty-five dollars, but an unmilled one is not worth more than seventy-two. All accounts are kept in rice dollars and flivers which are here merely nominal coins, like our pounds sterling.

The Dutch, besides their land forces, which are very numerous, have men of war sufficient to engage any fleets they are likely to meet with on the Indian seas; and from their great strength and importance in this part of the globe, they assume the title of "Sovereigns of all the seas," from the Cape of Good Hope eastward, to Cape Horn in America.

Cheriton is situated at eighty miles east of Batavia; it is a place of considerable extent, and where the Dutch have the most fertile gardens, and produce most kinds of provisions, particularly rice. The inhabitants are under the dominion of four great lords, called fullans, and are attached to those who are accidentally attached to the Dutch, and for that reason are distinguished from the rest by the name of the company's fullans. The rice, indeed, may not be undervalued of the like epithet, as they are in alliance with the Dutch, whose friendship they endeavour to preserve, and whom they consider as their sole protectors; for had it not been for them, their petty princes would have been reduced to the subjection of the king of Siam, who made insurrections on their district, but was repelled by the interposition of the Dutch. Since this circumstance, the fullans have retaliated their grudge by granting many distinguished privileges to their protectors in their dominions.

The chief person belonging to the Dutch factory here is the resident, who corresponds with the governor general of Batavia, but is freely independent of any other officer. Here is a good fort, where the Dutch have a garrison consisting of eighty men: about a mile and a half from this is a large temple containing the tomb of the sovereign of the princes of Cheriton. It is a lofty building of variegated stones, and very elegantly ornamented within. The whole of the space is covered with the seats of the whole order of those who are treated with the most distinguished respect by the inhabitants.

From the description of Pamaboon and Mataram, the latter of which is famed to the Dutch.

Pamaboon, the capital of the kingdom of that name, is situated at the mouth of a river and has a good degree of both water and land communication. The palace of the king was once a fort, but the elevation of it is very considerable, and on the summit of it there is a temple to the sun, and the whole is entirely surrounded by a wall.

This kingdom, which is independent of the Dutch, lies at the south-east end of Java, in a pleasant country with the most fertile gardens on all sides. It is a kingdom of commerce, and its trade is carried on with all parts of the town into the neighbouring straits. The rajah, or king of this country, generally resides either at Pamaboon, or at another place called Tana, on the south side of the town. His dominion reaches from the east end of Java, eighty miles along the coast, about sixty miles from north to south; but its extent to the country is not known. This kingdom produces of all kinds of cotton, silk, rice, Indian corn, roots, and garden flowers. Their animals are, horses, buffaloes, oxen, deer, and goats, and they have great plenty of deer, and pigs. They call themselves the natives of the kingdom, and they are regarded with the greatest respect by the inhabitants of the towns in their country. They annually pay a tribute to the king of the most delicious fruit; and their waters abound with the best of fish. But the most valuable commodities of the country are pepper, ginger, cinnamon, and indigo. In the woods and mountains there are several kinds of wild beasts, as buffaloes, flags, tigers, cheetahs, and leopards. Their gardens are the best in the world, and the most valuable of all the zones of the earth. They are so much admired because they will not contain poison; for they will instantly break to pieces in any such composition is put into them.

With respect to the natives of this country, they are very much resemble those of other Indian nations, and have the same kind of customs in their manners and customs, such as the public divination, particularly the representation of stories, which principally consists in singing and dancing, and they are also foppel and highly addicted to the habits of pietrity. Thir, although these are the same fame, they are so frequently reduced to the most abject distress and poverty.

The Javanese are the chief of the Malaborn religion, as is also the king, who generally resides at a place called Katiafar, where the Dutch have a foot and garrison.

showing poisons, Darts through Fists at their enemies.

whose swords are made of Sandalwood.
This prince reigns absolute among his subjects, who are very faithful to him, and pay him the grossest homage. Like other eastern monarchs, he is constantly attended by women, and takes as many wives and concubines as he thinks proper. When his courtiers obtain an audience, they come to him with the profoundest humility; and even his priests revere him, that some of them go in pilgrimage to Mecca, to make vows, and pray for his protection, and that his government may last. The island of Baliy, or the Sefuifer Java, is only divided from the larger island by the fragments of Baliy, and eastward of the greater islands, Flores, Scler, Timor, and several more, upon which the Dutch have forts and settlements, and take the liberty of governing and even transplanting the men, wherever they please: from hence they frequently recruit their troops, and thus make one nation of Indians contribute to keep another in subjection.

Timor is the largest of those islands, being about two hundred miles in length, and fifty in breadth, and divided into several petty states, which the Dutch oppose against one another, and by that means govern the whole. It has not any navigable rivers or harbours, but there are several commodious bays. The Portuguese had formerly colonies here, which are now entirely intermixed with the original natives, that they are scarce to be distinguished from them, especially as they profess the same religion. The principal kingdoms in this island are Macapulco, Loculoo, and Anuruloo, each of which has an independent and absolute sovereign; these have several rival, and other distinguished officers under them; all of which lords, as their fables, &c., color them, have their subjects the same as their own hommage. Each kingdom has a language peculiar to itself, but the manners and customs of the inhabitants differ little from one another. There are four principal mountains, full of lime, and the Chinese come hither to trade once a year; the inhabitants are so very swarmy, that they sometimes, for fear of being thrown to the ground, have their loins; that the women is deeper, reaching below their knees. The country is still over-run with wood; but the women neglect to cut it, as they have the ground, but chiefly on fuch fruits as the country produces spontaneously; they have little trade or commerce with any other people: but at times fall by in their way to and from the trades of Macapulco, where they bring off both their produce and fuch fruits as the country affords, taking tobacco, linen, and other necessaries in return. The inhabitants are a harmless, inoffensive people, living chiefly on rice, roots, and fish.

The islands of the Nicobar, situation, thirty-five leagues west-south-west of cape Negros, are also the most valuable produce of which, for foreign markets, are silt-fish. Its principal town is Arabas, situated near a deep bay about eight leagues from the western part of the island, see the foot of a mountain, replete with greenery, and possesses several different of fruit, particularly rice, also several kinds of the most delicious fruits. The chief animal is buffaloes, which are here, the latter of which are remarkably large, and the fifth inferior to tribes of Europe. Their buildings, maxima, customs, &c., resemble those of other Indian nations: some of them are very rich, and other Pagan. The men are in general very robust and courageous, for which reason, when there is any deficiency in the fixed number of the Dutch seamen, those from them their forces at Batavia and other settlements. No. 19.

TREASURY OF THE GENERAL ISLANDS OF NICOBAR, AND CEYLON.

The Nicobar islands are situated in the Indian sea, between ninety-two and ninety-four degrees of southern latitude, and between ten and eleven degrees of north longitude, near the entrance of the bay of Bengale, and north of the island of Sumatra. These islands form three clusters: the middle, called Somberro, are well inhabited and are of the greatest extent; the northern, called Carinam and Carinamp, are of less extent, but very populous. The southern cluster of the Nicobars, are very mountainous, and the people much more savage than those of the middle and northern cloters. The islands of Somberro, are deer much in the same manner as the wild deer, paint the devil, by which they keep the inhabitants in awe.

The largest of these islands, which lies most to the north, is forty miles long, and fifteen broad; the fourth end is mountainous, and there are some deep rocks near the sea; the rest of the island is covered with woods, but there high land. It is a rich soil, that would produce almost any grain, if it was cultivated. The creeks of coconut-nuts that stand in the flat country, near the sea, are exceeding pleasant; but they do not find there any towns, only as we full by, we see clusters of five or six little houses in every creek and bay, which are built on stubby piles, eight or nine feet above the surface of the ground, the roof neatly covered with branched cane, and covered with palm branches.

These islands are moderately tall, their composition a deep olive, and have been inhabited by the people, their women might be esteemed handsome, if it was not the custom to pull the hair off their eyebrows by the roots. The men wear no clothes, but they have their hair bended, and the Chinese come hither to trade once a year; the inhabitants are so very swarmy, that they sometimes, for fear of being thrown to the ground, have their loins; that the women is deeper, reaching below their knees. The country is still over-run with wood; but the women neglect to cut it, as they have the ground, but chiefly on fuch fruits as the country produces spontaneously; they have little trade or commerce with any other people: but at times fall by in their way to and from the trades of Macapulco, where they bring off both their produce and fuch fruits as the country affords, taking tobacco, linen, and other necessaries in return. The inhabitants are a harmless, inoffensive people, living chiefly on rice, roots, and fish.

Here are also the cocoa islands, situated thirty-five leagues west-south-west of cape Negros: they produce great abundance of cocoa, but are uninhabited.

The islands of Ceylon are situated between five degrees thirty minutes and ten degrees twelve minutes of north latitude, and between forty-nine and fourty-five minutes of north latitude. These islands do not seem to differ much from those of Nicobar, except in producing rice, which is cultivated here and eaten by the natives as well as fluff and fruits.

The inhabitants are a harmless, inoffensive people, living chiefly on rice, roots, and fish. It is the most part a mountainous country, covered with wood; but there are several fruitful plains and valleys, well watered by rivulars. The rich remarkable mountain, which stands on the south-side of Ceylon, is the name of the northern division, is by the natives called Ceylon, and by the Europeans, Adam's Peak, being of pyramidal form, only on the top is a little rocky plain, with a print of a man's foot on it, near two feet long, to which the natives come in pilgrimage once a year to worship the image, having a tradition of former times, that their god Buddhoo ascended to heaven from hence, leaving this print of his foot, which the Portuguese, when they possessed this island, called Adam's Peak. Fico de Adam, others affirm, that it received its name from a tradition of the natives, that Adam was created and buried here. In this mountain rise the principal rivers, which run into the sea in different directions. Some of these is the Marivangongs, which runs north-east of the cities of Candy and Almeur, discharging itself into the ocean at Tripotamo.
They are permitted to part from each other whenever they please: but if there are any children, they are obliged to maintain the boys, and the women the girls; and
and they are so fond of availing themselves of this liberty, that they take them, and which grows immediately, a bush or two, and eat of it. The
If this island produces rice, the common food of the inhabitants in all hot countries: of this they have several kinds; one of them will be seven months before it comes to perfection, some in the same season, and some after a year. But time and harvest: that which grows fattest is the best tilled, but yields the least increase; and as all roots of rice grow in the same manner, the farmer is bold enough to economize the expense in levelling the ground they design for tillage, and making channels from their wells and reservoirs of water, to carry to their fields; these they eat out of the fields, but the rest are laid in store for the winter, and then cut and bored, and dried to make the rice. They have several other kinds of grain, which they eat of the latter end of the year, when rice begins to be scarce, and particularly corn, which is at last as much as wheat, which they beat or grind into flour and make cakes of. This grain grows on dry ground, and is ripe within three or four months after it is sown. They have another kind, called tanna, as small as curculio, every seed whereof shoots out four or five stalks, which have each an ear, and are said to multiply a thousand for one. The women, who do the greatest part of the harvest work, eat off only the ears of it when it is ripe, and carry it home in baskets. This is very dry food, and only eaten when rice is not to be had. They have also a kind called tola, of which they make oil, and anoint themselves with it.

Here are great variety of fruits, but the natives seldom eat them ripe, or cultivate any, but those which serve to make pickles for their soup or curry, and sauces, when they are green, to eat with their rice. The betel-nut so common in India, they eat it, but offer it to the gods in the great advantage, before the Dutch excluded them from all trade with foreigners.

The coffee is called jappa is part of their food; they grow upon large trees, are of a round shape, and as big as a peck-head, being covered with a green prickly rind; they have the black seeds as big as that of a pistachio, and in colour and taste like them. They gather these jappas before they are ripe, and boil them, and they eat much like chestnuts; if they let them grow tillfull they are very good to eat raw; they roast the kernel in the embers, and carry with them, when they take a journey, for their provision.

There is another fruit called jambo, which is very juicy, and tastes like an apple, it is white, friseted with red, and looks very beautiful; they have also fruits fruits which resemble oranges and cherries; but not as well of the common Indian fruits, such as mangoes, cucumbe, pine-apples, melons, pomegranates, oranges of several forms, each a lasting 200 years, but the most curious fruit is toms, tree, to prevent their being stolen; after which their neighbours dare not touch them, left the demesneau should punish them for the theft; and before the owner eats of it himself, he offers part of it to the idol.

Their kitchen gardens are well filled with roots, plants, and which the Portugez people go into the woods and Dutch have introduced: almost all manner of European plants that grow in our kitchen gardens. They also abound in medicinal herbes, which the young people of both sexes adorn their hair. Among others, they have white and red roses, as well as white and beautiful as those of Europe, with a flower resembling jasmine, which the king refers to his own wife, no subject being allowed to wear it. There is another flower, which is ordered to open about four every evening, and clack again next day in the morning. Among their most magnificent is a piece of it on their heads, to preen them from the sun; these leaves are so tough, that they make their way with them through the streets and thievits without tearing them; they serve the soldiers for tents to lie under in the field.

There is a tree called kermale, a kind of palm, as high as a cocoa tree, with a pleasant liquor, not but strong; an ordinary tree yielding three or four galleons a day, and when boiled, makes a kind of brown sugar, called jaggery; the wood of this tree is black, hard, and very heavy.

The tree of most inestimable value to the Dutch, as it was formerly to the Arabs and the Portuguese, is the cinnamon, which is found in no other country, but grows commonly in the woods, on the south west part of the island. This tree is of a black wood, and has a kind of the form of a laurel leaf. When the leaves first appear, they are as red as scarlet, and being rubbed between the fingers, smell like roses. It is said that there are not fewer than 30 kinds of the cinnamon, which neither smelt nor tastes like the bark, but if boiled in water, an oil swins on the top, which smelt strongly, and is used in ointment in farces and lumbagoes.

It is said that there are few of all kinds of flowers that have great plenty of it, they frequently burn it in their lamps. The tree have two bars, they strip off the thistle back, which is good for little, and those cut the inner bark round the tree with a pruning-knife; after which they cut it long ways in little strips, and after they have scraped these pieces off, make them in the sun to dry, and they roll up in the manner we fetch them brought over.

The body of the tree is white, and leaves for building and other uses, but has not the finest on table the bark has. When the wind lets off the island, the cinnamon grows plentiful the air for many miles out at sea, of which we have inestimable evidence; probably, it is at that time of year, when the cinnamon trees are in blossom.

This island abounds in elephants of a very large size; they have also oxen and buffaloes, deer, hogs and goats, and some wild beasts, with monkeys in abundance; but they had neither horses, aften, or sheep, till they were imported by the Europeans, not have they any lions or wolves; and here is an animal in all respects like a deer, but not bigger than a hare: the wild elephants feed upon the tender twigs of trees, corn and grass. It is growing, and do the householders, generally, which they used to export to the coast of Comorrand to great advantage, before the Dutch excluded them from all trade with foreigners.

Here are also flowers of various colours and a delicious they are full of them, and which grow immediately, a bush or two, and eat of it. The

The New and Universal System of Geography.

so accustomed to the horrid butchery, that, on the days appointed for the death of criminals, they, by certain tokens, run to the place of execution. But the most remarkable criminal punishment is inflicted by the king himself, who rides an elephant trained up on the beach to trample the unhappy wretch to death, and tears him limb from limb.

Sometimes a creditor will go to the house of the debtor, and very gravely affirm, that if he does not discharge the debt he owes him immediately, he will destroy himself: this so terrifies the other, that he instantly collects all the money he can, even selling his wife and children rather than be deficient, and pays the sum demanded. This is owing to a law, which specifies, that, if any man defrauds himself on account of a debt not being discharged, the debtor shall immediately pay the money to the receiving relations, and forfeit his own life, unless he be able to redeem it by the payment of a very large sum to his creditors.

They have two modes of deciding controversies, the one is by imposing curses to fill upon them if he were to speak the truth; and by the other, both parties are obliged to put their fingers into boiling oil, when the person who can bear the pain the longest, and with the least appearance of being affected by it, is declared the victor. But however, methods of evading both these laws, the first, by using ambiguous expressions; and the latter, by certain preparations, which prevent the oil from doing them any injury.

It is not lawful to beat a woman without permission from the king, for then they may slay his majesty for the blows they get. But they may be made to carry heavy loads of sand on their heads as long as the punisher pleases, which is more to their advantage than a heavy drubbing. The circumstances of the children depend upon the state of the mother; for if the mother is a free woman, they are free; but if she is a slave, they are always slaves.

As to physic, every one almost understands the common remedies, applying herbs or roots, according to the nature of the complaint, and they have an herb which cures the bite of a snake; but there are neither physicians or surgeons among them, who make a profession of this science. As they abound in pomegranate herbs and plants, so they have others that are antidotes against them. Their diseases are chiefly fevers, fluxes, and the small-pox. They never bleed except when lessons first them in the wet season, as has been mentioned already, from which they acknowledge they have sometimes received great benefit.

The natives worship God, but make no image of him; however they have the sun and moon, to which they ascribe many of their misfortunes. In every town it has its tutelar demon, and every family their household god besides, to whom they build an altar in their house, and sacrifice to him monthly, in order to obtain his protection, which is very frequently granted upon appeal to the gods. They worship the sun and moon, and other planets. Every town has its tutelar demon, and every family their household god besides, to whom they build an altar in their house, and sacrifice to him monthly, in order to obtain his protection, which is very frequently granted upon appeal to the gods. They worship the sun and moon, and other planets.

In Ceylon, the criminals are frequently impaled alive, others have their heads driven through their bodies, some are hung upon trees, and many are burnt by dogs, who are
There is a second order of priests that attend in the temple. This order consists of about 40 men and women, to whom the temple is devoted. Every morning, and on their return from their daily labours, they assemble in the temple, and when the people families come in and make their devotions, the priest presides before the idol, and delivers to them the offerings made at the temple, and the prayers for the king and the nation. These devotions are performed in a most religious manner, and are attended to with great reverence and devotion.

Apart from the religious duties, the priests are also responsible for the care and maintenance of the temple. They are responsible for ensuring that the temple is properly cleaned and maintained, and that all the necessary items required for the worship of the deity are available. They are also responsible for overseeing the construction and renovation of the temple, as well as the care and maintenance of the surrounding areas.

In an4

And

...
In these islands the women are fairer than the men, and in their usual dress appear in a very distinguished condition. They wear a coat of cotton to fill that reaches from the waist to the ankles, over which they have a long robe of taffety, or fine cotton, that extends from the shoulders to the feet, and is fastened with buttons before, and has sleeves that reach to the elbows. Their hair is black, which is adorned with great ornaments; and to obtain this, they keep their daughterse head shaved till they are married, and only wear their heads with the forehead so disfigured, that the boys from them.

When this is done, they stroke all the hair backwards and forwards, and then behind in a knot, which they add a large lock of man’s hair; and the whole which is curiously ornamented with flowers of various colours.

The common people have houses both of cassowary-wood, and covered with leaves framed one within another; but the superior fort build their houses of stone, which is taken from under the sand and rocks in the following manner: among other trees in this island, is one called cannon, which is exceedingly soft; and, when dry and faved into planks in much lighter than cork; the natives, who are excellent fishermen, dive under water, and, having fixed upon a stone for their purpose, they fan them a strong rope to it: after this, they take a plank of the cannon wood, which they put it, and, fasten it in the rope, and then draw up down the stone: they then run on a number of other boards till the light wood rises up to the top, upon which they are done. By this contrivance the natives weigh up the cannon and anchors of a French ship that was cast away here about a century ago.

The people are in general very polite, particularly those on the islands of Main, and particular those called nell-pou and ees, the latter of which they dress several ways; they also make a portage of milk, cocoa, honey, and bread, which they either an excellent dish; and their common drink is water. They fit cross-legged at their meals, in the same manner as in other East Indian countries; the floor on which they sit is covered with a fine mat, and they use banana leaves instead of table cloths. Their dishes are chiefly of china, all vessels of gold or silver being prohibited by law: they are made round with a cover, over which is a piece of silk to keep out the ants. They take up their viands with their fingers, and, in case of mishap, do not let any thing fall, and, if it should happen to fall to the rice from the table, and walk out. They do not drink till they have finished their meal, for they consider that as a mark of respect for any person dining at the presence of strangers. They have no fat meats, but eat when the appetite demands, and all their provisions are dealt by the women for this business is accounted disgraceful to a man.

Being naturally very cleanly, as soon as they rise in the morning they wash themselves with soap and water, and black their eyes-brows. They are also very careful in washing and cleaning their teeth, that they may the better receive the flour of the betel and areca, which is red, and the clove tobacco. They take with them the five present betel to each other upon occasional salutations, as they always keep some about them.

They prefer many Pagan customs, though their religion is Mahometan: when meeting with any dissatisfy at tea, they pray to the king of the winds; and there is in every village a priest, who have cedared dang; make offerings to him of little vehicles made for the purpose in which they put fragrant woods, flowers, and other perfumes, and then turn the veil adrift to the mercy of the wind, and they dare not put to the head, and in the course of offending this airy deity; and all the vehicles which are devoted to are kept as clean as their mosques. They intercede for the sick, and death to the devil; and, in order to pacify him, in a certain place, make him banquets and offerings of flowers.

Each of their mosques is situated in the center of a figure, and round it they burn their dead; they are very vast and beautiful buildings. They are covered with small pieces of leaf: the walls are within are whitewashed, and the ceiling is of wood beautifully variegated. The floor is of polished stone, covered with mats tailor-made; and the ceiling and walls are ornamented with carvings. Each mosque has its priest, who, before the duties of his office, teaches the children to read and write the Mahometan language, which is written on the wall, and in the Arabic language, and is rewarded for these services by the parents.

Such people here as are very religious go to their mosque five times a day; and, before they enter it, they wash their feet, hands, ears, eyes, and mouth; this they never neglect to do. They when they go in, say their prayers at home; but if they are known to omit doing one of the other, they are treated with the greatest contempt, and every body avoids their company.

Friday is the day on which they keep their fasts, which is celebrated with great festivity; and the feast is observed on the day of every new moon. They have several other festivals in the course of the year; the most distinguished of which is one called midnights, and is held in the month of October, on which of Mokmet died. On this occasion a large wooden house, or hall, is erected on a particular part of the island, the inside of which is lined with the richest stuffery. In the center of the hall is a table called midnights, which is placed by proper officers appointed for that purpose, according to their respective stations. The priests and other ecclesiastics sing till midnight, when the whole assembly fall prostrate before the great idol, in a most lively state, and form a circle till the head priest rises, when the rest follow his example. The people are then served with betel and drink; and when the sacrifice is entirely over, each takes a part of the provisions on the table, and prepare, as a sacred relic, with the utmost care.

When two persons entering into the marriage state, the man gives notice of his design to the pandier, or maybe, who asks him if he is willing to have the woman proposed, on his answering in the affirmative, the pandier questions the parents as to their consent: if they approve it, the woman is brought, and the parties are married in the presence of their friends and relations. After the ceremony is over, the woman is conducted to her husband’s house, where she is visited by her friends, and a grand entertainment is provided on the occasion. The bridegroom presents to the king, and the bride equally compliments the queen. The man does not receive any dowry with his wife, and he his not only obliged to pay the expense of the nuptial ceremony, and to maintain her, but he must likewise lend a jointure upon her, though if the thinks proper, she may relinquish it after marriage. A woman cannot part from her husband without license, though a man may divorce his wife; but if the done it relates to the separation, the may demand her jointure; yet as this is considered as a mean sa, it is seldom practiced.

On the death of a man, the funeral is very properly performed by one of the fame fees, of which there are several in each island appointed for that purpose. After this, it is wrapped up in cotton, with the right hand placed on the east, and the left on the thigh. Then it is laid on the right side in a coffin of cassowary wood, and carried to the place of interment by the relations or friends, and followed by the neighbours, who attend without being invited. The grave is covered with a large piece of flk or cotton, which after the interment, becomes the property of the priest. The corpse is laid in the grave, then the body is covered with earth, and, after it is deposited, the grave is filled up with white sand sprinkled with water. In the procession both to and from the grave, the relations scatter coven over the body; the kernels of the poor, and gives pieces of gold and silver to the priest, according to the circumstances of the deceased.

The bridegroom, after he has married, and when the whole is over, the relations invite the company to a feast. They incline their graves with wooden rails, for they consider it a sin for any person to walk over them; and they are carried, for each other, to the nearest place of the dead, that no persons, not even the priests, dare touch them.

In their habit on these occasion they make little difference: the mourners only go bareheaded to the grave, and continue to for a few days after the funeral is solemnized. If a person dies at sea, the body, after being washed, is got
pet into a coffin, with a written paper mentioning his religio-
nation, and requesting those who may meet with the corpse to
not be afraid of it, but rather consider it as the body of
a saint. After having completed their ceremonies, commit it to
the waves on a plaited wooden boat.

The funeral of the king is celebrated in the center of the
realm, and about five miles in circumference. The palace is
built of stones, and divided into several courts and apartments;
but it is only one half built, for the rest of the architecture
is elegantly furnished within, and surrounded with gardens,
in which are fountains and fountains of water. The portal is
richly carved, and the fountains, both in the courts and the
principal one, empty upon the top of it. The ground floor
of the regal apartments are called three fire, to avoid the
smoke, and are covered with floss-silk* fringed and
flowered with gold. The king's bed is hung like ham-
mocks between two pillars ornamented with gold, and
when he lies down his attendants rock him to sleep.

The dressed of the king usually consists of a coat made
of fine white cloth or cotton, with white and blue edg-
ings, fastened with buttons of gold: under this is a
npiece of red-embroidered tapestry that reaches down to his
feet, and is fastened with a large fillet of gold, and a
great gold chain before, with a moet of the most precious
stones. He wears a casque cap on his head, which is a
piece of gold, sewed on, that no other person dare
presume to use it. This cap is faced with gold, and on
the sides are three large emeralds. And he is always
punished with a red-embroidered tapestry. The
grandees and soldiers wear long hair, but the king's
head is shaved once a week, he goes bare-legged, but wears
a small girt-copper, which are worn only by the royal
family.

The dignity of the king, when he goes abroad, is par-
cularly distinguished by a white umbrella with no
covering, and when he enters a town, excepting at its
doors, he has three pages near his person, one of whom carries
for him, another his sword and buckler, and a third his box of
bedding and clothes, which is an object of curiosity for
the people. He goes to the mosque on Fridays (their sabbath)
in great pomp, his guards dancing and striking their swords
on each other's targets of music, which is attended
on his return, by the principal people of the island. He
ever walks; or it is carried in a chair by slaves, there being
no beasts of burden.

The queen is attended, when the king goes abroad, by a
great number of female slaves, some of whom go before, to
give notice to the men to keep out of the way; and four ladies
carry a veil of white silk over her head, that reaches to the
ground: on this occasion, all the women from the several
districts meet her with flowers, fruits, &c. She and her
ladies frequently bathe in the sea for their health, for
the convenience of which they have a place on the shore
close to the water, which is enclosed, and the top of it covered
with large stones. In the chambers of the queen, or those of the ladies of quality, is what is
called latticework, which are kept continually burning, it being the
good and prevalent custom of the country. In the drawing-room, or that part where they are
usually retired, is blocked up with four or five rows of tapestry, the inner-
most of which none must lift up till they have coughed,
and have their names taken.

The guards appointed to attend on the king's person con-
stituted of the hundred, who are commanded by his groom;
and he has considerable magazines of arms, cannon, and
several sorts of ammunition. His revenues consists chiefly
of a number of islands appropriated to the crown, with
certain taxes on the various productions of others; in
the money paid to purchase titles and offices, and for licences
to wear fine cloths. Besides these, he has a claim to all
goods imported by shipping; for when a vessel arrives, the
king is next in the order of taking what he thinks proper at a low price, and obliges his sub-
jects to purchase them of him again at what sum he pleasingly
takes to sell them. The inhabitants, by such means, are
fitted him. All the emigrants found in this country (which
produce more than any other part of the Indies) is allo-
to him, and his dominions by sea, belong to him. It is watched,
that a person would be punished with the loss of his right
hand, if detected in converting it to his own use.

Most of the nobility and gentry live in the north parts
of the island, on the eastern coast, for the wind is
southeast, and so much is this division esteemed, that when the king
banished a criminal, the sending him to the south is thought to
be a heavy punishment.

Absolute monarchy prevails in the government here, as
every thing depends on the king's pleasure. Each attoned,
there are but few days in the course of the year, in which the weather is very uniform; the floor is not always covered by the
periodical return of the rain; the night-fogs, however, are common; and there is therefore great care should be taken not to be exposed to their effects. People would not live for ever in this place, they need not be afraid of the climate, as in any other of the European settlements; and there are now some good physicians on the island. They have very weather at Bombay about the month of May and Sept., which is commonly intro-
duced by a very violent thunder storm: during this season all trading vessels are laid up. The rains begin about the middle of May and continue till September. When the black merchants keep a festival, giving a cartoon, which they consecrate and commit to the waves.

What they abound in most is their grove of casuarinas, their rose fields, and onion-grounnds. Their gardens also produce mangoes, jackies, and other Indian fruits; and they make large quantities of oil, with little difficulty, from the sea-water, which being let into little pits, extracts the mixture, and the oil is left behind. The town or city of Bombay is a mile long, and sur-
rounded by a wall or ditch, it has also a pretty good canal; so that it is well defended, and circumcised one of the strongest places belonging to the East India Company. The houses of the English here consist in general of a ground-floor with a court both before and behind, in which are offices and out-houses. Most of the windows are of transparent oyle, for which they are very good light; and the flooring of their habitations is a sort of flax composd of shells that have been burnt; this they call chunam, which is white, and hard, and becoming hard, has an
enough polish on it. The houses in which the black mer-
chants reside, are in general ill-contrived, awkward struc-
tures.

The English church is a very neat building, situated on a pleasant ground, round which are the houses of the Eng-
ilish. As to the pagodas of the Goanese, they are few, worn and dilapidated, as to be unworthy of notice. The government is entirely English, subordinate to the India company, who appoint by commisson a president and council; and the army under the immediate direction of the president, who is titled commander-in-chief.

The officers are of many nations, some Por-
tuguese, some Dutch, and others French: what can be called topasses, are for the most part, black, or of a mixed breed from the Persians, and Portuguese. The lories are of a particular companies of the natives, who are called sepoys.

Any popull priest, except a Portuguese, may officiate in the church of the English, and be buried in the churchyard; but Bombay is divided; but the English formed an ob-
jection against the Portuguess, from an apprehension that their faith might be diffused and extending to others of their own country, in the adjacent settlements belonging to their master. There are no disputes in this town about professions in religion; all alike are tolerated. Licence of conscience, freedom of trade, and ho-
heits, distinguishing the people and clime.

The inhabitants of Bombay, are a mixture of several nations. English, Portuguese, and Indians, amounting, as it is said, to fifty or sixty thousand. The president of Su-
rat is usually governor of the place, who has a deputy here, and courts of justice under the model of England. And the governor, when he is upon the island, appears in greater

The inhabitants are contented with greens, fruits, and rice, and some fish, rice is their principal diet, though they have roots and fruits in plenty. However, they are much addicted to women, and are generally weak, lean, and feeble. Captain Hamilton, when he was in this island, found five hundred, and counted above eighty churches, convents, and monasteries, and he was told that there were about thirty thousand inhabitants. The body of St. Francis Xavier is buried in St. Paul's church, and, as they pretend, performs a great many miracles. None of the churches exist except those churches which they made of stone instead of glass, and all their fine houses the frame.

The island itself has but few manufactures or productions, their belt trade being in arrack, which they distil from toddy, the sap of the cocoa-nut tree. The rivers mouth is defended by several forts and batteries, which are armed with large cannon on both sides; and there are several other forts in different places. This settlement is built on a hundred and fifty miles north of Cochin.

The island of Don or Dio, situated in fifty-eight degrees forty-five minutes east longitude, and twenty-two degrees forty-five minutes north latitude, is three miles long and two broad. The town, which bears the same name, is pretty large, and fortified by a high stone wall, with bastions and gates, and well furnished with cannon. The harbour is fixed by two castles, one of which is made use of for powder, and other warlike stores. It was here that the Dutch, after fixing the batteries being built of stone and marble. It contains five or six fine churches well embellished with images and painting, built by the Portuguese; but it is much decayed of late, and not being inhabited.

In 1592 it was taken by the Arabs, who plundered all the churches and other places of their riches, but were driven away by the Dutch, who have fixed there. There are not now above two hundred Portuguese inhabitants, for the rest are Banians, who may amount to forty thousand. If this town was in good hands, it would be the best place for trade on the coast.

The Kohor islands lie to the north-east of Cape Romano, produce nothing fit for the carrying on commerce. Pulo Aur, one of them is peopled by Malays, who are said to form a sort of republic, headed by a chief. There are several fortifications which are much plantations of cocoa-trees. Articles in trade are purchased here with iron, and the people have the character of being very hospitable.

The island and town of Sinapour, or Sincopora, lie at the southernmost point of the peninsula of Malacca, and are a little to the north-east of it. Here is a mountain which yields excellent diamonds, and sugar-canes grow to a great size. The soil of Sinapour is fruitful, and the woods produce good timber for ships.

There are several islands in the East Indian sea, lying off the coast of Cambodia, the principal of which, called Pulicat, is the only one inhabited. It is situated in one hundred and seven degrees forty minutes east longitude, and eight degrees thirty-six minutes north latitude. It is about thirteen miles in length, and nine in breadth, but in some places not above a mile over.

The inhabitants of this island are of a middle stature, and well shaped, but their complexion is exceedingly fair, their last is short and small, their eyes are remarkably small, and their noses high; they have thin lips, small mouths, and white teeth, and in their dispositions are very courteous. They go almost naked, except on very particular occasions, when they are drest in a long garment girded about the waist, and ornamented with various coloured tassels and bands.

Their houses are built of bamboo, covered with long grass, but they are very leaky. They are raised several feet from the earth, on account of the dampness of the ground, and they have neither doors or windows; for that one side is left open as well for convenience of light, as for the free passage of the air. They are very free of their women, and will bring them on board the ships, where they are kept by the sailors while they flay.

The people are of a bloody disposition, but what kind is not known; however, they have images of deities in their temples, as well as homes. In a small village, on the south side of the island, a woman sat in a stone edifice built of wood; within it is the image of a god, and without that of a horse.

The soil of these islands is a brownish, and pretty deep.

No. 19.

but the hills are somewhat sandy. The trees are not very regular, with the largest, salutary, and most useful, fruits are mangos, a sort of grapes, and banyan namugs. The animals are hogs, lizards, and guannas; there are two sorts of various kinds, as turtle doves, pigeons, wild cocks, and parrots, all of which breed in the island, and are not known in Europe. The sea produces great variety of turtles, lumps and nuptas, the chief employment of the inhabitants is to go out to sea, with very large nets that grow here.

In 1704 the English settled on this island, after the conquest of Chusan, on the coast of China, was broke by them. However, they continued here but a short time; for, having made an agreement with some Muscovites, natives of the island of Cebute, to serve for soldiers, and assist in building a fort, and not discharging them at the end of three years, (for which term they were engaged) they rove in the night, and murdered every Englishman they could find on the island. The English had purchased this island of the king of Cambodia, to whom, after this circumstance, it again reverted. Few remains of the fort are now standing it having been for the most part demolished.

There are several other small islands in these seas; namely, 1. Pulidinding, near the continent of Java, which belongs to the Dutch, where they have a fort. 2. Pulio-Timung, on the eastern coast of the peninsula of Malacca, in one hundred and fifteen degrees forty-five minutes east longitude, and three degrees twelve minutes north latitude. It is pretty large, covered with trees, and the valleys are very pleasant. If left alone, their islands, orproductions, or other refreshments, and there is great plenty of green turtles. 3. Pulio-Way, near the island of Sumatra: it is situated in twenty-one degrees forty-five minutes east longitude, and five degrees twenty minutes north latitude, and is the largest of all those which form the entrance of the channel of Achiem, and is peopled by men banished from Achiem. 4. Panja, is situated about north of Panja, one thousand degrees five minutes west longitude, and three degrees fifteen minutes south latitude; it lies at the entrance of the bay of Guipas.

S E C T. XI.

Treats of the Asiatic isles under the dominion of the Turks.

The Turks possess of all the islands that are differed about the Archipelago; but, from the rigorous government of their Turk, they are greatly degenerated from their primitive opulence and importance.

Those situated to the northward, are, Rhodes and Cyprus.

1. Tenos. This is one of the smallest in the Aegean sea, but was greatly famed among the ancients. It lies in forty degrees north latitude and fifteen degrees east longitude, exactly opposite to Troy, from the shores of which it is about two leagues distant, and indeed formed the Trojan harbour. The Grecians concealed their fleet behind this island, in order to delude the Trojans, by making them suppose that they had raised the siege, and returned to Greece. The inhabitants of this island were reduced of the utmost inducement after the fall of Troy, at length completed by the Persians, and afterwards utterly subdued by the Macedonians, Romans, and Turks.

This island is near twenty miles in circumference, and had formerly a considerable city, and two baths, one of which is the town, and the other of which is the town, is called Echinus, and is the highest and most celebrated above the Aegean. It was inhabited by a great number of barbarians, and was celebrated by the Romans, and Turks.

It was inhabited by a great number of barbarians, and was celebrated by the Romans, and Turks.
The new and universal system of geography.

About fifty miles east of Thesprotis, and near the river Pechara, is a hill called Aolion, which is of considerable height, and covered with wood.

The Christian church at Aolion is said to have been founded by St. Miltiades, who was a native of that place, and a celebrated orator.

The church of Aolion is said to have been built by St. Miltiades, who was a native of that place, and a celebrated orator.

one hundred and seventy tons of excellent wine; many coins of Constandine the Great have been dug up in the near vicinity, and it is likely that the rock, at no great distance, which, in its fall forms a beautiful cascade. This town was anciently far for the temple of Nicaea, a great port of Delphi, the ruin of which is yet to be seen.

The natives of this island, while the territory of the great ancient cities, have occupied parts of the territory which is now their own, and which they have occupied for themselves by their own laws; but since the Turks conquered it, the poor people are both deceptified and oppressed by them. They are

5. Patmos is a very small island to the westward of Chios, and remarkable for nothing but a breed of all, which die immediately after being brought to market, and are scarce very long, hardy, and long-lived, while they remain in their native place. Near this island are some smaller ones, called Carenères, which, like those heretofore mentioned, are frequented by pirates who intercept the trade.

6. Samos, at the distance of forty miles from Chios, and opposite to the south coast of Ionia, lies in thirty-four degrees north latitude, and twenty-seven east longitude. It is about eighty miles in circumference, and the site of an ancient archipelago; but this prelate is exceedingly poor, for he is obliged annually to pay a very large fine to the court of Constantinople, that he may leave himself any thing. It was formerly a commonwealth; and it is naturally to form. It was a chief seat of art, and the furnaces of hot glory, it was deemed, though less than many, of so much importance as any of the islands of the Archipelago. They have natural forms of wine, which are admirable, a superior kind of onions and garlic, fine earthenware, raw silk, oil, honey, fustrian, fruits, drugs, minerals, emery, oker, and black dye, &c. Notwithstanding the vast riches of this island, the natives are so much oppressed by the Turks, and plundered by the pirates, who infest the coast, that they are in general very much reduced, and a prey to indigence for the four coins and three and a half of the drachma.

There are about twelve thousand inhabitants in this island, which are principally Greeks, the capitoules which they pay to the Turks and the bishops of the island are not great, and the chancellor is a very learned man; and he is so accurate in his profession, that he is esteemed the ablest of his kind in the Archipelago.

The island abounds with wild fruits, such as pomegranates, woodcocks, fitches, thrushes, wood-pigeons, turtle doves, and wheat-sars; besides which, their poultry are excellent; they have iron mines, and most of the soil is of a rocky character; they have also emery stone, and all the mountains are of white marble.

This island is about two hundred in number, and so extremely ignorant, that their whole knowledge of religion consists in being able to say mass by rote; they have no clergy, and their women are very ugly and filthy, and never rise above a mouth; they are clothed in the Turkish manner, except a red coat, and their hair hanging down their backs, with plates of silver, or some such embellishment of the head.

Samos, the chief town, which, as well as the island itself, the Turks call Sulfan, is now reduced to a poor village; and, to add to its wretchedness, the pirates frequently plunder it, but the noble fragments of its ancient splendor, which still remain, excite at once admiration and grief in the spectators.

The other towns are, 1. Vati, the residence of the French vicar; this, though formerly a splendid city, is now only a mean village, containing about three hundred inhabitants, who are chiefly employed in the manufacture of the celebrated Samian pottery, which is sold in all parts of the world.

2. Lacon, a small town, situated on a high mountain, and from which there is a fine view of the whole island.

3. Decidou, situated on the north coast, is a small town, which is inhabited by the natives, who are very poor and wretched.

4. Catharina, on the west coast, is a small town, which is inhabited by the natives, who are very poor and wretched.

5. Samos, which is about forty miles in circumference, lies very near Patmos; it is a mountainous, has two feet ports, a tow n and a cafile, to which it gives name, yet is never seen for anything but a magnificent temple dedicated to Apollo, and was on that account celebrated by the poets.

6. Leros, Lito, or Oleron, lies to the south of Patmos and north of Cloths, is sixteen miles in circumference, and produces abundantly the olive and fig. The climate here is exceedingly hot, and the inhabitants are most of them poor and miserable; and, upon the whole, the island contains little else than fields that are thickened by the imagination of the inhabitants.

7. Nicaea, or Naxos, is about seven miles in circumference, and rocky, mountainous, and barren; it lies in thirty-four degrees, thirty minutes north latitude, and twenty-six degrees thirty minutes east longitude. It has no harbor for fishing, and consequently must be supported by commerce. The town was built when the world was made, all the good materials were exhausted in making Samos; and that nothing but the rubbish remained for Nicaea. Some say that it is equally pleasing to the natives from these disadvantages, for the Turks do not think it worth their while to oppress them, nor the pirates to plunder them of their trade.

The inhabitants are about three thousand in number: they have wine, which is but indifferent, sheep, goats, and aromatic herbs. They row their boats, and do other work quite naked; for fear of wearing out the few clothes, they are able to procure. They are of the Greek communion, have a kind of bishop, twenty-four priests, and a few chapels.

A ridge of mountains runs through the whole island; they are covered with wood, and supply the country with water. There are strong and very many; but, if the inhabitants are poor and naked, they are exceedingly lazy, of savage disposition, and speak a most barbarous dialect of the Greek.

8. Patmos lies between Naxos and Naxos, and contains twenty minutes north latitude, and twenty-six degrees forty-five minutes east longitude, and is only about eighty miles in circumference; it is a very poor island, and does not abound in any valuable product. The climate here is very hot, and the inhabitants are very poor and wretched.

9. Cloths, which is about forty miles in circumference, is a noble temple built to the honour of Cloths; it was formerly a very magnificent city, as we may judge from its ruins, which still remain; it was once inhabited, except by the pirates that infest those parts, who are some of the most civilized and savage wretches existing, murdering the crews of all the ships that fall into their hands.

10. Andromeda, the center island is laid in hedges, but not very large; it is inhabited, except by the pirates that infest those parts, who are some of the most civilized and savage wretches existing, murdering the crews of all the ships that fall into their hands.

11. Samos, which is about forty miles in circumference, is inhabited, except by the pirates that infest those parts, who are some of the most civilized and savage wretches existing, murdering the crews of all the ships that fall into their hands.

12. Basil,

13. Basil,
23. Stanchio, or Coae, lies in thirty-six degrees forty minutes north latitude, and twenty-four degrees thirty minutes south longitude, is opposite to the coast of Doris, c. 100 miles west from Samos, and in circumference, has a fruitful soil, and towards the east gradually rises into mountains: it is rich in watering places, vines, fruits, turpentine, and strawberries. It is noted by Pliny and Sosigenes, as the island itself was for the birth of the celebrated Hippocrates, whose house is still shown in the town of Harangane, and it is here that these celebrated physicians owed their fame more to their recommending temperance, than to any of the medicines they discovered or prescribed.

This island was celebrated for some light gunnery manufactured here, and called velutina coae: but was still more remarkable for the flaves of Venus, made here by Apelles, who was a native of this little island; and hence the notion of Venus's rising out of the sea originated. This admirable piece of workmanship was first lodged in a flat temple, but Augustus carried it to Rome; and to make the superstitious people some amends for its loss, their tribute was entirely remitted. The harbour is good, and well secured from the depredations of the pirates that infested the place.

24. Carpathus, or Scarpanto, lies on the south coast of Doris, between Corlea and Rhodes, in thirty-five degrees forty-five minutes north latitude and twenty-four degrees forty-five minutes south longitude: it is situated about thirty miles east of Carpathus, and is near eighty miles in circumference, but is mountainous, barren, and but thinly inhabited. Its harbour is tolerable, but terribly infested by the pirates.

15. The islands in the gulf of Smyrna, are five in number, and uninhabitable; one is called Long Island, or Ifola de Eglere, that is Church Island; it is ten miles long, rather narrow, and contains the ruins of a magnificent temple. Another of them, the Greeks say, formerly contained many elegant buildings, of which no vestiges are at present left, except an apartment supported by four pillars, the whole being cut out of the solid rock; from this island a caseway formerly joined to the main land, but it is now entirely ruined. Some have imagined this to be the Calazone of the ancients, but we cannot determine on the propriety of this conjecture.

26. Rhodes is situated forty-five minutes east from Canidia, eight from the Lybian coast, is about one hundred and twenty-three miles in circumference, and about thirty-five degrees, fifty minutes to thirty degrees thirty minutes north latitude, and from twenty-eight degrees twenty minutes to thirty minutes south longitude. It has formerly been under the names of Alteria, Ethrea, Corymbia, and many others; as for the name of Rhodes, some are of opinion that it was so called by the Greeks at the foundation of the town, but many think it derived from the Carpathian sea. It is near eighty miles in circumference, but mountainous, and contains the ruins of a magnificent temple. Another of them, the Greeks say, formerly contained many elegant buildings, of which no vestiges are at present left, except an apartment supported by four pillars, the whole being cut out of the solid rock; from this island a caseway formerly joined to the main land, but it is now entirely ruined. Some have imagined this to be the Calazone of the ancients, but we cannot determine on the propriety of this conjecture.
but much fallen to decay since; it has been in the power of the Turks since the conquest of Constantinople by St. Sophia is converted into a Turkish mosque; there are however several churches and chapels in it, which are allowed to be inhabited, Messina, and many Maorities. This city is of a circular form, surrounded by walls, and is well fortified, and defended by a deep ditch. The Bishop of Messina resides in it, whose suffrages are the Bishop of Messina, Syrte, Lameza, and Gerone.

Next to the capital, the following are the principal principalities of Messina, or Aciara, in which is an elegant city, and good sea-port, pleasantlysituated, and defended by two forts; it is included on two sides by a chain of fortifications, and is defended on the other two by the sea. The Turks are tolerable of the importance of this place, and contrary to their usual custom, keep the fortifications in excellent repair. The governor of this city is accountable only to the Ottoman Porte, not being subordinate to the bains of the islands. The Greeks and other Christians are only permitted to keep them here in the day time, but are not allowed to sleep in the city. 1. Lameza is a good sea port town, in which the French and Venetians have a confu; the houses are, however, low and mean, and the inhabitants composed of Turks, Greeks, and some Europeans. The commodities are cottons, cotton yarn, wool, &c. 2. Cerensa, the seat of the Porte, and his mint, is a strong, high, and populous place. People depart from hence to the continent, as the nearest port; The palace of Pescara, and the seaport belonging to the kingdom, is near this city; and at about nine miles there is a Greek monastery, the monks of which have cells along the sea-shore. The fifth part of the revenues which they are employed to catch for the use of the brotherhood. 4. Liminum: this is now nothing but a merely village, though it remains as it was; and the situation of the ancient city of Amathus is not at present known. Liminum, now called Bafra, is situated on the western coast of the island. Though much decayed from its former glory, it is still a large town, and a good sea-port town. In ancient times it was much celebrated for its magnificent temple dedicated to Venus, from which the goddess of love was called the Paphian Venus. In this city St. Paul converted its governor Sergius, andtruck the neccessarary Barjeus with blindfolds, Acts vii. 6.

This island was formerly divided into twelve districts, each containing a large city, and the whole including eight hundred villages. It is, as we before observed, governed by a bauza, subordinate to whom are five magnates, namely, Ithchii, Alina, Cyrus, Schu, Tarfas; and these again under them forty zimmars and one hundred and sixty-seven minor princes. The inhabitants were formerly deemed some of the most lewd and debauched people in the universe; and, according to the most authentic accounts, their inclinations are as depraved as ever, but the Turkish government and manners are apt to make a more receiv'd behavior; and at least obliges them to act with an outward appearance of decency. The present inhabitants are chiefly Greek, and those who speak in the Italian fashion, but retain their own religion and customs.

The natives of Cyprus were converted to Christianity by St. Paul and St. Barnabas, the latter of whom was a native of Cyprus. It is a fair and pleasant island, and thirty-three leagues, or girt, from Coptic, Euchonion, Zenus, Apollonia, the famous bishop of Ephesus, and several other great men.

There are no considerable rivers in this island; but some famous mountain particularly Olympus, which is of an astonishing height and extent. On this mountain, at its base, lies every league, there is a Greek monastery, and a fountain made to be erected by the emperor Helenius, the mother of Constantine the Great. Hardly any vellies remain of the ancient city of Salamis, formerly celebrated for the number of its inhabitants, and the poet Alcander, Euchonion, Zenus, Apollonia, the famous bishop of Ephesus, and several other great men.

There are two forts of timber trees: the largest is the gum tree, which grows all over the island; it yields a great deal of timber, and the wood is heavy, hard, and very much consumed, and of all kinds, diiferent and various, in different places. There are three sorts of palms, three, a kind of cherry-tree, a sort of fig tree, and plants, trees, and bushes, palms, shrubs, a great variety of fruits, and many different kinds of flowers. There are several sorts of quadrupeds, but, as they could not be caught, no description can be given of them. They seem to be of the wolf, pole-cat, and weasel kind. There are bears, but in small numbers, and a kind of animal, except for the foxes, the weasel, and the cats, which have also to two crows, viz, the opprobrious nature of the Turkish government, and the swarms of locusts which for ages past have infested the island, and the frequent destruction of the produce of the earth. The soil produces all kinds of grains: their vines, oil, sugar, cotton, honey, faggion, wood, metals, minerals, plants, drugs, flowers, &c. are said to excel those of other countries. There are many kinds of manufactures, and the Silk is the best in the east, but the silk is very indifferently different. All the sugar castes in the island were deforeed by the Turks, but the people, however, have No. 20.

A great traffic in a delicious bird, which they catch in the month of September by the name of the bird, is very much extolled. The Porte has several petty sovereigns or heads of families, who were afterwards brought under the dominion of the Egyptians, and next to the Phcenicians their neighbours; at least each of the islands was held by the Greeks, Turks, or Egyptians, whom he suffered after his conquest to retain the name and authority of kings, (the title of whom was confirmed by the Porte,) and obliged them to pay an annual tribute. Alexander the Great, next made a conquest of it, and in the division of his empire it fell to the share of Ptolemy king of Egypt, under whose successors it remained till the Romans calling an eye on the wealth of the country, without any other colour for invading it, sent Por Gum Cato to reduce it under their power, which he effected, bringing with him to Rome the spoils of the island, which amounted to seven thousand talents: the Saracen afterwards plundered it, but it returned to the obedience of the Greeks again, to whom it fell on the division of the empire. About the year 1270, Richard I. king of England, put in for four years in the island, and was by the Turks cruelly expelled. The Turks, being very unobliging to reception, whereupon he subdued the island, and transferred his right to, to Gug Lusignan, the titular king of Cyprus, whom it remained till the year one hundred and twenty-three; when the Sultan of Egypt invaded the island, taking John the king prisoner, whom he obliged to pay him a large sum of money, and permitted him to enjoy his kingdom again, under a tribute of forty thousand crowns per annum, and about the year 1473, one of these tributary princes made the feast of St. Savva, a most splendid entertainment, lasting six months, under the like tribute. When Selimiius, the Turkish emperor, as sovereign of Egypt, claimed a title to Cyprus, and his grand vizier Mustapha, setting down before the city of Famagusta, the strongest city in the island, obliged the governor Seignior Brugidino to surrender under honourable terms in the year 1570.

S E C T. XII.

Containing a description of New Holland, New Guinea, and other islands lately discovered.

T H E island of New Holland is supposed to be the largest in the universe, being two thousand miles long, and its figure surface exceeds that of Europe. The north-west and south-west coasts were discovered by the Spaniards in the seventeenth century, but captain Cook was the first who saw the east coast, which was in 1770. The southern parts of New Holland are the most barren, hilly, and diversified with woods and lavers. There are but two forts of timber trees: the largest is the gum tree, which grows all over the island; it yields a great deal of timber, and the wood is heavy, hard, and dark coloured, like the lignum vitae, with narrow leaves like those of the willow. The other grows tall and upright, resembling the pine, something like the live-oak of America does. The wood also of this tree is hard and heavy. Besides these, there are trees having a soft bark, easily peeled off, the fame that is used for canning of ships in the East Indies. Here are palms of three sorts, a kind of cherry-tree, a sort of fig tree, and plants, trees, and bushes, a red apple, marcopages, shrubs, a great variety of fruits, and many different kinds, &c.

There are several sorts of quadrupeds, but, as they could not be caught, no description can be given of them. They seem to be of the wolf, pole-cat, and weasel kind. There are bears, but in small numbers, and a kind of animal, except for the foxes, the weasel, and the cats, which have also to two crows, viz, the opprobrious nature of the Turkish government, and the swarms of locusts which for ages past have infested the island, and the frequent destruction of the produce of the earth. The soil produces all kinds of grains: their vines, oil, sugar, cotton, honey, faggion, wood, metals, minerals, plants, drugs, flowers, &c. are said to excel those of other countries. There are many kinds of manufactures, and the Silk is the best in the east, but the silk is very indifferently different. All the sugar castes in the island were deforeed by the Turks, but the people, however, have No. 20.
The thought could follow the and into stumps, and, return for though walking on the sea floor, in flight of the ship, a wonderful machine they had never seen before, scarce one call an eye towards it, though numbers trod along the decks. They introduce into company as the English do, by their names.

We cannot truly ascertain whether they are brave or not: they made for fire, and as a few pieces fired with small shot preferably differed them, and, after the first contend, they would never come near enough to parley: so that the Europeans could by no means form the least convention with them. How it happens that there are so few inhabitants, is not easy to determine: whether they are destroyed by each other in contests for food, whether swept off by famine, or their encroachment prevented by any particular cause, cannot be perfectly determined. That they have wars amongst them, is evident by their weapons; but what gives rise to their wars, or what is the consequence of them, we cannot determine.

In confirmation of what has been related above, and for the further satisfaction of our readers we shall add the following remarkable particulars: when Captain Cook first landed at Botany Bay, they were all without hands, but their arms were formed from them. On their bodies were observed large tears in irregular lines, apparently made by some blunt instrument. 

They have very many butes, like hovels, scarce big enough to hold their families, and here they make fires, with fire which they call smoked. Their utensils to defend themselves are a vessel made of bark, to hold water, and a bag, made like a cushion, to carry their whole property, which consists of paint, fishing-hooks, darts, and bracelets.

To prevent the devastation of any one piece of land, they make a fire, take two pieces of soft, dry wood, one a round fork of about eight or nine inches long, the other piece flat: one end of the round piece they shape into an obtuse point, and make a hole in the flat piece. In this hole they twist the end of the fork between their hands, as we do a chocolate mill, perforating it down in the hole, till it fires. By this method they get fire in less than two minutes, and, from the smallest spark, they encrave it with after-nipping fire. They will wrap up a spark in a little dry grass, which, by moving, will be fanned into a flame. Thus a man will run on for miles, and, without any visible fire in his hands, will at every fifty or a hundred yards, throw down and leave fire behind him. One of their methods of amusing their European visitors, whom they consider as enemies, was, by letting fire to the high grass in their neighborhood and the waste places far and near, which, being dry as fluff, burnt with amazing force, and did a great deal of mischief in its progress.

Swords and lances of different kinds, are among their weapons: some with four prongs, pointed with bone and barbed. The points of which are covered with a hard skin, rich and well polished, and facilitates their entrance into the object they strike: others with only one point, and some barbed all the way up the shaft. They throw these with a throwing stick. They have likewise bows and arrows, an oblong shield, and a sort of scabbard a foot mitar. Some of their weapons had a chisel fixed at their ends, but of what substance they were framed, could not be learnt.

To the southward of New Holland, the canoes are made of one piece of bark, about twelve feet long, tied up at the ends, in one of which we found five children, who had hidden themselves behind a shield and some bark: we peeped at them, but left them in their retreat; without knowing that they had been discovered; and following the coast away, found different pieces of ribbons, pieces of cloth, and other presents, which we hoped would procure us the good will of the inhabitants when they should return; but the lances we found lying about, we took away with us, to the number of fifty. They were from six to fifteen feet long, and all of them had four prongs in the manner of a fish, and of which we provided with five dozen, and very sharp. We observed that they were all made with a vigorous substance of a green colour, which favoured the opinion of their being poisoned, which, however, we doubted, even if it was a mistake: they appeared by the sea-weed that was found

or great; and, though they seldom comb it, and a method to keep it free from vermin.

The figure of the man is of the middle size, but slender: and, although but a common hand, may span their ankles and their arms above their elbows; and in general they are clean-limbed and remarkable, vigorous, active, and nimble; and when armed with their hair, and also boyish and thick, it never being suffered to grow long.

The people in general go naked, without the least fens of ornaments: they have however, without their ornaments, the principal of which is a bone five or six inches long, and as thick as a man's finger, which they thrust through the frencases of their nose, and so pass on the face, and so effectually flaps up the muzzle, that the wicker, when he speaks, elestes it as scarce to be under-look, and is obliged to keep it mouth constantly open, in order to breath freely: the tailors, in humour, call it their first fast yard. They wear also necklaces made of shells, branches of small cord round the upper part of their arms, and a string of human hair plaited tied round their waist; and some were seen with large gorgets of shells hanging on the breast, and a few women had feathers on their heads, fixed on with gum. They paint themselves red and white, and dust their faces with a white powder.

The red is generally laid on in broad patches upon the breasts and shoulders, and the white in stripes, on their thighs, two below their knees, one like a fath over their shoulders, and another across their foreheads. They have holes bored in their ears, with which holes, which the women were formed in them. On their bodies were observed large tears in irregular lines, apparently made by some blunt instrument, great enough for the dead.

They have very many butes, like hovels, scarce big enough to hold their families, and here they make fires, with fire which they call smoked. Their utensils to defend themselves are a vessel made of bark, to hold water, and a bag, made like a cushion, to carry their whole property, which consists of paint, fishing-hooks, darts, and bracelets.

They carry a very small powder to make war, and when they desire fire, they take two pieces of soft, dry wood, one a round fork of about eight or nine inches long, the other piece flat: one end of the round piece they shape into an obtuse point, and make a hole in the flat piece. In this hole they twist the end of the fork between their hands, as we do a chocolate mill, perforating it down in the hole, till it fires. By this method they get fire in less than two minutes, and, from the smallest spark, they encrave it with after-nipping fire. They will wrap up a spark in a little dry grass, which, by moving, will be fanned into a flame. Thus a man will run on for miles, and, without any visible fire in his hands, will at every fifty or a hundred yards, throw down and leave fire behind him. One of their methods of amusing their European visitors, whom they consider as enemies, was, by letting fire to the high grass in their neighborhood and the waste places far and near, which, being dry as fluff, burnt with amazing force, and did a great deal of mischief in its progress.

Swords and lances of different kinds, are among their weapons: some with four prongs, pointed with bone and barbed. The points of which are covered with a hard skin, rich and well polished, and facilitates their entrance into the object they strike: others with only one point, and some barbed all the way up the shaft. They throw these with a throwing stick. They have likewise bows and arrows, an oblong shield, and a sort of scabbard a foot mitar. Some of their weapons had a chisel fixed at their ends, but of what substance they were framed, could not be learnt.

To the southward of New Holland, the canoes are made of one piece of bark, about twelve feet long, tied up at the ends, in one of which we found five children, who had hidden themselves behind a shield and some bark: we peeped at them, but left them in their retreat; without knowing that they had been discovered; and following the coast away, found different pieces of ribbons, pieces of cloth, and other presents, which we hoped would procure us the good will of the inhabitants when they should return; but the lances we found lying about, we took away with us, to the number of fifty. They were from six to fifteen feet long, and all of them had four prongs in the manner of a fish, and of which we provided with five dozen, and very sharp. We observed that they were all made with a vigorous substance of a green colour, which favoured the opinion of their being poisoned, which, however, we doubted, even if it was a mistake: they appeared by the sea-weed that was found
found flicking to them, to have been used in striking fish. Upon this supposition we kept an eye upon the head of the twig, and found them to have been the word we had ever seen. They were between twelve and fourteen feet long, and made off the twigs in bunches, and tied up at one end, the middle being kept open by flicks, which were placed across them from gunwale to gunwale.

"Here was seen a tree, the fruit of which in colour and shape, resembled a cherry. There are but two kinds of this wood to be seen, as large, or less than the English oak, and one of them is not a very different appearance. This is the same that yields the red-dish gum like fagient dracuncus, and the wood is heavy, hard, and little compressible. The other kind grows tall and straight, something like the pine; and the wood of this, which has some resemblance to the live-oak of America, is also hard and heavy. There are a few thorns, and several kinds of the palm; mangroves also grow in great plenty near the head of the bay. The country in general, as far as it was observed, is level, low, and woody. The woods abound with birds of exquisite beauty, particularly of the parrot kind: here are also crows, exactly the same as those in England. About the head of the harbour, where there are large flats of sand and mud, there is great plenty of water fowl, most of which are species infinately unknown. One of the most remarkable was black and white, as large as a turkey, and had a very long beak.

"The other fish seen, were those frequenting the vicinity of the inhabitants, who go into shallow water with their little canoes, and pick them out with their hands. They were not so large as these, nor do they all go together. Sometimes they go on shore to feed, for they have frequently sites in their canoes for that purpose. They do not, however, frequently catch for that purpose. They do not, however, frequently catch upon which they might be staked; for they have frequently sites in their canoes for that purpose. They do not, however, frequently catch upon which they might be staked; for they have frequently sites in their canoes for that purpose. They do not, however, frequently catch upon which they might be staked; for they have frequently sites in their canoes for that purpose.

"All the inhabitants were black-naked; they did not appear to be free from reasonable delusion. Some of the other inhabitants, were scattered about along the coast, and in the woods. Of their manner of life, little is known, as no connection was formed with them, for they never would come near enough for a parley; nor did they touch a single article of all that was left at their huts; and the places they frequented, on purpose for them to take away. At the fight of their Indians, Tupia, with an air of superiority and compassion, shook his head, and said, that they were tasteless, "poor wretches." A middlewoman, who had thrashed alone into the country, saw an old man and woman, and some little children; they were both grey-headed with age; the hair on the man's head was bushy, and his beard long and rough; the woman's hair was cropped short, and both were black naked.

"More to the northward is Hervey's Bay, in which were some of the finest, such as grows in the flat islands, and the flint of the kind in with in the feast. In the branch of these mangroves were many roots of a rounder kind, growing in the water. When the branches were disturbed, they came out in great numbers, and punished the offenders by a much sharper bite than the same kind of animal is elsewhere known to give. Upon poles also fell the green cero-pillars in great numbers: their heads were thick set with hairs, and they were ranged upon the leaves, side by side, like files of soldiers, to the number of twenty or thirty together. On touching them, the hair on the bodies was found to have the quality of a needle, and gave a much more pricking though a less durable pain. More northwardly was found a species of the buffalo, as large as a turkey, one of which weighed seventeen pounds and an half. It was generally agreed, by the gentlemen who sat at the board, that the Indians were the fowl; and in honour of it they called the interior Buffet Bay; it lies in latitude twenty-four degrees four minutes, and longitude one hundred and thirty-eight degrees forty seconds east. Here are crows in great numbers, and of various kinds; among others, the hammer-hofter, and abundance of finches and finches.

"Thirty Sound, twenty-two degrees ten minutes south, one hundred and fifty degrees eighteen minutes east. Upon the branches of gum-trees here, were found ants nests amidst yellow and green leaves; these ants, as their kind is wont to do, when they are disturbed, released a fluid very similar to that described in Sir Hans Sloane's natural history of Jamaica, vol. ii. page 251. tab. 258, but not so froth. The ants which inhabited these nests were small, and their bodies white. On another species of the tree was found a small black ant, whose beak was thrice the length of its body, and, working itself down the pump, occupied the pipe which had contained it; yet the parts in which this insect had thus formed a lodge, the other, and its little tube together, were filled with flying, and with the remains of flowers, and appeared to be in so flourishing a state, as those that were found. Here was also such a famous store of butterflies, that for the space of three or four acres the air was crowded with them, so that millions were to be seen in every direction; at the same time that every branch and twig was covered with others that were not upon the wings. Here was also found a tree of a singular kind; it was about the size of a man; and had two very strong branches. It was found in places quite dry, benumbed, and covered with water, for when it was approached it leaped away, by the help of the breast fins, as nimbly as a frog; and when it was found in the water, it frequently leaped out, and purposed its way upon dry ground. From the great difference in the needle when brought on shore, captain Cook thinks there is iron ore in the hills.

"Along the coast of New South Wales, the sea in all parts conceals thistles, that suddenly project from the shore and rocks that rise abruptly like a pyramid from the bottom, for an extent of twenty-two degrees of latitude more than one hundred three hundred miles. Off Cape Tribulation, which lies sixteen degrees fifty-nine minutes east longitude, our intrepid felon met the ice by the help of the crag of the rock upon which the ship was landed, and making violent a course, made so near the land that any one on board could stand on his legs. At the dawn of the day land appeared at eight leagues distance, without any signs in the mountains. The land was all gone to within twenty feet of the stern post; the main keel was considerably injured in many places; a great quantity of刷新 was torn off, and several planks were much damaged, two of them, and a half of a third, under the main channel, near the keel, were, for the length of six feet, so worn that they were not above the eighth part of an inch thick, and here the worms had made their way quite into the timber. On this coast they found that many were driven away from领导人, and had been driven away from领导人, and had been driven away from领导人, and had been driven away from领导人, and had been driven away.
party, to prevent the deftruction of these people, returned to the boat, as they had no intention forcibly to invade their country, either to gratify their appetites or curiosity, and it was evident nothing could be done upon friendly terms. When they got on board the boat, they rowed along the lone. The people were dark narked, and their hair coarse and short, and in general their features, over which force, in a kind of petticoat, others a bag made of a kind of cloth, in which they carry their children. Full grown women wore a semicircular piece of water down, pieces - round the head during, and when reaching nearly to their knees, others have only a single round their middle with a whip of straw between the legs, and girls, and children, this, with a few dots of necklaces. Clubs and spears made of hard wood, and bows and arrows, are their weapons. Their bows are about four feet long, made of a dark-brown flick like mahogany, split through the middle, are broad, elastic, and nearly straight, and, with the head, and, with the arrow, are a kind of reed, pointed with hard wood, or bone dipped in poison, which they keep in a fort of quiver made of the hair and boards around.

They have small wretched hovels for their dwellings, in that, how they can hardly stand upright in them, and confinement of a room, sitting on a few goats, and throbbed with pale leaves. Some few are indented with boards, and the entrance is by a square hole at one end. Their caves are like those of the neighbouring islands.

These people seem to be of a cheerful disposition, and pass great part of their time in music and dancing. Their instruments are not ornaments, but, very simple, for there were seen but drums and pipes, which are ready made. Their drums are, in cases of danger, serve to found an air.

Sandwich island (the fourth) is ten leagues long in the direction of north-west by west, and south-east by east, twenty-two leagues from their half east with Malícomo, and twenty-five island round: it was so called in compliment to Lord Sandwich. The hills gently sloping to the sea, and diversified with woods and lawns, exhibit a delightful view.

Erromango (the fifth) is twenty-four leagues in circuit, and lies eighteen leagues from Sandwich island, the middle of it is in eighteen degrees fifty minutes south latitude, and one hundred and fifty-nine degrees nineteen minutes east longitude. These islanders seem to be of a different race from those of Malícomo, and for their different language. They are of the middle race, have a good shape, and tolerable features; their colour is very dark, and they paint their faces, foreheads with black, and others with red pigment; their hair is very curly and crisp, and somewhat woolly. The few women which were seen, were ugly; they wore a short black curtain, and covered with pieces of some plant. The men, like those of Malícomo, were shaved, with only the hole about the waist, and the piece of cloth, leaf used for a wrapper. No canoes were seen in any part of the island. Their plantations are laid out by line, and fenced round: they live in hovels, covered with thatch.

Tanna (the sixth) is about eight leagues long, and three of four broad, in nineteen degrees thirteen minutes south, one hundred and fifty-nine degrees thirty-eight minutes east, and about twenty-five leagues from the south side of Erromango. Its name, in the Malay language, signifies earth. The soil, in some parts, is a rich black mould; in other parts, it is formed to be composed of decayed vegetables, and the ashes of a volcano, which was seen about eleven miles to the west of the ship, burning with great fury. The country is in general so covered with trees, shrubs, and plants, including fruit, and cocoa-nuts. The houses and inhabitants are thinly scattered. Several ponds of stagnant water were seen, in which the natives had planted quantities of eddies. During the sixteen days that captain Cook continued here, the volcano vomited up, at different times, vast quantities of smoke, accompanied with an explosion about once in five minutes: some of these explosions resembled violent claps of thunder, and the brumming noise continued for about half a minute; the whole air was filled with smoky particles and ashes, which occasioned much pain when they fell into the eye; at one time great flames were thrown up high in the air, some of which were as large as a man's head. The crew rowed in the boat: its fires presented a most pleasing and magnificent sight: the smoke, which rolled up, from time to time, in thick and heavy clouds,, mingled with embers of the island, and dens of yellow, orange, crimson, and purple, which died away into a reddish grey and brown: as often as a new explosion happened, the whole country, with its...

Happy
The Ambrym eye is longest and strongest and furnished with a kind of small crowning with blue, a beautiful species of parchment, taper, tobacco, in general, agreeable, and such a kind of hawk, bobby, man of war, tropic birds, and others unknown to Europe. Eagles and left abdomen is at times, peculiarly, something like a large, long, ugly head, and which brings on an extraordinary number of molestures and goldfinches to those who eat them. They have three or four, are, cut, spiders, lizards, fantastic feet, and a flat-nosed water-fowl. Captain Cook left them an 'O-taille dog and bitch.

The inhabitants are of various nations. They are stout, well-featured, and of a mahogany colour. Their hair is black, strong and frizzled. To comb their hair, orファー; when they have an excellent instrument, a kind of comb, made of hick or hard wood, from seven to ten inches long, and about the thickness of a knitting needle; about twenty of these are fastened together at one end, parallel to each other, and about the tenth of an inch at the front. Thee comb they wear constantly in their hair, on a piece of their hands. They cut their hair with a piece of mineral, sharpened like a knife. Some few indeed of the men wear it long, and tie it upon the crown of the head; others suffer only a large lock to grow on each side, which they tie up in cloths.

In this island, the men go quite naked, except a wrapper over their privates, which they fall up to their girdle, as they do at Malicko, or up to the neck by a flannel ornament that is fastened with small round beads, of a pale green nephrite stone. They wear their heads black cylindrical caps, and a mattock or nestling-hatching, with grooves, very much like a fuller's cap. The chiefs ornament their heads with feathers. They stretch the flaps of their ears in a great length, cut out the whole cartilage, or gristle, as at Easter Island, and hang great numbers of tortoiseshell rings in them, as they do at Tanna.

The women dress gives them a thick skirt, and consists of a petticoat refilling fringes, about eight inches long, just dropping below the waist: it is made of fringes, or small cords, held thick over one another, and fastened with a long string that is wound several times round the body. The outward fringes of this fringe they dye black; the under ones are of a pale yellow. By way of ornament, they have in their ears, and fastened by buttons, a great number of oyster-shell buttons. Both sexes wear tortoiseshell ear-rings, necklaces, and bracelets, above the elbow. The women tattoo or punch themselves a little in the face; generally in three black straight lines, from the under lip downwards to the chin; and they carry their infants in a kind of pocket on the forehead.

The houses of these people are like those in Friendly Isles, which we shall describe hereafter. Their chief utensils are made of red clay; they subsist on roots, fish, and the bark of trees. They eat potatoes, with a great quantity of offscorn, as of course they must sometimes have among themselves, or with their neighbours: their weapons are, as are, clubs, bows and arrows, and clubs of hard wood. Their clubs are about two feet and a half long, and of different forms; some like a scythe; others like a mattock; some have a head like a hammer, and others have knoös at the edges like the Malicko, and the same kind of branches and pecock's. The men go naked. The women are not left exposed more than the men, and wear bandages on their heads, which they put on, and their cloth they paint many pretty designs with a fine cinnabar.

They use, for their arms, bows and arrows, and clubs of hard wood, like those at Malicko; female also are among their prey; and also, they eat flesh by catching them. They have a particular species of diggs here, and other productions in common with the neighbouring islands.

New Caledonia extends from south latitude nineteen degrees thirty-seven minutes north, and from south longitude one hundred and fifty-three degrees thirty-seven minutes to one hundred and sixty-five degrees fourteen minutes, east. This island was discovered by Captain Cook in 1774. It is hilly, but contains (few) fruitful valleys, has many fine streams to water it, and appears delightfully pleasant. The productions are bread-fruit, figs, sugar-canes, plantains, potatoes, and sweet potatoes.

There are no cropland of any kind in this island, but a variety of little feather tribe, large tame birds with bright plumage, such as of small claw tinged with blue, a beautiful species of parchment, taper, tobacco, in general, agreeable, and such a kind of hawk, bobby, man of war, tropic birds, and others unknown to Europe. Eagles and left abdomen is at times, peculiarly, something like a large, long, ugly head, and which brings on an extraordinary number of molestures and goldfinches to those who eat them. They have three or four, are, cut, spiders, lizards, fantastic feet, and a flat-nosed water-fowl. Captain Cook left them an 'O-taille dog and bitch.

"they exceeded all the natives we had yet met with; and although it did not quite suit their taste, it was not refused us, once pleased and left our minds at ease." A hatchet was not quite so valuable as a large fake nail; small nails were not at all liked. They were considered as a thing of no value, and did not admire. Many of the natives came over the fence with perfect confidence, and one of them exchanged a yew for a piece of paper, and a dog and bitch, both young, but nearly full grown, which may be the means of flocking the country with that species of animals; and to Hebeii, the friendly chief before spoken of, he gave a few corn and hoar pig, in order to prevail, it is possible, a few of the metamorphic animals, for that nation whole-inadmissible features strongly deserving of such a present. To enhance their value with the Indians, and thereby induce them to be more careful of their flock of hogs, the captain explained to them how many young ones the female would have one time, and how soon this would multiply to some hundreds. No one of the natives attempted to take the leaf tiffs by stealth, but all behaved with the first horrid. Some of them spoke of a great land to the northward, which they called Mingha, the inhabitants of which were their enemies, and very warlike. They likewise pointed to the Juan Fernandez islands as near the sea, as well as another in the latitude of the rope, all which had some communication with each other. The inhabitants are said to be a fruitful, and large leaf nose added to plundering; they may in general be deemed a friendly, inoffensive people: they gave captain Cook and his shipmates a very warm welcome, and informed him, addressing him first in short set speech, and then inviting him aboard. But they are indecent, and full of curiosity; the greater part of them did not move from the shore where the Europeans had landed them till the first time: they are remarkably grave, speak always in a serious tone; and laughter seems to be a stranger among them.

They deposit their dead under ground, which seems to be a more judicious manner of disposing of them than that used at O-Tahiti, where they capstone them above ground till all the flesh is entirely purified: if the mortality were removed. The huts of these islands are so near the sea, and another near the entrance of the rope, all which had some communication with each other. The inhabitants are said to be a fruitful, and large leaf nose added to plundering; they may in general be deemed a friendly, inoffensive people: they gave captain Cook and his shipmates a very warm welcome, and informed him, addressing him first in short set speech, and then inviting him aboard. Captain Cook when he first landed here, was accompanied by a native, who appeared to be a man of some consequence and who had come on board the ship before the came to an anchor. The natives assembled in great number and were received by curiosity, for many had not so much as a stick in their hands. The party, on landing, were received with great courtesy, and with surprise natural for people to express as feeling men and things to new and curious objects, and the latter particularly to all those whom his companion pointed out: but, on his going to give a few beads and medals to some women who stood about the crowd, the chief held his hand, and we would not suffer him to do it. As they proceeded up a creek, Mr. Forrest shot a duck that flew near them, which was then on the beach; but merely by curiosity, for they had little else than good nature to bow to; and in this says captain Cook, they extended all the natives we had yet met with, and although it did not quite suit their taste, it was not refused us, once pleased and left our minds at ease." A hatchet was not quite so valuable as a large fake nail; small nails were not at all liked. They were considered as a thing of no value, and did not admire. Many of the natives came over the fence with perfect confidence, and one of them exchanged a yew for a piece of paper, and a dog and bitch, both young, but nearly full grown, which may be the means of flocking the country with that species of animals; and to Hebeii, the friendly chief before spoken of, he gave a few corn and hoar pig, in order to prevail, it is possible, a few of the metamorphic animals, for that nation whole-inadmissible features strongly deserving of such a present. To enhance their value with the Indians, and thereby induce them to be more careful of their flock of hogs, the captain explained to them how many young ones the female would have one time, and how soon this would multiply to some hundreds.}

New Zealand's swans experienced two hundred and eighty, degrees forty-five minutes, and one hundred and ninety-three degrees fifteen minutes west longitude, and thirty-five degrees two minutes twenty-four minutes south latitude, and about twenty thousand miles difference from O-Tahiti. It consists of two islands, very large islands, in fact, or few, and divided by a narrow channel, and lying near north and south of each other. The northern islands is called by the natives Eathor-monau, and that to the south of the sea, a very fine sea, its minerals and vegetable still remain untouched; animals it should seem to have none, from the ignorance which the natives to the northward discovered of such as they saw.
A kind of one that grows so large and lofty, that they will touch the ground, and swell like flint mimaes, made a growth of feet, and are as straight as an arrow, from the root to the fist branch; many of them will yield three hundred and fifty feet in height, and yet they bear the beauty, and haughtiness, and form of the branches; it bears a narrow leaf like the juniper, is generally found in low land, and has a dark-coloured appearance. Of this tree the natives make their canoes.

These trees are so thick, many trees and shrubs, which bear beautiful flowers, and are highly aromatic, yet there is not one that produces fruit; but there is a plant which produces fruit of both these kinds, and that is the

Of this plant there are two species; one bearing a deep red flower, the other a yellow. The leaves of both refer to them, but there are at least four leaves and the flowers are more in number. They make all their cloths of the leaves of this plant, and also all their fringes and cordages, which are at once glossy, elastic, and so strong, that nothing made of hemp can equal them. From the same, by another process, they draw out long, slender, strong threads, white as snow, and flaxing as flax; of this they make their better cloths; and by fitting the leaves in proper breadth, and tying them together, they make their fishing-nets. This plant seems to grow best in boggy grounds; there is every reason to believe that it would thrive well in England; and, could we transport it thither, it would be a valuable acquisition to this country.

Dyes are rare and scarce in many places, and a high price is paid for them; but they have a great variety of birds, some of which are exquisitely beautiful.

The town it inhabits, in proportion to the extent of country. Tweti Pontnamamo is, as we observed before, very thinly peopled, confiding chiefly of wanderers; but Eable-monvans is better peopled. The inhabitants of one side of the island are quite a desert, by being far mountains, hence any place is inhabited but the sea-coasts, which, on an extent of four hundred leagues, is sufficient to contain only about one hundred thousand people.

The men in general, are equal in stature to the larger Europeans, but thin, very light, exceedingly flaxen, and white, they are particularly active and vigorous, with an uncommon adroitness in every thing they do; but most of their legs are slender and bandy, with large knees, owing to the little exercise they take, and their continually fitting crooks-legged in confined canoes.

Their complexion is a clear mahogany brown, though they are rather darker in the northern island. Their hair is black and curling, and their teeth extremely regular and white. They have good faces, like Europeans, dark eyes, lips rather thick, and aquiline noses. Their voices are rough, they talk loud, and, in general, are more rude and unpolished than the natives of O-Tahiti, of whom the men's voices are plain, and have no great female delicacy; but their voices are remarkably soft and harmonious, and by this they are chiefly distinguished, the dress of both sexes being nearly the same. They are a whole tribe; there is a chief among them, a chiefness superior to the men, and a greater flow of animal spirits. Both sexes have the practice of tattooing. Women of both sexes, of this country people, every one of that men is merely a wrapper round the body, kept from falling below the waist by two flaps over the shoulders, fastened before and behind with bone buckles. It is made of flag-leaves, and resembles a flabby door mat. Some men on particular occasions, wear another piece of this matting round the waist, which reaches almost to the ground.

The dress of the women is a cloak and petticoat of matting, and a bunch of aromatic leaves hanging from a gridle round their legs. Some of them wear their hair cropped short, others have it flowing about their shoulders; but the men tie theirs up in a bunch on the crown of the head, consisting of about thirty, and thick a comb behind it. They wear their beards cut short. Both men and women grease their hair, and frequently wear upon the crown of their heads, a large bunch of black feathers, tied up in a knot, as to their heads twice their natural height, and almost to cover it.

A variety of ornaments is worn by both sexes, such as ear-rings, nose rings, and rings in the fingers, necklaces, bracelets, and rings on the toes. They make their ears, and stretch the holes till they will admit a finger; in these they wear cloth, feathers, bones of large birds, and of the most curious of woods through them.

The women frequently fluff in the white down of the albatross, fished with rode or hook, which spreads before and behind, as large as one foot; and, though singular, has a very good effect. Sometimes they hang to their ears, by fixing, chile on their fingers, and the end is polished, and often the nails or teeth of their deceased relations: bracelets and anklets are made of birds, bones, shells, or any other substance they can find a bottle through. The mats sometimes were made round the neck, fixed by a piece of round green transparent tale, or whistbots flapped like a laurel leaf, and with the rude figure of a man carved upon it; and, but, the other hand, on their plantations fail, or an unfavorable season happen, and they happen not to be provided with food, they will break, the difficulty, as the interior parts of the country must be dreadful. This will in some measure, account for the fear these people have in each other, for the care they take to fortify their villages, and for the horrible custom of eating those whom they kill in battle. The head is the only part they do not eat; they break the brains, and frequently convert the skin into domestic purposes, such as to hold water, etc.

The way they dispatch their prisoners, is by, knocking them down with their patti-pats; and then ripping them up.

The hiphaps, or towns of these people, are all fortified. Many are built upon eminences near the sea, and secured on the land side by a ditch, but here; and a high palisade of hedges, which forms a kind of the ditch; and some have outworks; their houses are built on a rising ground, under a tuft of trees, but are little better than dog-houses, filled more than twenty feet long, ten broad, and fixed high; their furniture and utensils are trifling. Their amusements are singing and dancing; they have three musical instruments, a trumpet made of a head, a wooden pipe, which is not unlike a whistle, and a whistle. A top was seen here, flapped like the gig in England, and, like that, made to fly by whistling.

In their islands, two or three forms of cloth are made: the flabby fort, resembling a thumbed door mat; one as coarse as our coarsest canvas, though ten times as strong and another as light as gauze, the leaf of flax, flax leaves, flappity or more, and interwoven with dry, leaving a number of ends hanging to it on the outside, eight or nine inches long; and the glossy fort is formed by many threads tying very close one way, and a few croosing them the other; but these are about half an inch broader, somewhat like the round pieces of cane matting that are by some persons placed under the lid upon tables to save the cloth; this stuff is prepared so as to shine like flax, and is often frippled. It is made in a frame of the face of the cloth, about five feet long, and four broad. They have skirts and axes made of black bone, and claws of birds, or pieces of Jasper; they have likewise an instrument made of a sharp dish, which they use at once for plough and spade. Their fishing-nets are made of a kind of grass, very strong in its nature; and their principal nets are 6 or 7, that seem to be the joint work and joint property, and, like the other, generally about five fathom deep; they make also circular nets, extended by two or three hoops, feet or eight feet in diameter, which they fasten at the bottom, and leave open at the top.

The natives have a particular and singular taste for carving; they attempt not to imitate any thing in nature, but confine themselves to a volute or spiral, which they vary many ways, single, double, and triple, and with as much regularity, as if done from mathematical draughts. They thus ornament their boats, paddles, arms, tools, and almost every thing they make, though they have very awkward tools to do it with.

Hollies, among them, are declared with a war song and dance, in which the women join and attack, with diffused features, hideous shouts, rolling eyes, and tongues lolling out of their mouth, and feet walking on their fore legs. Their faces are curiously tattooed, and sometimes adorned with a wooden comb and teeth. Captain Cook, having expressed a desire to see the mode of attack and defence, one young man mounted a fighting flag, which he raised from the ground and surrounded with a ditch, of which they have many large ones on the sides of hills; and another brought a long spear, and wore both the blade and head to defend the place; and he that was to attack it, sung the war song, and danced in a frightful manner, working themselves up to a degree of passion, and when this dotte they attacked each other with uncommon fury.

As these people live in perpetual hostility with each other, there is therefore little laid in a state of cultivation, and
and every village it made a fort; they seem to have fixed it
left the parties unselected and, therefore, that no unmeasured
A lance painted and barred is their middle weapon: this
is held like a quarter staff, in the middle, and driven
through the body. It has no joint, and is tipped with
darts and arrows, and with stones; but have neither beams
to convey the former, or figures to mark its pitch; their
other weapons are pointed sticks; and of those weapons
is made of green talk about a foot long, and thick
enough to weigh fifty or fifty pounds. It is formed like a pointed
bludgeon, with a head of a double and sharp edge. This
was designed for fishers through the handle there is a
string to twist round, and when the weapon is used the
paddle pitts is worn on the girdle, as a considerable
military ornament. Their chiefs carry an enormous
busk; and yet none of them have any provision of a
brass, with a small one in the water, are sent on
in a flax of diffusion, generally the rib of a whale, white as
flax, wound round the paddle, with carving, dog-shoe and
selars, like our sheriff's hallmen; but sometimes this
flax is merely a flax about fix feet long, adorned in
the same manner, and lined with a reed resembling
mother of pearl.

The manors used by these people afford a striking proof
of their ingenuity they are of different sizes, narrow and long,
and resemble very much the New England white-bast.
Some of the larger forts seem to be chiefly for war,
and can contain from forty to near one hundred armed
men, being forty or fifty feet long, though not more than
five feet broad, and about three feet and a half in depth.
The sides are made flat, of three sides plains, one above
another, which rests on the ground, and is formed together
by the edge of the flat land, the ends of the shore, and
the woolly substance of the residuum. The side being flat,
and the bottom flatly, they are in form of a wedge. A con-
fused mass of various number of bones are laid foreboding; which were
put to gunwales, in order to strengthen them, and a profu-
sion of carved ornaments decorates the head and stern, which
are the border of the body, lying almost perpendicularly
five or six feet above, it is pierced through and through
in plaques, like filagree work, and adorned with fishers
hauling them landwards on a whole. Their gunwales of their first
boats are also carved in a grotesque tail, and ornamented with
planks of white feathers placed upon a black ground. These
boats are worked by eighteen or twenty finely light paddle,
above the feet long, neatly made, having on side blades, pointed
at the bottom, and gradually losing its oval form in the
handle; and the Indians have such an adroitness and
manual dexterity in using these paddles, that thirty of them
together will keep time so exactly, that one would think
the rowsers were actuated by one common soul. They fre-
quently sing when rowing, and beat time with their paddles.
Sails of matting fixed upright, between two poles, are
sometimes made use of, but they can make no way
with these, except right before the wind.

The New Zealand language and that of O-Tahiti are
radically the same, the difference being only provincial.
They worship a Supreme Being, but believe in subordinate
spirits, to make up the number of souls. The

The Europeans could not discover how they bury the
dead; the natives in the northern parts informed them,
that when they were buried in the ground, but in the southern
parts they laid them they threw them into the sea, tied
to a bone, in order to fish them; this, however, it certain,
that the whale would not eat; and the only direction for removing
this way of throwing respect to the deceased, dissect themselves
in a terrible manner.

Those who inhabit T'wai Pannamo, which is, the
southern life, lives a wandering life, and seem to be under
no regular kind of government; the head of each tribe,
indeed, is respected, and, on some occasions, commands
discipline; but I have good reason to believe that the so-called
sovereign, under whom are several chiefs, or priests, to
whom great respect is paid, and by whom
sacred things are committed to them, is very little
in their authority by inheritance. The

The New Zealanders, though more intractable than the
other south sea islanders in general, are, however, less im-
mediate in their conduct, they are quick to
be made; that the ensuing female must be treated as
good manners and respect; that no unmeasured
.. and that the day-light must not be a wit-
tess of what pass'd between them. An agreement thus
made is one of the most solemn and binding as a
marriage ceremonial in European countries.

The two following instances will serve to show the
frenzy of thefts, so common among them. An Indian,
and great pains taken to conciliate their affections,
before captain Cook, who was here in 1769, could afford to
be their ally. One, whom the author of the account
Marion, who commanded two French ships, was, in
1793, with twenty-eight of his men murdered here.
This corporal belonging to this officer's ships were
assisted in the woods, near this provision of a

This accounted for the nautical terms, and also the

The author of this account, M. Crozet, with a small party, for the purpose of
making new masts, &c. Upon the news, therefore, of captain
Marion and his men being cut off, a corporal and four
men, were dispatched to M. Crozet, to acquaint him with
his danger, while several boats waited to receive him.
M. Crozet immediately disposed every thing, as well
as he could, to effect a retreat: but found himself in
flight of a prodigious crowd of the natives, tied on by
several chiefs. He directed the four natives to be ready to
fire at those persons as he should point out, if necessity
required it, and then ordered all his party to strike their
masts, and retire with their canoes, when, while he
advanced up to one of the chiefs. This man told him,
that M. Marion was killed by another chief, whom he
knew. At this, M. Crozet gave a shake in the ground,
just before the part of the chief, and bid him set his
eyes on the other chief, and go further. The boldness of the action startled the
fugitives, which being observed by M. Crozet, he inquired on his
commanders, and ordered them to be set free. After
the crozet completed the repairs of his ship without interruption, and, after a stay of fifty-four
days, proceeded his voyage.

The other instance relates to the dreadful catastrophe
of captain Furness's crew: the two ships commanded
by the captain and Furness having parted company on the scaffold, &c. &c.

The Europeans could not discover how they bury the
dead: the natives in the northern parts informed them,
that when they were buried in the ground, but in the southern

A Chief and other Natives of Otaheite visiting Capt. Cook on his second Voyage to the Southern Hemisphere.
the unhappy men who had been murdered by the natives; who were decoyed from devoting their entreaties. Horror chilled the sailors blood at the sight, which urged them to a fierce desire of revenge. They fired and killed several of their officers, and killed one man of the negro crew.

Mr. Banks and Dr. Solander, going on shore, at Queen Charlotte's Sound, in search of natural productions of that country, were at first treated with a very surprising hospitality, which when discovered, he conveying away a variety of things that lay conveniently for their purpose, upon which they were ignominiously expelled. One of the natives at the moment was discovered with a cutlass in her hand, and was hauled to the shore after a judicious use of the failer, and conveyed to a young New Zealander. The master, finding the stolen goods was none, now the danger of its further occurrence, for which he was received several blows with the failer with great good nature by, imparting them to jo- cality; but as he was advancing to his boat, he was fa- turned several large frames thrown at him by the New Zealander. This was more than the spirit of the firearm could brook, he therefore returned, and began to attack the vessel in the English manner of boarding, and professedly obliged himself to cut off with a black eye and bloody nose.

A boy about fourteen years of age was prevailed on to drink shot; a glass of Madeira wine, at which he made a year many vires at first; a bottle of very fine Cape wine being brought upon the table, a glass was filled out to him, which he declined so well, that he was continually filling his lips, and desired to have another, which he refused drizzled off, their positions began to sustain his fits, and his senses went with great volatility; he expressed about the cabin, but on the decks which lay on a chair, and was much piqued at a refusal; he next derived one of the empty bottles, and this request induced him to give up his own, in which his passion rose very high; he stamped, threatened, then promised, or rather grunted gibberish, and at last became to fall down that he was at wit's end. This boy was a very jolly sample of the impetuous temper of these people.

The women who were the first inhabitants seen in the Bay, the man stood with a sly and subtil air in his hand, set the rocky point of an arrow, and called to captain Cook and men, who were on the shore, and who were asked to behave with respect.

The women were belted skin, each with a long spear in her hand. Her sable was unknown in the language of O-Tahiti; Ewo hava mal, Friend, and Ewo hava mal, Friend, was our word for a long time; nor did they hold a long spear, frequently winding round their cloth, on which he leant at various times. The captain loaded the rock alone; great bags of flour being his large subject, and the poor native; however, he stood firm on the shio jet. The captain went up to him, and embraced him according to our customs, by which tokens of much friendship on the part of the natives were displayed. The man received the presents that were offered to him, and the two nations parted.
prostrated the ducks bred and increased, there being plenty of food about it. In August, 1773, Captain Cook left a couple of geese, male and female, and on his return the April following he found that the little goat had two kids, and was with kid again, that they looked at the two geese as if they had seen them for the first time, as if they had not lived without them, and as if they were beasts of the same race. The domestic animals here are little hogs, and small fleecy dogs. There are flocks of ducks, geese, doves, blue-beak, crows, kingfishers, herons, partridges, pheasants, ants, &c.

The natives of this island are a sort, wild-made people, benumbed in their looks, and women are almost totally baldheaded, and has, few with eye-lids, and eye-brows. The hair of the people in general, however, is black. They oil it with cocoa-nut oil, perfumes it with a certain root, and dress it nearly without comb. The men wear whiskers, and their hair is almost naked than their dress is, their chief dress, as we have already told. Both men and women regularly bathe themselves in running water twice a day, as soon as they rise, at noon, and just before they go to bed. They wash their mouths, feet, and body, and food with every meal, and not only their mouths but their hands, and this five or six times in the course of the meal, and keep their clothes without either foot or hair upon them.

The lower class of inhabitants are frequently seen without any covering over their body, half or more round their legs, &c. One principal peculiarity, which is a decided ornament among the men, is to wrap themselves gracefully in a piece of cloth containing many yards, which hangs down as low as the knees. Some of the women wear, as well as men, crepe cloth, with a hole in the middle through which they put their head, so that it hangs down before and behind and below their knee; over this they throw a piece of cloth, and when, a sort of mantle which is worn, several times over the body, in elegant turns, below the breast, forming a kind of tunic. The cloth is made like paper, of material hark, forced out and beaten together.

Girls, under four, and boys under seven years of age, go naked. On the head they wear a bonnet made of mitting or cocoa-nut-leaves, and the women sometines decorate themselves with small turbans, and, plaiting their hair, twine it round their heads. Sometimes they flock flowers and feathers in their hair, and both sexes wear ear-rings, and bags of nuts, or small pearls, in one ear only. They let the finger-nails grow, except that of the middle finger on the right hand.

When they draw were scarce, few this island, the men wore quite naked, and the women covered only from the waist downwards with a garment made of the palm-tree: he indeed saw one man, who seemed to be a chief, who had on his head a sort of round, broad hat, of black feathers, so fine and soft that they resembled silk, and behind hung down a bunch of red hair somewhat curled, as low as the middle of his back; by which we learn that a century and half will make some alterations in the customs of the natives of the South Sea, as well as in those of the Europeans. The same women mark their loins and back part of their thighs with black or blue lines, in a variety of forms, which they call tattooing. They tattoo themselves in this manner, by puncturing the skin till it is quite blood. When the skin is thus pricked, but not broken, and then rubbing upon the part a mixture of foot and oil, which continues through life; such as are marked with such a tattoo, have the parts reddened with the juice of a plant that gives that colour. They do not mark their children till they are about thirteen years old; and others are sometimes seen that are painted, and few days before they are partly healed, they bear it with great resolution, considering it as the highest ornament.

The diet of these people is vegetables, fish, pork, potatoes, and a great deal of fruit, and their manner of dressing their food is very singular. Having procured fire by making a grove in one field, and rubbing another in that grove, in which is a little stream, which they bring to the grove by a small ditch, till they get a little small dand kindles, they dig a hole in the ground about an inch deeper, and eight or nine inches in circuit: this done they pave the bottom with pebbles, and make a fire in it: they then sweep off the ashes, and lay their food upon it, first they place the things lying over it the hot embers. Here it lies till it is sufficiently baked and when taken out, it is tender, jucy, and full of gravy. Their chief drink is water: but they sometimes drink the juice of the coconut. When they are inebriated, which they proc in from the root of a plant, yet they seldom are inebriated. They fit on the ground at meals, with leaves spread out by way of plate, cushions, table-cloth, household utensils, are nonexistent. They taste their food with their fingers, and eat indiscriminately. They are silent during the whole repast, and eat separately with their faces turned from each other.

The huts of the island are mostly of a roof, supported on three rows of poles, one on each side, and tiles in the middle, and whitened with the leaves of the palm-tree: their houses are formed like our hay-ricks, with their roofs sloping both ways, the eaves of the roof about four or five feet from the ground; they have seldom any walls, but are open at the sides and ends; some few are inclosed with reeds, having only a hole to enter in at, which can be shut up and closed; but these are the habitations of the principal people. Within, they are very neatly bedded with a kind of straw or hay, on which they lay mats to sleep on. Railing their head on a block, or four Uganda, their body on a block, or four Uganda, and burn a kind of candle, made of the kernels of an oil nut, many of them which they stick upon a small piece of wood like a bolster, and not with a piece of wood. In throwing a lance, their ambition is to hit the mark at about twenty yards distance; and in using the bow, the bow, is the best archer that throws the arrow farthest, and their arrows are not feathered, will often find them two hundred and eighty yards. They kneel when they draw they bow, which, at soon as the arrow is delivered, they drop.

Flutes and drums are their only musical instruments: the flutes are made of the bamboo cane about twelve inches long, with two holes only, which they blow with the lips, with the fingers of one hand. They have only two notes; and of these they seem to have but one tone; and, what is more remarkable, they never strike this instrument by blowing through two holes, but by passing the breath through the one hole. The drum is cylindrical, and formed of a hollow block of wood, solid at one end, and covered with the skin of a shark at the other. These they beat with their hands, and many of them can tune them; they beat two, three, or four at the same time, with the flute, which they do by ear with great exactness.

They sometimes sing, and sometimes dance, to the sound of these instruments. Their songs are in couples, and frequently extemporaneous, and, from their repeating them, seem to be recited, though without rhyme. At other times they dance, and their dancing is not less regular than their music, for they twirl and wring their bodies into many extravagancies.

Dramatic entertainments, or regular interludes, divided into four acts, one by men and women. These dramatic interludes are called by the islanders Heaven, and they consist of dancing and comedy, and lie near two hours. Their language is both melodic and prosaic, with vowels.

Cloth is their principal manufacture, which is made of bark of different sorts of trees, bleached, and dyed in different colours, red or yellow. They are likewise very ready in making baskets and wicker-work, which they do very expeditiously; they make baskets in a moment, and also bonnets to deck their faces, from the fun, not such bonnets as cover the head, but merely a slide over the eyes, which they tie round the head with a piece of night, or make rope of an inch, or visible to the size of a piece of thread to that of an inch. In the middle of these they form their fishing-nets and tackle and of the cocoanut they make their boats, their fish by.
The Mode of Dancing in the Island of Mictar.

Correct representation of a Morai, or Burial Place, in Otaheite.
fishing-hooks are made of mother of pearl; and they make a harpoon of bone, pointing it with hard wood, for they have no metal of any sort.

The tools used by the people are in general made of flints and stone; and, with these, they will erect houses, build canoes, and after their manner carve images. They make arrows of bone, and darts of hawks' bone, who become their allies before they are born, to give notice to all who approach, that the way may be cleared for the mourners.

Little can be told of the manner in which the gods, or their religious language differs from the common language of the seamen, and the Europeans, who visited them, were not even sufficiently judges of the latter, to comprehend their extraordinary mysteries. The priests held a hereditary, and, in the course of time, became very learned in religious knowledge of the priests consists chiefly in understanding their traditions better than other people: and they only are allowed to tattoo and circumcise.

Marriage here is but a mutual contract to be continued at the pleasure of the parties, the priest having nothing to do with the affair.

In this country, the feudal government seems to subsist. Each of the principal chiefs has his name and title, which are forty-four in number, a subordinate chief. The chief have a kind of court, and a council. Each district, in case of an attack, furnishes a certain number of fighting men, and the sovereign commands the whole. The weapons are arrows, darts, and clubs. They give no quarter but kill men, women, and children, and carry off the few hones as trophies.

The O-Tahitians are much addicted to theft; but it seems to arise rather from not having any notions of private property, than from any criminal inclination. They are apprehensive, and often believe that the most distant friends are their pretended enemies. There is a society, however, called the arrow, in which indiscriminate assassinations are permitted. Polygamy here is universal. The husband is the chief of the family. Love is a ruling passion; but a submissive obedience is paid by the wives to their husbands.

When a dispute arises among the inhabitants, Captain Cook was once present at a naval regatta, and found it consisted of upwards of three hundred large canoes; which were very well equipped, manned with near eight thousand men; the chiefs, and all those on the fighting platforms, were habited in their war accoutrements, which consisted of a great quantity of cloth, tuchus, breast-plates, and unwieldy helmets. The canoes were drest with flags and streamers. This fleet was designed to attack a neighboring island that had thrown down its dependency on O-Tahiti. Some of the troops at captain Cook's request, went through their exercises on shore. Two parties first began with clubs; the blows of the clubs were aimed at the legs and head; thefe at the legs were evaded by jumping; and those at the head by leaping or leaning aside; when they protected to the face or darted forward; when they carried their blow, they carried the dart by fixing the point of a spear in the ground before them, and directing the other end of it, as they foresaw the aim was made at the other party.

When captain Cook (who having once failed to this island) brought his ship close under the land, he was surrounded by some hundreds of canoes, with several persons in each. When they perceived this, they gave a shout, and seemed to hold a council how to act; as if they paddled round the vessel, exhibiting signals of friendship, and one of them made a speech. Soon after this, some few came on board, but one of them was being butted by a goat then on deck; and on turning round seeing the goat was on his legs, the goat jumped down the sides of the vessel in the greatest fright, but soon swam round her and returned on board again, and the crew had enough to do to prevent their being injured by the weeds that lay in their way; one of them finished his course with a stern, which was thrown overboard, and swam off with it. Upon the captain's finding out a boat to found the depth of water, the Indians decreed to prevent the coming ashore, three boats were left, and wounded some of the men, which made an officer in charge of the boat fire his musket loaded with buck shot, at the Indians who threw shields; it was preceded by a fire of muskets; this was an alarm sufficient; it brought together three or four hundred canoes, with upwards of two thousand men, armed with darts and feathers, of two pounds weight, who attacked the ship's road by land, and as he fired his gun, in a hand long thick, the end of which is set with thorns, and affords a kind of slumber, occasioned by grief, the people flee before the attack, as he should strike and wound them with it, which, had they been witting his reach, he certainly would have done. These precautions are not
of sheep. So great indeed was their dread, that a party of Indians once attempted to attack an officer, then friendly to them, by fire; but they put them all immediately to flight, by presenting their tooth pick cane at them, which they conceived to be a little gun. After this, the ship's boys went on board, and made a general search on board, and after signals of friendship made on both sides, a trade was opened with the islanders, which improved every day. The things they sold us were flint hand axes, and hatchets; having no iron; and the rates of trafficking were, a spik for a small pig, a smaller for a fowl, a hatchet for a hog, and middling sized fish for twenty rice, or bread-fruit; but, they trafficked with the ship's crew for the personal favours of their daughters and fitters, whom fathers and brothers brought them; however, their favours are soon forgotten: but when we reflect that they have never been taught either to distrust or suppress their passions, and are not accustomed to thought, which alone can recall the past, and anticipate the future, it is no wonder that their favours should be transient; they are affected only with the occurrence of the passing minute, and yet they are of a benevolent disposition. Though they have no trade, they have plenty of amusements and employments: manufacturing of their drefs is an agreeable employ to the women; and building huts and canoes, with making of tools and arms sufficient occupations for the men. Most of their days are spent in a country where nature has been lavish of her gifts; where the temperature of the sea is warm, but continually refreshed by whole sea breezes; where the atmosphere is constantly clear and serene, and where the climate and fruits of the land contribute to the strength, pleasure, and elegance of the natives. In short, their temper are untroubled by violent passions; they live a life of ease, equanimity, and content, and are situated in a delightful country, free from care, and happy in their ignorance.

M. de Bougainville, when at O-Tahalitee, met with a native of that island, about thirty years of age, very desirous of accompanying him to France, and his countrymen seemed to approve the step. He happened, however, to be a stupid fellow, and in two years fay at Paris, could never be brought to speak or even pronounce the language, positively from some impediment in his speech; yet still he would go out into the streets by himself, and was well acquainted about a large circle to which he had been accustomed, and seldom paid more for it than its value. The principal exhibition that pleased him was the opera, and particularly the women's. He was taken there by himself, paid for his admission, his favourite place was in the boxes behind the boxes. Among the great number devious of seeing his kind of country, he was taken to duffing with those who were most civil, and his grateful heart never forgot them. The miniftry sent him, in March, 1780, to the Isle of France, that he might be thence conveyed home; but he never lived to reach his native life, for having caught the small pox, he proved fatal to him.

The society fifies are six in number: viz. Huahine, Uleia, O-Tahalitee, O-Tahalitee, O-Tahalitee, and Marora.

1. Huahine was discovered the 11th of July, 1769, by captain Cook. It is situated in six degrees forty-three minutes of north latitude, and one hundred and fifty degrees of west, fifty-two minutes well longitude, is upwards of twenty miles in circumference, has a hilly surface, and a common boulder on the west side.

This island is divided into two peninsulas joined by an isthmus, which at high water is overflowed. It seems to have been disturbed by volcanoes, and the face of the country is somewhat flat to that of O-Tahalitee.

The same language is spoken here as at O-Tahalitee; the natives also wear the same kind of habitation, and are the same at both islands; which must be except that they are not so dark coloured. The women in general are handsome, and both women and men rather floucer, larger made, and less deformed; but they are more indolent and lazy. The pro-

128 The New and Universal System of Geography.
degrees five minutes south latitude, and one hundred and nine degrees forty-five minutes west longitude. It is hilly and rocky, and affords neither fuel, water, or anchorage for ships. The natives are addicted to the use of tobacco, and are smokers.

The island is inhabited by stone-cutters, but there are but eight persons, and they are all stone-cutters. The island is inhabited by stone-cuters, but there are but eight persons, and they are all stone-cutters.

The natives, with respect to their persons, are lively and strong, of a middling stature, slender, but hard-featured. They have black hair, long and thick, and their complexion, in general, is a chestnut-brown; but some few are darker, and some are quite white, and the bodies of the men are very hairy. Their heads are black and strong, and they wear them clipped short. They both plates, of men and women, are not very broad, but rather flat between the eyes; their lips, though not thick as that of the negro, are strong, and their hair is black and curling. Their eyes are dark brown, and rather small, and the whites of them not so clear: as in other islands of the South Seas. The women wear their hair long, and sometimes tie it upon the crown of the head; but the men never suffer theirs to grow more than three inches long. Women of all nations are rounder and shorter than the great length of their ears. They pierce the flaps of them, and stretch the holes, by wearing a leaf in them, rolled up tight like a scroll, till they become two or three inches long. The men wear none upon the head. Sometimes they paint, and perforate the skin of the nose.

The men have the privilege of painting and tattooing. The men cover their heads either with a round fillet, feathers, a straw bonnet, or with a bumpy cap. The clothes are made of the skin of red and white quilted cloth, or a mat, one part wrapped round the loins, and the other thrown over the shoulders; but the men it is almost naked, except a flap of cloth between the legs, which they are careful to be fastened to a belt round the waist. Both sexes wear on the breast, suspended by the neck, a flat piece of bone, shaped like a laurel-leaf; and occasionally, by way of amulet or charm, necklaces and ear-rings made of shells.

As to their habit, they resemble a canoe lying upon the ground, with the keel upwards: they are about fifty or sixty feet long, and built in the following manner: the foundations are laid with stone, by paving the ground in two courses, converging at the extremities to each other: the distance, from line to line, in the middle, is about six feet, and at the ends not more than a foot. In every line of this line of foundation is made a hole, into which they set a stake, six feet high in the middle, and diminishing proportionably to two feet at the ends: these stakes are drawn together, and fastened at the top, and then covered with a ground of matting of flag-cane leaves.

They have but few working tools, and those are very much made of wood, bone, or shells; but then they are very ingenuous at carving, and they use the art of. They carve and very highly polish, human figures about eighteen inches long; which they perform with great neatness.

Cuba, spears and battle axes are their weapons; their canoes are very badly contrived. Very little that may be depended on, can be said of their religion, language, or government.

There is a number of gigantic stone figures in several places on the coasts of this island, some crept in groves, in platforms of matting, and othersingle, fixed only in the earth. They resemble a human figure to the waist, are very feet high, more than eight feet across the shoulders, and far from being one of the worksmanship is rude; and the eyes and nose, are scarce marked on an ill-shaped head; but the ears quite long, in the form of elephant's ears. If the heads of these figures are placed huge round cylinders of stone, five feet in height, and five in diameter, set upright. They seem to have been crept into the groves of some chiefs, in former days, not being the workmanship of the present inhabitants, but preserved now as monuments of antiquity. How these stones were thus raised one upon another, is as little known as the cause of the two great stones on Salisbury-plain were erected. The islands do not pay any adoration to them, but hold them in a kind of veneration, and will suffer any one to tread upon the platforms. They probably may have some tradition concerning them, but as the Europeans who visited the island did not continue long enough to learn the language, nothing could be collected with certainty, except only the following: the natives never go to sea, sail, or fish. The islands are situated in the ten degrees twenty-five minutes south latitude, and one hundred and thirty-eight degrees fifty minutes west longitude. It is a fixed place, and is in general mountainous, but contains some valleys where the people dwell. The inhabitants are handsome, of white complexion, and frequently cut the face.

The natives are a well-made people, of a warm or yellowish complexion; but look almost black, by being purged with water. The men wear no beards, but sometimes tie in two bunches under the chin, and others part. The women reliable of O-Tahiti: their clothing is also the same, and made of the same materials. The men in general go almost naked, having only a cloth of cloth padded round the waist and between the legs. The dress of the women is a piece of cloth wrapped round the waist like a petticoat, hanging down below the middle of the legs, and a loincloth or tunic thrown over the foundations. But, to be more particular.

This land, though high and steep, has many valleys which widen towards the sea, and are covered with fine forests to the summits of the interior mountains. On the fourth day, at a peak, which is very rugged and irregular. All the north side is a black burn hill, of which the rock is vailed along the gape, and the top clad to the forest with a shrubbery of the most dense. In this island are, breadfruit, bananas, plantains, cocoa-nuts, scarlet-beans, paper-mulberries, of the bark of which they are made, calafemias, with other tropical plants and trees. They have hogs and fowls and pigs. Mr. Forster says, he never saw a single deformed or even ill-proportioned man among the natives; all were strong, tall, well limbed and alive in the highest degree.

Their arms are clubs and spears, like those of O-Tahiti; but nearer. They have also flints, with which they throw stones with great velocity, and to a great distance; but not with a good aim. In times of danger, they beat an alarm with drums of the same kind with those of the Society Isles, and like them, are under a monarchial government, but the chief does not look upon people, who usurp, in that respect, perhaps, any other in the world. Their canoes are from fifteen to twenty feet long, and about. Six feet wide and one foot in depth. They are often cut in shape, but not quite to large as those of O-Tahiti. Their drink is pure water, cocoa-nuts being rather scarce. They are as great a friend as to serpent, like the lower fort among the O-Tahitians.

Hood's Island was discovered by captain Cook, in 1774, who gave it that name from a person on board his ship, who first saw the land in that latitude.
The Friendly Islands are situated between nineteen degrees forty-four minutes and twenty-one degrees thirty-two minutes south latitude, and one hundred and twenty-four degrees twenty minutes west longitude. There are three main islands, which we shall describe here, and the lands of which are enclosed by coves and headlands, and are thus rendered very inaccessible. The inhabitants, under the name of Friendly, live on these islands, and are said to be very peaceable and cheerful people. They are said to be now in possession of some kites and very inconsiderable islands.

The Friendly Islands, or, as the natives call it, Tongataboo, lies in twenty-one degrees seventeen minutes south latitude, and one hundred and twenty-four degrees twenty minutes west longitude. It is about ten leagues in compass, and may be seen at the distance of twelve leagues.

The general features of the men in the islands of Amsterdam and Middleburgh are equal to our middle face, from five feet three to five feet ten inches; the proportions of the body are very fine, and the contours of the limbs extremely elegant, though something more muscular than at O-Talindee, which may be owing to a greater and more even coast, and natural strength in their agriculture and domestic economy. Their complexion is a clear mahogany or chestnut brown, with black hair, in loose trifles on the head; they are slight in the face; their hands are cut or shaven. Their features are extremely mild and pleasing, and they practice tattling, or cutting the skin. They have a practice likewise of powdering their hair, with a white powder made of lime, which burns upon others with blue and some with orange colour, made of turmeric.

Both men and women have, for their deck, only a piece of cloth or matting tied round the waist. The men are very fond of linting, and they wear their hair long, and, when black, forms a curve; the convex part has a groove that holds a fitting. In drawing the bow, instead of pulling it, so as to increase the natural curvature, they draw it the reverse way, so that the spring, to recover its former position, gives greater velocity to the arrow, and the recoil never hurts the arm of the person who discharged the bow.

In point of neatness and workmanship, their canoes exceed every thing the kind met with in the South Seas. They are constructed of several planks fewed together so neatly, that the joints on the outside are scarcely to be seen. Some of their canoes are double, and some single; the single ones are from twenty to thirty feet long; the double ones are from thirty to thirty-five, and may be seen lying in the midwater, terminating at each end in a point. At the ends are a kind of deck, about ten feet long, so that the cause is open in the middle, and they frequently decorate it with a small piece of wood, which burns upon others with blue and some with orange colour, made of turmeric.

Their religious opinions are little known; and what respects their government and public matters they are in the same predicament. The prevailing diet is the pepito, to every fish, and to every fruit they have, with brake and wild fowl. They are not particularly fond of styles, and use much of stuff to make their clothes, and to make their women's bodies. They have a child made of matting, and one made of the tידוע, and that is the only one that is left to them. They have some children made of wood, in the same form of the tידוע, but these two are said to be given to pilfering, like those on the neighbouring islands.

Reitandam Island, or Atwoodos, has a great number of small inconsiderable islands in its neighbourhood; it is found to be in twenty degrees south latitude, one hundred and one degrees and forty-five minutes west longitude. The inhabitants, under the name of Reitandam, live on this island, and are said to be the most peaceable and cheerful people that any of the described above.

It is a large island, and has a very good number of fowl feeding. The lower portion of the coast is covered with a great number of trees, and it is said to be the most pleasant island in the South Seas. The inhabitants are said to be very peaceable and cheerful people. They have a child made of wood, in the same form of the tידוע, but these two are said to be given to pilfering, like those on the neighbouring islands.
and a large piece of wood on the left side, with which they keep the vessel upright; on this wood there is always ready use for a sloop, and a kind of gear for fishing fish.

Horn or Hoorn Island was also discovered by Schouten. In 1618 it is situated in fourteen degrees fifty-five minutes for latitude, and one hundred and seventy degrees ten minutes for longitude.

The computation of the people of this island is a yellow, bushy, tall, large, white, and strong bodied; they are all runners, expert swimmers, and good divers. They do not suffer their breasts to grow, but take great pleasure in dressing their hair, which is black. Some tie it, others part it, and others cut it; some let it grow down the waist, and tie it in five or six tails, and others dress it sight an end, standing up like horse's tail.

Both men and women go naked, except a piece of covering between their legs; the women are very much deformed both in face and body, and are very short; they rub their heads and cheeks with something red. Their breasts are long, and hang down to their bellies like breast bags, so that they may be very disagreeable appearance; they are before very immured, performing the rites of Venus in the presence of every one, only under a mat. The fish-producers constantly a great variety of fruits, such as cocoa-nuts, breadfruit, yams, &c., for they know nothing of cultivation. They have four bags, which they cook competently. At low water the women catch fish which is eaten raw.

Queen Charlotte's Islands were visited by Captain Carter in 1797. They consist principally of eight islands, namely, Queen Charlotte's Island, Guadaloupe Island, New Jersey, Eddies Island, New Sark, Ottery's Island, New Alderney, Swallow Island, Carteret Island, and Prince's Island. The following is the bell account we could procure of Queen Charlotte's Island, the rest being only seen at a distance.

Mendenhall first discovered this island in 1845. He would fire, they have fixed a colony here; but found it impracticable, as the natives continually maintained hostilities against him. Captain Carter's attempt in 1797 was equally unsuccessful; for on the first attempt to land, a skirmish ensued, in which four people lost their lives. We perceived, however, laying the island abounds in large, fowls, ringdoves, turtle-ducks, partridges, geese, hens, swallows, and black lizards. It likewise produces plantains, sugar-canes, two or three kinds of bread-fruit, beef, two kinds of good-almonds, Spanish pumpkins, chufas, and nuts, cocoa-nuts, large pine-apples with kernels in them, and apples. Reefing pernamentia, lago, sweet fishes, ginger, a kind of Indian, &c.

Their towns consist of about twenty houses each, they are built round and of plank, and flinted with palm-leaves. Their houses have stories, to which they go up by land-ladders; each story is inclosed with huts, the part above being left open to give light and air. Their houses are covered with grass and leaves. Both the entrance, instead of a gate, and the sides and flues within are lined with fine matting. There is in each town a large house, probably a temple; and another long house, apparently a place of meeting, in which we pitched on a large bundle of arrows, in great quantity, ready for use; and also a well two or curiously made, with fleas to go down, and covered with plants. Some of their towns are rounded with breast-work of stone, reenforcing fortification, and gives reason to suppose that the natives are often troubled with civil wars. Some falling waves fenced with stone are found close to the sea.

The inhabitants at present go naked and unadorned, though when Mendenhall first was there they had clothing and ornamentation. They live principally on fish, and a wine thus came down upon them with the fury of wild beasts.

Savage Island lies low, in nineteen degrees eighteen minutes south latitude, and one hundred and fifty-four degrees thirty-seven minutes west longitude. On Captain Cook's landing here, June 17, 1778, he laid his ship with great fury: every possible intimation of good will was given them, but without effect: a dart or spear was thrown by one of the natives, which grazed Captain Cook's shoulder; a party being landed, in which each polled on terra firma, to secure a rest in case of an attack, saw it absolutely necessary to fire on the natives, to refuse their commander, and those who were with him, from destruction. This prevented others coming down from the heights, and abated the ardour of those who were engaged; whether any of the Indians were hurt, could not be perceived. This disposition of the natives, as well as the island furnishing no port, determined captain Cook to leave it. The name of Savage Island was given by him to this spot, from the conduct and effect of the island, and the white thus came down upon them with the fury of wild beasts.

Ilands of Danger, a name given by commodore Byron to three islands which had hitherto been men of these two between them, and were so low, that a ship may be cloe in with them before they are seen. Their situation is different laid down by commodore Byron and captain Carteret; the former placing them in longitude twelve degrees thirteen minutes north; latitude one hundred sixty-four degrees five minutes west and the latter in ten degrees forty-one minutes and ondred four and fifty minutes west longitude. The thirty-easttreem of these islands are about three leagues in length between the extreme points, from the west-boards, a reef runs out, and in the sea breaks to a tremendous height; upon the north-west and well lides immemnurable rocks and islands...
near two leagues into the sea, and was extremely dangerous. The islands have a fertile and beautiful appearance, and the natives, under the persuasion that the ship was an English war-vessel, assembled in great numbers, prepared for hostilities, and were limited by a small body of troops, who were stationed on board the ship, to make some experiments of the temperature of the sea at a certain depth, but were at length saved by the Adventure. On December 26, the ship, pulling off a great quantity of pecked or broken ice, some of which looked dirty or decaying, with the aid of ice-falls surrounding them; and in the evening, the sunsetting south behind one of them, tinged its edges with gold, and brought upon the whole craft a beautiful tinge of purple: they had no thought during the continuance of the whole summer.

On the 20th January 1773, captain Cook searched for Cape Farewell, which is laid down by Bouvet in fifty-eight degrees fifty-three minutes south longitude, and ten degrees six minutes west. The course was west, and when the ship was off Cape Farewell, the ice was so thick that they were obliged to return. Cook then sailed to the north, and was in the latitude of Cape Impossible to proceed further. Here they were joined by the Indians suddenly jumped out of his boat, swam to the ship, and ran up the ship like a cat. As soon as he had discovered this, he was far down upon the ice, and was burnt into a violent fit of laughter, then started up and ran all over the ship, attempting to feal whatever he could lay his hands on, but without success. Seeing black naked, it was impossible to report his account. The seamen put him on a jacket and trunks, which produced great merit, and formed a part of some new tricks, which he left with a varying appetite; and, after playing a thousand antics tricks he leaped overboard clad in his new apparel, and swam back to his ship.

These people are tall, well proportioned, and clean limbed; their skin is a bright copper colour; their features good and their countenances exhibited a mixture of siptude and cheerfulness that is very striking. They have long black hair; some had long beards, some only whiskers, and others nothing more than a facial hair at the point of the chin. All their ears were bared, but they had no ornaments in them. They were all dark naked except their ornaments, consisting of flints very pretty differing from the rest, which they wear round their neck, wrists, and waists.

Sect. XIV.

Containing a journal of Captain Cook's three years voyage round the world.

We shall conclude our account of this quarter of the globe with some particulars relative to the important expedition made by captain Cook, &c. for the discovery of a southern continent, which object has greatly attracted the notice of the learned and curious. On July 1, 1773, the Resolution and Adventure (the former commanded by captain Cook, and the latter by captain Furneaux) sailed from Plymouth Sound, having on board Mr. William Hodge, landscape painter; Dr. John Reinhold Forster, Mr. George Forster his son, and Mr. Sperling, naturalists; together with Mr. William Wales, and thirty-three persons; and set sail from the Cape of Good Hope on the 30th of October following. On the 30th of the next December they saw the first ice in latitude forty degrees, and thirty-three minutes south, and longitude one hundred and eighty degrees, in the sights of the six fellows, who had reached that point, and perhaps will be the last. The first ice was seen December 12, in twenty-two degrees, ten minutes south, one hundred and fifty-six degrees, which is eleven and a half degrees more to the southward than the first ice seen the preceding year in the Atlantic Ocean. On December 15, in sixty-five degrees south, one hundred and fifty-six degrees, the course was interrupted on account of the ice, among
amidst which they were in a manner imprisoned, which obliged them to seek to the northward; and soon after they got clear of all the lesser ice, but not without-receiving several shocks and breaking the hulks of the ice. The weather remained foggy, and several ice-colders fast lay in their way, one of which they were near falling aboard of, and if that had happened, some would have ventured to retain the same, but the wind had driven its opposite end to the windward of this huge mass, so that every one on board was in the most dreadful fright for a few minutes. Several sledges, chickens, and two or three antarctic penguins on the wing. We doubt not but the following account and description of their birds will prove interesting:

Captain Cook relates, that having continued during the whole summer in the frigid zone, their chaces of penguins proved very unsuccessful, though it afforded them much entertainment. Their heads were done in quick succession to the windward, and at times dipped continually into and out of it, making way with such amazing velocity in a straight line, that the bowmen were obliged to give over the pursuit, but not before they had come near enough to sound one of them; but though they followed it closely, and fired at times with solid shot, which was returned to him, yet they were at last obliged to kill it with ball. When they took it up, they perceived its hard glossy plumage. It weighed about 15 pounds, so that its beam of 6 feet 6 inches is extremely thick, and consists of long narrow feathers which lie above each other as closely as scales and secure the animal fresh against the cold; in which, they appear to live, as the thick and firm, soft, and down, and all together, were highly esteemed by them, not because they wished to eat them, but because they were extremely rich in oil and fat, and of great value to the ule of the penguins. Their plumage was remarkably abundant, and insected their backs in a great proportion; and two feathers, instead of one, projected out of every one, lying within each other, and formed a very warm covering. As they are almost tenninated in the head, these wings are very strong, and of great length, to support them in flying.

They crossed the antarctic circle a second time on December 20, in one hundred and forty-seven degrees forty-five minutes west longitude. The next month the ice-colders were seen very high and 5, good, forming a large top many peaks, whereas those that had been seen before were 2 or 3 feet and not so high; many of them were between two and three hundred feet in height, and between two and three miles in circuit, with perpendicular sides.

Most of their winged companions had now left them, the grey albatross only excepted, and, instead of the other birds, they were visited by a few short-tailed petrels, and, not much after the same, the first some weeks they were observed the curious bill and eye of this bird, we may add, that they lay on the floor of a large pigeon, the feathers of the head, breast, and part of the back, those of the belly and side of the wings white, the tail feathers are also white, but tipped with brown. Another petrel was shot afterwards; finaller, and instantly greened; birds were fatter of feathers than any before seen. A few chocolate-coloured albatrosses were seen in these parts, all which kept among the ice, from whence, captain Cook concluded they came from the south; and the greater part of the ice was covered with a thick layer of snow.

On December 31, they had penetrated to eighty-four degrees seventy minutes west longitude. Twenty-three small ice-colders were this day seen from the deck, and several more were fast lay in the ice next to them. As the day was very foggy, that they could not see above two or three miles round them. On the 29th the weather was very bad, with heavy snow, and ninety large ice-colders seen were in sight. This being Christmas day, the captain invited the officers and men to drink, and one of the captain's stewards attended to that purpose.

The No. 41. light of an immense number of ice-colders, among which the ship drifted at the mercy of the current, every moment in danger of being dashed into pieces against them, could not deter the officers and men from offering a toast to our holy Father Christmas. They had often offered successions of toasts, which the hills among the flags, without either the old or young of the latter being disturbed at their presence. It may be added, there has been a general impression of the effects of fear and delight which the birds must have produced on various coves, and probably in no small numbers, as there are so many of them.
On January 14, being in thirty-five degrees thirty-six minutes south latitude, and thirty-nine degrees twenty-four minutes west longitude, land was discovered; its mountains rose from the sea height, covered with snow and ice, in most places, quite to the water's edge; towards the south and several low islands were seen, which appeared to have some verdure upon them, and were therefore called the Greenlands. This land, which was at first supposed to be part of a great continent, was found to consist of an island of treasuries leagues in circuit between the latitudes of thirty-five and thirty-eight degrees, and longitude of thirty-five and thirty-eight degrees from the equator: it was named Point Blank, and, after some explorations, the crew perceived that they were in the southern seas of Southern Georgia. Captain Cook landed in a bay on the northern side of this island, which he called Possession Bay; here he displayed his colours in three different places, and took possession of the country in his Majesty's name, under a discharge of small arms.

Two rocky islands are situated on the north end, one of which was named Willis's island, from the perfon who discovered it; it is a craggy cliff, nearly perpendicular, which contains the relics of many thousand things. The other received the name of Bird island, from the innumerable numbers of birds of all sorts that were seen upon it, from the largest albatross down to the least petrel. Several porpoises were likewise observed, and seals, which probably came to breed on these inhospitable shores. The base of the island is about two square miles, and is terminated by perpendicular ice cliffs, of considerable height, such as are found in the harbour of Spitzbergen, in the northern hemisphere. The shores were continually breaking off and floating out to the sea; and a great part happened while they were in the bay, which made a noise like the open sea.

The rest of the country were not less savage and horrible. The wild rocks raised their lofty summits till they were lost in the clouds; and the valleys lay covered with snow; the tree was to be seen, not a shrub even big enough to make a toothpick. The rocky vegetation observed was a strong bladed grass, growing in tufts; wild barberries, some like moose, which sprang from the rocks; seals, or sea-bear, were pretty numerous. Among them was a huge animal of the fume kind with the feature described in lord Anson's voyage; a mild, fitumous foot it trot through the head, whilst it lay asleep. It was all over a dark grey colour, with a light olive cast, something like the seals in the northern hemisphere; it was of a perfect shape of its forest, and the want of external ears; its nose projected far beyond the mouth, and had a beak, which was about thirteen feet long. Here was found a flock of about twenty penguins, of a much greater size than any before seen; being thirty-five to forty inches long, weighing forty pounds; their seals and penguins killed here were very acceptable to the whole crew; for any kind of fresh meat was eagerly craved. Besides being uninhabitable, South Georgia, was so far from all other land inhabited by men, that it might be visited occasionally by European ships. On the coast itself, not a river or stream of fresh water was to be seen.

On the 26th of January, Captain Cook left the southern part of this island, and steerèd east-south-east, until he arrived in forty degrees south latitude, further than which he did not proceed, without visiting their villages. The inhabitants of these islands, he observed, some certain signs of meeting with land. These high southern latitudes, where nothing was to be found but ice and thick fogs, had at last made up his mind to return. The discovery of this island was made on January 35, at seven in the morning. Captain Cook gave the name of Sandwich land to this whole country, which may possibly be the northern point of a continent; for he is of opinion that there is a track of land near the pole, which is the source of most of the ice that is spread over this vast southern point.

Southern Thule, in latitude fifty-nine degrees thirty minutes south, longitude twenty-seven degrees thirty minutes west, was the most southern extremity that was seen in proceeding toward the south. The day that land was discovered; the mountains appeared to be of vast height, their summits being conflantly wrapped in clouds, and the lower parts covered with snow down to the water's edge. This coast, which they were then, Freezerland Peak, Cape Brids, and Cape Montagu; with an island that received the name of Saunders, thirty-eight degrees twenty-seven minutes south latitude, twenty-six degrees forty-four minutes west longitude, and two small islands, which were named Palliser and Cook's islands, were of considerable height, and are covered with snow. The whole country had the most defolate and horrid appearance imaginable; not a single blade of grass could be discerned upon it, and it seemed to be forsaken even by the amphibious and lumpish animals which dwell on South Georgia.

February 14, bore away to the northward, having crossed the meridian of Greenwich, in latitude fifty-seven degrees fifty minutes. On the 15th crossed the place where Cape Cunomission is laid down by Bouvet; without having the least signs of land, though the weather was favorable to discovery. Captain Furneaux likewise supposed that he had passed the meridian of Cape Cunomission in the latitude of fifty-seven degrees fifty minutes south, without meeting with any land.

The Fugitive, while lying off an island in the northwestern part of the country, was now near to the most impatient height; their voyage had then lasted twenty-seven months after leaving the Cape of Good Hope, since which time they had not touched land. Two small ships had also been fearcd from all intercourse with their country, their friends, relations, and domestic endearments. As the Fugitive approached a country by which she was going to engage with Europe, her hopes and fears began to be greatly excited; all the tender and endearing ties at home now took litile position of the breast, and agitated with the strongest sensations.

On March 21, being then between thirty-five and thirty-six degrees south latitude a ship was sent to windward, and in three days they discovered another. The eagerness with which every person on board bent his eyes toward their welcome objects, was the strongest proof of that delicate longing for an intercourse with Europeans, which, till then had been feeped by the attentions which their situations and regard to personal safety demanded. Two tedious days however, palled in this state of painful uncertainty, before they could come up with either of the ships; at length they got within five miles of one of them, which, as they were not intended to be a basis, in the Augustinian shape of its forest, and the want of external ears: Its nose projected far beyond the mouth, and had a beak, which was about thirteen feet long. Here was found a flock of about twenty penguins, of a much greater size than any before seen, being thirty-five to forty inches long, weighing forty pounds; their parts and penguins killed here were very acceptable to the whole crew; for any kind of fresh meat was eagerly craved. Besides being uninhabitable, South Georgia, was so far from all other land inhabited by men, that it might be visited occasionally by European ships. On the coast itself, not a river or stream of fresh water was to be seen.

On the 26th of January, Captain Cook left the southern part of this island, and steerèd east-south-east, until he arrived in forty degrees south latitude, further than which he did not proceed, without visiting their villages. The inhabitants of these islands, he observed, some certain signs of meeting with land. These high southern latitudes, where nothing was to be found but ice and thick fogs, had at last made up his mind to return. The discovery of this island was made on January 35, at seven in the morning. Captain Cook gave the name of Sandwich land to this whole country, which may possibly be the northern point of a continent; for he is of opinion that there is a track of land near the pole, which is the source of most of the ice that is spread over this vast southern point.
feather than any ship ever did before; since, according to Mr. 
Fother, all their tasks, taken together, form more than 
three the circumferences of the globe. Thus was com-
pleted a voyage which will immortalize the conductor of 
it, as it was not only the most extensive, but the most in-
trusive one ever performed.

In this celebrated voyage, Captain Cook not only dis-
covered, but surveyed vast tracts of new coast; dis-
gelling thereby the illusion of Terra Australis incognita, 
and fixing the bounds of the habitable earth, as well as 
those of the navigable ocean, in the southern hemispheres. 
But being the chief navigator which perhaps any age or 
country ever produced, is not this great scotian’s ultimate 
praise; his humane and judicious attention to every means 
which might possibly contribute to the healthiness of the 
ship’s company, gives him an eminent place among the 
distinguished few who are true friends to mankind, and 
his endeavours were successful to a degree of admiration, 
the methods he made use of for preserving the health of 
the seamen being no less simple than efficacious. With 
a company of one hundred and eighteen men, he per-
formed a voyage of upwards of three years, throughout 
all climates from fifty-two degrees north, to seventy-one 
degrees south, with the loss of only one man by a dis-
temper. From hence it plainly appears, that marine dis-
temper is not caused by any malignity in the sea air; and 
that a voyage round the world may be undertaken with less 
danger to health, than a common tour in Europe; espe-
cially when such assiduous care is taken of the diet, bed-
ing, cloaths, the application of excellent antiscorbutic 
medicines, &c., as was skilfully employed by Captain 
Cook, which obtained him the cordial esteem and affec-
tion of the most respectable societies in this country, and will 
for ever erect a monument of deserved eulogium and gra-
utile in the hearts of his countrymen, and the friends 
to real merit, of every distinction, throughout the globe.

S E C T. XV.

We shall here observe, as Supplementary to our account of the 
Dutch settlements in the East Indies, that

On November 12, 1781, the town and citadel of Ne-
gapatam, on the coast of Coromandel, in the East 
Indies, was taken from the Dutch by the English fleet and 
army commanded by admiral Hughes and Sir Hector Mun-
ro; the garrison consisted of near eight thousand men, 
about five hundred of which were Europeans, and the rest 
Indians; and also,

On January 16, 1782, Forts Oudhburgh and Trinco-
male, situated in Trincomale bay in the island of Ceylon, 
were taken from the Dutch by the English fleet and army 
under admiral Hughes and Sir Hector Munro, and are now 
in the possession of the king of Great Britain.
CONCERNING AFRICA IN GENERAL.

SOME geographers, both Greek and Latin, have, in their systems, ranked Africa as the third part of the known or inhabitable world; nevertheless, as the posterity of Noah made their first emigrations out of Asia into this northern quarter of the globe, (for the ancients knew but little of the southern part of Africa,) we shall therefore make choice of it, as most proper for the second division of our work.

The far greater part of Africa continues still unknown to us; and though we are at present become better acquainted with it than we formerly were, yet our knowledge of it extends little farther than the regions that lie chiefly along the coasts of the Mediterranean; which being the most fruitful in corn and other products, and also more easy of access, have been more continually visited by both Europeans and Africans.

The midland parts were for a long while believed inaccessible and uninhabitable by reason of their intolerable heat, they lying mostly under the torrid zone, and have on that very account, as well as the savagery of its inhabitants, been little visited by any strangers. Even the southern parts of it, which lie under a more temperate climate, and are much easier of access, are found inhabited by such barbarous people, so fierce and savage in their nature, so uncomely and forbidding in their manners and language, and so of all intercourse with foreign nations, that our readers need not wonder that we are as much in the dark about them as we are about the midland part of this continent.

The name of Africa, or Afri, was given to this vast tract of ground from one of its ancient provinces, which we now style Africa Propria, and extends itself along the Mediterranean, from the ancient Mauritania, on the west, to Cyrenaica, on the east, where is now the kingdom of Tripoli, and which has been the celebrated Carthaginians. The ancient Greeks called it Libya, from another of its provinces, whose desert part bordered upon Egypt, and was inhabited with other uninhabited part of it, by the old Arabs, under the name of El-bers, which signifies a divided, or forsaken land. The Indians call it Albatania; the Arabs, Libya, or rather Africa; and, the Ethiopians, Akabarat; and the Perrians, Armenians, and other nations, by different names.

Africa, in its largest extent, lies south of Europe, and west of Asia, and is bordered on the north by the Mediterranean, which parts it from the former; and on the east by the Red Sea, which separates it from the latter to which it only joins by that small island or neck of land which cuts off the communication between these two seas, and is commonly known by the name of Suez. On the south and west, it is surrounded by the main ocean, so that it may be properly styled a wall overgrown peninsula, joined only to the continent of Asia by the Isthmus above-mentioned, which, if cut off, would make it by far the largest island in the world. It extends itself a vast way, not only on each side of the equinox, but of the two tropics likewise; the southern verge of it reaching quite to the thirty-sixth degree of southern, and the northern almost to the thirty-seventh degree of northern latitude; so that its utmost extent, from north to south, is almost seventy-two degrees, or about four thousand three hundred and twenty miles. From east to west it reaches still farther, viz. from fifteen to sixty and a half degrees of longitude, that is, four thousand five hundred and twenty miles.

The ancients divided this part of the then known world into twelve regions or provinces, and ranged them in the order following, going from east to west, viz. the two Mauritania, the two Numidias, Afric Propria, Libya Cyrenaica, and Mauritania; Lower Egypt, Thapsis, Libya Interior or Upper, and the two Ethiopias. Others ranked them in the following order: Egypt, Marmarica, Cyrenaica, Syrtica, Africa Propria, Numidia, the two Mauritania, instead of Afric Propria and Ethiopia. Under the Romans, it was divided only into these five provinces: Afric Propria, Mauritania Cæsariensis, Mauritania Tingitana, Numidia, Tripolitana, and Botryia, the last of which amounted to little more than what we style the present Barbary, but was all they possessed, or were perhaps acquainted with, except the kingdom of Egypt, which they did not reckon a part of Africa. Even Strabo had little notion of its real extent; and though Ptolemy, who was much better acquainted with it, and had gone farther in his division of it than any of the ancients, has been frequently divided it by twelve regions or provinces; yet one half of the country was unknown to this excellent geographer.

The African emigrations have been not since acquainted with this region, than the Greeks and Romans. This plainly appears from the general description which Megasthenes and Strabo, two of the best, have given of it. They neither allow it so great an extent as Ptolemy doth, nor place in it Egypt and the other countries that lie between the Nile, the Red Sea, and the eastern ocean on Africa, but make them to be parts of a new continent. This is no less inaccurate in alluding to the true situation, names, &c. of states, gulfs, and several cities and provinces, but a general confusion seems to run through all the whole, occasioned...
in all likelihood by the coming of the Arabs into this country, who, on the remembrance of their ancient inhabitants, gave new names to those places, and caused such changes in it, as the old Africans, upon their recovery of it, could never thoroughly repress.

In the course of the voyage, the christians had a very imperfect knowledge of a great part of Africa, and consequently had never visited it, so as to have afforded a fished plan of these countries when they left home; and, in what manner it was circumnavigated about three hundred years ago, which is a fact that is not done of any other country.

The Goths having recovered Portugal from the Moors, followed them through the shores of Gibraltar, and subdued part of Spain from among the towns of Tangier, Ceuta, Arzila, &c.

Prince Henry V. son of John II. king of Portugal, accompanying his father in one of those expeditions against the Moors of Africa, being firmly persuaded that a way might be traced out round Africa to the East-Indies, from whence the fine spices and other rich merchandises were brought to Egypt, and the ports of the Levant, and obser

Arms, gold, ivory, and other valuable merchandize was annually brought over land by caravans from Guinea to Morocco, forming the design of discovering the west coast of Africa, being convinced that it would turn to account to visit those golden shores, if he should be dispa

He now set sail and took upon him the voyage, and after having carried his men in some difficulty, but they did not attempt to pass it for ten years afterwards: but having at last overcome the difficulty, he obtained a boat or grant from the pope, of all indians countries, that should be discovered to the west of Africa; and finding, after a few years, that his

He no sooner returned to Portugal, therefore, from the African expedition, but he obtained leave of his father, king John, to set out from Portugal for the discovery of that coast which was not yet known.

In the year 1471, the trade was extended as far as the Gold-coast, in five degrees north latitude.

King John III. caused the fort of St. George del Minho to be erected for the protection of the Gold-coast, in the year 1481, and having now great expeditions of discovering a way to the East-Indies round Africa, and apprehending that other princes, notwithstanding his grant from the pope, would attempt to follow his people to India by the same route, he applied to the several princes of Christendom, representing that they ought to furnish their quarters with provisions and ships, in those parts of the Africa and India, as they would all reap the benefit of it, but the enterprise being still deferred very hazardously, or rather not at all, he resolved to undertake it himself.

Whereupon king John applied himself to the pope, to confirm the donation of all pagan countries, north and south of the Cape Bajadore, which had been made to his ancestors by the holy see, and the pope not only confirmed the former grant, but decreed, that no other nation should be inspired to any such discoveries; and the king of Portugal from that time (1481) affirmed the title of Lord of Guinea, by which was then meant all the west coast of Africa then discovered, or then after to be discovered, ordering his commanders to fit up those crofles in memory of taking possession of those countries as part of the Portuguese dominions.

The Portuguese commandant first set out, which was in 1482, who, passing Cape Catharina, came to the river Congo in the kingdom of that name, called by the natives Zaure: he sailed on, twenty leagues further, and instead of the river of Congo, he called it Calouanghum, in thirteen degrees south latitude, and another in twenty-two south: and returning to Congo, he had a conference with the king of that country, wherein he told them, they came to instruct, his people in the Christian religion, so they did every place where he came to; and the king sent one of his sons and several of his nobility with captain Diaz, for to dwell there, and to be a bond and queen, and several persons of quality being appointed: the chief of the former name was Zutkura, but they gave him the kingdom of Don John. Bartholomew Dias, in 1487, was sent with three ships to make further discoveries to the southward, in order to find a passage to the East-Indies; and was to return to us to make the most southerly promontory of Africa, which he named Cabo Tormentoso, from the terrible and mountainous sea he met with there; which so terrified him, that he durst not pass it, but returned to Lisbon, to tell the king about it, and show him the map he had made, now that he had gained his point by opening a passage to India, and gave the southern promontory Diá descried to the king of Portugal, that he might give the king of Emanuel, the son of king John. This prince sent three ships, on board whereof were one hundred and sixty men sent by Valdo de Gama, to search for a passage of the Cape of Good Hope. De Gama set sail from Portugal on the 8th of July 1488; the captains who commanded the other two ships were, Paul de Gama, brother to Valdo, and Nicolas Nunez; they had a trader with them laden with provisions, commanded by Gon
dalão Nunez, and a troop, of which Bartholomew Dias was captain, bound to Del Mina on the coast of Guinea. Admiral de Gama, with his three ships, made the Cape of Good Hope on the 16th of November in the evening, and gave it the name of Victoria, and having followed the coast of India, in search of spices, he returned to Lisbon, and then set sail from Portugal on the 12th of December, and arrived at Lisbon on the 25th of January, 1489, having discovered all the coast to the island of Natal, as being our Savioirs, afterwards arrived at a river, which they called De los Reys, or the King's, being on the coast of the Levant, they went upon deck with the chief of the natives, who gave them ivory and provisions, and the admiral left two men to help to inform him of the state of the country at his return; and that the country of Natal, of which much had been changed for the worse. Clothing along full to the northward, they arrived at Mozambique, in 28° 40'. south latitude, where they found the Portugese merchants, who traded to India for spices, precious stones, &c. There was a very good harbour, and the town was inhabited by Moors, who traded to the Red Sea, and to India, in large vessels, but without Asia. The Portugese having entered the harbour, the fish, or chief of the Moors, sent them presents and provisions, desiring leave to come on board, which was granted, and he came with a numerous train of attendants, dined in a Turkish habit; and here the Portugese obtained a pilot of the king to carry them to Calcut, in India, which they were told lay about one thousand leagues to the northward.

But to proceed with our general survey, Africa comprehends forty-one kingdoms, states, or provinces; viz.,

1. Barbary; comprehending, Morocco, Algeirs, Tun

In treating of these extensive countries, we shall consider the dominions of which it consists, in the following par
cs, viz.,

I. Barbary; comprehending, Morocco, Algeirs, Tu

II. Negroland; comprehending; Sierra Leonne, Mundigian, Phaley, and Jalofit.

III. Guinea; comprehending, Whindah, Arzab, Bara

IV. Congo; comprehending Bengazi, Angola, Congo

V. Cabras, or the country of the Hotentotes, &c.

VI. Zarunguehr, containing; Moambiquen, Meldone, 

VII. Abyssinia, or Ethiopia, Superior; comprehending Nubia and the coast of Abou.

VIII. Egypt; being the north-east division of Africa.

In order to give our readers a more clear view of the limits of the continent, islands, and other particulars worthy of notice in this division of the globe, &c. view, we have annexed the following Tables:

The capital city of this empire, called also Morocco, is pleasantly situated on an extensive plain, between two rivers, the Neptuln and the Agmed, and is watered by the Tenfis. It is one of the most elegant, populous, and important cities in Africa. The most received opinion is, that it was founded by Abu Tchizzâhe, and finished by his warlike son Joseph, who after obtaining many glorious victories in Spain, and carrying thence thirty thousand prisoners, and many captives, whom he constantly employed in fortifying it with strong walls, which were twelve miles in circumference. It is then crossed by the river Mulvia, which separates it from Algiers; and, on the west, by the Atlantic Ocean: it is about five hundred miles long, and four hundred and eighty broad, and some make the circumference two thousand miles. This empire contains three great divisions or provinces; namely, that of Fez, to the north. 2. Morocco Proper is in the middle, and 3. Susa on the south.

The chief rivers are, 1. The river Mulvia, which runs from south to north, separating the kingdom of Fez from Algiers, and discharging its waters into the Mediterranean. This is a large deep river, according to Dr. Shaw, and admits of small sailing vessels, and might be made commodious for ships of greater burthen: the sources of this river lie a great way within the Sahara or desert, at the distance of eight hundred miles from the sea, and runs almost its whole course in the same meridian. 2. The river Susa, which runs from east to west, through the kingdom of that name, discharges itself into the Atlantic Ocean, at the mouth whereof lies the port-town of Santa Cruz. 3. The river Kabetas, which runs almost in the first direction, and discharges itself into the same ocean, the pritectual port of Salé being on the mouth of it. 4. The river Ceiba, at the mouth whereof Almora is situated, being another piratical port. The river Locus runs in the same direction, and falls into the same ocean, near the mouth whereof stands the port of Larache. None of these are navigable for ships, and the ports at their mouths will admit but small vessels. The most commodious are those of Tangiers and Tripoli, in the Mediterranean, but these are unsafe in some winds. The Spaniards are in possession of the port of Ceuta, opposite to Gibraltar, and of Penon de Velez, called also of Cabo de Puertos, to which the Mulvia discharges itself; but neither of these is habitable. Others less considerable are the Taga, the Omnissahib, and the Tenfis. This river runs through the city of Morocco, and supplies the inhabitants with water: it has a handsome bridge over it.

The Greater and Lesser Atlas are not only the principal mountains in Barbary, but some of the most celebrated in the universe. The Great Atlas divides Barbary from Blicudgerit, and the Little Atlas extends along the Barbary coast to the river Gibralsar. The coldcurrents and inaccessibility render the Great Atlas in many parts uninhabitable, but some places enjoy a milder climate, contain many villages, numerous herds and flocks of cattle, are well cultivated, and inhabited by Arabs, Berberes, and other African people, who, in the severest parts of the winter, are obliged to retire into wadi caverns, to preserve themselves and their flocks from being overwhelmed with the prodigious quantities of snow that fall, and from the inclemency of the weather. These people are in general fierce, cruel, and warlike, and are spread in numerous tribes on the various branches of this prodigious mountain. They can bring many men into the field, and have in their power to be very troublesome to the neighbouring governments, it being as impossible to invite upon the defensive against them, as to bring them totally under subjection.
The city of Fez, situate in thirty-eight degrees north latitude, and four degrees west longitude, was originally the capital of the kingdom of the same name, and is at present a rich and populous city. It comprises three distinct parts, viz. 1. The old town, which contains about four thousand houses, and stands on the east side of the river Fez. 2. Al-Aziz; containing about four thousand inhabitants, and standing on the west side of the same river. 3. Albega, or White Fez, which was built by Jacob, king of the Bel-merizi, and contains twenty thousand inhabitants. The two first towns, Old Fez, the greater, and New Fez, at present they form together one city.

Old Fez is nine miles in circumference, divided into two miles, or two catterials; the one old and given to decay, the other new and in good condition; the latter is garrisoned with blacks, but neither have any caution to defend them. The houses are of stone or brick, three stories high, flat roofed,composed with galleries, adorned on the outside with models, and embellished with various alterations. The main entrance is by a wooden bridge, and there are thirty cubits in length and twenty in breadth; the roof is flat, with stone and tile work; there are thirty castellated gates; and the pillars which support the minaret, or tower, are thirty cubits in height. In the colonnade belonging to this mosque are forty-two galleries, and four hundred arches for people to perform their ablutions. The college is the most eminent, and contains the chief library in the empire; here are several other hospitals and colleges, which are large, magnificent, and well endowed; fifty huted water conduits, and two hundred spacious rooms. As Fez is usually deemed the grand magistrate and principal mart of Barbary, the streets therefore swarm with merchants and tradesmen of all sorts of merchandise, and the warehouses, shops, &c., are filled with a great variety of commodities.

Morocco, where the court now resides, is situated in a pleasant plain, in five degrees of west longitude, and thirty-four degrees of north latitude. The city is divided into four quarters, or rather contains several cities united. The palace is a distinct city; the parks and gardens that surround it, with the number of baths, rooms, of which only a single instance is given, and the number of baths is about two. The quarter of the Moors and the Negro town are also distinct, and the Jews have a quarter to themselves, in which there do not seem less than fifteen thousand of that nation, living allowed a flesh or magistrate, who has the government of them according to their own laws, and the king allows them their protection. Notwithstanding which, these people are exceedingly ill-used, as they are plundered, abused, and beat, even by the very meanest of the Moors, and dare not resist them. Amongst the governor men brewers or cudgel them whenever they come in their way, and they are not permitted to come out of their quarter with shoes and stockings on, being obliged to walk barefooted. This is the practice in the Algeciras of Fez, and is called the Alegars of Fez. They live on the same principles, and laid out a great deal of money in the mode and fortifications; but the parliament refusing to let the king have money to maintain the gâyers, baths, &c., the men were obliged to quit the place, though it is aged, it would have been of very great service to the nation, if we had been masters of it in this way, and not the Moors.

In January 1545, the Infepeus privates, having sprung a leak, was obliged to run ashore in the bay of Tangier, where the whole crew (excepting the captain, who escaped, with Vela, four lieutenants, and two privates) were drowned to a loathsome dungeon, and suffered incorrigible hardships, being himself famished with hunger, and others
tually treated. Out of the whole ship's company, which amounted to one hundred and eighty-three before the wreck, exclusive of Mr. Raffel the surgeon, whose death was by the severity of the cold weather, or of the seas were murdered by the Moors; and the survivors, to the number of about sixty, were redeemed for a large price in bonds ofערי, by the agrees to the bottom of a bay called Eutrope, in one degree fifty-seven minutes well longitude, and thirty-four degrees forty-eight minutes north latitude. The town is from ten to twelve miles inland from the coast. It is situated in the degrees twenty-five minutes well longitude, and thirty-six degrees thirty-five minutes north latitude, and lies at the entrance of the Mediterranean. It is a kind of peninsula, which is the nearest point of land to the Spanish coast: the streets and fortifications are not so good as might be expected from its situation; nevertheless it is a considerable town, has a strong garrison, and is a place of refuge for seamen, who have never been able to take it, though they have blockaded it ever since. Near this city is a mountain with seven heads, which the ancients called Mounti, with the towns of Sepulcro, Frares, and Seven Brothers. It is a place of great trade, and has a good harbour.

The next town we shall describe in the province of Fes is Tetuan, which is situated on the coast, about eight miles from a bay of the Mediterranean sea, called Fes; and is between twenty and thirty miles south of Ceuta, and about fifty-four miles of Tangier. The town is about a mile long, and half a mile broad, and has a citadel, and the town and country beneath it the streets are narrow, unpaved and full of dunghills, which makes it a filthy place in winter, yet the town is said to be one of the best towns in the country, on account of its being better built than most others. Their houses are usually built about a little open square, with piazzas supporting galleries above them; and in the middle of the square, people of fashion always have a fountain. There are commonly four rooms on a floor, one on every side of the square, which have no other light than what they receive from the great folding doors that open into the piazzas.

The town of Tetuan contains about thirty thousand inhabitants, of whom about seven thousand are Jews, and they have seven synagogues here; but, though their numbers are so great, they have not two hundred houses amongst them; and the houses under the fine. They are laid to be very poor, though all the trade of the place passes through their hands; for they are the only brokers between the Christians and the Moors. One of the chief men in the town, in an old castle, is to be received with respect to this town, it is, that the people walk on the tops of the houses, which are flat roofed, and visit one another from chance, more than by the streets, as they do in Algiers, and other parts of Barbary. The town is surrounded with an ordinary wall, and defended by an old castle, consisting of two squares; the outward square flanked with towers, but the walls not cannon proof, and it is commanded by hills about it. They have a burying place, on a hill above the town, adorned with numerous tombs and pyramids, that it looks like a town itself; but what is best worth seeing at Tetuan is the bath, the palace, the entrance into which is by a cloister, which is about a hundred feet, paved with mosaics, and in the middle a marble fountain, the pavement of the area and piazza being of mosaic work. The mosaics are as elegant as any buildings can be that are in the Moorish style. The features of mosques have about two cloisters, which are places of refuge for all criminals, except those guilty of treason. The Christian façades here are those that are very ill used, every night in a dismal dungeon, called the Mortimore, which is a place twenty feet under ground, where there is no light whatsoever. A hole is made of a silly hole in England, and it's always very deep, on account of the springs rising in it, occasioned by its being dug in a very sandy soil. The inhabitants, between trade and thieving, are in tolerable circumstances; for when they are not strong enough to plunder a ship, they will traffic with the crew.

Messa, the province of Sus, is on the river of that name, which is called all the region round, and the town is called by that name. The province is of ancient renown, and is famous for its very fine fruit, lying in a triangle, each surrounded by a wall, and with a mile distant from each other; there is a temple in it built of large stones, with brass inscriptions about it, at the command of George II. king of Great Britain.

Mellila, in the province of Garec, issituated near the sea, forming a bay called Eutrope, in one degree fifty-seven minutes well longitude, and twenty-nine minutes north latitude. The country adjacent is fertile by the overflowings of the river, and vines have been frequently called upon the shore. The town is about a mile and a half distant from the sea. A branch of the river Susa water it, and passes through a large marsh, which in the centre of it, by means of the people, have an opportunity of proving their abilities in a running stream. The town contains about four thousand families: the neighbouring territory is extremely fertile; and the principal commodities are sugar and Moroccan leather.

Tarragona, is reckoned the largest city in the province of Sus; it is situated in a fertile plain, one hundred and fifty miles from the sea, and thirty-seven south of Tangier, and contains eight thousand families, four hundred of which are Jews, who carry on a considerable trade. Here there are two markets weekly, to which the Arabs and Moors resort with their commodities, and the negroes to buy apparel. It lies in seven degrees thirty-five minutes west longitude, and twenty-eight degrees thirty-five minutes north latitude.

Talafet, is feated on a river in a plain, three hundred and twenty miles south of Fes, and two hundred and fifty-five south of Tangier. It contains about six thousand families, and is about three miles in length, and four miles in breadth. The country is divided into three provinces, Sara, Seba, and Tust. It is mountainous and sandy, but produces an excellent kind of indigo, dates, and a little wheat and barley by the sides of the rivers. The people are miserably poor, living upon cattle's feed and dates, and by breed horses to sell to foreigners. They have also olive trees and drummies, which last will travel one hundred leagues by land, about forty leagues by sea. The date trees are sent to Europe come from hence, as the emperor will not permit them to be exported from any other part of his dominions: but the vineyards here are tanned with the leaves of that fruit. About four thousand horses are retained in this district, to keep the people, who are entirely strangers to their cattle, usually governed by a prince of the blood. The governor resides in the city, which has a strong castle to defend it.

The inhabitants are about two thousand in number, and are employed in the manufactures of leather, silk, and linen: they are very sociable, though extremely superstitious. It is a great rendezvous of both African and European merchants.

Cefalù, a province on the coast of Barhary, is feated
to the governor of Taflet: it is a dry barren country, the limits of which are not perfectly ascertained. The mountains, however yield plenty of iron and copper, and the inhabitants are famous for working in those metals, by the exchange of gold and silver, with their merchandise. They have annually several ships, but one in particular, which it kept on a large scale, lasts two months, and is referred to by merchants from all parts of Barbary; and this is, getting, better prepared than any other in the universe: the people, though naturally brutish, are under such restrictions, that a quartel was never known to happen. Some of the soil being level, and the part is said, that the merchants who come thither to buy the ware, are maintained at the expense of the province.

Seyyem, situated on the top, but one in particular, which it kept on a large scale, lasts two months, and is referred to by merchants from all parts of Barbary; and this is, getting, better prepared than any other in the universe: the people, though naturally brutish, are under such restrictions, that a quartel was never known to happen. Some of the soil being level, and the part is said, that the merchants who come thither to buy the ware, are maintained at the expense of the province.

No. 21.
mode of punishment, that is, piercing the criminal to death with darts, and throwing his carcass to the dogs or wild beasts.

S E C T. II.

Contains a description of the persons, habits, mode of life, manners, clothing, furniture, utensils, &c. of the inhabitants of Morocco.

These people, as well as the rest of the inhabitants of Barbary, consist of three sorts, all of the Mahometan religion, but differ much in their way of life. The Moors, who are the original inhabitants, live in towns and are the most numerous: the Arabs live in tents, and remove their camps when they want forage for their cattle. The Moors who dwell on the coast, in the towns, are a sort of innocent people.

The natives generally maintain a good figure, and well proportioned. The Moors, that are not employed to the weather, have good complexions: the Arabs are a towny race; and labouring people among the Moors are as towny as the Arabs. The Moorish ladies are fair, and usually have fine features; neither Moors or Arabs have any great share of learning, but are men of good natural parts, and understand the use of instruments of improvement.

Their music is bad: they do not write down their compositions, nor have they any contrail or variety of parts. The music made by the Arabs is the most convenient is suitable to their horny instruments. The blander and finer is in great esteem amongst them, and they have another instrument in the form of a kettle-drums, which serves as a bell in their concerns.

The Moorish ladies are more ingenious and melodious than that of the Arabs, and they have a greater variety of instruments. Besides several sorts of flutes and harmonies, they have a viol of two strings, and a lute double figured, a little bigger than our viol, with several small guitars of different sizes, each of them tuned an octave higher than another.

The inhabitants of the mountains, named kabyle, live in dahkias, or thatched cottages, and their villages are called keffs: each of these cottages contains but one room, in which also they have their beds and clothes, and food and their cattle living much alike. The women make the clothing and furniture for the family, particularly their hkes, or woollen blankets, and the webs of goats hair, or their tents. One of these hkes is a yard long, and five feet broad, forming the kabyle and Arab for a complete dress in the day and for his bed and covering in the night. It is a loose but troublesome kind of garment, being frequently disconcerted, and falling upon the ground; so that the person who wears it is obliged to tuck it up continually.

They have a garment called the bergoume, which is a close coat that makes them resemble a negro. The Moors and wealthy Arabs wear caps or turbans; but many of the poorer sort amongst the latter go bare headed, binding their hair, or with a narrow file, to prevent their hair being troublesome. Some of the Arabs wear under their hkes a clove bodied frock or tunic, which girt about their bodies, except when they are at work, for then they usually throw off their hkes and mantles. The Moors wear tunic under their tunic, but the Arabs in general wear nothing but woollen.

The Bedouins, or Arabs, are not used to wear dresses, which the citizens of both sexes do conjointly, especially when they go abroad or receive visits. The virgins are distinguished by their garments, in having their heads of needle-work, striped silk or linen. But when the women are at home, and in private, they then lay aside their hkes, and dress their turbans; and in religious, many of the people of Morocco follow the tenets of one Humin, a modern Jewish, who was an enemy to the authors of the califate. They are all very fond of idleness; whole protection will in some cases secure offenders from punishment, who have been guilty of the most atrocious crimes. The Moors of Barbary in general have however adopted the very worst parts of the Mahometan religion, retaining whatever of it as it authorizes them to commit the most shocking actions with impunity. Though the men are indulged with a plurality of wives and concubines, no law requires the unmarried individuals to allow the most unmusical crimes. Adultery in the women is punished with death.

As to their religious observances, their Moslem religion is founded on fear, superstition, and employment: lies is one continual round of idleness or diversion. When no patience calls them abroad, he does nothing all the day but sitter at home, hour after hour,Change this last sentence to a new paragraph.

and repose himself under some neighbouring shade. He had too many suitable and particular pleasures: what he measured of all values, is his forre, for in this place he places his highest satisfaction, being seldom pleased, or in a good humour, but waiting here about an hour, they were conducted to an open gallery, which gave the prospect of a fine mead

Robert Chambers. Government is not with propriety to blame
in Morocco, whose monarch is deemed the most despotic prince in the universe, having an uncontrolable power over the lives and property of his faithful, or rather vassals; for there is not a single person in the whole empire who can pretend to the least shadow of freedom, or dare openly to avow his sentiments: these monarchs have for some ages been parties, judges, and even executioners with their own hands, in all criminal matters; to which all their subjects submit with a degree of satisfaction almost incredible. Every military officer in the absence of the emperor, has the power of life and death in his hand, and, from him regard the form and

Judges, &c.

Another, the ambassador, between the bails who conducted him to Morocco, and the bails' brother, preceded by twenty musketeers, the rest of the English gentlemen, accompanied by another of the bails' brothers, and some other officers of the court; two of the ambassador's servants, five tawny horseback, and after them the envoys, and the Moorish and Jewish servants who walked on foot: the whole clad with a guard of horse belonging to the house, but a drunken Moor of oratree, in the superabundance of his zeal, rode in amongst them, calling them Christian dogs and rogues, professing his pleasure at the Emperor's court, was with some difficulty for his being affected by the officers of the court, the gates were shut against them, and extravagant sums demanded for permission to go through them. In the mean time, the throng was very great, and their veils were cut off their cloaths before they could get away, and

On the 29th of April, a large crystal box was presented by thirteen barons with twenty branches; eleven bales of coarse cloth each, bale containing three pieces; three boxes of superfine elecr; containing three quintals of tobacco; one box of French wine; one box containing papers of pistols; four boxes of Florence wine, and one box containing hollands and chemicals.

After waiting here about an hour, they were conducted to an open gallery, which gave the prospect of a fine meadow within the palace, over the middle of which there is a covered walk from the entrance to the other, which is filled with vines, supported by an arched frame. Having passed in a continual crowd till a great way further, they were

The ambassador was conducted to a large room, and there given to understand that the emperor was in the next room. Whereupon the bails, his brother, and several other great officers, immediately pulled off their alabhas, their outward veils, or habits of distin
guishment, as well as theirippers, and each of the bails' brothers took a China jar of sweetmeats, part of the present, to carry in to the emperor; and all the rest of the present was carried in and placed in the emperor's fight, before the ambassador was admired: then two great doors were flung open, and they saw his majesty sitting under a canopy, in an open gallery, and at his feet, his favourite brother, Musly, with his prime minister, bails Emanuel, a great fat negro.

When the ambassador was led up to the throne, he pulled off his hat, and made three bows; and having de

ferred the king of Great Britain's letter, tied up in a hand

chise, into the bails' brother's hand, and a gold watch in another, he put on his hat and made a speech, ex
prefiting the great esteem his majesty had for his imperial majesty, concluding with him on his father's death, and congratulating himself on his accession to the throne, which was interpreted, our author observcs, to very little purpose: for the emperor was so drunk, he could scarce hold up his head; however, it seems, he understood it far

so much by the speech and the present, as to be very well pleased, and answered, "Buono, buono," ordering the bail and alcaide of the Christians to do they did not want were

And roasts pigs every day, changing the prime minister to fer the Christian minister, the ambassador, have whatever he demands, and the people dress themselves on their faces, and clawed upon their hands and knees to kiss his feet: soon after which, his majesty's eunuchs, finding him much out of order, carried him away and the court retired. While the ambassador waited to be admitted, there was such a noise and disturbance among the drunken courtiers, that he could compare it to nothing else but the common fest of a goal; though, at their audience, things were little composed.

This emperor, Musly Hamet Duhreby, was upwards of six feet high, about fifty years of age, of a fierce countenance, and much pitted with the small pox, his face blotted, and his fore teeth out, and being a Mulatto of a swarthy complexion, made a very insignificant figure: he being cold weather, he had a black cloak over a white alabha, or veil; his turban was a green silk hat, which being crusted curiously about his head, looked he was drunk. All he said about him was in a gold sword in a gold scabbard, richly set with precious stones.

After they had carried away the emperor, the confusion among his drunks, by being as light as the emperor, was there any care taken to conduct the ambasador back again to his house? they were pushed and shoved about, and in danger of a fatal fall, was with some difficulty for his being affixed by the officers of the court, the gates were shut against them, and extravagant sums demanded for permission to go through them. In the mean time, the throng was very great, and their veils were cut off their cloaths before they could get away, and they expected every moment to be frittered by the mob: how

ever, by the help of the porters, who, without any more, they were cut off by fortune, at length escape out of the palace and get to their house. But to return to the emperor: It suffers usual with his horseman, but he was hung up by a rope, and still be fell down dead drunk, and then was carried to bed by his eunuchs; and when he awoke again, he was for six or seven days in a fever: now our ambassador had

He being somuch about his house, having been informed that his eunuchs fed, and dared to come near him, and happy was the minister that could make an excuse to be absent, and escape the affords of his furious.
...and their government, they are very ignorant of the art of feizing and carrying their ships into Sallee, if they find a paflanger on board, belonging to a nation at war with them; however they are usually so good as to dismiss the ships, and their crews, after they have robbed them of some of their merchandize. The charge of these piratical traders, is borne entirely by private adventurers; though the emperor has a tenth of all the prizes and captives they make, which leads me to enquire into the revenues of this prince.

Thee arift either from the labour of the husbandmen, and the fruits of the earth; or by duties upon goods imported and exported; the emperor has a tenth of all the corn, cattle, horses, wool, hides, rice, fruits, and other produce of the soil.

After his tytre is deducted, he at liberty to purchase the remainder of the prisoners, if he thinks proper to subdue. This gives the emperor a immense profit to him; either by their ransom or labour, for he makes them work, and supplies them with nothing but a scanty allowance of oil, bread, and water; he gives them the necessaries of life, but the benevolence of these is taxed, by paying them a considerable annual stipend, for a toleration to ait with humanity to their fellow-creatures. The Jews pay a capitulation, has, and all the commodities in which the Christian demanded are heavily salted.

They have no shipping to carry on a foreign trade by sea. But the Europeans bring them whatever they want from abroad; as linen and woollen cloths, stuffs, iron wrought and unwrought arms, gunpowder, lead, and the like; for which they take in return, copper, wax, hides, Morocco leather, wool, (which is coarse) guns, fuppe, dates, almonds, and other tracts. Their trade by land, is either with Arabia or Negroland; to Mecqa they fend caravan, confiding of several thousand camels, in sumter, twice every year, partly for trade, and partly upon a religious account, great numbers of pilgrims taking that opportunity of paying their devotions to the god of peasantry. The goods they carry to the east, are woollen manufactures, Morocco linen, indigo, cochineal and other feathers; and they bring back from thence, muslin and other foreign drugs. By their caravan from Negroland, they carry gold, silt, silk, woolen manufactures; and bring back gold and ivory in return, but chiefly negroes; from hence it is, that their emperor requires his black cavaries, through their own state: they first carry a market, and serve on foot, and after some time are preferred to be cavallers; and as these have no other hopes or dependance but the favour of the emperour, they prove much the most durtful and effectual corps of all his subjects; and indeed support the prince in his tyranny over the rest, who would not probably have borne the hardships of his own dominions, if they had not been governed with a rod of iron in the hands of these negroes; who, like the other foreign mercenaries, never attain to the dignity of the cavaliers, but execute his most inhuman decrees without remorse.

Their gold coin is a ducat, resembling the ducat of Hungary, worth about nine shillings English, and usually divided for a give of three of them for a mohool. Manufactures are kept in ounces, an imaginary coin, ten of which make a ducat in mercantile accounts; but in payments to the tanners, dyers, and manufacturers, it is usually divided, and not a mohool a piece. They have two of these, which is a copper coin in less than a farthing, twenty of which make...
make a blanqueen; this last is a silver coin of about two-penny half.

In Morocco, learning is chiefly confined to reading, writing, and arithmetic, as few attempt any thing higher, except for profit. The favourite science of the two latter orders, and what the people generally admire, is, astrology; so that a superstitious belief, in omens, predictions, &c., is general throughout the nation. The students, as they are called, are confined in small academies, in which children are taught to read, write, cipher accounts, and repeat a short catechism, which contains the names of their sultans.

Every Friday, which is their Sabbath, both sexes visit the sepulchres of their ancestors and relations. In some places, it is being said, they greatly venerate the dead, embellish their tombs as much as their circumstances will allow, and permit no Christian to approach within a certain distance of them. They are very particular in the observance of the three following vulgar notions: 1. To place victuals and drink upon the tombs of their ancestors and relations, at certain times, that the dead may not starve in their graves; 2. To bury gold, silver, jewels, &c., with the persons, that the persons may not be in bad circumstances in the other world. 3. To dig the grave very wide, that the deceased may not be incommoded for want of room. They have another notion, equally singular and absurd, which is, never to bury the persons who die that they might have some difficulty in finding their own bones on the resurrection-day. The prevailing opinion of the Moors is, that all the persons who are any part of any sect of Christians are secure of salvation prior to the age of fifteen: but after that period they imagine that none but Mussulmen can be saved. They confide in the dependence on public opinion with great force; for the first negligent, the person is rendered incapable of being a witness in a court of justice; for the second, fined; and for the third, burnt at the stake; but they exclude women from these trials. Hence, their chance are strictly forbidden; and those who are detected playing for money, are liable to be severely punished.

The character of Morocco and Fez, the Mauritania of the ancients, no material transactions occur concerning it, till conquered by the Romans, who found, that the prevailing mode of government throughout Moro-

The, Arabs conducted by Julius Caesar, this country, on the death of Boug, became a Roman province, and was afterwards бедов хлебом by Augustus on the younger Julus, whose son Pleinisy was put to death by the tyrant Caligula. The Greeks then ran over the country, and collected it till they were driven out by the Saracens in the year 660. Those were again subdued by the Arabians, who divided them into seven, till they were, in the thirteenth century, united into one under sufereignty of the family of the Almoravides; for Joseph, the second monarch of that race, established not only Fez, but the Moorish dominions in Spain. His grandson, Albo Hali, was a great friend to learning; but a taste for literature died with him. Mahomet, the fourth of this succession, of the family of the Almoravides, for Joseph, the second monarch of that race, established not only Fez, but the Moorish dominions in Spain. His grandson, Albo Hali, was a great friend to learning; but a taste for literature died with him. Mahomet, the fourth of this succession, of the family of the Almoravides, for Joseph, the second monarch of that race, established not only Fez, but the Moorish dominions in Spain. His grandson, Albo Hali, was a great friend to learning; but a taste for literature died with him. Mahomet, the fourth of this succession, of the family of the Almoravides, for Joseph, the second monarch of that race, established not only Fez, but the Moorish dominions in

The reign of the three succeeding princes of this line was not of short duration; but the height of their power, named Sisam, restored peace to his country. However, a gang of pirates, in his reign, plundered themselves of the gold and silver, and made them conscious of nothing but the want of another king, they applied for aid to the court of Byelor. The reigning monarch, Charles 1st., complied with his request, and sent some ships to his assistance.

The pirates were taken at sea, and the former, in return, sent three hundred Christian slaves as a present to his Britannic majesty. This worthy monarch died in 1670, and was succeeded by his elder son.

Muley Abdelnach, who was remarkable for his cruelty and drunkenness, and was, after having reigned four years, murdered by his people. He was succeeded by his brother.

Muley Elwaly, a prince of sweet disposition and generous spirit, who began his reign by relaxing all state prin-

Muley Hamed Shiek, succeeded his brother Muley Elwaly, but being murdered by the Arabs, they raised one of their own chiefs, named Crumel lack, to tlieir court, who, on his death, succeeded by Sharif Muley, King of Tafihet. The latter engaging in a war with Sidi Omar, prince of Illoch, was defeated, taken prisoner, and closely confined; during which time he was deprived of all that he had, and became very poor, except that he had a woman frightfully ugly, with whom he nevertheless cohabited, and the bore him two sons; the eldest named Muley Archy, succeeded in the reign of either of Tafihet. Muley Archy, whose reign, was very short; for being able to drink im-

coasts. He exerted vast sums of money from his sub- 
jects by unjust and cruel means, and was to PADITY 
fully mean, as to keep the tenants of his household at short allowance, 
and did not allow his officers any thing to sollicit one, unless in a very tone, that his maids, camels, or other 
beasts, asked him for no maintenance, and therefore they might get theirs where they could find it, thus leniently 
his officers, and pleased all that came in their way, and eighty miles to the west, and eighty miles to the east, and one hundred miles in breadth, 
where widest, and is situated between thirty and thirty- 
seven degrees north latitude, and thirty and thirty- 
seven degrees east longitude, being bounded by the Medi- 
ad, on the north; monas Atlas, on the south; the 
kingdom of Tunis, on the east; and the 
province of Fez, on the west, which separates it from the empire of Morocco; on the 
west.

The principal rivers, which rise in mount Atlas, and run northward into the Mediterranean, are: 1. The river 
Arelola, or Haretgol, which falls into the Mediterranean, 
about seven leagues to the westward of Oran. 2. Affalin, 
which discharges itself into the sea, five leagues to the west- 
ward of Algiers. 3. Chelif, which falls into the sea, near 
Mortagan. 4. Sofya, which runs into the sea, to the south- 
ward of the city of Algiers. 5. Seif Gomar which runs 
by Constanfina, into the Mediterranean. 6. Zinganon, or 
Major, which falls into the sea, near Bugia. 7. Minor, which discharges itself into the Mediterranean, 
at the mouth of the great river of the same name. 

None of these have a very long course, rising but 
in the mountains of Italy, or other hills in this king- 

The climate of Algiers is remarkably severe, and 
so that the country seems to enjoy a perpetual verdure, 
and the people are unacquainted with the extremes of heat and 

cold. This is to be understood only of the parts towards 
the sea, the inland parts being principally wild and barren, 
and very little inhabited except by a great variety of wild 
creatures, particularly lions, tygers, leopards, buffaloes,

The situation is on a peninsula, difficult of 
accest, except towards the south-west. It is one mile in 
circumference, well fortified, and contains many 
fragments, particularly a noble bridge, near which is a
large substraneous-aqueduct, that terminates in a cascade, into which fishes are thrown, and receive their destruction amongst the stones by the force of the current. The bay of the eastern government reposes here, and has under its command three hundred Turkish forts, and upwards of five hundred odd vessels. On the left: the inhabitants are opulent, haughty, and spirited. The neighboring mountainous territories contain a robust, hardy, and self-sustained people, renouncing liberty, circumscribed, and humane. They furnish the neighboring towns with great quantities of fruit and other provisions, and are able to supply them with rice, wool, and oil, which is grown on the ground. The bay of Constantia stands in great ease of them. They are, however, deftine of fire-arms, and have only lances and arrows to annoy the enemy with. On the fast coast, at a small distance from Constantia, fland the ruins of a Roman colony, suitably called Cuito. It is situated on a high rock, and has a garrison under the command of an aga; adjoining to it is a French fort, wherein the Moors bring hides, wax, and wool for sale; and at no great distance are the remains of the ancient city of Stora, the bay of which is full good. Constantia was the residence of the kings of the province of the same name, till 1520, when it was conquered by Barbarossa, who annexed it to the territory of Algiers. Some sable ruins are found in and about this town.

Giglet is situated on fast coast between Bona and Bugey, about six miles from the first. The town (which contains about one thousand five hundred houses, inhabited by very poor people) is defended by a fort and a small garrison. The whole territory contains no more than the name of the town, and not that of a very wide district, robbing all that can come at, plundering any ship that is so unfortunate as to be wrecked upon the coast, and treating injuries to the same extent that they have been known to them. They habitually will not call upon any kind of order, as they fly to places inaccessible to all but themselves, and let the Algerians defend their own town. The French are fortifying themselves here in the year 1666; but were driven from thence by the Algerians, and obliged to leave their cannon and ordnance behind them, they went back.

Buga, formerly the capital of a kingdom of the same name, is situated at the mouth of the river Major, about twenty leagues to the eastward of Algiers. It now lies in ruins, and contains nothing remarkable but the sepulchre of Sceky Beur BS, the titular faithful of the place. Here are three castles, two at the port, and one upon a rock. The inhabitants deal in iron-works, particularly pewter plates, oil, wax, &c. The English admiral, in 1671, took or destroyed nine Algerian men of war, which the cable was not able to protect from his attack.

Steffa, or Steffa, is situated in a fertile valley, about sixty miles to the south of Bugia, and fifteen from the sea: it contains only the melancholy ruins of its former magnificent buildings, containing now about three hundred families, who are miserably poor.

Tefil, is at present quite desolated, and very thinly inhabited, though it has a good garrison; a large and deep reservoir of water, containing about five hundred families, who are miserably poor.

Zamorah, is reduced to as despicable a situation as the two former, by the tyranny of the Algerine government; though it is fortified, it is the most fertile spot from Arba to Barbary. It is defended by a fort with a good garrison; and has a market every Monday, which is frequented by the Arabs.

Bifera, situated in fifteen degrees fifty minutes east longitude, and thirty-five degrees ten minutes north latitude, has a fort and garrison to keep the inhabitants of the neighboring district in awe. The people here are very ignorant, and lead a wandering kind of savage life; but their chief employment is catching and taming wild beasts, particularly lions and tygers, which they carry for sale to Algiers.

Necana, is one of the pleasantest towns in Barbary, being but a short distance from Bifera, which is watered by an awkward river, whose banks are adorned with a variety of beautiful trees. The inhabitants in general are polite, the women handsonde, the houfes neat, the country well laid out, and the neighboring country fertile. The town contains a magnificent mosque, and a large well endowed college for the education of Mahometans.

Cousc, is situated between Algiers and Bugia. It was formerly the metropolis of a kingdom of the same name; now a place of trade. It contains about five thousand houses. It received a visit from the French in the year 1671, from Algiers. The Spaniards left near five thousand men; and were afterwards driven out, but returned a second time, and having killed all the inhabitants, and burnt the town to the ground, they set fire to the houses of the neighboring people, and soon forced some of the neighboring hills, if there be not a garrison of six or twelve thousand men to defend the avenues, difficult canals, and roads, as well as the town itself, it cannot fail in a long siege.

At the Spanish coast and merchant ships had suffered much from the corsairs or rovers of this town, Ferdinando, king of Spain, sent over an army, under the command of his prime minister, Cardinal Ximenes, in the year 1599, to besiege it; who having a correspondance with some of the inhabitants, when the Moors fell out with the best part of the garrison against the Christian army, their friends in the town set the gates against them, and the cardinal obtained an easy conquest, killing above four thousand Moors, and delivering at the same time twenty thousand Christian slaves out of captivity: the Turks of Algiers, who were not far from the town from time to time for two hundred years; but were always repulsed till the year 1578, when they made themselves masters of it, by the treachery or cowardice of the governor and deputy, whereupon the governor offered his submission to Oran till the year 1723. But King Philip, having at this time no other enemy to contend with, and a fine army to defend his possessions, embarked a good body of them at Alençon, about the middle of June 1723, under the command of the grand master of the order of St John, and the 29th of the same month, with very little opposition; and, having afterwards gained the height of the mountains above Oran, the Governor abandoned the place, and left the town to be besieged in form: of which triumph we received repeated advice in our common newspapers, but the account the Turks give of this enterprise affords some further particulars. According to them, the day of Algiers, believing that this armament of the Spaniards was intended against his capital, did not send forth reinforcements to Oran as he would have done, if he had expected they would have attempted that city: however, the bay of vicecyre of Oran had assembled an army of twenty thousand men, for the defence of the place, most of them hordes; with which he endeavored to hinder the defence of the Spaniards; but his troops were disordered by the continual fire of cannon of the enemy, and by the constant storm of war and gallies. He attacked them also after they were landed; but, the ground being unfit for cavalry, and his hordes still supplied by the Spanish artillery, he was obliged to retire; and though the town was to be abandoned to the Spaniards, the Spaniards proceeded with the treaty of four thousand Turks, and five thousand Moors, which he daily expected from Algiers, before he engaged the Christian inhabitants. The Sultan, the word, removed all his efforts, his treasure, and his women, out of Oran to a place of security: whereupon the garrisons and inhabitants were in the greatest confusion; imagining they should be soon abandoned by the governor, and sacrificed to the Christians; and thereupon packed up all that they had, after the battle's example, and kindly quitted the town to the Christians without a blow; leaving in it an hundred and forty-six pieces of cannon, besides mortar, and fifty ship-loads of provisions, which consisted very much towards the presentation of the conquest; for the sea was so tempestuous they could receive nothing from their fleet for several days.

However, the French were not in this matter and as they were marching into the place; and, though he found it impossible thus to save the town, so obstinate was the engagement, that the Spaniards lost near five thousand men; and were afterwards forced to abandon the town, after which they could put the place in a posture of defence, that great part of their army was cut off, and amongst them their new governor, the grand master of Saint Cruz, and several of their best generals. But to proceed:

This city was the residence of a bey, and, though greatly fallen from its former greatness, was still the chief seat of the greatest government in the province of Algiers. About six miles from Oran, stand the ruins of the ancient city of Buthis, where a little chapel is built to the memory of a
Mauritania, who fowed up money enough to maintain five hundred disciples, whose sole business was, to repeat a long Mahometan litany, by the help of their heads, at certain hours. Oran, is full in the position of the Spanish

Trebute, (the province) is bounded on the north, by the Mediterranean sea; on the east, by a province called Algiers; on the south, by the desert of Sahara; and on the west, by the kingdom of Fez; it is about three hundred and seventy miles in length, and one hundred and twenty-five in breadth. If the capital town, of the same name, is situated ninety miles south-west of Oran, and surrounded by a strong wall, well fortified; has five gates with drawbridges, and a strong castle containing many handiome barracks for the janizaries who are in garrison. Trebute, while the metropolis of the kingdom of the same name, was a noble city, but is now fallen greatly to decay; for one of one hundred and fifty mosques and one hundred and fifty six baths, there are remaining only eight of the former, and four of the latter; and the palace exhibits little but the fragments of its ancient magnificence, among which, the remains of a refers

or, or banor for water, are the most conspicuous. The inhabitants are extremely indigent. The territory contiguous to it is dry, barren, and mountainous, except on the north side, where there are plains abounding in corn, fruit, and herbage.

Moroggan, is situated fifty miles east of Oran. This town is built in the form of a theatre opening to the sea, and surrounded on every side with rocks that hang over it. The ruins of an old Moorish castle stand in a space between the rocks, and there is a strong stone wall towards the port, with a modern built castle, garrisoned by a number of Turks. The citadel is erected upon a hill, on the summit of one of the rocks, and commands both city and territory: the haven is commodious, and the town is well supplied with fresh water. The neighboring mountains are inhabited by a people called Magharis, who live in tents, possess a great number of flocks, and pay to the chief of Algiers twelve thousand crowns annually. There is a handiome mosque in this town.

Tensen, is situated about one hundred miles to the eastward of Oran, and, to the north of Moroggan, and at a league distant from the sea, where it has a convenient port. Here is a cafe that was once a royal palace, in which the governor resides. The fortifications are strong, the garrison numerous, and the neighbouring territory fertile. This was supposed to have been the Julia Caearea of the antients.

Serrach, lies between Tensen and Algiers, about twenty-four miles to the westward of the latter. It is defended by a Turkish garrison, and has a little port, which will only admit of small vessels. This was ancienly a large populous city, but is at present a very poor defolate place.

The third Algerian government, being the southern distri

tict, is inhabited by a wild fer of people, who like some of the Tartars, roam from place to place, and live in tents while they reside in any particular spot. The territory is so big as to have no frontier, but is divided into three districts, by the only riches of the people are their numerous flocks and herds. The government exacts a tribute from them, both in kind and in money, annually to the head of an army to collect it; and many of them retire to inaccessible plains till the troops are withdrawn, in order to evade the payment.

We shall now proceed to give a particular description of the metropolis and chief city in the kingdom of the same name.

Algiers is situated in latitude thirty-seven, west longitude one hundred and twenty-five, to the eastward of the river Safran: it is built on the side of a mountain; the houses flat roofed, terraced, and whitewashed and whitewashed, rising gradually from the sea shore up the hill, forms a kind of amphitheatre, and appears very beautifully on the approaching it by sea; but this, like most other Turkish towns, looks better at a distance than we are in it: The mosques, domes, fountains, cafes, and palace standing in full view, give us a great idea of the place; but, as the streets are extremely narrow, and the houses are not much, our spectators are not answered when we come to examine it closely: however, there is this convenience, that the inhabitants can light each other's candles, and all the houses almost all over the town, without going into the streets. The walls are about a league in circumference, defended by four bastions and square towers between them; the port is secured by a pier or mole, in length about five hundred feet, ex-

The fortifications towards the sea are much stronger, and more considerable than those towards the land. The old fort was the work of Cheredin, the son of Barbareito, as well as many of the other fortifications; for that monarch employed at the Castel Montecelio, in the construction of the old, and confection of new fortifications in and about Algiers; and, by pernificantly inspecting their proceedings, he gave the satisfaction to see the whole completed in the space of three years.

To the south, there is another fortres with three batteries to defend the entrance of the harbour. The faries are continually employed in bringing stones from a quarry in the neighbourhood which they lay on the sand, to defend the moles from the impetuosity of the waves; and this laudable work is obliged to be repeated continually, because the sea constantly washes them away, and makes a perpetual supply necessary. The embankments of the castle and batteries are in good repair; and the inhabitants are exempt from the necessity of their carrying, and all other necessary utensils, are kept in excellent order.

This city is supposed to contain one hundred thousand Mahometans, and one thousand five hundred Jews, two thousand Christian faries, and some montedores. There is one street, which is broad and handiome, and paved quite through Turkish style; the citadels are erected upon a hill, in which the houses and shops are elegant and spacious, and the markets are kept here: but all the other streets are narrow, inconspicuous, and dirty. Some travelers have accounted for the narrowness of the streets, by affirring that they were so contrived to keep off the extreme heat of the sun, and others attribute their being built in this form to the frequency of earthquakes, on which account the streets are not only constricted, but the houses low, and propped by pieces of timber falling across the streets from one to the other.

The houses appearing one above another, make a very fine appearance from the sea: they are about fifteen thousand in number, are built either of stone or bricks, upon a square plan, with a paved court in the centre. Round the court is a double range of galleries one above the other; and both supported by columns. The tops of the houses are all flat: for which reason they walk upon them in the evening to take the air: and many embellish them with pretty gardens, placing a neat four store-house in one corner. The people are obliged, by the laws of the place, to white-wash their houses inside and out, at least once a year; but all who can afford it, do it much oftener. Their furniture is exceeding mean, and consists only of a few wooden and earthen utensils, a mat, and two quilts laid upon a few boards to serve as bed and bed-

The nearer it is to the sea, the more it is inhabited; for the inhabitants are more numerous, and the houses larger. They have a very pleasant climate; indeed, the summer is very mild, and the winter very soft. The sea is not very troubled, and the gales are of moderate violence. The inhabitants are not willing to be moved from hence, and are very anxious to see the seaport of Algiers, on which account the city is called the pearl of the Mediterranean.

This building is very extensive, and surrounded by two superb galleries, one above the other, supported by noble pillars.

Here are noble structures erected as barracks for the Turkish troops: they are adorned with fountains, and contain many spacious and convenient apartments. Married men are not permitted, edge here, but are obliged to reside either in private houses, or in one of the four feodacys of the place; the latter being large commodious buildings, consisting of private houses, and having a large stock of wares, &c. which are let indifferently to all who choose to take them, and serve instead of caravanserais or inns.

Christian merchants are commonly kept in separate houses, and usually accommodated at the consul's house, according to the nation they belong to, but the pous Levantine, or other traders, lodge at the abovementioned places, and may eat and drink according to their circumstances: or

2
The fishes, as in a quarry for their food, and continually wear their scales to centre. These are generally called the narrow stream, having a sandy bottom, and making a part of the cask, with a number of the cases, and are kept in the thousand of cases. There is a particular stream, which the cases are called, and which the native makes of the fun, and is answered to the number, to be sent to the low, and beats from the very thin or an inch, and the centre.

There are several tolerable editions without the walls of the sea, which add to the beauty of the casks, particularly the marine officer's public hall, a marvellous beauti-ful dwelling, and a variety of Turkish shrines and monuments; amongst the latter, the magnificent tomb of a saint, who is said to have been murdered by the turban, and whose body is preserved to the memory of his sons, who were facetiously elected, and then murdered in the given within a few days. But these are too extended for a few pages. The heads and the necks of the dead are distinguished by a stone, on which a turban is carved in relief; those of the age's and other military officers, by a gold ring in the ground close to the coffin; those of the desert's captives, by a staff with a gilded ball at the top; and those, in the form of a coffin, are laid on the graves of the common people.

The city of Algiers had formerly none but rain water, and the inhabitants were often greatly disturbed upon it not being driven from the country, except in two months, when the river ascend to the sea. This river, which is allowed to be the most beautiful in the world, ascends by a long course of trees and plants, and conducts, from a great variety of rivulets that have their sources on the adjacent mountains.

The city of Algiers is the most fertile, and the gardens, groves, and country estates frequent in their gardens, and they are large, but not very high, and many of the fruits and vegetables nor to arrive at the perfection they might be brought to by means of ingrafting, pruning, transplanting, and other methods, but surrounded by orchards of Barbary fig-trees, which, from their compactness and prickles, are more secure than any other kind of fruit.

Among other rich spots in Algiers Proper, the great plains of Mertijah is admired for its astonishing fertility; it is fifty miles in length, and twenty in breadth, includes immense plains and fertile gardens, and produces such a profusion of the most delicious fruits of all kinds, and the enjoyment of the habitants enjoy every year-two, and during the rainy season, the fields are covered with taffeta, and the city of Algiers in particular, are subject to

No. 23.

Tillage, as there are many cooks, house, and other public-houses, kept either by the Christian slaves of the day, who will accommodate any persons, or deal in any commodity. Here are one hundred and seventy men, all who refer or mention, are belonging to the barber, or some other trade, or are inclined to it.
they worship. The people who reside on the coast are equally savage to such as misfortunefully fall into their hands by shipwreck: so that it appears the Algerines are as much inclined to inhumanity as they are to an elegant taste or polite behaviour.

Algerians retain the title of a kingdom, though in fact it is not so, as they do not possess the metallic trousseau, or the rich robes, or the horse, and the like which belong to such a title. But it is evident they at least possess the three following points: "We the great and small members of the mighty and invincible militia of Algiers," &c. This alternate grandeur and subserviency of the Turkish subject, who at length deplored by the militia and janissaries, who put up a day of their own clouting; when the Ottomans were most the Turkish buffets intirely, found themselves under necessity of ratifying this regulation. The janissaries now became extremely powerful, as they formed themselves into a daily, and always elected a day; but this dignity is a very precarious station, for the dissembler, election, a day in seldom chosen without much tumult and bloodshed: he is always in danger, from the nature of his office; and seldom dies a natural death, which is owing to the disposition of those about him.

The age of the janissaries is the next officer in dignity and power: he only enjoys his post two months, and then retires upon a pension. The other officers of importance are secretaries, secretaries of the police, secretaries of the confessions, secretaries of the police, &c. of the police, or colonels subordinate to the aga; eight hundred bottal buffets, or five hundred captains, and five hundred oldish buffets, or slave drivers. In this as in all others, the right of feuds of their own is fiercely observed by Algiers; for a single infringement in this essential point would immediately cause a revolt among the janissaries, and take the day in the street. The two above, there are purveyors to the army, a body of guard to the day, &c. and the officers to the Turkish forces, who are distinct from the rest.

The people of Algiers in general use a compound of Arabic, Moorish, and the remains of the ancient Phoenician languages; but public business is transacted, and public acts recorded in the Persian tongue, though much use is made of the Algerines of all denominations understanding the Lingua Franca.

Through most of the Algerines are fond of the piratical trade, yet they admit free Christians, Jews, Arabsians, Moors, &c. to trade in silk, wool, cotton, leather, carpets, &c. in the country. They are also allowed to import gold and silver bullion, damask, cloths, spices, tin, iron, brass, lead, quicksilver, linen, cordage, silk-bolls, bullets, rice, alum, tartar, cochineal, goss, soap, cotton raw and spun, horses, copper, brass, lead, wood, ivory, vermilion, guimack, opium, sulphur, aniline, and common feeds, saffron, frankincense, galis, mummy, paper, copper, cards, dried fruits, &c. and they are allowed to export edris, feathers, wax, hides, wool, copper, rugs, hides, leathers, embroidered handkerchiefs, dates, and Christian fuses, who, for their part, are permitted to trade. But the commerce is greatly injured by the oppressions of the government, the suspicions of the merchants, who are alway suspicious of one another, so that the faithfulness, and the perfidy of those who carry on the trade.

The three chief ecclesiastics are extremely reverenced but little: they are the mufti, the cadi, and the grand marabout. The first is the high-priest of their religion; the second the supreme judge in ecclesiastical cases, and civil matters as the civil power does not interpose in; and the grand marabout, their great living saint, or lorimer, rather the general of that order who profest themselves hermits or marabouts: the last have an inconceivable influence both on the government and the affairs of every private man in the kingdom, as upon all occasions they take advantage of the weakness and perplexity of the people, and the insufficiency of the ecclesiastics. The three ecclesiastics may be distinguished by the largeness of their turbans: they sit in the divan, a little below the day, on his right hand; and when they enter the assembly, he rises up and hides it, and they are always covered with important occasions, they have no vote here. The divan consists of near two thousand officers and soldiers, and of the grand marabout. When the government is in a difficulty, the grand marabout sends a present of fruits and sweetmeats to the bride, and gratifies her relations with a feast and a musical entertainment. On the nuptial day the bride is sometimes directly drest, to the house of the intended bridegroom, where another entertainment is provided, and the marriage consecrated.

When any of the Algerines are sick, they are attended and nursed by persons of their own sex. The physicians are few, and if they are young and of their profession they are in a danger of being their patient's. In capital cases the Turks are ranged with a bow-beating, which two people pull different ways with all their strength: but the various deaths the poor Christian faves are put to, that offend their barbarous pirates, are almost immeasurably: impaling, and burning, or rather, roasting, the unhappy sufferers alive, are but two frequent on their attempting to make an entrance, especially if any Turkish or Christian vessel be taken in the souli; but the work of all deaths, is the throwing them off the walls of the town upon iron hooks, on which they are hanged and torn, the rest, or half of the body, and hung in the most exquisite torture for several days before they expire: but this, it is said, has not been executed for a long time. We have been instances of the crucifying Christians, and nailing their hands and feet to the walls within their few years; to which is ran the speeches of knocking by the hands of those that were spared of some of their Christian neighbours having been equally cruel to the Turks they had taken. A Moor convicted of burglary hath his right hand cut off, and suffers about his neck, and then he is led through the city on an ass with his face towards the tail; penalties of disembowelling, for crimes against the state, were placed between two boards, and worn around. Women detected in adultery are hanged by their necks to a pole, and held under water till they are suffocated. And this leads us to give some account of the condition of the Christian slaves of Algiers.

The corsair, or pirate, it seems, no longer takes a prize, or bafes himself on a certain privilege for the capture of his prisoners; and, if he imagines they do not give him a full account of themselves and their comrades, he orders his men to batter down the walls of the town, and quarter the people within the streets. Having got what information he can, he brings them on shore where he has stripped them almost naked, and carried them to the house where the criminals are immediately repaired, to see if there be any of the prisoners who belong to their respective nations, who are at peace with Algiers; for, in that case, they re-claim them, provided they were only passagers: but, if it be proved the prisoners served for pay on board the ships of any nation at war with this government, there is no way to get them released, but by a ransom.

The matter being settled between the day and the consuls, which of the prisoners shall be set at liberty, and which of them deemed slaves, the day has been known in every eight fathom, and generally takes the merchants, furriers, carpenters, and most useful men belonging to the respective priances: and, besides his title, he lays claim to all such prisoners as are of any quality, for whom a swelling ransom may be expostled: the rest are left to the captor and their owners, and usually carried to the boulard, or slave market, where the uerci proclaims the quality, the pretension and circumstances of each of the unhappy captors, and the respective prices set upon them. They are sold afterwards to the court before the day's palace, and sold by auction in his presence to the bel belider, but whatever is given beyond the first price set upon them belongs to the government: the bey has the power of selling them at the first price, which is divided equally between them.

The women throw a vail over them when they go abroad, so that they are not being discerned, to all but the Day. They are sold by auction to the women. Some are carried in litters made of offer twigs and covered with painted cloth, but so low that they are obliged to sit cross-legged in them: this mode of travelling is used by both sexes in long journeys, particularly pilgrimages, as the traveller can see and be seen, and travel without being annoyed by wind, dust, rain, heat, &c. The women in general lead a life of idleness: their principal employ- ment being dresting, lolling on their sofas, batting, chatting, visiting the tombs of their relations, and украsening in their gardens. Then men spend most of their time with the women in their gardens, in conversation, drinking coffee, smoking, &c.

The Algerines by their law, may have as many wives as they please, but they usually content themselves with two or three at the most. They seldom fet them before marriage, but have their description from a female betroth. When they are ready agreed upon, the bridegroom sends a present of fruits and sweetmeats to the bride, and gratifies her relations with a feast and a musical entertainment. On the nuptial day the bride is sometimes directly drest, to the house of the intended bridegroom, where another entertainment is provided, and the marriage consecrated.

When any of the Algerines are sick, they are attended and nursed by persons of their own sex. The physicians are few, and if they are young and of their profession they are in a danger of being their patient's. In capital cases the Turks are ranged with a bow-beating, which two people pull different ways with all their strength: but the various deaths the poor Christian faves are put to,
of square coffins, and carried on men's shoulders by means of poles to the grave, attended by the relatives, friends, &c. Mohammedans believe that the remains having waited for some days, and the men wearing their besmud for a month; during three days after the interment, the nearest relations and friends, and the nobles of the place, and even, of course, the suckers or suffering to be in lighted in their houses: the better sort of people have epaulets, or fur-lined palas from the khan, or the dar ecclesiastics, but with an alternate row are complimcunt with the virtues which they never pos-
ition, and the living may be flattered in the supposed mer-

The militia who clear their debt, are all natural Turks or renegado Christians, admitted into those troops generally denominated Janissaries, and antecedent to about twelve thousand men; these are, for want, filled the excellence of Al-
giers; and certain it is, that the frequent revolutions that happen at Algiers, are brought about by this class of people chiefly; they are but few in number indeed, com-
pared with the native Moors: and yet they do tyrannize over the natives in a most insolent manner. On the con-
trary, in the empire of Morocco, the Moors govern every-
thing, and will not suffer the Turks to have any share in the governments. The Moors here are said to be a cowardly and indolent race of people, who only serve the Turks as auxiliaries, to do the service in the name of their masters, who have defeated armies of them, both in Morocco and Tunia, of fix times their number, and formed and plun-
dered the Spanish dominions for many years, compell-
ing their respective princes to accept of such terms as the days of Algiers were pleased to impose on them. The rea-
on of which favouritely is supposed to proceed either from that of the Moors, which have not, however, been so fortunate; the Moors, whereby the latter are in a manner disprised; or that the Algerine Turks, being all men of sword, engaged perpetually in the most desperate services for fee and land, and, dreading no dangers, are an over-match for all their neighbours, who endeavour to live in peace; but, from what causes soever this fury procedes, it is instructive to observe, that less than ten thousand of the Algerine Turks should dare to march through great part of the empire of Morocco, and make inroads and ravages in the capital city of Fez one year, and afterwards of Tunia last year. But it is certain, the native Moors have as great a disposition to revenge this ill usage as the Algerine Turks. They have at sea, treble and tremble at the very name of an Algerine Turk. Part of the Algerine foedery serve as marines on board their vessels; about one thousand of them do garrison duty, and part are employed in fomenting differ-
dences among the neighbouring Arab princes. The day can bring one thousand Moorish force into the field; but as they are enemies to the Turks, they are little trusted.

The Algerines are more formidable at sea, than any other power on the coast of Barbary; and the sea-faring people of those parts, account of the prizes they have so frequently in; but still they have no share in the election of a day: the fathers of the thriftiness affix, that they are the first to form, and the last to withdraw from the war, from eighteen to sixty guns, besides a multitude of smaller cruising vessels; and, as they have very little timber in the country, nor any naval stores whatever, their ships are either taken from the natives, or are the slaves of the state, and thus reduced the number and quality of vessels, out of the materials of such ships as are taken: however, they never suffer the number of their ships of war to be diminished; but, if any of them are lost, or destroyed, they immediately add as many more, by means of the military forces with which they are supplied by the Europeans, who purchase their friendship with the implements of mili-
chiefeft, and count them not to make dependences on their trading ships, by furnishing them with the power to do it: the English coast, in its coast, proved to them with powder, balls, bombs, fire-arms, cordage, &c. taken in return, corn, oil, provisions, and other necessaries for the garrison of Gibraltar; we must however confess, that former fortresses afforded, and afford at this present, have been of unspeakable service to it during the present poignant siege of that fortress by the Spaniards. The Al-
gerine Turks are more numerous than the Moors, which to this day is the case. The emperor Charles V. by the name of the emperor's fort; he then clovenly invested the city, and greatly disturbed the inhabitants, by turning the course of the river to deprive it with art of the re-

After the operations, the Algerines looked upon their condition as so desperate, that the members of the divan were upon the point of surrendering the city to a poor eunuch, named Yufid, who was looked upon as a lunatic, appeared in their presence, and thus addressed them: "My lords, I am the poor Yufid, the slave of slaves, and most abject of Multitudes, perished by the rage, and pro-

compared by Bellarius, the emperor Julianus's cele-

From the time-mentioned period, they continued faith-
il the Greek emperor till the year 651; when the whole country was over-run by the Arabs, who remained masters of it till the year 856. The Arab tribe, expelled them, and took the reigns of government upon himself, which continued in his family till the twelfth century. The Sultan was, in a manner, the successor of the Barbary corsairs. This piracy race was first diverted of power by the Benimerins, who in the thirteenth cen-
tury, were driven into Sicily; but not of what they have had, by the death of Hascan, who divided Algiers, and other parts of Barbary, into several petty kingdoms; but falling out amongst themselves, Ferdinand V., king of Aragon, took advantage of their civil divisions, and in the year 1509, by advice of his prime minister cardinal Ximenes, sent a powerful armament to Algiers, under the command of the count of Navarre. This nobleman soon made himself master of Oran, Bagis, and some other places. In this exigency the Algeries applied to Selimi Estemani, an Arabian prince for assistance; but though he aided them to the utmost of his power, he could not prevent the count from making the city of Algiers tributary to the court of Spain. This subject is to be considered till the death of king Ferdinand, which happened in 1516, when the famous pirate Barbarossa undertook their deliverance; but, instead of vanquishing the garrisons, he fell into the power of the Turks, and was obliged to seek their assistance; his propotions were accepted by them, and he proceeded to the government of Tripoli, on the throne, of which he had been deprived by Barbarossa. The Spaniards and Arabs re-

The conciliating of the Moors and the Arabians, far from causing any further jealousy among those they have their common title to, gives occasion to our seizing on this event, as a point of the highest importance. It was the study of the Barbary corsairs to force every Christian that was above the age of fifteen, who came into their hands, to swear allegiance to their king, and have himself made free to the corsairs, to render them service. This alliance was then entered into by the corsairs with a thousand Moors, and was ratified by the corsairs with the Corsairs, and was ratified by the corsairs with the Corsairs, and was rat-

Barbarossa's defeat and death occasioned great confusion at Algiers; but the people determined to chuse his brother Hayraret Barbarossa king and high admiral in his room. But Hayraret, fearing that he should not be able to support himself against the numerous enemies that surrounded him, prevailed with the Grand Signor, and proposed to cede the Algierin kingdom to him, on condition that himself should continue to rule it as vicerey, and be satisfied with some Turkish forces. These proposals were gladly accepted by Selim I, and a body of forces immediately dispatched to the assistance of Hay-

Being now become formidable to the Moors and Arab-
ians by land, and the Christian's by sea, Hayraret laid siege to the Spanish fort, which was a continual thorn in his side, and to which he was attached. Being now secure from enemies, he turned his thoughts to improve the harbour of Algiers; which he did effectually, by building a fort before it, and constructing of towers in the prison. Upon this great work, thirty thousand Christian slaves were incessantly employed till the whole was completed: he afterwards repaired the fort, which, after it was restored, was farther fortified, and made secure than ever it had been, against the attack of an enemy.

Hayraret was now raised by the grand Signor to the digni-
ty of captain-bailiff of the Ottoman empire, and Hassian, a sandiman renegado, appointed bailiff of Algiers in his stead. The latter purcured his piracies with great success, and even made depreciations on the coasts of the ecclesi-

This induced the pope to exhort the emperor Charles V. to put a stop to this mischievous traffic, which that monarch immediately undertook, and soon found himself at the head of a formidable armament, consisting of one hundred and twenty ships, twenty galleys, a large train of ordnance, and the number of volunteers of several nations, among whom were many knights of Malta. These forces being landed, the em-

Algiers, and the academy of Constantinople, a mul-

tation, Christian slaves, &c. but all the officers must be Tur-

The sailors in general are extremely filthy, and everptrepheirs to their dinner, so that ninety found in most of the vessels belonging to the Chris-

The officers of the Algerine fleet received a remarkable treatment from the emperor Julianus. The emperor, to show his respect for the services rendered, bestowed on the officers the title of a grand officer of the empire. It was a great privilege to be thus honorably distinguished, and it was considered as a mark of distinction and distinction. The officers were generally treated with great respect, and were considered as the most important characters in the fleet. They were given precedence over all other persons, and were treated with great consideration. They were not only given the best quarters, but were also given the best food and drink. They were also given the best clothing, and were considered as the most important personages in the fleet. and twelve hundred Spaniards, including several nobility, were put to death, but many remained ignorant of it; the end, who is the judge of the law, had often made me undergo severe public punishments, and had treated me with indignity. When I arrived there, I saw to us an unalterable, but sometimes given to us as an
fight in fury; and what I have afterwards foretold, had not been without some reason for that regard. Hence, by giving friendly signals towards them that defied me, but have informed their poor people, who pleaded and relieved me, of the greatest astonishment to them: but at this very time, the two years being over, the public danger forces me to speak: here is a powerful fleet of infidels, whose ships are crowded with armed men, and who have come among us suddenly upon us as if they had not been at all in the city. We are deluded of all means of defence, and our only hope is placed on an equitable capitulation, if our fleet does not arrive; we fear the end. God, who, at length, the machines of men, hath quite other thoughts: he will relieve his people out of the hands of their oppressors (for they are in Algiers, the Roman Catho-
lies) in face of all their fears, be they ever so many.

Lord Haman, and you his ministers, and great men of the kingdom, and learned men in the law, I call upon you: to make your request for such a fortunate and above the
Youef; and be assured, that before the end of this month God will display his glory to the utter confusion of the Christians. Let the very day will perish in your
and our city, be victorious and free. Their arms and equipage will fall to our share; and if they have already enough, in a hundred days, to pay, in the form of our justice against themselves, so a small number only of their blind and circumscribed people shall be per-
mitted to return to their own country, but shall continue victorious in the places where they now are. The members of the assembly were diverted by this singular speech from their intended design of delivering up their country; what is it but extraordinary, every. This confudence of the prediction was verified within the month, the greatest part of the emperor's fleet being destroyed by a violent tempest. In the next year, in cold rains, which occasioned torrents of water to pour down from the mountains, and overwhelm his camp. These disasters obliged him to save the siege, which he did with great expense. Leaving behind him troops, baggage, artillery, &c. and betaking himself to his ships; which the Algiers no sooner perceived, than they fell upon his troops while they were without a single man. Calvin
took a great number of prisoners. In fine, the emperor's whole force amounted to one hundred and twenty ships and galleys, three hundred officers, and above twelve thousand soldiers killed or drowned, and near or many
prisoners; with respect to the latter, the Algerines in deference put many of them up to public sale, as an action put to their own use. The Algerines were magnified, looking upon him as a faint; and they have ever since been great admirers of the art of divination, and much addicted to it. Not long after this event, Haman died, and was suc-
cceeded by Haji, an officer of the militia, who was, how-
ever, obliged to retire in favour of Haman, the son of Hafian, the brother of Harafor; the latter being nominated by the Ottoman Porte. In the beginning of the reign of this prince, the Spaniards obliged the Al-
grikes to evacuate Turin; but a few years afterwards they fabulated and plundered it. Hafian was after-
wards, by the intrigues of the baija Kafan and Saffa Rais, deposed, and a creature of theirs advanced to the throne in his stead. This prince rendered tributary several Num-
midian provinces, and returned with fifteen causal loads of gold dust, and other valuable spoils; he afterwards died of plague, and was succeeded by a Coriscan named called Hafian Corbo, who was murdered by Tumiki, a Turk. His latter tyrannized but a short time, being known for one of those turbulent characters; and after entering into the town for only six days, being suddenly carried off by the plague.

The supreme dignity was now held in trust by Chajah, a Turk, till the pleasure of the Porte was known; when Hafian, who had been an opposi-
tion, and Saffa Rais, was restored by the Grand Signor's order, and Chajah quietly resigned the government to him. This prince during his time was totally defeated: the ensuing year, however, made some amends, for the Spa-
niards making an attempt upon Mafhagan, he gave them a dreadful overthrow. In the event of this event, a third formed a cord, with many other officers, and a great number of private men, were slain.
A General View of TUNIS, a celebrated Town in Barbary.
ruled Algiers about three years, when being ordered to Constantiopolis, his kinsman Mulufa was placed on the throne and reigned for ten years, to the great joy of the people in favour of Hlidir bey, who was re-appointed to the government of Algiers by the Porte. Hlidir had no sooner rejoiced in his advancement, than he exacted fifteen thousand ducats from Mulufa, before he set sail for Constantiopolis, and ruled the Algerines with his usual tyranny, oppression, and plundering; for the rich with空前的 method. All their things Mulufa, on his arrival at Constantiopolis, represented with such energy, and painted Hlidir's character in such glaring colours, that the Divan immediately purchased again the return of the Bey to Algiers, and re-appointed Mulufa once more. The latter, after a return to Algiers, stripped Hlidir of the principal part of his treasure, forced him to Constantiopolis, and afterwards ruled the people with so much justice and moderation, as to afford upon all occasions with such generosity and humanity, that he was beloved by all ranks of people, and the station was never more prosperous or happy than while he conducted the public affairs.

We have now brought the history of the Algerines down to the latter end of the sixteenth century; all that now remains worthy of notice is, that in 1683 the Algerines made a treaty of alliance with England, and in the same year they joined in the French league, which each country of France to send a fleet against them under the command of the marquis de la Queue, who commanded Algerines; but, in the end, the Algerines, being in want of money, and being in no condition for a fleet, determined to concert injuries, and obliged him to return home. He was no longer gone, that the Algerines failed forth, put to sea, sailed to the east, and plundered the Gambia shores on the coast of France. This new influx so much exasperated the French monarch, that he ordered the marines to be landed on the coast of Algiers, and to destroy the city, in order to punish these pirates for their audacity. The French squadron came before Algiers in May 1683, and poured in such a flower of honor, that the Bey's foemen, the bey's palace, one hundred mosques, and other public buildings, with a vast number of private houses, were destroyed; the fleet and wounded were landed, and the townspeople a study on the Mediterranean. This occasioned them to set out for peace; when one of the principal articles insisted upon by the magistrates, was, the delivery of all Christians taken under French colors. This was referred to, and one hundred and forty-two of them brought on board the next day, with a promise of finding the remainder; but unfortunately the negotiators were held back by the Algerines over the bloody flag. The marquis accordingly renewed the bombardment, when great destruction and slaughter ensued; to receive the attack, the Algerines had recourse to the most barbarous, and savage cruelty, murdering all the French captives, and firing on the confus of that nation from the mouth of a mortar. Thisnposure of the French, natural posture, by destroying all the shipping and fortifications, and all buildings in the tower, with mort of those in the upper part of the city, that in fact, all that his cannon or bow they could do to effect their ends. It is about seven miles from Algiers, and three or four leagues distant from the Mediterranean, is a large, populous city, and a place of some trade; the walks about a league in circumference, but no great strength. The baya's palace, the mosques and gardens are the most remarkable buildings in it. The houses are all of stone, and but one story high; those belonging to the better sort of people are built about little squares, adorned with pillars, gardens and fountains; but they have no other light than what they receive from the doors that open upon the squares; and the roofs of the houses are flat and terraced, as in other Mahometan countries. When Charles V. took it in the year 1553, it is said to have contained more than a hundred thousand people. The city lies five gates, viz. Véron, Carthage, Elmenor, Affey, and Elmenara gate; and without the walls are the plains, which are raised in earthworks. There is a circumvallation of marble tombs, and flower-plots. The bay's palace is a magnificent square structure, with four flagged gates, one at each front, and turrets at each end. The gardens are rich and elegant, the courts are adorned, and the apartments very spacious, and handsomely laid out.

[Africa]  

Tunis is the kingdom of Tunis, bounded on the north by the Mediterranean sea; on the south by the same sea and Tripoli; on the west by mount Atlas, and the river Guadalquivir, which separates it from the kingdom of Algiers; on the east, lying between thirty and thirty-seven degrees and a half north latitude, and extending near two hundred miles front to front. This kingdom is amply the republic of Carthage. The chief towns are, Carthage, or Cayor-van, situated on the river Majembi; latitude thirty-two, laid to be the true souv; the Sousse is latitude forty degrees, very remarkable as being the burying place of the Mahometan princes and great men. Udry, or Thuburbo, situated in a level plain, on a river that falls into the Guadalquivir, but is lost in the desert, lies near twenty miles south-west of Tunis; remarkable for the marble pillars, images, and other Roman antiquities found here. Pannonia, or El-Medjerada, is a small city, in latitude thirty-five, ninety miles south-east of Tunis, laid to be the Abodentum of the Romans. Sulph or Kiplasa, situated partly on a flat, and partly upon the precinct of a rock, on the Mediterranean, twenty-five miles to the eastward of Tunis; it lies in ruins at present, and is laid to contain more antiquities than any town in the kingdom; here is a small harbour, which is the ancient port belonging to Tunis frequently lies. Modern geographical divides this kingdom into eight districts, viz. Tunis, Pro- 

cer, Byrsa, or Cerds, and El Bardo, or Caparo, IT, Mauretania, and Elbdiyana, or Carthage, Porto Ferrando. We shall describe the principal provinces, towns, and cities. The city of Tunis is the kingdom of Tunis; it is founded on a bare plain near a spacious lake, in thirty-five degrees and a half north latitude, almost over against the island of Sicily, and a few miles from the place where the famous city of Carthage is supposed to have stood; it is about fifteen miles from Algiers, and three or four leagues distant from the Mediterranean, is a large, populous city, and a place of some trade; the walks about a league in circumference, but no great strength. The baya's palace, the mosques and gardens are the most remarkable buildings in it. The houses are all of stone, and but one story high; those belonging to the better sort of people are built about little squares, adorned with pillars, gardens and fountains; but they have no other light than what they receive from the doors that open upon the squares; and the roofs of the houses are flat and terraced, as in other Mahometan countries. When Charles V. took it in the year 1553, it is said to have contained more than a hundred thousand people. The city lies five gates, viz. Véron, Carthage, Elmenor, Affey, and Elmenara gate; and without the walls are the plains, which are raised in earthworks. There is a circumvallation of marble tombs, and flower-plots. The bay's palace is a magnificent square structure, with four flagged gates, one at each front, and turrets at each end. The gardens are rich and elegant, the courts are adorned, and the apartments very spacious, and handsomely laid out.
The gardens, though large, are laid out in a bad taste. In the midst of this confusion, however, the most valuable articles, the book containing the Tuscan code of the laws, is kept.

The city is defended by a strong wall erected on an eminence, and the only place of access, except by fords built on an island in the neighbouring lake. The colleges and academies, numerous and large; the jardinières barrack parks: the house of上司; the fortifications, and the exchange for the merchants very convenient. The dock is tolerable, and the arsenal, pretty well floored with maritime stores.

There is a very picturesque place in the suburb, that formerly contained about three thousand shops, but their number at present is much diminished. The staple commodity here is oil, and the inhabitants are the manufacturers excel all others in Barbary.

The inhabitants of Tunis are a mixture of Turks, Moors, Africans, Jews, and Christians of various nations, but their general character does not singular honour, as they are reputed to be more polite and just, rather kinder to their fancies, and much less haughty, insolent, and mercenary than most of the other inhabitants of Barbary.

In fine the generality of them prefer the fruits of houind industry to unlawful plunder, and rather seek wealth from piracy, endeavour to obtain it by commerce. Both sexes are clean in their persons, and neat in their dresses, which becomes very few, and both frequently the women, when they go abroad, are veiled, but they are permitted to be seen by, and converse with strangers.

Fruits, figs, dates, citrons, lemons, olives, &c. are very plentiful in Tunis, and the inhabitants are not secure of what little they raisé; for it is of no uncommon thing, in harvest time, for the Arabs to go into the countryside and plunder, and of those who are left behind, the whole territory of all the rice grown. The rich, however, are supplied by commercial means with wheat, and what else they are to obtain at all, they regale themselves, by making it into a dumpling, which they eat without cooking, only dipping it into little oil or vinegar; or plain water if those are not to be got; they have, however, plenty of honey and fruits, but seldom eat meat, except upon festivities, or some very fov dgional occasion.

Nabel is situated in a low ground, at about a mile and a half from the sea shore, and nine miles from Tunis. It is famous for its potteries, and a flourishing town.

Marfa or El-Merfa, was supposed to have been founded by queen Dido, one hundred and forty-one years before the building of Rome. Its name implies a haven.

It is situated where the part of ancient Carthage flourished, and contains a magnificent mosque, a capacious colloseum, about 1000 feet in diameter, and 900 feet in circumference, built by the most considerable Tunisians for pleasure, and in the territory is exceedingly agreeable and fertile. This pleasant district was occupied by the ancient city of Carthage, the center of commerce, midstres of the sea, and rival of imperial Rome, when that city was in its most flourishing state.

Konnart, stands at a little distance from the ruins of ancient Carthage, and about nine miles north of Tunis; it is a walled town, inhabited by fishermen and gardeners, who supply Tunis with fish, fruit, and fugar cases.

Ariana, about three miles distant from Tunis: it is a little village, inhabited by poor gardeners, who live by fishing for sale, to heat city, their fruits and roots.

Tunis, or Chaff, is one of the most considerable cities in the kingdom, and the capital of the province of the same name. It has a flourishing trade for oil, linen, wine, honey, and sugar. It is situated on a high road, behind which runs an extensive plain country, fertile in barley, figs, olives, fruit, and purlipia. Though it hath great plains divided by rivulets, which are not very large, and also those which occasion a great deal of labour, are of much less extent, and populous, and the inhabitants are polite and courteous to strangers. A twelfth part of the city lies beside the promontory of the city, which stands on a rock of the same kind. The temple, or ancient baths, is situated on a rock, and is still inhabited by the inhabitants, who are also inhabited by the shepherds of the surrounding countries. It is a very pleasant town, and is supplied by a considerable number of vessels, and an enormous number of persons, by means of which the city is supplied with all sorts of necessaries.

Scarcely any vellages are now remaining of Hercules, a city of vast extent, built by the Romans, but since destroyed by the Arabs.

Kesawan, or Carvan, though situated in a barren desert, is of great importance, as it is the seat of a bishop of the sufficiency of life, except what is brought in from several miles distance, it nevertheless one of the most populous and flourishing cities in the province of a name. It is twenty-four miles from Sonif, and has, about half a mile from the town, a large and commodious building, with the reception of rain-water; the inhabitants are supplied from the sea, and the carriage of the water to the house by a still rapids, where both, and more particularly of the latter, are unwholesome, and occasion many disputes, not only among the inhabitants, but in the hands of the merchants, are the manufacturers excel all others in Barbary.

This city was rebuilt by Hafca, generalissimo of Ottoman or Hatsan's forces, which left was the successor of Mahomed III. calif of Damascus, in the year 1553, and had sent him from Arabia into these parts to make what conquests he could. He had Tunis having landed his forces in some of the neighboring ports, made choice of this barren and dilatable spot for the place of their rendezvous, and of the ruined city for his retreat, which he accordingly caused to be surrounded with lofty and strong brick walls, flanked with flately towers: and, among other noble edifices, built a most magnificent mosque, supported by an incredible number of flint columns of the fourth century, two of which were of 60 feet in height and lovely a red. The town is now still over with little white spires that the polumry, that their price is reckoned incomparable, and the whole structure the most magnificent in all Africa, and the palace the most edifices in the whole world, the seat of the richest revenue and endowments, and the title and privilege of a head metropolis, as being the first Mahometan mosque built in the interior of the world: upon the whole it is likewise become the burial place of the Tunisian monarchs; and not only they, but all the grandees and wealthy men of the kingdom, are ambitious of having their remains deposited in it, from a superfluous notion, that the prayers of the head pash of fecon of Mahomet, and the whole city, will procure them a pious passage for their souls, and send them by the nearest way to Paradise. But very city itself is held to have been among them, that those great peripioes usually pull off their shoes before they enter it, and cause some costant chapels and oratories to be erected over the graves of their deceased relations, and to keep a yearly feast on some persons, not only to keep them in repair, but likewise to retain a number of idle priests and monks to rest thither at proper times. It is most probably upon the account of this superfluous concourse and veneration, that withstanding provisions are very dear and scarce.

Tobulba, is now but a very poor village, though it was once a considerable city, and Gables or Capes, once a notable city, is in much the same situation. This is the city of Jerba, which is the southern boundary of the balla's fummer circuit, is about twelve miles south of the latter.

Hammamet, is a city of the most considerable; it is towards the north of Tunis, and consists of sixty leagues by sea; it is a small but quiet city, situated upon a promontory near the sea, and is well secured on the land, and besieged and inaccessible rocks, so that a very small expense would render it totally impregnable.

Biferta is situated near the place where Urica formerly stood; thirty-three miles north-west of Tunis, and two hundred and forty-two miles of Algiers: it is well fortified, particularly on the side nearest the sea, and contains two towers to defend the haven, a commodious magazine, and two large prisons for slaves; it has plenty of fresh water, and is well supplied with fire.

Eight inconconsiderable villages belong to the governorship of this place, which inhabited, as well as those of Carvian, are miserably poor; that this territory is very fertile; their only roads is a coarse cloth wrapped round their bodies, and another about their heads in lieu of a turban. They are, however, very industrious, and herd their domestic fowls; but they do not feed their hens, nor use either brick or colds. The Bifertans are deemed by all travellers the most superfluous people in the kingdom of Tunis, and by reason they trade to the French and English, and entrepot the most trivial affair without hanging a great number of annualets or charms about them: and if they trade, they load them with the most河南, and a very low stock, which are only pieces of parchment or paper inscribed with strange characters, and read in leather or silk. It is situated in forty degrees to the west of Pisa, in the northern latitude.
much fallen from its antient splendor, and is at present one of the finest cities in the Ottoman empire. It is the seat of the Sultan, of the Grand Vizir, and of many other high officials. It is also the seat of the Viceroy of Egypt, and is under the administration of a Governor appointed by the Sultan.

The city is surrounded by walls, which are about five miles in circumference, and are said to be of great strength. The gates are six in number, and are called the Great, the Middle, the Small, the Black, the White, and the Golden. The walls are of stone, and are about twenty feet thick at the base, and eight feet high. The gates are fortified with towers and battlements, and are defended by a moat filled with water. The city is divided into two parts, the upper and the lower, by a deep ravine, which is crossed by a bridge of stone.

The upper part of the city is the ancient part, and is called the "Old City." It contains the chief public buildings, such as the Grand Khan, the Great Mosque, the Great Madrasah, and the Great Bazaar. It is also the seat of the Grand Vizir, and is inhabited chiefly by the wealthy and the noble.

The lower part of the city is the modern part, and is called the "New City." It contains the chief public buildings, such as the Imperial Council, the Imperial Arsenal, and the Imperial Hospital. It is also the seat of the Governor, and is inhabited chiefly by the poor and the humble.

The city is well supplied with water, and has a number of public baths, which are said to be very ancient. It is also well supplied with markets, and has a number of caravanserais, which are said to be very comfortable.

The city is also well supplied with libraries, and has a number of schools, which are said to be very good. It is also well supplied with hospitals, and has a number of charitable institutions, which are said to be very useful.

The city is also well supplied with churches, and has a number of synagogues, which are said to be very ancient. It is also well supplied with mosques, and has a number of shops, which are said to be very numerous.

The city is also well supplied with gardens, and has a number of parks, which are said to be very pleasant. It is also well supplied with parks, and has a number of fountains, which are said to be very agreeable.

The city is also well supplied with parks, and has a number of beautiful buildings, which are said to be very ancient.

The government is despotic and hereditary, but not of the absolute kind, for the boy at liberty to choose for his heir, if he has any sons; and, if he has not sons, he chooses his brother, or nephew, or any other relative. A Turkish haji resides here, and a divan is frequently held; but if detected, he is therefore arrested, and the latter without any authority.

Through motives of fear, the haji of Tunis keeps up a good correspondence with the chief of Algiers and Tripoli; and, from this, we cultivate a friendship with the subjects of France and England, and, at certain times, again, they wrap him in Spaniard, dipped in vermilion, and burn him; or rifle stones, mud, mortar, etc., around him, and having walled all but his head, they throw over with honey, which attracts wasps and other insects, that torment the poor wretch with their stings, all the more effectually, which sometimes does not happen for several days.

With respect to the revolutions that have happened in this country, historians of doubtful credit relate, that it was alternately subjugated and overrun by the Moors, Turks, Greeks, Vandals, Saracens, and Arabs; and in 1169, Abd-al-Hadi, a Moorish officer of the time, came with a considerable force, landed at Tunis, obliged the Arabs to evacuate the towns and villages, and ruled the kingdom, in quality of viceroy of the caliph, in the territories of the last kingdom of the north, and, by his conquests and military operations, in all the countries to the north of Morocco.

On his demise, he left the kingdom to an inconstant nature, and his son, the great Al-Hadi, or Al-Hadi, succeeded, finding himself sufficiently powerful, revolted from the empire of Morocco, affronted the title of king of Africa, strengthened his kingdom, and afterward reigned over the metropolis of Africa. At his death, he divided the kingdom between his three sons, giving Tunis to one, Bu-ri-in to another, and Nomadi to the third.

When Christian merchant ships arrive here, they always fill the castle with these guns: but men of war wade through the streets accompanied by armed guards, and, at certain hours, with the consent of the mayor, the gunners discharge the salt, if it be charged with one hundred pounds per head, every tenth person excepted, who beda the property of the town, but the members of that assembly do not dare to claim their right to this allotment. The revenues of Tunis consist of the duties arising from imports and exports, and the tribute paid by the Arbus and Moroccans.

The revenues of Tunis consist of the duties arising from imports and exports, and the tribute paid by the Arbus and Moroccans.

The mercantile vessels are very numerous, and the merchants pursue traffic with great avidity. The whole of their merchandise is carried in negroes, an elephant, a ship, a camel, and a number of slaves. The oranges, or cantaloupes, are large, and the young leaves of the oranges, or cantaloupes, are used as fishes, and to dress the beef and pork in the market. The permission of purchasing the salt, if it be charged with one hundred pounds per head, every tenth person excepted, who beda the property of the town, but the members of that assembly do not dare to claim their right to this allotment. while others attacked the castle, but were repulsed with great loss: and the Tunisians were at length compelled to surrender the fortress. Signor for their sovereign, and Barbarossa as governor.

In order to regain his dominions, Hassain had recourse to the ancient expedient of despatching an embassy to the Christian emperor Charles V., to which he promised to become tributary. This rendered him full munificence, and his own setting out and looting of the goods of the Mahometans in general. The emperor entered heartily into the enterprise, and prepared a powerful armament accordingly. While Barbarossa, the governor, could do nothing upon such an occasion: he put Tunis into the boat full of disease; all the Moorish and Arab princes to join him, who readily gave assent; he fancied that he imagined that it was a general cause, to which all Mahometans were concerned, and perverted most of the Levantine cruisers to aid him with all their strength: however, the court of Constantinople could afford him but little assistance, being then involved in its Atlantic war.

At length the emperor's fleet, consisting of one thousand four hundred ships of various sizes, appeared on the Tunisian coast, when the numerous forces were immediately issued, and the castle of Goleta invested in form, which, after a very stout resistance, and great loss on both sides was taken by storm. The emperor then proceeded to Tunes, which he marched out on his way, and drew up his army in order of battle in the plain of Casar Menara, which is about three miles from the metropolis. The two armies presently came to an engagement, and an attack was made upon the Arabs; but it all he could so to-conclude, Barbarossa inflamed a total overthrow. After retreating to Tunes, he now thought of nothing but escaping with his treasure, though he had so far to conceal it, that he sent his intentions found him. He then had his wife, and even his own people; but his design was perceived, both by his flurry to remove his riches from the castle, and the order he gave to blow up all the Christian lives. This diabolical order, however, none of his officers had the cruelty to put into execution.

Among the Christian barons there was one named Paul Simon, a brave Maltese, who had behaved so gallantly against the Turks, that Barbarossa would never suffer him to be harmed, or depend on any account. This gentleman, having an intimation of Barbarossa's design, found means privately to procure some hammers and files, when he immediately released himself and the rest of the Christian slaves from their chains, to the amount of seven thousand, and jointly breaking into the castle armoury, they furnished themselves with weapons, with which they fell out, and killed or routed all the Turks who guarded the avenues to the castle. They then secured the place, and waved a white banner from the battlements, inviting the Christian deserters to their guard. The turco-barbarian brought Barbarossa to the place, who demanded entrance into the castle, but was answered only by a volley of musketry. After this, when perceiving how matters went, he cried out, "I am an enemy to these Christians, and desire you to give me the keys of the castle, and all my treasure," and fired with the utmost precipitation, so that he got safe to the city of Scars, which he immediately presented to the emperor, with the greatest favour. Simon, however, sent him word of Barbarossa's flight; and as soon as he entered the city, presented himself before him at the head of the newly-emancipated Christians; when the monarch tenderly embraced the Maltese knight, saying, "My dear friend, Moslem for ever; the noble rebellion which enabled you to break off your fetters, to facilitate my conquest, and recapture the glory of the Maltese order." This gentleman was afterwards sent to Malta, instead of favor, to be most cordially entertained by that of his order. Thus the Christians became powerful in Tunes; but we are foorv to add, that the enmity which they immediately excited upon the Turks, and the rich possessions, which they possessed, led to the calamities of the Latin princes, and then gained by their courage and constancy.

The Christian principality overthrown, the throne by the emperor, under the following conditions: 1. That the fort of Geletta should remain in the emperor's hands as a pledge, though Hassain should be obliged to repair the fortifications at his own expense. Yet Barbarossa had his troops should remain in it, but Hassain should maintain and pay them. 3. That prince Mahomet, Hassain's son, should immediately make a treaty with him, and AT acknowledges Christian captives, of whatsoever race they should receive without any ransom. 4. That the Christians should have a free commerce throughout the whole kingdom.

but which and in which Mahomet, to have been either murdered or dethroned, he was informed to that the Turks to | Mahomet, whom they hired of Ibrahim day of Algiers. With these troops they found means to strike against them; they took Chafy, put an end to the<br>but this change availed them nothing, for the latter was not as arbitrary and rapacious as the former; so changing their minds again with their usual facility, they restored Mahomet, and detoured Ben-Chouke.

Ramadan was soon after made dey by the order of his brother Mahomet; but this prince, having lived always a recluse life, knew nothing of public business, or of mankind, and was consequently very unfit to govern a kingdom; but what was the fatter was, that the state was in such confusion, the jealousies so great, and the intrigues so various, that new deys were frequently elected, almost all of them being afterwards murdered or dethroned, so that the space of one hundred and twenty years had never seen more than twenty-three reigning, the whole of whom, except five, were dethroned or murdered. The people in general were so dissatisfied at this, that if a new dey was not immediately elected, they would immediately depose him, and substitute another.

At this period the kingdom of Tunis began to be go-
verry by days, by half a century, or by couple of years. and flanked by pyramidal towers. Here are but two gardens, that of the sea, and the fourth garden, towards the country, and the whole city is in the form of a crescent, the concave part of which incloses the haven.

At the extreme points of the harbour, which is very commodious, and free from obstructions, they are bounded by a low wall, which is in bad condition, but on the westward there is a castle well fortified. The buildings in general are very mean, and the streets are narrow and crooked. Yet some remaining monuments of magnificence seem to confirm the prevailing opinion of the inhabitants, that it was once a city of importance, and that many of its ancient buildings, among which are the fragments of a triumphal arch, which is nearly buried in the sand, but exhibits a figure of the emperors that give some idea of its ancient greatness when perfect, and standing in its proper situation.

This city abounds under two very great inconveniences, which are, the scarcity of corn, and want of fresh water, the family folly making it difficult to cultivate the field, and the want of rivers, springs, &c., rendering it impossible to procure the latter, without the disagreeable necessity of catching rain in cisterns and cisterns. The deficiency of fresh water, and great fertility respecting grain, are both supplied to have been occasioned by the encroachments of the sea, which has frequently been known to overawe the neighbouring territory to a very considerable distance: but these inundations, though they may have essentially limited the fertility of the soil in the above places, have considerably diminished them in another particular, that is, the amazing increase of loathsome trees, which thrive better in a saline clay or calcareous sand, than in any other food and drink, as the fruit excessively well, and makes a most delicious wine. Yet, after all, the inhabitants of Tripoli could not subsist upon their country; without the additional provisions continually brought in by their piratical vessels, which are constantly cruising in the Mediterranean sea.

The people of Tripoli tutor the guarding of their city, in the night time, to matutins, which are run up during the day, in one of the balconies of the ramparts. Their mats generated very little against the dispositions of their functionaries; they parrot through the streets of the city, and if they happen to meet with any person, they are sure to tear him to pieces. As soon as day breaks, they go of themselves to the door of their prison; and, when they hear any person approach their habitation, and their roasting is heard in all the quarter of the city where they are confined. This city is frequently visited by the plague; on which account the Franciscans, who are settled here, have besides their church and convent, an hospital, in which they administer relief to the Tripolitans, as well as to those of their own religion.

It has been remarked by a reputable writer, that Tripoli is one of the chief ports of Barbary, which is not without some reason. The government is the same with that of the rest of the cities of Africa; the Moors are in as little credit here as a capital, or a province, (i.e. Christian) merchant, who can enjoy the greatest share of authority of any of the Moors in this country, and fill the chief employments; indeed those who are of any consequence in the city, whether the perfons abovementioned had converted with, and that they all appeared to be as ignorant of the religion they had embraced, as of that quoted by them: most of the perfons in question having been too poorly educated, that they were scarcely acquainted with the rudiments of their belief, and indeed, fays he, they affign the most trifling reasons possible for quitting their religion, whereas in other countries, against these, are commonly promied, from the ill treatment they meet with from their masters, to turn Mohammedans; but on the contrary, they are brought over by gentleness. Of all the coasts of Barbary, none are less cruel than the people of Tripoli, though none are so much addicted to their.

Going from Tripoli, one proceeds to the principal post of Tripoli, the gardens belonging to which, are usually marked by the Christian settlers, who are less than all to take a single bagpipe or goal in the city itself, during the night time.

Cabric, or Gabis, situated near the Gulf of the same name, and most harmonious with punctuality to which the moderns have given the same name at the town. Being the frontier town between Tripoli and Tunis, it is large and well fortified, and in its neighbourhood are found the ruins of the ancient city. The Taknina, or Tarno, which was then over, is but poor, very thinly inhabited by fishermen and a few houblawins; the latter of which cultivate a small quantity of barley, a considerable number of palm trees, and a root which resembles a potato. The fisheries are at this place as numerous as in any other part of the country, there being as many peaks of slaty, and half a dozen of palm trees, as a considerable fortune. The river Cacie rises in a sandy defile, and disrobes itself into the Mediterranean, where the weavers are in hopes that they cannot be put for about the space of two hours, into a cool place. This town lies in ten degrees forty-five minutes east longitude, and thirty-nine degrees south latitude.

El-Hammah, is situated in ten degrees fifty-five minutes east longitude, and thirty-four degrees twenty-five minutes east longitude, and thirty-two degrees forty-five minutes north latitude. In the town are three mosques; the first was erected upon the western coast of the gulf of Sidra, are in the country; those on the eastern side, and within the gulf are in a most wretched condition, and present a dismal picture of the devastations of time.

The various inundations of Goths, Vandals, Arabs, Mahometans, &c., which have been occasioned by the effects of the gulf, and the prevalence of the prevailing winds, have also suffered much from the destruction of the buildings, and tyranny of the government. The island of Malta is a perpetual theater in the sides of the piratical states, particularly those of Tripoli and Tunis, from the vicinity of the situation, and the Mandarins, though they purchase their privileges, have by frugality circumvented the power of the Barbary rovers, and restrained their piracies.

The Moores, after they were driven out of Andalusia in Spain, built the town of Derne, on the western side of the gulf of Sidra, which indeed is the only place worth mentioning in the district of that name. It is situated at the distance of about half a mile from the sea, and is better supplied with fresh water than most of the towns in the Tripolitaine provinces; nevertheless, the inhabitants are few in number, and miserable poor in all circumstances. The most remarkable produce is great quantities of honey, the delicacy of which is occasioned by the bees feeding upon a kind of thistle peculiar to this country, which blossoms all the year, and bears a fragrant yellow flower. The province of Melghat, is at present much reduced, though it was inhabited, and the Mandarins have few or no villages, and some detached villages, and upon an emergency can raise ten thousand men fit to bear arms here, standing in 120 and 120 men, and have there in spirits, for they appear at present to be inimical to the Tripolitains, who were antiently of the Tunisian yoke; they pay a tribute, though reluctantly, to the bey of Tripoli, and are often at war with the wild Arabs.

With respect to the inland inhabited, we may observe, that they are less populous, less well governed, and have fewer towns, than any of those described. Indeed, Angola, or Ouguela, though in many parts a barren desert, contains a few spots that are fertile, particularly in the province of the same name, and the country.

The revenues are raised by an impost on the coasts, which are usually about eight in number, by a tax on commercial imports and exports, and by a subsidy which the Moors are obliged to furnish. The bey likewise taxes the men of the gulf, and the wild Arabs and inland Moors; but the Moors frequently refuse to pay the tribute, when he has obliged to lend his flying army of janizaries among them, to reduce them into obedience: but neither the Porte, or the Turkish bai, trouble themselves about the government, provided the bey pays it; in short, the tax is nothing but the submission of the people, and the necessity of tyrannizing over the poor people, and reducing them to the utmost misery and slavery, in order to obtain a sufficient sum to discharge their quota.

Their
The history of, and various revolutions in the kingdom of Tripoli, 626.

We find the first accounts of Tripoli in some of the Roman historians, who speak of it as a very flourishing state. In the decline of that empire, after the inhabitants had thrown off the Roman yoke, they were successively subdued by the Vandals, Saracens, and the followers of the See of Rome, till at last, in the reign of Bucamen, king of Tunis, who ruled the Tripolitians very despotically, the inhabitants thought proper to remain independent of their own people, Tripoli; but the new monarch, turning tyrant, was poisoned, and succeeded by Abubacer, who had been one of his officers, but, turning marabout, quitted the military for the buccaneer life.

Tripoli was besieged, in the beginning of this King's reign, by an army of fifteen thousand Spaniards, who forced the place, and sent Abubacer, with his whole family, prisoner to the emperor Charles V. who was then at Palermo; but this monarch restored him to his kingdom, on condition of his becoming valid and tributary to him.

Abubacer was sovereign of Tripoli till the knights of Rhodes were driven from that island, and obliged to retire to Syracuse, when the beheaded emperor granted them the island of Malta, together with the city and castle of Tripoli, which lay opposite to it. They accordingly garrisoned the latter, but were soon dispossessed of it by the famous Barbarossa. They were, however, soon after restored by the emperor, who put the knights of Malta again in possession of them.

The Turks, under the command of the bafs Semli, in the reign of Sultan Solyman, besieged Tripoli when it was surrendered to him, as is imagined, by the cowardice or treachery of the governor, who was a Frenchman, after it had been forty years in the hands of the Christians. It continued thirty-nine years under the government of a fanatic, deputed by the Porte to rule the people, and collect the revenues, the castle being garrisoned by Turks, who had been driven from Rhodes, but the despots and extortioners became so intolerable, that a marabout, named Sid-Hajhus, found an opportunity to cause a general revolt about the close of the thirteenth century, and drive the fanatic out of the place. He then called the chieftains, and at length affidivated by some of his own party. Altogether Bebyg, a Greek renegade, was then sent by the Porte to govern Tripoli; but this officer was no sooner established in his government, than he refused to receive any bafs from the Grand Signor; he indeed acknowledged himself the vassal of the Porte, and voluntarily stipulated to pay a certain annual tribute, but he alleged, that in common presence it was requisite for him to defend himself from the French, however of many thousand, dependent on the Porte, who had been put to death upon the most unjust and oftentimes frivolous pretences, without being so much as allowed to vindicate their conduct.

They are the only remarkable troubles which now remain to be taken notice of relative to the kingdom of Tripoli; for the reimbursement of the capital city by the French, in the reign of Lewis XIV., and the treaty of peace and commerce between the Tripolitans and England, in the year 1716. The first of these events took place on the 22d of February, 1716, when the French having taken a ship under French colours, and detained several French subjects in a state of slavery. This occasion first led to his Majesty's officers to make reprisal upon the vessels of Tripoli, wherever they met them.
I. That all merchant ships belonging to the dominions of Great Britain, and trading to the city or any part of the kingdom of Tripoli, shall pay no more than three per cent. for the port, and as for board they shall not fall, they shall be permitted freely to embark them again on board their ships without paying any duty whatsoever, and shall depart without any hindrance or inter-

XX. That his Britannic majesty's consul, residing in Tripoli, shall, at all times when he please, have liberty to put up his said majesty's flag on the top of his house, or any other building, and likewise that the said consul shall have the like liberty of putting up and displaying the said flag on his house, when he pleases to do so, and no man whatsoever shall be liable to no other jurisdiction but that of the consulate, where the ships shall happen to be.

That
XXII. That whereas the island of Minosoa, and city of Gibraltor, have been yielded to his Britannic Majesty, as well as several other parts of Europe engaged in the late war: it is agreed and concluded, that from this time forward for ever, the said island of Minosoa and city of Gibraltar shall be returned in every part, by the Government of Tripoli, pretends, that the Britonic Majesty, and the inhabitants thereof shall be deemed his natural subjects, as if they had been born in Great Britain and they, with their wives and children, children, should be permitted freely to trade and travel in any part of the kingdom of Tripoli, and that the trade to be by an Atlantic sea, being in length from coast to coast, above two thousand two hundred miles; and in breadth, from north to south, where widest, about five hundred miles.

This country enjoys a wholesome temperature of air, neither too hot in summer, nor too sharp and cold in winter. The winds are generally from the sea, i.e., from the sea to the land. These from the sea are common at Algiers from May to September, at which time the weatherly winds take place, and become the most frequent. Sometimes also, particularly about the equinoxes, we have a very salubrious experience that both and imperceptibly, which the ancients have ascribed to the Africun, or north-west wind, called lebasse by the maritime Berber-passes. The southerly winds, which are usually hot and violent, are not frequent at Algiers. They blow sometimes from the sea, in July and August, rendering the air for exceedingly suffocating; that during their continuance, the inhabitants are obliged to sprinkle the floors of their houses. The winds blow from the west, the north-west, and the north, are attended with fair weather in summer, and rain in winter; but the easterly winds, too little from the land, are for the most part dry, though accompanied with a thick and cloudy atmosphere in most restars.

We shall close our description of this country with observing, that the kingdom of Tripoli was once the richest, most populous, and respectable of all the states on the coast; but it is now much reduced; and the inhabitants, who, are said to amount to between four and five hundred thousand, have all the arts of the Arians.

Barca, which is included in the kingdom of Tripoli, is situated between ten and thirty degrees east longitude, and thirty and thirty-four degrees of north latitude. It is built by the few Arabs who inhabit it; Ceyzar Barca, or the desert of which is burned and burnt, extends four hundred thousand miles square, and is built by the desert to the east. This immense country comprehends these districts which the antiquaries called Marmarica and Cyrenaica. It was better known to the ancients than the moderns, and was once the principal country, from whence the greater part of the territory of the people, in the speech which the poet puts into the mouth of Ana, queen Dio's mother, she is describing the ruins that formerly

The territory about the towns and villages produce a great quantity of corn, milk, and eggs; while metals of this wretched region, are totally barren; and the whole labours under a great scarcity of water. Small is the quantity of grain is, the poor people are under the necessity of being fed on of it for cattles, sheep, goats, &c. Perhaps the most pleasant place in the whole country is that small district upon which the temple of Jupiter Ammon formerly flourished; yes, there are thirty thousand, and by burnt sand so that the burners, which move under the traveller's feet like waves, or being raised by the winds, overwhelm him with dust and smoke, and obliged to travel through this difficult region, they must travel with a compass or they would be lost in the desert, and wander about till they perished with hunger and thirst.

On the whole, the Barbary part, and that called Marmarica the habitable district, those who live near the less coast are all given to pleasure; and the maritime part it is a great deal more commodious. The savages from the chief city of Gibraltor, the all the other towns known to the ancient being either totally ruined, or dwindled to the most incosiderable villages; so that what conditions they are in, what commerce they carry on, or how and by whom governed, we cannot give any satisfactory account of; and can only farther add, that the people are the most determined, ferocious, and cruel robbers, both by sea and land, and they
Palm trees are very numerous in this country; as are also almond trees, plumbs, cherries, mulberries, apples, pears, pomegranates, grapes, pistacées, pichkis, very alliaceous, olives, walnuts; but no hazel alberries, currants or gooseberries.

The grape vines, thrown towards the latest end of July, and are cut for the vintage in September. The wine of Algiers, before thelocusts, made such destruction among it. Fine walks, parterres, and flower-plots, would be to those people the lots of so much profitable fruit, as planting in order and regularity, the study of foil and compotes, and the aiming at any new improvements and discoveries, would be so many deviations from the practice of their ancestors, whose footsteps they follow with the utmost attention and reverence, for the place is a faring, till they were, one or other of them, fapped by the channel of the Harboune. Several of the branches, together with some pieces of the house turned down, and the dry part of the building not always the same; for in the plains of Ziay-xet it is blackish, whilst in those of Bichichdegch, &c. it inclines to be whitish. Though all this is alkali impregnated with great quantities of salt and nitre, we are equally fruitful.

The banks of several rivers, to the depth sometimes of twenty fathoms, are filled, in summer time, with nitrous and faline knubs and evolutions, which, besides the depth of the foil, theu or likewise how well it is faturated with alkali, or rather air, in the salt-petre works at Tahan, they extract six ounces of nitre from every quintal of the common mould, which is there of a dark colour; and at Douain, Kair-win, and some other places, they have, like quantity from a lousy earth, of a colour between red and yellow. To this grand and inexhaustible fund of salt we may in a great measure attribute the great fertility for which this country has always been remarkable, and still continue to be, without any other nourishment than the burning, in some few places, of the fruitful, though it is somewhat extraordinary that the province of Bysacian, which was formerly held in so much repute for its fertility, should be at present the most barren and unprofitable part of the same kingdom.

Olive is the chief and prevailing mineral of these kingdoms, as well from the several salt springs and mountains of salt, as from the great number of saline showers that fall to the sea with the rain; or that run down from the chain of A vars lie surrounded with mountains, taking up an area of about six miles in compass. They appear like a large lake of brine, but all the winter, the water is not seen, and is then exhaled, and the salt left behind crystallized. In digging, they pass through different layers of this salt, wherein some are as thick as others more in thickness; in proportion, we presume, to the quantity of saline particles the water was impregnated with, before their respective operations. This whole area is made up of a succession of similar saline heaps one upon another; and in the same manner are the salines between Carthage and the Goletta, those of the Soutl, and of other places, bordering typhus along within this kingdom.

Jebel Had-dij is an immense mountain of salt, situated near the eastern extremity of the lake of Marks. The salt springs which feed it are of a different quality, and appearance from that of the saline, being black and solid as stone. It is red, or of reddish colour. Yet what is washed down from these precipices, by the dew, acquires another character, being which is called the chaff of bitternuts, which is in the parent rock salt. The salt of the mountains, near Lozotiba and Jebbel Minrail, is of another quality and appearance from that of the saline, being hard and solid as stone, and of a reddish or purple colour. Yet what is washed down from these precipices, by the dew, acquires another character, being

Shibkah, i.e. a fruitful plate of ground, being commonly overflowed in winter (at the same time they appear like white or red silt), in many cases like sand, or sand and solid mud, without the least moisture, they may be taken for the like number of bowling-green prepared for the turf.

Some of these shibkahs, have a solid earth, and solid bottoms, without the least mixtures of salt; they should, retaining the salt that lies crystallized upon them after rain. But others are of a more open, aborsent, clinging nature, fossilizing any saline inundations upon the surface.

But besides the salt springs and rivulets, already mentioned, there are others in hot and despicable springs and basins. Some of these springs are more than lukewarm; others of more intense heat; and very proper to baths, while the Hammam-Melkouteen, and the upper bath at Maraga, are much too hot for that purpose; the former boiling a large piece of salt water; and the latter a quarter of an hour.

Besides the hot mineral springs that are continuously discharged by the termes, there still remain below the surface some vast and intercalated beds of sulphur, nitre, and other inflammable bodies, of which the frequency and violence of the earthquakes, Anno 1732 and 1742, shook down a number of houses, and closed up the course of several fountains; but by one of these violent convulsions, Anno 1716, a large patch of ground at Wunne, lying in an easy defect, with a well, a few trees and a farm house, gilled all down in a faring, till they were, one or other of them, fapped by the channel of the Harboune. Several of the branches, together with some pieces of the house turned down, and the dry part of the building not always the same; for in the plains of Ziay-xet it is blackish, whilst in those of Bichichdegch, &c. it inclines to be whitish. Though all this is alkali impregnated with great quantities of salt and nitre, we are equally fruitful.

Lead and iron are the only metals that have yet been discovered in Barbary; the latter is white and good, but in no great quantity. Their lead ore is very rich, and might be obtained in large quantities, if their mines were under a good regulation.

Besides the horse, the mule, the ass, and camel, used in Barbary for riding and carrying burdens, Dr. Shaw (from whose travels into this part the following account is chiefly taken) mentions another animal, called the kumruth, a little ferocious beast of burden, engendered betwixt an ass and a cow, being figner, but much fatter than the ass, and of a grey head (except the horns) like a cow, and a skin flecker than that of the ass.

In this country, the beast cattle are generally very small and slender, the fattest of them, when brought to the fall, rarely weighing above five or six quintals, or hundred weight: neither is their milk in proportion to their fassa, for notwithstanding the rich herbage of this country from December to July, the butter never has a suffucnce or richness of taste equal to what our English dairies afford us in the midst of winter. About bntta, day of the year, there was no left spared than his ministers, when emperor Cæsareilac acquainted him, that he had a Hampshire cow on board the Camelot, which was sent in the end of (Algiers) which gave a gallon of milk in a day; a quantity equal to what half a dozen of the best Barbary cows would yield in the same time. The Barbary cattle have likewise another imperfection, viz. that they almost leave their calves and their milk together.

The dairies here are also in some measure supplied by the sheep and goats, rearing a quantity of these in the hilly and mountainous ereas of their milk. Instead of curd, they make use (in the summer season particularly) of the flowers of the great-headed thistle, or thistle, which, to turn the milk, putting the curds thus made into small bakers of rushes or palmier leaves, and binding them after wards and precluding them. Many of these cheeses weigh about two or three
three pounds, being usually of the shape and size of a penknife. They have no other method of making butter, than by putting their milk or cream into a goatskin, which being suspended from one side of the tent to the other, the wind, and the temperature of the place, as well as the number of these distillers and flippers of oil, bring about opportunities of separation of the unctuous and oily parts, which is requisite. These are several species of goats, which are also of the same sort of the castle of this country; such species are very numerous and prolific. Several Arabian tribes can bring into this country several hundred of these, at the same time that they are possessed of so many thousand camels, and that number of sheep and black sheep, which are employed in their domestic purposes, and on which occasion they appear to live upon their milk and butter. 

Wild boar, ferrets, weasels, mole, rabbit, hare, and wild bear, are all of these in great abundance. 

The boar is a small animal, not naturally tame and domesticated, these kingdom afford large hordes of the real kind, called bokher-al-wal by the Arabs. This species is remarkable for having a rounder turn of body, a faster foot, with brown blending more to each other than in the tame kind; they agree in colour with the red deer, and are of the same size. 

The boar and hare, are among their wild beasts, the boar is not a native of Barbary. The dabbah is an animal about the bigfeet of a wolf, but of a smaller body, and is noted for its speed and lightness, it is not well known, but that it is common to other countries, as red and fallow deer, the gazel or antelope, the hare, and rabbit, of which there are three species, the ferrets, foxes, ferrets, weasels also the mole, rabbit, hare, and wild bear, which are all more in great abundance. 

There are several kinds of hares, which, people supposing without any had been known to defend itself with no more bravery, that it takes an inclination to neither side, the caracales of both having been found lying dead together in a grove, greatly tamed and wasted. 

The abovementioned traveller observes, that the locusts which he saw in the years 1724 and 1725 were much bigger than our common chaffinch. A few hedges, with legs and bodies of a bright yellow. Their first appearance was towards the latter end of March, the wind having been for some time thorough, and in the middie of April their numbers were so vastly increased, that, in the heat of the day, they formed themselves into large bodies, appeared like a scorioum of clouds, and darkened the sun above the midde of May, when their ovaries were turgid, each of these bodies began gradually to disappear, retiring into the midden and other adjacent places, to depopulate their eggs. Accordingly, in the month following, their young broods began gradually to make their appearance, and it was surprising to observe, that no sooner were any of them hatched, than they immediately collected themselves together, each of them forming a compact body of several hundred yards figure, which marching afterwards directly to the rear of the enemy, wept, and howled, and cut and eat up every plant in their way, letting nothing escape them. 

The inhabitants, to stop their progress, made trenches all over their fields and gardens, and filled them with water, or else placing in a row great quantities of heath, flippable, and such like combustible matter, they set them on fire, and the flames, which were let out, did no par. For the trenches were quickly filled up, and the fires put out by infinite flames occurring one another, whilst the front formed regardless of danger, and the rear preserved on this close, that a retreat was impossible. 

A day or two before one of these bodies was in motion, others were already hatched to clear the ground of the young branches, and the very bark of such trees as had escaped before with the loss only of their fruit and foliage; so fully hath the inspired writer compared them to a great army, as the ancient historians, besides being greatly the longer time to be seen. 

Having, in this manner, lived near a month upon the rain and destruction of every thing that was green and juicy, they arrived at their full growth, and threw off their work as the air was by the breath of the wind after the rest of their bodies, after which they lay in a languishing condition: but as soon as the sun and air had hardened their wings, and dried the moisture, they mounted upon them, and as if they had been for sifting off their thoughts, they returned again to their

former residence, with an addition both of strength and agility: but they continued so long in this state, they were instantly dispersed, as at their parents, had been before, after the laying of their eggs; and as the direction of the march of their mothers and fathers being, when they came to the rootwaters, it is probable they perished in the sea, a grave, which according to some people, they have only in common with strawberries, which are said to have been left to themselves; but it is so far from truth, as none are so much like the river crayfish in taste. 

Africa produces several plants, according to the same author, the natural and ordinary toucfs of things is much the same in Barbary, as in other places: each species, as far as he could judge, were in a greater number, of the same kind, and produced in such a variety, that few have not at least some, which are produced from animals under the direction of mankind, and therefore not to properly left to themselves. 

The Euphorions are little known or encouraged in Barbary: besides their scarcity, and some other entomiloical comments upon them, very few books are read or collected after, by those few persons of other years, who have both time and leisure for study and contemplation. All that variety of learning which they formerly either invented or improved, is not in use among the philosophers of this place: for, if in the words of one or two species, are produced from animals under the direction of mankind, and therefore not to properly left to themselves. 

The same writer observes, upon his arrival at Algiers, he made it his chief business, to be acquainted with such persons as had the characters of being learned and curious; and though it is very difficult (as well from their natural physiognomy, as from a particular complexion, which they have for Christians) to cultivate any real friendship among them; yet in a little time, it was perceived, that the whole art of navigation, all it is practised, and the whole, was nothing more than what is called the picking of a chart, and utilizing the eight principal points of the compass: Even chemistry is not applied at present than to the distilling of red water, though this was formerly the favourite science of these people. 

Notwithstanding the extreme ignorance of the people in general, there are, however, several persons who prescribe in physics, play upon a variety of musical instruments, and are concerned in other sciences and performances, which seem, at least, to dispose some into mathematics; yet all this is learnt merely by practice, long habit, and custom, afflicted for the most part, with great strength of memory and quickness of imagination, which is not by any means to be made against the natural parts and abilities of these people, who are certainly subtle and ingenious, and only want time, application, and encouragement to cultivate and improve them. 

As they believe in a final and absolute predetermination, few of them would either admit of advice or medicine; for as they are of the opinion, if we are to be saved, it is no matter what is said to them. 

The use of the bow and arrow is very great among the sexes, and they generally use arrows with a stone head, often two or three inches long; when they are shot, they are made to incite the arrows to one another, or being at all underfooted by the by-finder. 

The Arabs are more addicted to superstition than any other nation in the world, or even than the Mahometans in general. They hang about the children necks the figure of an open hand, which the Turks and Moors call kadi; and which may be seen in every nation among them, and of the children's hands, in which a tercharm or evil eye; for, with them, is an unlucky
Jocki number. They who are grown up, carry always about with them some paragraph or other of the korin, which, as the Jews did their phylacteries, they place upon their breast, or few under their caps, to prevent fascination and all sorts of evil. Thus, a large part of the boats, or other misfortunes they are exposed to.

The people suppose the virtue of these charms and scrolls to be universal, and that in Lagonas and other places, on the sea, they put something like a cock, a sheep, or goose; by burning the whole or a part of the blood, or else by burning or dispersing the feathers: for it is a prevailing opinion all over this country, that a great many diseases proceed from some offence or other that has been given to the heavens, a sort of creatures placed by the Mabometans between angels and devils. These, like the fairies of our fathers, are supposed to frequent shalls and fountains, and to assume the bodies of toads, worms, and other little animals, which, being always in our way, are liable every moment to be hurt and molested. When any person, therefore, is sick or maimed, he-fancies that he has injured one or other of these beings, and immediately the women, who are destitute in these ceremonies, google the head and主板 their hands to the ebb and other parts, to some neighbouring fountains, and there sacrifice as we have already hinted, a hen or cock, an ewe or a ram, &c., according to the sex and quality of the patient, and the nature of the distemper he is afflicted with.

Sect. xi.

A S the provinces and districts of Barbary, lately treated of, have the Mediterranean for their northern boundary, it will be therefore necessary to give a particular description of that celebrated sea, before we proceed with our account of the other parts of Africa; especially as there are many singularities relating to it, too curious to be overlooked in a work of this nature, and which we shall now give our readers in as succinct a manner as the subject will admit of.

The Mediterranean sea is so called on account of its being surrounded by the land on all sides, except at the two frights at the end of it, viz. that of Gibraltar, on the west, and the Sicilian strait that leads to the Euxine or Black sea, as the former doth a constant current from the western ocean into it. The ancients called it the Hellespont, from the word Helle, or Hylle, signifying the west. It was also called Mare magnum, or the Great sea; and Mare internum, or Lower sea. This strait was given by the sacred books of the Old Testament, in opposition to the sea of Galilee, and the Dead sea, which, though dignified with the name of sea, but where salt lakes in comparison of it; and the Later or Lower sea, opposite the Romans, from the coast of Genoa to that of Sicily. Thrice of Interius, Interius, and Internum, were given on it the fame account as the rest of the Mediterranean. The Semites call it Maridi lerano, or the Eastern sea, by reason of its situation with respect to them.

This sea is parted from the western ocean by the straits of Gibraltar above-mentioned: from the Red sea by the Ithmus of Suez; and from the Propontis, by the straits called Dardanelles. It is bounded by Europe, on the north; by Asia, on the south; by Africa, on the west; and by the straits of Gibraltar, on the west. Its utmost extent from north to south, where the width, that is from the gulf of Corinth to Tripoli, is not above twenty, to forty-fix, forty, in upwards of fifteen degrees, or three hundred and twenty leagues, or nine hundred and thirty miles. Its breadth, from west to east, is still much greater, viz. from five degrees western, to thirty-six eastern, or forty-one degrees of longitude, making in all seven hundred and ten leagues, or two thousand one hundred and five miles. It is of this vast extent that remains the general name of Mediterranean, yet it hath a variety of appellations given to its several parts, according to the countries it touches on each side; such as the sea of

Garrus, the Tufcan or Etruscan, the Sicilian sea; and that branch of it which runs northward from the Cape Otranto, quite up to Venice, is called the Adriatic sea, or gulf of Venice; and so of the rest.

The Mediterranean hath abundance of gulfs. The most considerable of them are, that of Venice, last spoken of, that of Lyons, on the coast of France; the Archipelago, in the Ionian, or the Cretan, on the coast of Barbary. It hath likewise a real number of peninsulas, of which we shall only mention the three principal ones, viz. Italy, Greece, and Asia Minor. The most considerable of its islands are those of Sicily, Sardina, Crete, Malta, Sardinia, Cypus, Cephalonia, Zante, Candia, Rhodes, Cyprus, those of the Archipelago, and many others; an account of which the reader will find at the close of the chapter to which they respectively appertain.

It is allowed on all hands, that a continual current flows from the Atlantic ocean into it, at the straits of Gibraltar; and another in a contrary direction, is the Gulf of Cadiz, into the Euxine, or Black sea.

It certainly appears, that the current in the Mediterranean, unless hindered by contrary winds, and it is well known, is a strong rapid stream always in from the Black sea, notwithstanding which, and the prodigious quantities of water that are likewise thrown into it, it may be allowed that the stream is very large and deep, this sea is never observed to overflow, or even rise beyond its usual height. What becomes of all the water that is thus thrown into it, by two such large and constant currents; the one of which is computed about four miles broad, and the other about two, is a question, that is more easily asked than resolved, though the learned have formed many conjectures concerning it. The most received opinion is, that which supposes the middle stream to flow into it, whilst the two sides, by a contrary current, discharges themselves out of it into the ocean. And indeed it is observable, that though in the middle of the strait there be a rapid current always setting in, yet, on the sides, there is a stream of abundant part of that breadth, that flows six hours, and ebbs five, every day; and that a still innermost stream along the shores doth likewise ebb and flow full twelve hours, but contrary times from the other: so that on the first day of the moon it is flood at one of the clock, and ebb at seven, in the two intermediate streams next to the middle current, and, on the same day, it is flood at ten, and ebb at four, in the two outermost streams next to the shore; or rather, as the above-mentioned captain Bellard affurcd us, it flows at ten, and ebbs at four, on the African shore; and flows at seven, and ebbs at five, on the European side.

We shall now only add that surprising phenomenon of its opposite currents; as difficult to conceive of, as that we have been speaking of concerning the Mediterranean sea. These currents have been long since taken notice of by Procopius, who lived in the fifth century, and tells us, that the father of history, who frequented that part which is filled the abyss, observed, that their nets, when flung into it, were dragged by the upper current directly from north to south from the surface downward to a certain depth, after which they went directly in a contrary way, whence they concluded, that the lower current was quite opposite to the upper.

Toussaint, who had examined the truth of this observation, endeavored to account for this contrary current, by supposing that the waters moving violently against some hollow rock, and meeting with and being repulsed by it, much of consequence be beconcing bear off with an opposite motion to what they had before. However, that judicious author is far enough from being, as some have thought, from this strait, it is a farther part of this wonderful phenomenon, and only propounded it as a conjecture of his own, which may excite others to seek for a better. Several others have since that time, the reader is fully examined the fad, and owned it altogether surprising, particularly Mr. Gilles, and Count Marfily; but neither they, nor any other, have ventured to give any opinion about the cause or effect of it. Much more is there for the description of this sea, which has been so remarkably both in ancient and modern history.
NEGRoland, or Nigritia, is fraste between eighteen
degrees well, and fifteen degrees of east longitudine,
and in fifteen degrees twenty minutes west longitude,
from whence it is little to be wondered at
that the climate should be excessively hot. The rainy
season usually begins with the month of June, and continues
till the latter end of September, and sometimes, before the
beginning of October: the first and last are generally the
moist rainy. The wind comes swiftly, and blows excruciatingly
hard for the space of half an hour, or more, before any rain
falls, insomuch that a veffel may be suddenly surprized
and overflown by it; but then a person may be aware of its
approach, and take shelter before the storm. During the
rainy season, the sea becomes folemonly blow, but instead of
them usually winds right out the river, which in
the months of November, December, January and February
generally blows very fresh, particularly in the day time. Four
months of the year are healthful. The greatest heats
are in May, three weeks or a month before the rainy
season begins.

The river Gambia is divided by a number of islands
and sand-banks, and in the widest part is about nine miles
across. It is navigable for small vessels eleven and a half
hundred miles, the sides reaching to that distance from
its mouth. The land on each side is chiefly flat and woody;
but there are some parts very open, on which the natives
plant rice, and in the dry season they produce pother for the
beasts. The wild beasts consist of lions, tigers, and
elephants, and there are great numbers of crocodiles in
the river. In this river, the English, French, and Portuguefe
have setlements. The chief belonging to the English is
in a small place called James's Island; which is about ten
miles from the north of the river. There is also another
considerable plantation at Gyllifree, a large town on the north
bank of the river, near the above-mentioned island; and
the last is the chief settlement of the French. Gold,
elephants teeth, bees-wax, and flaves, form the
principal part of the trade carried on here; the latter of
which are either prisoned in war, or from thieves, or
condemned for crimes. The gold is of so excellent
quality, and much finer than sterling gold. The ivory, or
elephants teeth, called by the natives mortel, is either
found in the woods, or got by hunting and killing the
beasts; and the larger the teeth the more valuable the
ivory: some of them are quite white, others yellow, but
the difference of colour neither adds to, or diminishes the
value. Bees wax is sold in great quantities about the
river, and is made in cakes from twenty to one hundred
and twenty pounds weight. Gum dragon is also brought
from this country: it comes from a tree called boa di
flying, or bow wood, out of north latnines, incision being made
in the tree, the red liquor oozes out after the tree, till
several lumps are formed, which are afterwards dried in
the sun.

Several forts of people inhabit the banks of the river
Gambia: they are known under the following appellations;
and they are the Mandingoes, the Jollofis or Jalls; the
Poituguefe or Portuguese; and the French. The
Mandingoes of all which, together with the manners and
customs of the inhabitants, we shall now proceed to give
an account of.

Mundingo is much larger than any other kingdom fraste
on the banks of the Gambia, and the inhabitants
of it are much more numerous. The Portuguefe conquered
this kingdom in the beginning of the fourteenth century,
when some of them settled in it, and their descendants
have ever since intermarried with the natives, so that there
is little difference between them either as to their colour
or shape, the former of which is quite black, and the
latter thick and clumsy; but as they still retain a corruption
of the Portuguefe language, and as they chitter and
murry by the help of the priest sent annually from St. Jago,
the two most civilized parts of Guinea, they consider themselves
as different from the Mandingoes, although they are really
natives of Portugal; and as the term Negro is only used
by them of the slaves, they esteem it the greatest affront
that can be offered, to apply it to them.

The kingdom of Mundingo is of considerable extent,
but its exact limits cannot be ascertained. The natives
are quite black, and have very disagreeable features, their
lips being exceedingly thick, and their noses remarkably
broad and flat. They are rational and humane in their
dispositions, and are particularly civil to strangers. They
are in general very brave and lively; but, if affronted,
are impetuous and revengeful; nor can any quarrel be
judged, otherwise than by the destruction of one or other
of the persons contending.

These people have a great sense of pride, the wealthiest
part of them keeping a prodigious number of slaves; but
the number is not so great as it was; the reason of this
is, that it is sometimes difficult to know the serving from the master:
they are frequently much better clothed, particularly the
women, who are ornamented with necklaces, bracelets,
and ear-rings made of coral, amber, and silver, to a consid-
erable value. Several of the natives have many slaves born
in their families, and though in some parts of Africa
slave is sold, yet in Mundingo it would be thought not
only indiscriminate, but very wicked; nor is even any family
slave sold, except for such crimes as would authorize its
being done, and be considered free. If indeed there are
many slaves in the family, and one of them commits a
crime, the master cannot sell him without the consent
of the rest; for it is the law of the land, and is called
a neighbouring kingdom for protection.

In most of the towns of this kingdom they have a
kind of drum called a tam-tam, which they
only beat on the approach of an enemy, or on some
very extraordinary occasion, to call the inhabitants of the
neighbouring towns to their assistance, and when this is
best
The women have a piece of cotton tied round the waist, from whence it reaches to the knees. The rest of the body is naked, but, by way of ornament, it is painted or painted with figures of various colours. Some indeed have a loose piece of cloth called the whatever they choose to be called, but that is considered as a particular kind of extravagance. Both sexes wear a large bunch of keys hanging at the end of their girdles; which is an addition they are extremely proud of.

The people marry their daughters very young in this, as in most other hot countries; some of them are even contracted as soon as they are here born, and the girls are never afterwards break off the engagement; the men, however, can refuse accepting them when at a proper age; neither dare the girl marry any other without her consent. Before a man takes his wife he is obliged to make a present to her parents of two hundred cola: two iron bars, and two cows: the cola is a fruit that grows in the inland parts of the country, and somewhat resembles a horse chestnut. When a man takes his wife he makes a grand entertainment, to which they who think proper, come, without the ceremony of a formal invitation. The bride is brought on men shoulders, with a veil over her face, which is not removed till the marriage is properly consummated; and during this time the company dances, and exhibit every kind of the most ridiculous mummary imag.
There is a place called Engerflol, about twenty miles to the east of this Defart, where the king of the Jolollos has his palace, which consists only of a large number of huts, built much like those of the other negroes, and at the time it is put into the grave, the whole affably bow, and give one universal thrink. After the corpse is deposited a large cut is laid around the surface of the earth, on which they place straw, or the leaves of trees, so thick as to prevent the mould from getting near the grave, and on top of these they lay the earth, which they trample hard down with their feet, presetting it very close.

The people have a language peculiar to themselves, which is more generally spoken on both sides the river, than any other, one who is well acquainted with this language, may travel from the mouth of the river quite to the country of the Joncoes, or merchents, so called from their yearly buying a vast number of slaves, and bringing them to the lower parts of the river for sale. The natives have also a concept kind of Portuguese, which, when they trade with the Portuguese is generally used by them.

The Mundingoes are chiefly Malaysians, and prefer many maxims of the most superstitious nature. When an eclipse of the moon happens, they believe it is occasioned by a large cat putting one of her paws between the earth and the moon, and during the time of its progress, they pay reverence to Mamoth. They keep theirabbath on the Friday, when they pray three times, but on the following day of it, they worship.

They have neither temples nor mosques, but are furnished to their devotions under the shade of a large tree by the priests, of which there is one in every village. They pay the greatest reverence to their priests, informing that if persons of the first distinction happen to be with one of them, they immediately form a circle round him, and, falling on their knees, follow his beneficence.

From their superstitious notions, they have such faith in their priests, that the merchents, or persons of note, can better fools, that they call it a grigirl, they think themselves free from any kind of danger. This grigirl consists of nothing more than a number of sacred characters drawn on a piece of paper, or the figure of lizards, serpents, or some other animal, which they wear about them as the most valuable possession. They have such an opinion of the utility of this supposed charm, that the poorest negro will not be without it, and be particular to have it about him whenever he engages in any hazardous enterprise, as supposing it a preservative from every danger; however, when it happens to prove ineffectual, which is sometimes the case, the marabout attributes it not to any defect in the charm, but to the bad conduct of him who possesed it. The priests reap considerable benefits by the sale of these charms, as they fix the price in proportion to the circumstances of the purchaser, and for one of them carrying on the richest commerce of the country, not only by trading largely in these articles, but also in gold, slaves, elephants and camels.

There is a sort of people on the borders of the kingdom of Mundingo, called loopes, who are in a manner wild, and invertebrate enemies to their neighbours. Their country is an extensive plain, and is entirely independent of each other, notwithstanding which, they are so numerous, that the Mundingoes, with all their forces, cannot conquer them. Their towns are surrounded with a kind of fortification made of thick driven in under ground close together, and covered with earth. They have the character of being very grateful when they receive any favour; but if any injury be offered them, they will never forgive the party, or suffer it to pass unrevenged, when an opportunity presents itself.

About one hundred miles from fort St. Lewis is situated the Gumi Defart, which is the place where the trade is carried on with the other negroes, those that form themselves at a considerable distance by hills of red sand, and to barren; that it produces only a few flaxing, thrubs. Near these hills there is a river, and there are a few huts built by the French, to secure their merchandise from the depredations of robbers; they are surrounded by a ditch filled with water, and are protected with a wall of wood posts and palisadoes. This part of the country may properly be called the Defart, for it is generally defilicated of inhabitants, and is only visited at such times as the Mundingoes are absent. They are very large beings, and the French, who then go down to it, and purchase what they bring, how great liquor the quantity may be.

The people who inhabit this country, called Jolollos, are blacker than the Mundingoes, and much better featured, their noses not being so broad, nor their lips so thick. Their dress consists of a loose garment made of callico, which reaches from the shoulders to the knees, and is fastened about the middle with a girdle agreeably ornamented. Both sexes are fond of decorating their hair, wearing bracelets and anklets on their legs and arms, rings in their ears.

The king is absolute and the greatest respect is paid to him and his family; for when any persons come into their presence, they must immediately prostrate themselves with their faces to the ground. No one, except the king, is allowed to sleep under tents (that is, clothes to keep off snow and mosquitoes), or to be carried in litter, that should come to the knowledge of the king. They also are subject to the same punishment, who presume to sit on the same mat with the royal family unless licensed to do so. His subjects are naturally courageous, and addicted to arms; notwithstanding which, they are good natured, modest, and hospitable, particularly to strangers.

It is needless to mention here the customs, ceremonies, religion, &c. of these people, as being nearly the same as those in the kingdom of Mundingo.

The kingdom of the Phoeys, or Fouleys, adjoins to that of the Jolollos; many of the natives of it are dispersed throughout the different kingdoms and provinces of the whole country of Negroland. This kingdom extends along the river Gambie, from east to west, near fix hundred miles; but its distance from north to south cannot be ascertained with any certainty, on account of its defective state.

The people of this country are much like the Arabs, but not so white, nor yet so black as the negroes, being rather of a tawny complexion. They generally speak the Arabic language, though they have one peculiar to themselves. The men are tall, and have not the features of negroes, and have good features: but the women are very short, and at the same time remarkably thin. They are all naturally of a weak constitution, notwithstanding which, they are very afflincd in their professions, which principally consist in taking care of their cattle, and cultivating their lands. They live in huts or claire; and form their buildings on such a construction, that they are easily Renewable, and can move from one place to another. Their country is very fertile and produces plentiful crops of large and small millet, cotton, tobacco, rice, corn, peanuts, yams, &c. They have great numbers of cattle: their goats and sheep are extremely fine; and their oxen so large that the French buy up all their hides at a very good price. They plant tobacco near their huts, and round their towns they plant cotton, beyond which are their corn fields. The corn is of four sorts, viz. maize, or Indian corn, rice, and the larger and better, or I'iney corn, the latter of which is called by the Portuguese, a milho.

The Phoeys are very fond of European merchandise, and near the trade of the Moors, and building large tents, they very fond of dancing. The decks of both sexes consists of a kind of weaver's cloth, made of cotton, which are fastened round the waist, from whence it reaches to the knees; and they adorn their heads with flowers and branches of amber, gold, pearls, and glass beads of various colours. Their houses are of a round form, inclosed by a cone; they are built in rows at a distance from each other, and are placed with great uniformity.

About the transport of merchandise they are very ingenious men, and their houses are very ornamental and frugal. As they raise much more corn and cotton than they consume, they sell it at a reasonable price.
priest to strangers, to whom they are very civil and hospitable when they come to visit them. They also supply the wants of their own country with such success, that they have been ever known and recorded as the most industrious of all humanity; and it is remarkable for the mildness of their temper, yet they see far from being deficient in courage, for they are as brave as any people in Africa.

They live in a kind of tents; when they return from the chase, they retire into the tents and set fire to them, so that the smoke and fire may drive away the serpents, spiders, and other wild beasts, or they also go in companies to hunt elephants, whose teeth they sell, and dry them on the same manner as baron is cured in England. They frequently remove their dwellings from one place to another, but commonly settle a spot near the Mungoing, which they think themselves happy in having such useful neighbours; and indeed there is hardly a Mungoing town of note up the river, that has not a Ploey on its own

The monarchs of this country are very powerful, and not only receives homage from the king of the Jololus, but all the great men of that kingdom are his vassals, and pay him every fourth year a number of slaves, and as many oxen. He keeps a standing force of cavalry, and his infantry are armed with lances, bows, and arrows. The men of this kingdom are distinct from and are obliged when commanded by the king, to join their forces together; in such cases they have a right to come in the flowers of all the negroes they meet with in their march; by which they have such liberty over any of his subjects, unless they are convicted of an offence of a capital nature.

In this kingdom, the following are the most remarkable places; namely:

1. A village, which is a village situated on a small river that runs from the lake Cajar into the Senegal; and Cajar, another village, which receives its name from the said lake. These two villages have each their particular lord, who is vassal to the king of this country.

2. Terrier Renge, lies on the coast of Queda, and is famous for its olive trees, which are cultivated in great quantities, and are exported to the Barbary.

3. Gouoilo, is another trading place, farther to the east, and situated on the northern bank of the Senegal. The whole country between these two places is exceeding pleasant, being laid out in large meadows, which abound with the best of cattle, and are very fertile.

4. Gouelo, is situated about twenty miles from Gouoilo; it is a large village, and the trading place of the Africote, or king of the Pholoes, though he has not any house there. His residence is a large house, situated about thirty miles to the north east of this village; near a large river, that flows at the same time as the Senegal, and, overflowing its banks, forms a large marsh, where the negroes go to feed their cattle, and where they are not troubled by any aquatic animals.

5. Boecar, is another considerable village, and belongs to the country of the Africote, or king of the Pholoes, and is about twenty miles from Gouelo. It is a large village, and the trading place of the river, being the only means to the coast. Its inhabitants are very numerous, and carry on a good trade with those who live near them.

Lac, is the left place of any note in this kingdom, and lies about fifteen miles north of Gouelo, it is a very considerable place, and is a native of that part of the country. Its inhabitants are very numerous, and carry on a good trade with those who live near them.

Thus having described the principal places in this country, it will not be improper here to introduce a remarkable

Story of one Job, an African, of the race of the Pholoes, and son to the high priest of Bundo in Forest, who was sold as a slave, and held in the English service, and who received honours from the royal family and nobility. Mr. Moore describes the particular circumstances of this remarkable African; and shows, that he was remarkable for the mildness of his temper, yet they see far from being deficient in courage, for they are as brave as any people in Africa.

Hans, a young negro, was one of the servants of Mr. Moore, who was very particularly remarkable for his mildness of temper, yet they see far from being deficient in courage, for they are as brave as any people in Africa.
did, and they told him the truth. At last he inquired how the king their master did; they replied, that he was dead: and by further inquiry we found, that amongst the goods for which he sold Job to Captain Pyke, there was a pithow, with which he used to wear hung by a line about his neck; and as they never carry arms without their being loaded, the pithow one day accidentally went empty. The man taking lodging in his house, he pretended. Job was so transported at the close of this story, that he immediately fell on his knees, and returned thanks to Mah- noom and gave up the ghost; but the very goods for which he sold him to slavery. Then turning to me, he said, "You see now, Mr. Moore, that God Almighty was merely giving something for a mere thing. ivery slave, and therefore for made him die by the very pithow for which he sold me: yet I sought to forgive him, for had I not been bold, I should never have known any thing of the English tongue, nor have had any thing of the fine, useful, and valuable things I have brought with me; nor have known that there is such a place in the world as England; nor such noble, good, and generous people as Queen Caroline, the duke of Connaught, the duke of Montague, the earl of Pembroke, Mr. Holdem, Mr. Ogilveth, and the royal African company."

"After this, Job went frequently with me to Crow, and several other places about the country. He always spoke very handsomely of the English; and what he said removed much of that horror the Pholeys felt amongst them for the flate of slavery, their countrymen had been following the belief and fancy theret I imagined, that all who were sold for slaves, were at last murdered, if not eaten, since none ever returned. His description also gave them a high opinion of England, and a reverence for the English nation. He told some of the presents he brought with him for trading goods, with which he bought a woman slave and two horses. He gave his countrymen and general good, many letters to the left of writing, a very rare and valuable commodity amongst them, and the company had made him a present of several razors. He used frequently to praise the English, and behaved himself with dignity and mildness to all, which attracted the esteem of every one."

"The messenger whom Job sent to his father, &c. not returning so soon as was expected, he ordered me to go down to James's fort, to take care of his goods, and I promised not only to send him word when the messenger came, but four other messengers, for fear the king should have received him."

"At length the messenger returned with several letters, and advised that Job's father was dead, but had lived to receive the letters his son had sent him from England, which gave him the welcome news of his being redeemed from slavery, and an account of the figure he made in England. That one of Job's wives was married to another man; but that as soon as the new husband had heard of his return, he thought it advisable to abstain; and since Job had a large estate, it was thought he could never be a fit subject for such a dreadful war, that the Pholeys there had not any cows left, though before Job's departure his country was famed for its many cattle. With this messenger arrived many of Job's old friends, with whom he was exceedingly glad to see; but notwithstanding the joy their presence gave him, he had abundance of tears, for the loss of his father, and the misfortunes they heard of him. He made them all the best in-formation, and the man who had taken her; For, said he, the could not help thinking I was dead, for I was gone to a land from whence no other Foley ever returned; therefore neither the nor the man are to be blamed. During three or four years he converted with his friends without any interruption, except to sleep and eat."

Job took his last farewell of Mr. Moore in the most affectionate manner, when he embarked on board the company's vessel for England; and at the same time gave him his regards to all the leading men in the royal African company, Mr. Ogilveth, and several other gentlemen in England, telling him to give his love and duty to them, and to use himself to the ladies, and to let them know that he came, he would let his grace and the other gentlemen know what he had done, and that he would endeavour to produce such an understanding between the African company and the English, that there should be no difference of plan. He had doubt, but it would be of great advantage to the English, from whom he had received innumerable favours, and by whom he had been redeemed from slavery, and brought safely home to his country and friends.

**Sect. II.**

**The English have their principal settlement here at St. James's island:** it is situated near the center of the river, which is here at least seven miles wide, and about thirty miles long, among which are planted small guns. Within the fort are convenient apartments for the governor, merchants, factors, and military officers; as also magazines and storehouses. Without the walls, facing the water, are two round batteries, on each of which are seven guns well mounted. Under the walls, facing the water, are two round batteries, on each of which are four large cannon; and between these are planted small guns. The fort is built of brick, with an iron roof, and is about thirty feet high. It has a cell of protestant preaching, and a chapel for the army, and the garrison, and the few are employed in carrying goods up to the other factories, and bringing from them wax, elephant teeth, and the like.

The company have also a factory pleasantly situated at a large town called Giffifere, a little below Job's fort; the company here are large gardens that supply James's fort with all kinds of vegetables. This town is inhabited by Portuguese, Mussungees, and some Mahometus, the latter of whom have a very steady and industrious character. On the north side, opposite to St. James's island, and about a mile and a half from Giffifere, is a small place called St. Domingo, containing only a few round huts belonging to the company, in which some of their slaves live, who fill the cafes there daily for water, take care of a well, and eat wood for the fort.

Here is also another factory belonging to the English; nearly opposite to the fourth side of James's island; this is situated on a river called Cabeta, which falls into the Gambia; but at the chief of the factory is to supply James's island with provisions, little trade is carried on here.

The English have likewise another factory about twenty miles above James's fort, at a town called Vintain, situated on a river of the same name, which falls into the Gambia. The factory consists of five huts, and consists of hides, ivory, and wax. The town belongs to one of the kings of Fonia, and is pleasantly situated, on the side of a hill, near the river. The inhabitants are the native of Gungue and Mahometus, the latter of whom have a handsome mosque. The town is plentifully supplied with provisions, great quantities of which are brought by the Pholeys, in which it is also taken.

The people of this town are extremely proud of their hair; some of them wear it in tufts and bunches, others eat it in croissats, and some fling, coral, or beads upon it. The men wear a cloth round their waists, which reaches to the knees, and they have another cloth thrown over the right shoulder: on their heads they wear caps of cloth, some of which are plain, and others adorned with feathers and goats tails. The drapery of the women consists of a piece of cloth wound round the waist, and reaching to the middle of their thighs; they tie handkerchiefs round their heads, leaving the crown bare, which some of them ornament with small horn beads, and who have not got hand-kerchiefs, supply them with a piece of white cotton. Their huts are about fifty feet in circumference, built with sticks and clay, and covered either with long grass or palmetto cloth. Their furniture consists of only a small chest for clothes, a mat to lie on, which is tailed about a foot from the floor; a jar to hold water, and a caldshibf to drink it with, two or three jars, in which they pound their corn and rice, and a few large dishes, out of which they eat their food with their fingers, since they use neither knives, forks, or spoons.

These people are very fond of smoking tobacco, which
and of their own growth; and some of them, being furnished with this article, will go two days together without eating. They make their pipes themselves, the bowl of which is formed of a red clay, but the stems are only a piece of reed, or a small stick bored through with a hot iron wire, and some of them are six feet in length. All the pipes are bored, or wormed, with some large, divined in time, and disposed of the names of Upper and Lower parts, and distinguished by the names of Upper and Lower, each of which is under the government of a different king, the one a Muslim, and the other a Jemarrow. Lower Yang have the company a small factory at a place called Yanmarew, which is kept by a black factor, wholly only busied in it, but with some business for the fort. This is the pleasantest fort on the banks of the river, it being delightfully shaded with palm and cissablos, the loaves of which the inhabitants use for covering their hovels with.

There is a small town in the Upper Yang called Cuttejart, situated about a mile from the river, between which the company had once a factory, but it being overlooked in the year 1725, and great quantities of goods destroyed, they removed it to Sumy, about eight miles farther, where it has continued ever since. This town is noted for a good trade, particularly in slaves; and is about twelve miles from the river.

The factory of Fangende is higher up the river, which is here exceeding broad, and deep enough to admit vessels of forty tons burden. The sides of the river are woody; and the land low, but the factory bands at a bend, and is at least ten miles from any town. On each side of the factory is a pleasant prospect of the winding of the river, which is very extensive; and is a divergent view of part of the kingdom of Cantore. The port here serves for a landing place to Sutocco, a town about nine miles distant; but, excepting the factory, it has not any trade near it.

The English have also another factory near a large town called Brunico; about half a mile from the river, in the kingdom of Jemarrow. The town is inhabited by a people of the Mundinga race, but they are brethren Mahometans. About half a mile below the town is a ridge of rocks that runs three quarters across the river, and leaves to install a channel, as to render it very dangerous for large vessels.

Baluboando, nine miles from Brunico, is a large town; it is situated on the south bank of the river, and divided into two distinct parts; one of which is fortified by a wall made of palm trees spread in the ground, and clay laid in between, so that it is little inferior in strength, to those made of brick and mortar. The other town is entirely encompassed by a fence, and surrounded by a number of flax and other plants which, in manner, most of the towns on the Gambia, as also the factories, are surrounded.

In populous times, the people live in the open town; but in time of war, they live up the country; and in this fit, it is fortified. These are naturally a refractory fort of people, and have a king of their own, called Sumna, who has a great power over them.

The kingdom of Tomany, is next to that of Jemarrow; this is a very extensive country, and contains more towns than any other on the whole river. The English have a factory at a small place called Yamamaunda, where a considerable trade is carried on, particularly in dry country articles. The town is on the north side of the river; but the factory is on the south, and is defended by a strong fortification. All vessels that pass this port pay a duty to the king of Tomany, who is a Mundinga, and lives at a place called Sutomoro, about three miles distant from Yamamaunda.

Contoro lies beyond Tomany; this is a large and populous country, with many small towns dispersed about it, but not any one nearer the river than three miles; and they all so insignificant as not to deserve any particular description.

We shall now proceed to give an account of the famous river Niger, or Senegal, which takes its rise in the eastern part of Africa, and after a course of three hundred miles nearly east and west, divides into two great branches. The first of these branches is called the king of a garment made like a furrie, but nearest no lower than his knees, and a large piece of cloth greater part of the kingdom is inhabited by a people, who are Mahometans, and are called the Mundinga; also are the tribes near the Senegal, the Gambie, and the Sierra Leone; all which, like the Nile, flow their banks in a particular time of year. The English have not been able hitherto to ascertain the character of this great river, but from the farther part that is navigated, the English have a factory at a town about twenty five

This king's dominions are very extensive; in
The foft time and their namers, which of Virch, and Jacob, that of the Cano, Zanfara houses, and in large numbers, chiefly inhabited by bushmen, the center of it is a large town of the same name, which is ornamented with many handsome buildings, and the inhabitants carry on such a trade with the neighboring nations, that many of them are exceeding wealthy, and live in the greatest splendor. Some parts of the country to the south of Guingara town abound with gold; and when the merchants travel to those parts for that valuable article, their goods are carried by slaves, the roads being too rough and dangerous for any beast. These slaves carry prodigious burdens, with which they travel upwards of twenty miles a day. The great loads they carry are amusing: for besides the merchandize, they are loaded with provisions for their masters, as also for the folders that guard them.

They are governed by a king, who maintains a garrison consisting of a great number of horsemen and archers, and he receives considerable tribute annually from his subjects.

Bito, which lies to the south of the Niger, is a small kingdom, and is bounded, on the south, by the town of Beto; on the north, by the kingdoms of Guingara and Zanfara; on the south, by Dauma. The inhabitants are of the same race, and are said to be exceeding wealthy. This country is large and fertile; but has only one capital town in it, called by the same name.

Temian is bounded on the north, by the Niger; on the east, by the kingdom of Waugria, the desert of Zaara, and the kingdom of Dauma; on the south, by the kingdom of Guingara; and, on the west, by that of Bito. The inhabitants of this country, who are said to be very savage, are very little known to the Europeans.

Dauma is situated in fourteen degrees thirty minutes east longitude, and eight degrees north latitude. This is also a small kingdom, and has not anything very remarkable to distinguish it, though the inhabitants are said to be very rich.

Bafara is situated to the south of Dauma; and is bounded, on the north, by the desert of Seth, which is a large space of barren ground, and reaches as far as the borders of the kingdom of Gigo, where it joins another large tract of land called the Kafara.

Gigo is situated four hundred miles south of Tombotu, having Dauma on the east, Melli and the Munding country on the west, and Guinay on the south, from which it is separated by a ridgy and continous height of mountains, from which the rocks and cliffs, but there is scarce any wine, trees, or fruits. The villages are principally inhabited by blacks and huts from which arise parasols and huts, and have a dark nakedness, but the rainy season is clothed with the fruits of beauty. The principal village is called Gigo, and is of great extent; and is situated here; but the houses are very mean buildings, except those belonging to the king and his courtiers, which are more spacious and handsome. The country for four miles round this town produces great quantities of rice, millet, corn, and cattle, also some melons and citrus; there are likewise mony springs, which produce excellent water. There are also many rich merchants in this town, which is much frequented by people of neighboring countries, who come to buy cloth brought hither from Barbary and Europe. They also carry on a great trade in slaves, and they make a great number of telling their wives and children.

The people here are in general very poor, owing to the numerous taxes they are subjected to. The king has a great number of slaves, and he appears, who are kept in a private place, and attended by eunuchs. He has a body of his own, and is very rich, and has a great number of foot-hold, besides which, he has upwards of one hundred archers. The king determines all controversies between his subjects, in the execution of which he attends personally. The chief points of this kingdom is between the inner and outer gates of the palace, and though
though he is as it were judge himself. Yet he has his counsellors, before he gives his final decision. He has his lieutenants, his secretaries, treasurers, facturers, &c., and auditors.

Mell, lies along, the banks of a river that runs into the South sea. It is bounded on the north by the great forest of Chili, on the south, by mountains and deferts, on the west, by large woods and forests reaching to the sea shore; and on the east, by the sea itself. It received a large height, at the mouth of the river, called Mell, which was once the residence of a sovereign who reigned over the whole kingdom, and at that time the town was called a castle. It is said to be of most civilised of all the negroes, and very courteous to strangers; they are likewise very industrious and frugal. The country produces great quality of corn, rice, and cotton, all of which is exported at(".

There are several considerable places towards the coast, the first of which is Kachao, called from the Frigate Cacahao, which was on the coast of the river. A small trade in horn and ivory is carried on here, and some for the sale of slaves in the month of November.

The town, called Fam, is situated about seventy miles from Kachao, on the same side of the river. A trade in ivory is carried on here, and it is called cauliflower, which is converted into a cake by baking, without moving it. It would be dangerous to eat as much cauliflower as a flour of manioc, because the farmer is left exposed. Both of them keep a long time, and are very nourishing, but a little difficult of digestion. Though this food seems to us inferior, it is preferred to the white wheat, by many.

The town, called Carasso, is situated about seventy miles from the mouth of the river on the same side of the river. It is from the town of Carasso, on the same side of the river, a village to the north of Fam; most of the people buy rice at this place, where it is very cheap, and it is surrounded with small coasts, the natives that live on the banks of this river are partly Papuans, and partly Mundingows.

There is a province in this country called by the Portuguese Kobo, where the king of which resides at a small place about thirty miles to the south west of Carasso. The town of Carasso, at the mouth of the river of that name is a small town called Caraball, where a considerable trade is carried on in slaves, cotton, and ivory.

The river Cusamunga, whose course is considerablo, and its stream very rapid, is said to be an arm of the Gambie, and lies to the south of the river of St. Domingo, or Caracho. It is said to be a long river with many bends, and the course is considerably long, and its stream very rapid, it is said to be an arm of the Gambie, and lies to the south of the river of St. Domingo, or Caracho. It is said to be a long river with many bends, and the course is considerably long, and its stream very rapid.

There is a church and convent in this place, and the civil and military government is in the hands of a viceroy, or grand vizier, sent hither by the bishop of St. Jago, to whom all the Portuguese that inhabit this country are subject. The convent belongs to the Augustinians, but from the unwholesomeness of the country, there are seldom more than two or three friars that reside here; and when any of them die, it is a difficult matter to find another that will fill the vacant place.

The civil and military government is under the direction of one called captain-major, who has under him a lieutenant general, and is in the hands of a chief of artists, who are the officers, as an intendant of the king's duty, a notary, and some foresters. The garrisons consist of thirty followers, who are stationed from time to time during the commission of some capital crime; and this garrison is of the most boreal nature, for they are kept at such short allowances, as to be extremely clad, and that if they had not some kind of business to send them, they might not be able to live.

Some of them will often follow the provost for which they were sent here; after dark they will parade the country, and rob the riches, and then go to walk after fun-ner, unless a person is well provided with arms; this is also practised in most of the other Portuguese colonies.

The country on the south side, where the town stands, consists chiefly of mountains, with a few fields in which they

No. 15.

low some rice, but they are so small, and so little cultivated that they do not produce. The difficulty of the inhabitants. The river before the town is at least a mile across, and so deep as to admit the largest ships, there is no port for a dangerous climate. The difficulty of the inhabitants. The river before the town is at least a mile across, and so deep as to admit the largest ships, there is no port for a dangerous climate.
The New and Universal System of Geography.

The monkey's foot being caught, he is taken and killed by the blacks, who reckon their feast; and also that of elephants, delicious food.

Pigeons, parrots, macaws, and Guiney hens, are in great numbers in the woods, the latter of which are of the size of a peafowl, and beautiful; but it is very difficult to catch them, on account of their rapidity of flight.

They have also other sorts of fowl, among which are white parrots as large as swans, a bird called ox-eye; herons, curlews, and boacony huts, that are composed of thick hedges, and render the whole of the most delightful spots that can be met with in the forest country.

Here are also monkeys, apes, and orang-utans, in quantity, which are silk cotton trees of a prodigious size, and good indigo is produced in some parts of it.

And about nine miles from the road is situated Benke, where the English had once a small fort, which advantages arose chiefly from its standing on a deep rock, the ascent to which was by a flight of steps.

The fort was built of lime and stone, and before it was a platform with six guns. The garrison generally consisted of twenty white men, and thirty grenadiers or free blacks, who lived in a small village, under the shelter of the fort. This fort, however, was taken by a French force of war in the year 1704, who plundered and then razed it to the ground.

Bente, for its size is much smaller than the rest, it produces only a small quantity of rice, the soil is of very indifferent quality.

Note that the country is in general very unhealthy, particularly in the mountainous parts, where, during four months of the year, it rains, thundereth, and is so continuously rainy that the inhabitants are obliged to keep closed to keep dry; the air is also in such a manner as to breed the most distressing illnesses, and the animal food is reduced in a few hours to a less nourishing state.

The flat open country, however, not to be said for, has such a climate as to be continually in the highest degree, in the late season of the year, in the afternoon, from the boiling heat that generally comes from the south.

Great numbers of mangrove-trees grow on the banks of the Sierra Leone, the leaves of which are remarkably abundant, of an European laurel. The branches of these trees are nearly of an equal length, the flowers, growing downwards, as soon as they touch the water, expand, take root, and by that means make a hedge so thick as to be almost impenetrable.

There is a beverage of great frothy milk and rice, which is the principal food of the natives. It also produces great plenty of oranges, lemons, bananas, Indian figs, alphonso, pomelons, water-melons, yams, potatoes, wild melons, white plums, several sorts of apples, and the kola fruit.

There are a variety of large trees on the shore, particularly the cocoe, and the shells, from which the mortars are abundances of palm and laurel-trees.

Deer, hogs, goats, and hogs, are very numerous here, and the native men kill the Europeans for a small quantity of brandy, a liquor which they are particularly fond of.

In the mountains are great numbers of elephants, lions, tigers, wild bears, and tigers; also ape of several sorts, and numerous birds, as of the loth, warbler, of which one of them would serve a moderate man for a meal; but they are so tough as to be scarce eatable, unless raft boiled, and then fried in small pieces.

The fowl that grow in the forests of the bay are, commodious hawks for crescades; also for the natives, or sea-row, which are known to the Europeans, we shall here describe them more minutely.

It is supplied by floods, that the manatees, or sea-cow, an amphibious animal is said to devour the grass which grows in the sea; they are about the size of a large elephant, but their backs are not hairy. The flesh of the sea-cow is very considered; and the skin is very valuable.
Various BIRDS in different parts of AFRICA.

[Image: Various BIRDS in different parts of AFRICA.

Engravings after the celebrated African expeditions of Capt. Cook and Capt. Byron.]

Engraved for MILLAR as the Compleat Illustrated System of GEOGRAPHY.
Though the back is the smoothest part, yet it is covered with circular wrinkles from the top of the neck to the tail, and are in general about twenty-five feet in length, but the head and neck are exceedingly rough. The line of the spine is at the top, and goes down to the spine, which is eight inches in diameter. The head is covered with a black skin, and hair, and is divided into two parts. The bottom of the head is four inches long. The neck is small, but large enough for the nears of feeding. The lips both above and below are double, and when they are opened, the teeth are seen in a line, with a small opening between them. The teeth are in several rows, and are very hard, and the lips move in the same manner as that of a cat. They have not a tooth, but, instead thereof, two strong white bones that run the whole length of both jaws. The nostrils resemble those of a horse, and are parted by a gristle above, an inch thick, and they are two inches over, with wrinkles, at the inside, and gristle and hairs an inch long. The eyes are surrounded by a ring of skin, and are separated by the end of the nose and the ears, and are not bigger than those of a sheep. The neck is thick, and so short, that it can hardly be seen, and is a great deal white of feather. From these flippers to the nose, the body is large, but, from thence, to the anus, it grows slender. The circumference of the butt is about six feet, and of the front part, for the four feet, but where it is largest, the circumference is upwards of twenty feet. The fore arms, or arms, are about two feet, in length. The palate is covered with a thick fat, interspersed with tendons and ligaments, with a thick skin resembling a hairy cloth. They are convey on their feet, when dead, and are kept with rough gristles about half an inch, long. The breasts are placed between the arms, one under each, and are of a convex form, about a foot and a half in diameter; they are hard, rough, and wrinkled, and when they give food, the last are four inches long. The skull greatly resembles that of a horse, and is much above the same size and thickskinned. The fork is exceeding large, being fix feet long and five feet broad; it is smooth within, and has a gland about the size of a man's head near the inflammation of the guttural.

The manes, have no voice of couns, and the tail none. It makes itself in festering its breath. Their bodies keep together in large companies, and are very careful of their young which they bring forth in autumn, and have four, and six, or seven. They may be kept in a pen, and when exposed to the sun, has a fine smell and taste; it has also peculiar property, that of making itxa. It can be found in the mud it become greasy. The taste is like the oil of sweet almonds, and the only effect it has on the body, is that of keeping it open. The manes does not live long, it rotten and hard, and may be kept a great while in the hottest weather without tainting. The fat of the young ones in like pork, and the lean greatly resembles veal. In the head, are four flowers, that are different, which are somewhat like bones, and used in medicine. Hoffman assures they are exceeding useful in cures of epilepsy, and they are also sold to be good against ague, and to cleanse the kidneys of gravel.

The method of catching these creatures is as follows: The men are seated on the ground, and one in front reads aloud. As soon as they find themselves near enough, the man, who is placed ready at the head of the boat, strikes a harpoon, or a spear, and he is stopped, and a pole into the body, and then let go. The beast immediately attaches itself to the mangroves, where the water being shallow, they follow it, and when they have waited about, when having obtained possession of the creature, they drag it to shore.

With respect to the inhabitants of Sierra Leone, they are not peculiar in this, and neighbour with it, with neither have they such foot or thick lips. This method in general are tall and well made, of a cheerful disposition, and not given to quarrel, but the women are short and rotund, coming to their being, and eating much of fish and garden vegetables, as well as the huts of the country men. They work hard in the fields, and also assist in the planting and cultivation of the land. They have a habit of keeping their houses in a clean and orderly manner, and they do not care for their personal appearance, but are content with what they have. They are brave and bold, and will not be afraid of anything. They are not afraid of fire, and will not be afraid of fire, and will not be afraid. They have a great deal of oil, and will not be afraid of fire. They are brave and bold, and will not be afraid of anything. be that the majority, is accounted the innocent part. In case of femicides, the party is, whether man or woman, is said for a slave. On a charge of murder, the suspected person must drink of a red variegated liquid prepared by the police, and this is the test of a murderer, if he be known to have left a bad life, and to have more matters to the accused, notwithstanding a positive evidence may be wanting, and at the same time a doubt of his guilt, they are inclined to make a false arrest, and to give him, or make it, that he may appear detached from the crowd. In case he is defended by another, he has the right of taking from him as much as amounts to his own life; but he must not make it appear before the judges that he has not exceeded their limits, that they may not be called to a further account.

Attempts have been frequently made by the Mundungo negroes, who are Kiwari Mahouenins, to impose their religion among these people; but they have ever rejected it, and full follow their own maxims. They acknowledge one supreme Being, Creator of all things, whom they call Kana; they also believe in a future state, but they do not worship any living creature whatsoever; nor even the sun. They have many superstitions notions, and pray great respect to their steels, or atlatchas, which they constantly carry in a bag about their necks, and other parts of their body. The number of these objects is not fixed, every one choosing his own according to his own fancy; some have a short, some a long, clear, and others a small shell, a bird's head, or some fish trifle. To think they pray, the longer and more frequent, and at their minds, always offer them a part. They never go to sea or del the rivers without these objects; considering themselves by these medicines, as by some magic, and they have a particular authority over a sea; and, after the voyage, thank the care it has taken of them during that time.

This country is separated by the river Sierra Leona into two kingdoms; namely, that of Balon or Bum, to the north, and that of Bum to the south. The former of these is called Kaolin and Bum has the field fertile, and produces great quantities of rice, millet, and maize, of which they make excellent bread. The natives are very fond of the English and Portuguese, many of whom inhabit that part of the country, and they make great pains to instruct the natives and masters of those countries.

Bum is a much more open kingdom than that of Balon, and near it is that long ridge of mountains called Sierra Leona, which is the abode of all strangers. There are from eighty to one hundred gunners on the coast, that when a single gun is fired from a ship in the bay, the echo is so often repeated, and the sound so loud and sharp, that there seems to be the report of several cannon. This is far from being disagreeable to hear; but when it thunders, the noise is at first dreadful, each clap being occasioned by the firing of a gun in some of the mountains above mentioned, these runs

**CHAP. III.**

**GUINEY.**

---

**G U I N E Y** is a very extensive region, and commonly divided into two large countries, called Upper and Lower Guinea; the latter of which is more properly distinguished by the name of Congo. These two together...
With respect to the natives of this part of the country they are in general tall and well formed, tolerably sensible and courteous to strangers: and are said to be the most honest and perfect of any on the whole coast. Their custom is to dress up in a habit of a negro is a pan or papian (a cloth) about his waist, two feet broad; and those of the better sort have magnificent clothes of velvet and satin. They are generally thrown over their shoulders; but yet so as their arms, legs, and a great part of their bodies appear naked. Both of the sexes in this very learn and by the hand; and some are the better acquainted with a multitude of rings, or bracelets, of gold, ivory, or copper, according to their circumstances, worn on their arms and legs, with bracelets and rings of coral, and upon another; but the placing and adorning of their bodies is not in general part of their time; especially of the women; the hair of some of the negroes is longer than that of others; and they have a way of pulling it out of the natural curl and making it straight, by hanging weights to it; after which, they form it into various fashions, dressing it up with little thin plates of gold, sequins, beads, coral, and shells that make a glittering show; some of the women throw a veil over all, to keep off the scorching sun, and some of the men have caps; their fisherwomen, particularly, have them made of flints or rushes, and are very happy if they can get a European hat; but many of the negroes go perfectly bare headed; and their fishes, it is said, are hardened by it, that they are not feasible of the sun's intense heat.

Rice, millet, fish, and fruits, are their common food; and some of them grind their corn in mills where the water is wholesome, and drink the water; or the milk of cassa nuts. Most of them are very obstinates, and will not drink any strong liquors to excess; such as do are very punished, by order of the king, for that practice.

The coast of this country governs with despotic power. But very few men are allowed to do any thing to his subject, who reverence him more from fear than affection; he is limited by no laws, or any other restraints. When he goes abroad, he is always preceded by trump and magnificence; but he is never seen in public but on particular occasions.

The people are all Pagans, but believe in one supreme Being, and seem to entertain some notions of a future state. The chief part of them are employed in husbandry, but there are some artificers amongst them, that are excellent workmen, particularly fitters, carpenters, and masons, the former of whom are so well acquainted with the nature of tempering steel, that they make their various instruments in the greatest perfection. They purchase fire-arms, gun-powder, and bullets of the Europeans; but darts, arrows, lances, and broad swords, they make themselves. The carpenters make the canoes of various fíxes with great neatness; and they also build their houses or huts, (which are made of wood or civa, and thatched with reeds or branches of the palm-tree,) in a very regular manner.

Some of the natives of this place are of a mixed breed, called mulattoes. These are an abandoned set of people, and have proceeded from the corruption of the Europeans; for when the Portuguese first discovered the fourth-west part of Africa, they not only propagated their religion, but also their habits and manners, and from a tawny complexion, and profess themselves Christians, notwithstanding which they retain many of the most superstitions notions of the Pagans. The men are great drunkards, lewd, thievish, and traiteless; the women are altogether the most abandoned, prostituting themselves at all times, and to all sorts of men, without the least degree of restraints. They imitate the Portuguese in their dress, but exceed both them and the negroes in their vices.

The trade is carried on by signals from the ships on the appearance of which, the natives immediately go in their canoes, carrying with them their pepper, ivory, &c. for the Europeans have no settlement in this part of Guinea.

One of their principal rivers is the Shartrou, called by some authors Selboco, and by others Palma, which divides itself into two branches, through which the Gambia and Gigns; and it separates the country called Sierra Leonas from that named Selebs, and has its sources in Upper Ethiopia, from where it descends, or rises, the one to be a branch of the Senegal, or of the river Gambie. Large ships go up this river for about seven leagues from its mouth, but further up it grows shallow, and not only un navigable for canoes. The country round is very mountainous, and the river has many turnings and windings.
When the farmers, in the course of the
season, are busy at their labors, the
town is lively and animated. The
plowman, the wheelwright, the
blacksmith, and the laborer of every
description, are seen and heard about,
busy in their several occupations.

The farmers, at the harvest time,
are the principal contributor to the
wealth and prosperity of the place.

The produce of the soil is great,
and the produce of the stock is
invaluable. The corn, hay, and
stock, are of the best quality, and
are exported to many distant
places. The farmers are also
enriched by the manufacture of
woolen goods, which are exported
to foreign countries. The
town, therefore, is a prosperous
place, and the farmers are happy.

The town is also noted for its
innocence and simplicity. The
people are honest, and their
conduct is exemplary. They are
true to their friends, and faithful
to their duties. They are good
neighbors, and their kindness is
united with a manly spirit.

The town is, in short, a
happy place, and the farmers are
satisfied with their situation.

The town is, in a word, a
happy place, and the farmers are
satisfied with their situation.

The town is, in short, a
happy place, and the farmers are
satisfied with their situation.

The town is, in a word, a
happy place, and the farmers are
satisfied with their situation.

The town is, in short, a
happy place, and the farmers are
satisfied with their situation.
honour, provided they be justly money by it; they will conspire with their wives how to draw young followers into the family and raise a fortune. They marry with their consent, and when another invades their property, for the intruder man does not money; less than five or six pounds of tobacco, if he be very well disposed. He must find means to have found evidences of the fact, besides the women, for if the man will make a solemn oath that he is innocent, and the goods remain in the family, he is not to be considered. "The women that are unmanded, is said, take very great liberties, which is no reproach to them upon this account, for they were brought up to a rough hand, and trained to be under the only of the inferior class of a people for women's education. They pay great respect to their priests, who, besides their ecclesiastical functions, are looked upon as the most able physicians, and are in general they are very wise.

Their principal commodities of traffic are, Guiney pepper, elephants' teeth, cattle, and poultry. They can not be uninteresting, that they are engaged to trade with the Europeans by signs, and in this they are expert, that bargains and agreements are made without much difficulty.

Cape Monte is the next considerable place we come to; it is situated about twenty-five leagues from the mouth of the river, called the Cape River, by the English. When first discovered at sea, appears like a rocky island. It contains a great number of villages, the inhabitants of which are extremely in the cultivation of rice and boiling of salt, which they do not only for themselves, but also for the benefit of their king, to whom they are under such obligations, as to do likewise.

Their chief cattle are sheep; and they have some fowls that are exceedingly large and good. They have likewise a great variety of various sorts of fish, the进城 of which is the chief employment of many of the inhabitants. Wild beasts, as elephants, tigers, buffaloes, harts, &c. are met with here in great numbers.

The dress of the man is a white garment resembling a surplice; but the women only a narrow piece of cloth fastened about their waist, rather longer than in Europe. They make great pies with their hair, or wool, which they twist into long slender bands, and ornament the top of it with gold or precious stones. They wear also necklaces of gold, rings, and bracelets on their arms and legs, and rings above the ankles, where some hang bells of silver, the noise of which, when they divert themselves by dancing, they are very fond of.

Though the houses are for the most part mean buildings, yet they are kept exceedingly clean. Those belonging to the king and principal men are built long: some of these being of adobe, and having a vast number of palm-leaves, so thick laid as to render rain or the heat of the sun absolutely imperceptible. A place to sit in the house is one of the greatest enjoyments of the people. They sit in the houses, and eat on saws, with an oil, or dresser, and have an earring to their nose, consisting of a number of beads laid one on the other, and surmounted by a silver chain. They are all richly adorned with gold, and live like certainly. Their kitchens are situated at some distance from the dwelling house, and are very neat.

The people here are in general more cleanly in eating their victuals, than their neighbours. They use bowls made of hard wood, and plates of pewter or copper tinned, which they keep exceedingly clean. When they boil their meat, they make it as black as ink, but as they like the means of making it turn round, they first roast one side, and then the other.

The peasants look after their wives as he can, for which reason some of them have a great number, for the expense is very trifling, as they make them work for nothing; they are, however, kept very warm, and dressed very warm, and even in the coldest weather they are not obliged to wear any other clothes, or to be subject to any hardships, as the climate is very cheerful in winter, and summer is remarkably cool. It is the case that there are the richest of the rich. Their military weapons consist only of bows and arrows, but they are kept more for ornament than for use. They have no arms for any differences; they are amicably adjusted by treaty between the parties. In the case of the Early, or of the Circumcision, the Europeans have often divided parties: they are of a bright yellow, and resembling a certain species of ivory, which is equally remarkable for its beauty and value. They purchase the skins of foxes, panthers, tigers, and other wild beasts, as also a great number of fowls, which are brought by the bush merchants from the land to the parts. The forests yield plenty of valuable sorts of wood for building; particularly canwood, which the natives obtain, and bring to the island in blocks of four or five feet in length; the Europeans pay a great deal of money for it, thinking it much more solid and beautiful than Brazilian wood, which they prefer it.

At a distance from this cape Monte, is a river called Rio Negro, on the banks of which are several good villages, and the soil is very fertile, producing great quantities of rice, and other grain, with various kinds of fruit, as oranges, lemons, citrons, pomegranates, &c. Here are also several forts of quadrupeds, as cows, sheep, goats, hogs, &c. and horset. In summer, the waters of this river are transported to two leagues from the coast, on account of the floating in it; and in the winter it sometimes falls to overflow its banks, and take great plains with it. It is a sort of considerable land that contains large quantities of large trees, and is covered with lofty trees. On the west side is another large bay formed by the islands, which is the only way to enter it. These two bays are separated by a long narrow neck of land. The cape is situated in the degree thirty-four, forty minutes north latitude, and that part of it which projects most to the sea runs east-south-east, from whence there is a small river that falls into the western bay, and is navigable for forty miles. This river abounds with a great variety of excellent fish, but the water is always brackish.

The people here are in general more cleanly in eating their victuals, than their neighbours. They use bowls made of hard wood, and plates of pewter or copper tinned, which they keep exceedingly clean. When they boil their meat, they make it as black as ink, but as they like the means of making it turn round, they first roast one side, and then the other.

The peasants look after their wives as he can, for which reason some of them have a great number, for the expense is very trifling, as they make them work for nothing; they are, however, kept very warm, and dressed very warm, and even in the coldest weather they are not obliged to wear any other clothes, or to be subject to any hardships, as the climate is very cheerful in winter, and summer is remarkably cool. It is the case that there are the richest of the rich. Their military weapons consist only of bows and arrows, but they are kept more for ornament than for use. They have no arms for any differences; they are amicably adjusted by treaty between the parties.
the leaves; and they think themselves equipped to the greatest advantage, if they can get an old hat to grasp their branches.

The weapons of these people are lances about five feet long, with pointed iron heads; small bows and arrows, the latter of which are poisoned. The heads of the bow, or the nock, in which the arrow is inserted, is accidentally killed, unless the part affected is immediately cut off. Their arrows have neither iron heads or feathers, and they always shoot them from a short bow, which enables them to fill in upon their mark. They carry square targets of thin board about four feet long and two broad, which are made to hang on their masts by a cord, so as to form, in a round manner, that they can easily manage the bow with their hands.

Paint-worms and rince are their chief articles of trade; of these they have great quantities, and exceeding good in quality; they procure cowries and small bars of iron, in exchange for these commodities.

About eight miles up the river, and near a quarter of a mile from the edge of it, the king's town is situated. This is surrounded with woods, and the entrance to it from the river is through a beautiful walk shaded with lofty trees.

The council-hall is in the center of the town; here the king and his chief people meet to hear all causes, dispose of justice and settle the affairs of state. The floor of this building is of clay raised about a foot from the ground, and over it is a platform of a circular form supported by posts, and thatched with palm branches, to shelter them from the rain. This platform, which is large enough for the convenience of light and air, and is about twelve yards in diameter.

There are about forty houses in this town, which, though few buildings, are very neat; they are open on one side, and walled on the other three with planks intermingled with reeds, and the soil is very killing. Their kitchens are even with the ground; but the bed chambers are raised about a foot from it, to avoid the inconvenience of the dews. The roof is raised like a tent, and covered with reeds, or palm-leaves, fixed by wood; the houses are neat and commodious, and a wind or rain does not affect it.

In the center of the kitchen is the first-place, which is raised about six inches from the ground; and they keep their fires constantly burning in the hearth, for dressing their victuals, and the convenience of smoking; and, in the night, to secure them from the inclemency of the air, and the cold.

They have, besides their houses, buildings for holding their provisions, as rice, millet, palm-oil, bran, and other necessaries. Their buildings are of a round make, with a conic roof, and are secured by padlocks of which the hub-band keeps the keys, and distributes daily or weekly such provision as he thinks necessary for his family. This does not give the lead off to his wives, who live amicably together, and spend their time in working abroad, or taking care of the children and other necessaries of life.

The buildings are of wood and a height of about six feet, and are covered with reeds or palm-leaves to secure them from the inclemency of the weather, and are enclosed with a wall of wood about twelve or eighteen inches thick.

The river called St. Paul runs to the west of Menfura; the entrance of it is about six feet deep, and in calm weather is navigable for small vessels. This river takes its course westward about three miles, and southward to the river Sebous, which is not navigable either in its course or in its mouth.

The river called del Punio or Rio Junque, is to the south-east of Cape Menfura; but the entrance of it is not more than a week's journey distant, and runs for several miles the country with a fine smooth current.

The river St. John is further to the south-east of that last, and is covered with lofty trees; and to the east of this river is a high mountain, in the form of a bow; but it is chiefly barren and uninhabited. No part of this river is navigable; from its mouth, is a village called Tabo Caro, and not far from it, is another, called by the natives Tabo Deyr, and by the French Petit Deyr.

The river called Essoire, or Sebous, is situated on the south-east of the river St. Paul; near it there is a large and beautiful village inhabited by people remarkable for being honest in all their dealings, and who are said to have a pres-
brilliant their colour; for which reason, they are much used by the mathematical instruments-makers for foles, feldors, &c. They have 6 teeth on each side, viz. eight in all, five incisures, four in each jaw; four dog teeth, two in each side, which are all cylindrical; and thirty-two grinders, of which they are the only sort: they have no lower incisors, and the number below. The feet of this animal are exceeding good, and in some parts is sold at five-pence a pound. The fat is of equal value with the lean, being exceeding wholesome, and particularly the oil, which is much used in rivers, where the water is good, and charis these parts where the boats are well furnished with grills. They feed almost exclusively on fish, and live entirely on the surface of them in a body. Their method is, to plant themselves at the mouths of large rivers, by which they intercept all the fish that come into them. They do not stay in the water, but among reeds or rushes on the sides of the rivers; and they frequently return to land, as to discover themselves to their partners. They being forth their young on the land, where they fizzle and keep them undefiled disturbed, when they immediately take to the water. The negroes who have boats near the rivers, are obliged to guard their fields and yards. These creatures would do great damage to their rice and corn, as well by trampling it down with their feet, as eating it.

Another animal, nearly resembling the above, is sometimes found in this river. It is about the same size, of a brown colour, with white stripes, a long neck, short body, and long ears. They are all only caught in the water; for though they are sometimes seen on land, yet they are too nimble to be overtaken by hand. Some negroes have been caught, but have all escaped.

There is also a great variety of fish in this river, among which is a remarkable one called the sea-woodcock. It is about the same size, and lives in circumstances. It has a large fin on the back, and two of the same fin below the gills. The tail is large, indented, thick, and strong; the eyes big, bulging, and lively. The mouth is large, with round teeth, sharp fin, and teeth, which has a bill about twenty inches long, divided into two parts, proceeding from the upper and lower jaw. This bill is not very strong. There are several sorts of animals covered with a rough skin, something like kelpweed. The fin of it is interminably with fat and lean, and is far from having a disagreeable taste.

Hence, is divided into four principalities, the chiefs of which are appointed by the king of Qeqa, to whom they pay an annual tribute of red cloth, fish, and brass kettle.

Fola and Manow, are both very extensive empires, but the latter is the most considerable; and the Folaans are in the same manner subject to the emperor of Manow, as the Qeqas are to the Folaans. The emperor's authority extends over all the neighboring nations, who acknowledge their subjection by making him annual presents. In the month of June, each chief is present there, to he received and entertained with honor by his majesty. As soon as he is received, he is supplied with a large quantity of red cloth.

The Folaans pay the same complements, and are sent to the king of Manow, by the same means. Each of those kings has an absolute authority over his own district; and they can make laws, declare war, or proclaim peace, without the emperor's consent, notwithstanding their subjection to him.

Besides rice and other grain, these countries produces a great variety of vegetables and roots, as also plenty of cornflowers, beans, and potato-skin, &c. The only cattle are they have are sheep: they are indifferently supplied with fowls, except small birds, which they keep in the woods, and some raccoons, buffaloes, wild horses, and dogs; the last birds are also liable to several other diseases not known in Europe.

The Qeqa language is the most common in this part; but the Folaans in the most elegant, and is chiefly spoken by the better sort in honor of the king. They often make use of allegories that are very judiciously applied, and are very circumstantial in their conversations.

They are chief in other negro countries; and the first word as always the pre-eminent. The husband maintains the boys, and the gifts are taken care of by their wives, who are taken for husbands. The last are chiefly in preference made by the parents of the parties to each other; but the ceremony of naming their children is very particular. Men to the king, he upon the king, and the king upon the queen, and the queen upon her own child, who is named by the father of the child. It is not till he reaches the age of five years, that he receives his name. The boy is then called the child, and returns it to the mother; after which they become refined. The men go for hunting, and gather palm-wine, which they bring to the king, and he gives them to the people, according to his pleasure. When the king appoints to perform the ceremony, taking the child from the mother, says it to the child, and gives him a bow and箭, and a quiver in the other. This child makes a long journey to the people, after which he addresses himself to the infant, and he may be like his father, his mother, and his brother, and his sister. He then names the child, and returns it to the mother; after which they become refined. When the king appoints to perform the ceremony, taking the child from the mother, says it to the child, and gives him a bow and arrow, and a quiver in the other. This child makes a long journey to the people, after which he addresses himself to the infant, and he may be like his father, his mother, and his brother, and his sister. He then names the child, and returns it to the mother; after which they become refined. The men go for hunting, and gather palm-wine, which they bring to the king, and he gives them to the people, according to his pleasure.
lives is no manner; after which, the whole company differs, except a few faithful friends, for whom an elegant entertainment is provided; after which they divert themselves in their usual manner.

After the ceremony of taking off the ring from the deceased and acquaintance of the deceased immediately assemble, and surrounding the corpse, sing elegies, in which they set forth the virtues of the deceased. After the funeral oration is over, the corpse is washed, and the body set upright, supported by prows at the back and under the arms. If it is a man, however, in the presence of a widow, and towards her with his belt garment. His nearest relations and friends then make a lot of skirmish with their swords; after which they take thunder from the corpse, and extend the bowstring to its utmost limits, intimating their readiness to fight against his enemies, or those who shall presume to speak disrespectfully of him. While these ceremonies are in agitation, the women attend on the widow, to lament and console with her; in doing of which, they throw themselves at her feet, and continually keep repeating their words, figure, figure, that is, be comforted, or ease your lamentations. After the whole ceremonies are over, previous to interment, the corpse is carried on a bier to the grave, which is generally made near the fringes of their tombs or fom别 spots, and there deposited about three feet in the ground; they throw into the grave all the knaves, braves, and principal things the deceased was pollihed of; after which, they cover the whole with a mat, and hang his armour on an iron rod, which is then set upright and left there. They generally ered a hut over the grave, to secure it from rain, as also the better to preserve the memory of the deceased. If any important property is bequeathed to a criminal, or a vagabond, a murder, a ruffian, a politician, a mug, and other things necessary in house keeping.

It is customary for the relations and friends of a deceased gentleman, when the funeral is over, to make a vow of abstinence, which is called Balli Gove; this vow, for the common form, is observed ten days, and for the king, or any very considerable person, thirty days. The person who breaks this vow, on making the vow, lift up his hands, and declare they will not eat any flesh during that time, nor drink any liquor, but what is kept in a box made for that purpose in the ground, as also to abstain from carnal enjoyment; and the women vow to clothe themselves only with white or black rag, or to go with their hair loose, and to sleep on the bare ground. When the time of abstinence is over, they lift up their hands again, to denote that they have very punctually fulfilled their engagements. After this, the men go to seek for game, and if they meet with any, on their return it is destined for regulating the company. All who have kept the fast are complimented by the nearest relation of the deceased with presents, consisting of a piece of cloth, a bale of fish, an iron bar, &c., but a man, a staff, or some kind of weapon, is generally preferred, and distinguished from which, her eyes, her head, or any part.

When it is suspected that a person did not die a natural death, they neither wash the corpse, or lament, till they have executed the criminal. As soon as the suspected person is taken into custody, he is shained to a great block, and asked if he will acknowledge the fact; if he does, he is immediately put to death, and if not, he is examined by their best men, and a large quantity of quany. This is the rind or bark of a tree so called, which in presence of the deceased's friends, is pulled off by the suspected persons, that the sap or juice may be used without any defect. The bark is ground, and then put into a large quantity of water, which, after some time standing, is put into the liquor they make the criminal drink three or four quarts on the following morning, in the presence of the whole company. If he then dikisters it from his stomach, he is deemed innocent; but if he has none, there is some doubt, and when they either call his body into the river, or burn it.

Although the Quoja Beruka are fastidious to the king of a person's grave; a custom on the king of Quoja, the title of Donadagh, which he also prefers, and which is conferred on him by the emperor of Manou; and the king of Manou, which is the title to the king of Quoja, the title of Donadagh, which he also prefers, and which is conferred on him by the emperor of Manou; and the king of Manou, which is the title to the king of Quoja, is of great importance, but is not regarded as a favour, for it is delivered to the chief of his wives, consisting of ribands, elephants teeth, &c. The same is granted to the person with a similar title, or in the absence of the king, or if he does not return home, till the king, through the mediation of his friends, gives his consent, then the person is not accepted. The king never gives the title, provided his crime be of a very serious nature.

When a nobleman has been guilty of any misdemeanor, he is summoned before the king; and if he refuses to appear, his majesty sends his koredo, or shield, by two drummers, who are not to cease beating their drums till the party comes with them, carrying in one hand the koredo, and in the other some valuable present. As soon as he comes into the king's presence, he profanes himself on the ground, and throwing earth over his head, begs for forgivenest, and acknowledges himself unworthy to sit on the koredo; but promises amendment in future. The king is fast to him by way of reproach, intimating, that, as he refused to obey the mandates of the king, he might come himself and take the place of the sovereign, and bear the future government. Others still, may not be so reproved, and may be commanded to make a paper, which, by the king, is called a royal charge, that is, which is sent to the person, and he merely acknowledges it, and departs.

When a woman is accused of adultery, the losses by the belle, with which she is guilty; the spirit (jannin, the spirit of the woods) may destroy her. If she has sworn falsely, and is afterwards convicted, she is immediately led to the market-place, where the council fire to hear the merits of the case. They first in-voke the jannin, after which they cover the woman's eye, that she may not see the spirits that are supposed to be waiting to carry her off; then she receives a severe reprimand for the disdently life she has led, with the most dreadful threat if she ever does the like again. A horrid noise then ensues; after which, her eyes open, the spirit is invocated, and she is discharged by the jannin, on promising to befriend, and mortifying herself for the remainder of her life. If, however, she is again convicted, the belief, the man, with his attendants, go early in the morning to her house, and making a strange noise with instruments adapted for the purpose, conduct her to the market-place. From thence she is sent again for the market-place, which which they oblige her to walk three times, that the brotherhood may have an opportunity of properly feeling her, they do not carry her, as one must not presume to appear, not even as much as to look out from their houses, for fear she should be taken away by the jannin. After the criminal has walked three times round the market-place, she is conducted to the wood of bellis, and is never after heard of. The negroes in general think such women are carried away by the belle, but it is more probable that they are taken by the king, induced by their own lust, and indeed some of the more sensible part intimate as much, but nevertheless affirms that it is done to appease the indignation of the belle, in order that they may have their satisfaction.

With respect to their religion, they believe in one supreme being, the king any thing in the land of them. They call him Canne, and attribute to him omnipotence, omniscience, and omnipresence. They also believe that the devil became spirits, whom they denominate, that is, patrons or defenders, and imagine them able to protect them in all calamities. Thus when a man happens to escape some imminent danger, he sacrifices at the shrine of his family god, he fires a kind of fire, he makes a feast for the entertainment of the relations of the

January following. To the west of this cape are these round hills, and a little further in land is a grove of palm trees. The village is set among some of these hills, and is reached by a considerablc distance at sea, and was the occasion of this cape being called Cabo das Palmas, or the Palm-tree cape. Behind the cape is a bay, where ships ride safely in summer. The hills rise abruptly from the level ground.

About three miles eastward of the bay, is a point that appears to be a long mountain; and opposite the western point of the cape, extends along the range of hills, even with the surface of the water, which reach from south-east to north, about four miles into the sea. The coast here, between this point and the Cape of Good Hope, is a very muddy, and therefore dangerous for vessels to pass along.

There is a river called Cavaled, about five leagues from Cape Palmas, to the east of it flows a very high stock. About twelve leagues north-east is a town called Offend, which name is probably received from the Dutch, but it is a very inconsiderable place, not merits any particular description.

A town of some note, called Drenuw, was formerly near the mouth of the river St. Andrew; but the inhabitants of the latter having a dispute with those of Drenuw, went to war with them, and burnt their town to ashes, making prisoners of all the men, women and children, and led them to the Europeans, who shipped them in the river above-mentioned.

St. Andrew is a very large town, and is situated on a flat, and is remarkable for the great number of villages near it. There is a long无疑是 of the town, seven or eight miles long, and about twenty-five miles wide. There are between twenty-five and thirty villages near this town, all in the same state of cultivation, and probably one of the best in all Africa.

The town is extensive, running at least three miles along the coast, and is very populous. The country about is very fertile, and contains a great number of villages, which are not far from the sea. The coast is very commodious, and the whole coast around is navigable.

The rockv mountains in this coast, which are red, and the confusion of the trees that cover them, form, by their various colours, an agreeable prospect, which is greatly heightened by the beauty of the valleys, that contain many villages encompassed with groves of lofty trees. The soil is in general very fertile, and produces great quantities of rice, millet, maize, and a variety of roots and vegetables; also several sorts of fruit, as melons, oranges, lemons, cocoa-nuts, &c. There are likewise wild-crate of a peculiar kind, bearing nuts smaller than ours, which are divided in the middle, and taste like the belt almonds. Sugar cane also grows in abundance, and is cultivated for the sake of its molasses. The climate is very warm, and the whole coast abounds with variety of fish. Among the latter, we frequently find three remarkable creatures, one a kind of the Bengal whale, a large, flat, and long fish; which, for the information of our readers, we shall here give particular descriptions of.

The first of these, viz. the sea-owl, or horned fish, is about eleven feet in length, from the fin to the tail. The body is about five feet in circumference, and of the same thickness all over. The skin is brown, rough, and without blemishes, but full of unequal points, and marked with large spots of various colours. The head is shaped much like that of a hog, but with a protrusion at the end, like the trunk of an elephant, by means of which, like that animal, it receives its food. The eyes are exceeding large, and surrounded with prominent lids; composed of hard globules, hard, thick, and large, and in the case of the head are two horns, of a large substance; they are strong, rough, and pointed at the ends, and are about ten inches in length; they lay flat and parallel to the body, and stick to the tail, on the upper part of which, near the tail, there are two extraordinary, which continue from thence to within a foot of the tail. This part of the tail next the body, is very filthy, and covered with very long and coarse hairs; but the extreme part is composed only of a fin, strong and thick, of a brown colour, crosted with white rays, or parallel lines. This fin serves as a defense to the fish, who has also two spurs at the extremity of his belly, each of which is a foot long, round, bony, and pointed like his horns. This fish is very abundant, and is very much valued by the natives. The second cardinal is the shark, which is a curious and voracious creature, and will feed on anything it meets with, particularly the body of animal, and the fish is fat, and survives itself on both sides like a herring, from whence it probably derives its name; at the extremity of each is placed the eyes, which are large and sparkling; it has a proportion of black, a hard, and contains two rows of long sharp teeth; the body is round, and terminates with a long flopping tail, which is very strong, and greatly assist him in seizing his prey, which he always attacks with the most surprising eagerness. The third

unes at sea. On the top of these hills is a grove of lofty trees, which, though disposed in a straggling manner, admit the projects of the sun, and its warm beams make the ground hot, and the ground is fertile, and farther back it rises into these distant hills, which in clear weather may be discovered
fist of the creature is entirely useless; an account of its
caracteis, and unpleasing taste.
With respect to the fox-dell, we shall reasonably sup-
pose the tigress to be one of the largest of its kind, which
is not rare the presence above all other creatures in
its fangs; it has four eyes, and is about twenty-five
feet long, the same as the tigress. The palm of each side of
its head is an angular shape as hard as a horn, and very
thick: the tail is very long and tapers, and terminates with a
dangerous point; the back is covered with small horns
about two inches long, and which all remain a fish at the
end of the beard is large, but there is no appearance of any neck, and the
muzzle is furnished with a great number of sharp-pointed
tusks, which are said to be quite hollow, and are round
and large, but the other two are placed above them, and
much smaller; on each side the tusk are three horns of
an unequal length, the middle of which is three feet
long, and an inch and a half in diameter, but they are
flexible, and therefore can do but little harm. The ne-
gress catch this creature for the sake of the live from
which they extract large quantities of oil; but their fist
is ill-taught and harsh.
In the same there is another fist of the same name
with that mentioned: this is only about four feet
long, and broad in proportion; it has a baton on its
head, with a very broad and thick skin like those of
the hedges-hog, and the skin is hard, rough and black, rising
with several small hitches, between which there are two
small horns, very wide, and armed with several sharp
teeth, two of which are crooked like those of a wild boar : it has four fins, and a broad
tail forked at the end, and over the eyes are two large
horns which they regard as the back of a fish. If this fist is a
deathful poison, and it is also an excooing fishful crea-
ture to look for.
The natives of the Ivory coast, called the Quagga
blacks, are tall, lieu, and well featured; but at the first
view appear rather fishful, in which in all probability
is the reason that some have described them as a fash-
ion and barbarous people: this, however, is a great
militant; for in general they are rational and well-behaved,
and their manners are generally said to be like those of
the Europeans who visit this coast.
When they go to trade with any ship, they take some water into their hands, and
in the month of October, which is a kind of cold,
which by that time, that they would rather lose
thei eyesight, than cheat those who trade with them.
They are no less averse to drunkmens than their
people produce a prodigious number of palm-trees,
yet they will not drink any palm wine, but only a certain
liquor called bondon or tumbu-wine, which is very
stronger, and, by being mixed with water, is rendered still
more so.
The dreads of the common people consists of only a few articles of trade; but then
they dress a kind of mantle or large linen sheet wrapped
about them, with a fezmaster or pointier by their sides.
Their small teeth are very sharp, but they are in general
irregularly placed, and very crooked. They are fond of
having long nails, and take particular pride in the length of
these nails which they cut, and twist in different forms,
and grate it with palm oil mixed with red earth.
With this composition they anoint their bodies every day;
and continually chew betel, the juice of which they rub about
their mouths and faces. As the more the skin is a clear,
the greater is his quality, so they adorn their legs with
a great number of iron rings, in which their chief dignity
consists.
The women wear only a piece of cloth before, which
hangs from the shoulders to the knees, but their backs
are covered by the hair like the heads of a goat.
They dye their hair linis by lins of pure
gold, which are of various forms, and generally very
thin, but the wives of the rich negroes have such a quanti-
ty of them on their backs, as amount to a considerable
value. These are sometimes of great use to the
husbands, who, when they are unable to purchase goods
for want of cash, make no scruple to Siber their wives of their
ornaments, and turn them into money to defray their ex-
 pense on this account.
These people use a language that is altogether unintell-
ligible, and the language of the latter.
We cannot pretend to determine why this division of
Guinea is distinguished by the appellation
of the coast, yet the whole are subject to a king called
cocoten, whom they not only respect, but dread.
They look upon all their kings and princes as favourites,
and pay them a sort of respect, that is, they come
with his friends to embellishments: they are all idolaters.
And when these facts are considered, it is quite
obvious that this king is the real chief: he is at
least as much the head of the country as, that every
one is obliged to content all his life-time in the
plains wherein he is born; so that for instance, one who
father was a fisherman, can never follow any other trade
as profligacy, but is predestinated to take up the
fishing for the rest of his life. At Labo, and gotta others parts of the coast, they make
a pretty sort of cotton stuff, flannel blue and white, about
these quantities for use; and they sell a quality of
it for a good price in ports most of Guinea, and are greatly
valued.
For the native negroes are extremely fond of trade,
et they are very cautious in going on board European
ships, particularly those from England. When they see
a vessel on the coast, they first examine it; and, if they
think they can deal safely, they carry their goods on board,
such as gold, ivory, slaves, or provisions. However,
they are always sturdier, and their trade is in some degree
justly founded, since the Europeans have generated many
of them, whom they have sold for slaves. They generally
The
four or five in a canoe, but only one will go on
board first, the others remaining in the canoe, till he has
entertained them in the same, till he has
left the ship, and if they can, on any occasion
whatever, he will not fail to come down between the decks.
The most effectual method of alternating them on board
for the matter, or by the means of officers, to take up a
bucket of water from the sea, and with their hands sprinkle some
of it on their faces, if they regard the back of a fish as an
oath, looking upon the fish as a deity, or object of re-
igious reverence. It is impossible to conceive what pat-
tience is required to trade with such people, for what is
what, they cannot be understanding, nor do they
understand Europeans, so that all is done by signs and
noise of the hands, and by the quantity of goods against
the oath they offer for sale.
The negroes here, besides the articles of ivory, gold
and slaves, carry on a trade in trade in, and by this
means, to their neighbours, who carry it further into the inland
countries, where it is very scarce, and disfigure of it to
great advantage.
The largest and best elephants in the universe are
found in the inland parts of this coast. Mons. Marchat
finds, that the quantity of ivory which this country affords
is great, that it grows, where it has been felled here in one
day. The inland country is of full elephants, that the
habitants of the billa parts are obliged to dig their
dens in the backs of the mountains, and to make their
doors and windows narrow and low; that they are forced
to sell all kinds of articles to drive them from their plant-
ations; or to lay it down, or to lay it down, or to lay it
in one of the most productive countries of ivory being so plentiful here, because the
elephants can tear them every three years; so that the
tooth they get from them, is far cheaper in number than
those they find low in the forests.
Though elephants teeth are as plentiful here now as formerly, yet the blacks have considerably enhanced the
price of them, so that the advantages of that trade are
much limited. This, however, is in a great measure
owing to the coast being annually visited by prodigious
numbers of ships, not only of the English, French and Dutch,
but also to the Danes and Portugueze, which has occasioned the trade to become more general,
and not so profitable as heretofore.

SECT. III.

Containing a description of the Gold Coast, its boundaries,
features, and natural history; also an account of the inhab-
tants, their pursuits, dress, manners, customs, religion,
towns, villages, government, &c.

We cannot pretend to determine why this division of
Guinea is distinguished by the appellation
of the Gold coast; since the other three parts of the
cost, produce equally as much, and as least as much, in
quality. All the inland countries abound with gold
mines; and though the natives are too arthful enough
to follow a vein, or to dig for it, they are also too
frightened to venture on such a venture; but they
proverbial to secure, that they will not permit any European either to dig or
for others. Besides
their

Y
The New Art Universal System of Geography.

In the north, those who live near the sea have another mode of fishing; in large brackish lakes, or deep inlets of the sea, after a wet night, they go to the sea-shore, each having a copper of bowls or patters made of calabashes, the largest of which he has. The Gill fish are caught by means of the long thin sticks, the tops of which rise on the surface washed over the brink; if there be any gold, it sinks to the bottom by reason of its weight; but if there be none, they have washed all the sand with a gourd and fand away, except a small quantity at the bottom, which they carefully take out and lay by for a minute inspection. When they have gathered a tolerable quantity of gold, they carry home, and there search with great diligence. Sometimes they find as much as is worth ten shillings, sometimes a few shillings, and frequently they cannot procure any.

The Gold coast is situated within the fifth degree of north latitude; it is bounded, on the east, by the Slave coast; on the west, by the Tchi, or Ivory coast; on the north, by Algolonia; and on the south, by the ocean. It is about one hundred and eighty miles in length, and contains eleven different districts, namely, Asin, Ama, Agon, Jefl, Coteney of Camombe, Fono, Saloe, Fafon, Agson, and Agoumbe. These countries contain some one, two, or more towns or villages lying on the sea-shore, either under or between the European forts and castles. The Gold coast are only by the convenience of trade and fishing, for the principal town lies within land, and are very populous. Some of the negroes go to the coast, and trade in gold dust, the trade of their own merchandise; and seven of them are known as religious leaders, or kings, of the kingdom governed by their respective sovereigns or captains.

In the Gold coast there are in the month of October to March, several rains, and in the other six months it is tolerable temperate. The coast is very unhealthy, owing to the extreme heat of the day, and the temperature of the night; in which, many, which add much dampness to it, sneeze every morning from the mountaiu. Tarapades are also frequent here, particularly in the months of April, May, and June. These are violent storms of wind rising suddenly from the sea, and south-east, and sometimes from the north, with a few points to the west. They are generally attended with repeated claps of thunder and unclouded lightning, with prodigious flowers of rain falling like a flood, and an uncommon darkness. They sometimes last an hour, and sometimes two or more; but as soon as they are over, the weather immediately becomes clear and fine. If they happen in the summer season, which sometimes the coast, they are not so violent as in the winter, but they are more inconsiderable both to land and sea-faring people, being usually followed by cold rains, so heavy and constant for several days together, that they form to threaten to destroy the country.

The native blacks, who live on the coast, fish with rain, and their art is so well practised as to be judged by their bodies; their indeed the Dutch themselves experience, particularly in the tornado season. The rains that fall then are of so peculiarity a quality, that if a percon sleeps in his wet clothes, he will certainly get a cold. It has been found, that cleaths laid by wet have in a short time been rotten to the point with the most gentle touch. The negroes, for this reason, avoid the rain as much as possible; and when they happen to be caught in it, they cover their shoulders with their arms across, to keep off their bodies. They are so fearful of the bad effects of rain, that they always sleep with their feet to the fire, and moisten their bodies with oil, through a persuasion that the frequent moisture will form the most agreeable of a sweat, instead of the cold, when full grown, is so light, that it will not weigh above 250 lbs. The sweat is not above half the size of those of Europe; but, instead of wool, their bodies are covered with a kind of skin or chym, in which are not very numerous, but small if compared to those of Europe; however, the body is very fat and sweet, and greatly preferred to that of the sheep. Here is also a great number of hogs, but their flesh is very imperfect, and the little fat they have is of an oily nature.

Dogs and cats are their chief domestic animals. The negroes frequently eat the former, and are very fond of them, so much that they will not only give a sheep for one of them, but they give them so much that the rain cannot penetrate; for they attribute all their diseases to this cause.

We shall now proceed to give the natural history of the Gold coast, which is peculiar and different from any other. The trees, some low, and others very large and lofty; there are also many groves of castor, which serve to make the oil; and all kinds of vegetables, of the same kind that grow in India, except that the oil cannot penetrate; for they attribute all their diseases to this cause.

The trees, some low, and others very large and lofty; there are also many groves of castor, which serve to make the oil; and all kinds of vegetables, of the same kind that grow in India, except that the oil cannot penetrate; for they attribute all their diseases to this cause.
Among their wild beasts (of which they have various sorts, both on the coast, and in the inland parts) none are more distinguished than the elephants; for though in some parts of Africa the rhinoceros bears a much ponderous and hideous form, yet here they are never tamed; but, notwithstanding this, they seldom hurt any one, nor is it easy matter to wound them, unless an attack be made upon one of their tender parts, where many of the African animals is related in Mr. Hofman's description of Guinea. In December, 1760, at six in the morning, an elephant came down the hill of St. Jorge, and as the tops of these trees, and the considerable height of the hill, prevented him from descending, he broke down a tree, and with the force of the fall broke a large branch, which struck him on the eye, but he did not seem to feel any pain, and was not hurt by the branch. Some of the officers fired at him, but he was not struck with a ball. As this tree was falling, he ran down the hill, disregarding the shot of the musketry. The elephant in this country is not formidable; he is a timid animal, and is not to be feared from any attempt at mischief. At length a negro, going hastily behind him, was not only held by his ears, but his trunk and tail were cut off. The elephant giving the negro a blow with his trunk, and drawing him to the ground, was killed. This was not an exceptional case, and the elephant is very often the aggressor. The following story is related by an officer, who knew how to feed and nurse it; but whenever he left the deck, the ship began to taze it; some feared to have it on board, others to leave it, for the sake of which being checked by the negro slave, the former told him he was very fond of his countrywoman, and asked him, if he would have her. The negro readily replied, "No, this is no, my wife: this white woman, this is my wife." The owner promised that this unlucky negro would be sent to his country. The story ends with the death of the animal, for it was found dead under the windlass the next morning.

There are many sorts of wild beasts in this country, which are of various sorts, others being as large as others; others not biggers than sheep, and some even to small rats. They are in general of a red colour, with a black stripe on the back, and some of them beautifully fitted with white. Their flocks are especially admired by the Dutch, and all the different kinds are good to eat.

Several sorts of wild cattle are to be met with here, some of which are spotted like gazelles, and are very fierce and malignant. Among these is the civet-cat, called by the negroes karikan, and, by the Portuguese, gozes de algalla. They are of a very small size, and the tail and tail end that of a common cat, but being longer in proportion to the body. Their hair is grey, and full of black spots, those who keep them for the sake of the meat, generally feed them with bread and other victuals, as they yield much more from than a larger food. When hungry they are very voracious and will even gnaw through the flesh of live animals, and always roll and tumble on their food before they eat it. They who keep them generally set them before they take the meat from the bag, for the sake of the animal is enraged at this operation; the better will be the civet. The bag which contains the civet is in the middle between the ears and the tail, being both in the male and female; but it is much larger in the male. The liquor of which civet consists appears to be excited from certain glands that lie between the bones that compose the bag from which the civet is taken; and the civet is not of any use in medicine, but is valued as a great perfumery.

Among the great number of monkeys, there is one called the Dutch bearded monkey, from their having long white beards; the hair on their backs is of a light brown, that on the belly white, and the rest of the body covered with fine white hair, from that part of them only being white. These animals, though of various sorts, are all very cunning, and ready to imitate what they see. They are fond of young men always in society, and greatly resemble the human form; so that the negroes call them washed men, and say they could fight if they would. They are very agile, and are said to be capable of much latitude in what they eat, particularly when of which we have the following relation: they take two or three fitches in each paw, as much bread as their two, with their teeth constantly leaping on their hind legs; but if pursued they hold what they have in their claws, and let the fitches drop. They are said to feed on the carrion of elephants, and if they do not like it, they throw it away, and pull another, so that this daintiness occasions more delight than many others.

The natives call one of the most remarkable of these species boggo; and the Europeans, mangle; this is different from all others, and approaches much nearer to the human shape. The body, when fully grown, is as large as that of a man; their legs are much shorter, but their feet, longer, and their toes and hands are in proportion. Their head is very large, and the face broad and flat, without any other hair than the eyebrows. The nose is very small, the lips thin, and the mouth wide. The face is wrinkled up, as with old age, and the teeth are broad and yellow. The hands and feet are white and smooth, but all the rest of the body is covered with long hair. They always walk erect, and next to the children. The fangs of one of these monkeys was made to a gentleman at Sherbro. It was a line, but six months old, yet longer than a baby's foot. They are the only animals who know how to feed and nurse it; but whenever he left the deck, the ship began to taze it; some feared to have it on board, others to leave it, for the sake of which being checked by the negro slave, the former told him he was very fond of his countrywoman, and asked him, if he would have her. The negro readily replied, "No, this is no, my wife: this white woman, this is my wife." The owner promised that this unlucky negro would be sent to his country. The story ends with the death of the animal, for it was found dead under the windlass the next morning.

The fond and good-natured nature of negroes is general in all countries, and the latter is the same, but the former is not so. The latter is the same, but the former is not so.
The New and Universal System of Geography.

In the universal. This animal is so low in its station, and resembles the common snail, that it is commonly called the snail. The head is fringed with a sort of a fringe, and the forepart of the body is covered with a sort of a skin, which is very flexible, and is found in the form of a tube. The tail is provided with a sort of a fin, which is used for swimming. In the young, the skin is very thin, and is removed with great ease. The animal is very active, and is found in the brackish waters of the sea, and in the rivers. The young are very active, and are found in the brackish waters of the sea, and in the rivers.

These people are very inquisitive in their professions, and where opportunity offers, with themselves several times a day, for which purposes they commonly build their villages being raised on piles or on some level in the water. Sometimes this may tend to a certain degree of the palladium with which they protect themselves.

On the coasts, these towns and villages are composed of in number of boats irregularly placed, but those in the inland parts are usually on the sides of sandhills, which are close to the sea. Their houses are generally of a square form and low, they are made of wood, and covered with thatch. This thatch consists of straw, reeds or rushes, which is so thin that a man may walk himself almost double so close as it is laid together, in the center of which it is as open, place adapted, not only as a place of diversion for the inhabitants, but for the more necessary purpose of a market for the sale of provisions and other commodities.

The people of higher rank have their houses generally situated near the market, and separated from other buildings. They are built of the same materials as those of the common people, but are more lofty and spacious. In the center is a portico open on all sides, but covered with a sloping roof made of the leaves of trees, to shelter them from the heat of the sun; and here they dwell during the heat of the summer season. In the evening the business is provided. In the evening the business is provided.

The houses of the common people are built at a very small expense, the materials, which consist only of timber, clay, and earth, is all that is required, besides the stones with which they can find them. They commonly erect a house in a week or in seven days, and the expense to the carpenters seldom exceeds the value of the materials. The family has a granary or storage house, where they keep their wheat, millet, and other grains: these are without the town.

All their furnaces, a fewDou, northern pots to hold water and dress their vines in, and a few small wooden cups to compose the whole. The poorest fort have only one house to live in, which they spread on the ground, and from the leaves they cover themselves with the stems of beans. The better fort the tables made of rocks, on which they lay a few meat with a bolster, and by it large kettle with water to wash them.

In their diet, they are very filthy, and prefer either fish or fish that fills to that which is sweet and wholesome. Their common food is a pot full of milk boiled to the confidence of bread; or instead of that, yam and potatoes, over which they pour a little oil, and mix with it honey, and a small quantity of fish. They have another dish called malted, which is composed of fish with a handful of Indian wheat, the same quantity of fish, and four palm-oil, all boiled in water. The water is then removed, and instead it is far from being disagreeable; provided the fish be sweet. At their mealtimes, they use neither knives, forks, or spoons, but they take their food with their hands, which is often very apparel. They lay it on a mat on the ground, and on the cover, with the seven fingers, and eat it very nicely. Their marriage generally goes alone in his own hut, and his wife separately in theirs, when he happens to invite his chief wife, as an occasion. They make both in a day, one at a time, and the other at different times. At their marriage the men drink water or poyon, which is a kind of beer; and they drink palm wine on the occasion.

The chief employment of the men is abroad, either in trade, fishing, or making palm-wine; great quantities of which are employed by the women. The women, when they are engaged in the work, get from their labour they give to their wives, who dispose of it in a very frugal manner, as they are in general not very rich. They save it for a rainy day or for the marriage of their daughters, and the men give them a definite amount for their expenses. They save it for a rainy day or for the marriage of their daughters, and the men give them a definite amount for their expenses.

The women are chiefly employed in providing for the family, under the direction of the principal wife. The first thing they attend to, in the article of diet, is to make sure that the food is provided by the men, and that the profits they get from their labour they give to their wives, who dispose of it in a very frugal manner, as they are in general not very rich. The women save it for a rainy day or for the marriage of their daughters, and the men give them a definite amount for their expenses.

There are several different kinds of corn thought necessary for the family the succeeding day. This they beat in the trunk of a tree hollowed for that purpose, and after they have separated the husks from the seed, they roast the latter in the sun, and then make it very small. These kernels are called shakers, which have a peculiar method of dressing them, with which they make them with great neatness. Their chief tools are a hard stone instead of an anvil, a pair of tongs, and a small pair of hammers with sharp edges, which they use in dressing their corn, and blows very strong. Their files are of various size, and well tempered; they provided themselves with these instruments.
Their goldsmiths make a variety of articles of pure gold, such as bracelet-plates, balances, bracelets, locks, bangles, ornaments for the head, ornaments for the neck, buttons, necklaces, earrings, &c. They also cast in the most curious manner, the figures of all sorts of tame and wild beasts, and every part of them, such as heads, eyes, ears, noses, toes, tails, mane, &c. They are, indeed, eminent artists, but their greatest ingenuity is shown in the gold and silver hats, bands made for the Europeans, the threads and textures of which cannot be described. It should be understood that no art or science can prevent its shrinking in again; when it moves forward, a correspondent matter issues from the forge, which increases in volume till it fills the mould, and the greatest care must be taken in winding it round the stick; for if it should be forced, and by that means happens to break, the filings grows dangerous, and is often attended with fatal consequences. It sometimes happens, that when one worm is extruded, another will immediately penetrate itself at the same opening, and many people have several of them at a time in different parts of the body, in which case the pain they feel is not to be conceived; infirmities, at, one instance concerning them, the pain occasioned by these worms is so excessive, rather than endure it, a man would for ever renounce all the profit of trading on this coast.

The negroes here are likewise subject to other infinites, namely, the lues venerea, the head-ach, and fevers; but these are very speedily cured by compositions made of herbs and roots; and the Africans are under no apprehensions concerning them.

On the death of any person, the relations and friends immediately affid below it, and, fortifying the corpse, make the most hideous lamentations; they then wrap the body in an old cotton cloth, and put it in a coffin made of the bark of a tree, covered with the skin of a native goat; in this manner they expose it in the open air, for half a day, the favourite wife sitting by it all the time, and rubbing the face with a whip of straw, and as soon as deceased is a woman, the husband uses the same ceremonies. During this time the nearest relations appointed on the occasion sing mournfully, and beat their breasts before, till the bearers carried the corpse to the place of their ancestors, and in the town, or village where it is to be interred, a man is called to blow his horn, in order to give notice of the death. The body is laid on a heap of earth over the body, on which they lay the principal tools and instruments used by the deceased in his life-time, as also his clothes and weapons. The friends of the departed assembled, and the ceremony and all the insignia, which they either lay in the grave, or place over it.

But the most excessive lamentations, and tearful forrows are expressed, when the king dies; for his condition and dignity require great attendance, he is provided with fevrors not only to accompany him in his journey, but also to wait on him in his refreshing officer of fathom's. To this end, each of his grandsons, or chief men, present him with a flave; others give one of their wives, and some one of their children, or any other person, as a token of their respect, who are all sacrificed previous to the interment of the royal corpse. The persons that designed for victims are frequently inflamed with rage, and on the day of the funeral, they are set on a pretended fire to some remote place, where people chosen for the purpose lie in wait, and easily dispatch them. Their bodies are brought
in the palace, and publicly worked, as a testimony of the great respect in which the kings were hold by his subjects; after this, they are beheaded with blood, and carried with the royal corpse in great solemnity to the grave, which is generally divided in the centre, and the bodies of father and son are always placed together, though not in a private. Their bodies only, however, are interred, for their heads are severed off, and fixed on poles round the grave, in order to prevent any attempts at their rest: Besides these, the king's favourite wives request to be interred in the grave, so that they may be laid with him in the same grave, in order to see what his kingdom is like in the other world: They are buried also with him their cloaths and weapons, with such other things as he cleaved most valuable; and near the grave they place, in a common place, victuals and drink, which, as soon as empty, they change, and bring others in their stead.

We shall here give an account of the ceremonies observed at the funerals of the kings of Feta, which, though not exactly the same as those abovementioned, tend to show the strange notions these people have of paying reverence to the dead. When one of these kings dies, the people expects their grief by mournful songs and ostentations. They walk the corpse, draw it magnificently, expos it to public view, and serve up victuals to it at the usual hours, as if the deceased were living. When the body begins to corrupt, four flames bear it, without ceremony, and line it around with wood, for every one going, who puts it. If any of the wives of the deceased follow them, they kill them, and bury them along with him. In the former grave they lay the dogs, as they clothes, his arms, in short, whatever he was fond of when alive, with victuals and drink. When the flames have covered up the grave, they remove it without speaking, and kneel down at the gate, stretching out their necks to the executioner, that they may go leave their master in the other world, in peace. This is their respect for his fidelity, by giving them the first prints in his new kingdom. While the flames are hot in the interment, the people make a cruel slaughter of fowls, they think may be useful to the deceased in his present state. Some kings who have been well beloved, have had four or five hundred personsorn butcher furnished on this occasion. This barbarous custom is practiced, more or less, all along the coast of Guinea; as M. Marchais relates, in his voyage to those parts.

The negroes on the Gold coast are in general holocausts, notwithstanding which, they believe in a supreme Being, and have some ideas of the immortality of the soul. Every one has a fetish or charm, by which they pay the greatest reverence; for thinking themselves too insignificant to be permitted to offer their petitions to God, they address themselves to their fetishes. At the arrival of the Europeans, or others having an egg, the bone of some bird, the head of a fowl, ox, or goat; and others again, the bone of a fish, the end of a ram's horn, a piece of bark, or the bark itself, or a bunch of trees, or what they think may be used for that purpose. Their regard to the fetishes is so great, that whatever they promise them, they perform in the most solemn manner. Some, to fulfill their vow, to them, affam from wine, others from meat; some deny themselves certain meats, or kinds of fish; and others, rice, maize, or fruit. In short, all without exception, so reverence their fetishes, that they destroy themselves by starvation by way of mortification, and they will sooner die than violate their engagements. They are very punctual in bringing their fetishes every morning a part of the beef provisions in the house, believing that if they failed in this point, their existence would be but of short duration. They have also several days in the same way, according to the number of their fetishes, which they celebrate by dressing it, and making some offering or sacrifice to it.

There are, besides the fetishes of particular persons, certain fetishes to each kingdom; these are generally some large mountain or remarkable tree, which any person should be so insolent as to cut or disfigure, they would be put to the most cruel punishment, or even burnt. These are their kings. The second are their nobility, who are men who have acquired great reputation by their wealth. The third may be called the common people, they are permitted only to take care of the city or village, and to appeal such tumults as may arise among the inhabitants. In the fourth are the traders, who trade with all nations, and are skilled in the arts of foreign fishing, &c. The fifth and last are the slaves, who are either taken in war, become so by poverty, or are sold by their relations.
We may consider the different kingdoms alike as monarchies and republics, whose kings are in general hereditary, but some of them are elective. The government of the kingdom is divided among the head of the family, or the body of the nobility, or chief men; and the other the matriarchs, or young men; all ordinary affairs fall under the jurisdiction of the national council, their decisions are determined by both parties together.

The chief justices, or judges, as well in kingdoms as republics, are generally considered as the most wealthy, and particularly the governors of towns and villages. These take cognizance of all civil and criminal cases; but it is necessary to observe, that their judgments are not absolutely decisive.

Offences of a criminal nature are generally punished by death. A murderer is sentenced to death, but such persons are seldom executed; for if he has either himself, or friends to pay the fine, he escapes, but if not, he suffers. In the latter case, as soon as sentence is passed, he is delivered to the executioner, who blinds his eyes, and ties his hands behind him; after which, he leads him to some island without the town, where he makes him kneel down, bending his head forward, when he Shoots a spear through his body. This done, he cuts off his head with a hatchet, and dividing the body into four parts, leaves it exposed on the spot, to become a prey to birds and beasts.

The murdering of a slave is generally punished by a fine of one to four hundred, or by one that has suffered, but the relations of the person punished frequently mitigate the fine.

The husband of a slave is punished by a reduction of the goods, and paying a fine, which is levied in proportion to the value of the goods, and the circumstances of the offender.

On the coast, adultery is punished only by fine, for which reason many women, by comfort of their husbands, believe their favours的男人 to be advantageous to themselves, and have been foolishly captivated by their charms.

But there is more freethinkers observed by the inland negroes, as their chief of police on the coast. He that debauches a negro's wife is not only instantly ruined, but his relations often suffer with him; and if the party, in his first passion, does willfully, but not out of cowardice, to bring to death, as also the slave's master; besides which, their relations are obliged to pay a confidence of money to the beetle and beetle.

They punish the feeling of men with great severity, and sometimes with death; as also the feeling of being in the country; which are independent of the European, they will much fewer put a man to death for feeling a thief, than for murder.

The negroes, in all cases of injury, do not confer much upon the children, but such relations, who in such cases help one another by a mutual contribution, each giving somethings towards the fine, according to his capacity. The offenses which are considered either to great danger of life, unless their relations pay the negro's husband a sum of money, or some valuable present; and the party is caught with his wife's have is infallibly put to death, as also the slave's master; besides which, their relations are obliged to pay a confidence of money to the beetle and beetle.

An exceeding heavy fine is imposed on a very rich man who commits an offence; they allow two good reasons for the levying of it: first, that he was not urged to it by necessity; and, secondly, that he can better spare the money. On this account, many negroes, though rich, will always plead the greatest poverty; as by that means, if either their friends or relations should commit any offence, the fine levied is but small, compared to what it would be if the magistrate knew their real circumstances.

The negroes are divided into the same four classes in the different kingdoms on the Gold coast are naturally loud and ambitious, contentious frequently break out amongst them; on which occasion, for example, they are divided into the several classes, or the governors, appoint a day for their subjuec to attend in arms. This being done, a herald is sent to announce it to the king, who proceeds to give the day, the place, and hour of battle. The grandees, or nobles, then repair to court, and, after complimenting the king, proceed to the war, taking with them their wives and families; and if the forces of the queen be great, before they set out.

No. 37.
is carried on between them as it was before the quarrel commenced. We shall describe the provinces and kingdoms that form the Gold coast, and the different settlements in each belonging to the provinces. In treating of this, we shall begin at the most wester part, namely the kingdom of Ashanti, situated about twenty miles east of Cape Apollo.

This is a very plentiful country; for the land being naturally good, and the inhabitants very attentive to cultivation, he thereby produce many kinds of products. Rice is in particular so plentiful here, that it is exported to all other parts of the coast, and the inhabitants bring millet, yams, potatoes, and palm-oil in return.

Ashambo is the chief village or town here; it is very populous and pleasantly situated. Near it is the Dutch fort of St. Andrew, which once belonged to the Portuguese, from whom it was taken by the former in the year 1646, and having been sold to the Dutch India company by the enlisting peace between Portugal and Holland, it has ever since remained in their possession. This fort is situated on a rock, and, though small, it is yet very commodious. It has two batteries on the land side, and one on the sea, with proper outworks, which, as well as the walls, are all made of black stone found in the country. The gate, the first is low, and well secured by a ditch eight feet deep cut in the rock, over which is a drawbridge, defended by two porters. The fort mounts two large and several small cannon, and the garrison usually consists of twenty-five whites, and the same number of blacks, who are under a serjeant belonging to the regular service. The composer of oak and iron, the houses are made of brick, of a triangular form, and very lofty: it has three fronts, one of which is a small spot of ground planted with date and pomegranate trees.

The dwellings, cottages, market, religion, &c. of the natives of Ashanti, are the same as on the Gold coast in general; and the same poverty and wretchedness, except that the people here are for the most part rich, from their carrying on a considerable trade with the Europeans, for gold, which they sell in great quantities, both to the English or Dutch.

With respect to their laws, they are subject to the chief factor, as governor of the fort, who maintains a kind of overlordship over the whole country. But as the country is very fertile, and the negroes and the blacks, the means being paid into his hands, he distributes them to the injured parties, a black or negro, on his own judgment, which he has always been careful to make as equitable as possible.

It is said, when the blacks have been killed, the whites follow them; the women and children, and the negroes, with their children, are not to be distinguished from the blacks.

There is a large beautiful fort called Fredericksburg, about seven leagues south-east of Ashanti, which was built by the Brandenburgers, but now belongs to the Dutch. It has four large batteries furnished with seventy-six pieces of ordnance, and the gate leading to it is exceedingly magnificent. The walls are thick, strong, and high, and within are several spacious dwellings for the officers and soldiers, as also good warehouses for the reception of their merchandise. The fort is well known by the name of Conyn's castle, which it obtained from the following circumstance: when the Praffians who were first possessed of it left the coast of Guinea, they committed the care of the fort to one John Conyn, a black, with strict orders not to deliver it up to any nation but the Praffians. Soon after their arrival the king of Tewa fell ill, and, being of the opinion of the governor of the Dutch India company, there being another fort belonging to him, situated upon Cape Three Points. When the Dutch came to defend this fort, John an agreeable fellow, and was some time after to return to them, which produced a war that continued for some years, and cost the Dutch much money, and a great deal of blood. While the in the manner of the Dutch, and this, finished with his repeated victories over the Dutch, became a mortal enemy to them, and confederated in the most obstinate opposition to his people. In Anno Domini, he had a small path, that led from the outer gate to the inner apartment of his castle, paved with the skulls of Dutchmen who were slain in battle, as a further mark of contempt, he had one small wall covered with silver, which he used as a parapet.

bowl. However, in 1745 he was completely conquered, when he fell into the country, and they were reduced to the division of the fort, in which hands it has remained ever since.

This fort is one of the best situated on the coast, and the anchorage and landing being two safe and convenient. The climate is tolerably wholesome, and the country rich and well-watered. The negroes here are much more intelligent and honest than in most other parts of the coast, and the government is well regulated. They carry on a great trade not only in gold, but also in gold, and are very generally known to the negroes as two convenient banks. The hills are ornamented with groves of lofty trees, which are visible a considerable distance astern; the whole country about the cape is exceeding woody.

A small fort, called Dorothea, stands about three leagues east of the Cape; this formerly belonged to the Praffians, from whom it was taken by the Dutch in the year 1646. The apartments within are very numerous, and most of them not only conveniently disposed, but very elegantly furnished. The fort itself consists only of a large house with a flat roof, on which are two small batteries containing guns.

Anta, which is another country on the Gold coast, extends almost thirty miles from cape to cape, and is full of hills covered with large trees, between which are several considerable villages. The soil is well watered and fertile, produces great quantities of excellent rice, the beet of maize, manioc, bananas, and potatoes. It sells plenty of tobacco, and is a great depot of gold and ivory. The number of wild beasts, particularly elephants and tigers, is of which the latter are so repulsive, that they figure in the first of the Englisb and Dutch forts in the night, to the great terror of the inhabitants, who sometimes sustain considerable injury in their gardens.

Dicklove is the fifth remarkable place we meet with in the kingdom of Anta; it is situated about eight leagues to the north-east of Three Points. Here the English have a fort, which is a handsome and regular building, and is well defended with four good batteries, on which are mounted twenty pieces of ordnance. This and all the other English forts are subordinate to Cape Coast Castle, as no other than the St. George's flag is allowed to be hoisted here.

There are two villages near Dicklove, that are commanded by one and the same colonist, who always displays the St. George's flag at his house, whether that at the fort, in honour of the English, is hoisted.

Batanstein is a fort belonging to the Dutch, and lies at a small distance from the above-mentioned villages. It is situated on a very high hill, and is built of an oblong form; it has a small building, and has only two batteries, on each of which are placed four guns. At the foot of the hill is a village called Buntum, or Buntum; the inhabitants of which are particularly distinguished for their honesty in all matters relative to trade. This village is watered by a river that comes down from the country, and dilutes like itself into the sea by the Dutch fort. The banks of it are exceeding pleasant, being adorned with lofty trees; and the sides of it are lined with mangoes, and the whole boughs are plentifully flocked with excellent owls. This river affords great plenty of fish; but it is hazardous to catch them, owing to its being infested with prodigious numbers of crocodiles. It is navigable only about four leagues from its mouth; for though it reaches much farther, yet it is impassable, owing to the violent waterfalls that pour down from the rocks.

Takorari is situated on the top of a high hill, which joins to the south-east into the sea, and is surrounded with several rocks. This is a pleasant village, and the country behind it is very agreeable, consisting of delightful valleys and plains, adorned with lofty trees, between which are a number of small hills. This was formerly a fort here, which was at different times possessed by the English, Dutch, Danes, Swedes, and Praffians; but in 1655, the Dutch built it as a place of consequence, and there are not any remains of it now to be seen. The natives here are famous for making the best and largest canoes on the coast; these are about thirty feet long, and will carry about ten tons of goods.

The price of one of the largest is about 10l. sterling; ships bound from the Whidah generally provide themselves with their own.
The village of Schambach, or Bambus, is about four miles east of Taffarin; the English and Dutch have each a fort here. It is a low-lying place, and, like the former, is strewn on the top of a hill. That belonging to the Dutch is very small, and poorly defended; but the English place is about twenty pieces of cannon. The French had formerly a settlement here, but not finding it answer their expectations, they deserted it, and this part of the country being diversified with hills and dales covered with firs, which grow with such uniformity as to appear as if placed by art. This village is very rich in gold, and is hardly a place as any on the coast.

Two small villages lie between Schambach and Samoa; the one called Adam, and the other Bath; but they are not of any note for trade, except in the articles of palm-oil; good quantities of which are exported to most of the neighbouring countries.

Samoa is watered by a small river called St. George, which runs into the sea near the foot of the hill on which it is situated. It contains about twenty houses or cabins, so placed as to form three separate villages. The place is populous, but the inhabitants are very poor, and chiefly employed in agriculture and fishing. The Dutch have a fort here, about the size of that at Bourow, and mounted with the same number of guns. It is called St. Sebastian's, which name was given to it by its governors, who were first masters of it, but the Dutch afterwards took it.

Adam and Jabi are two countries very fertile in maize, and almost all the manufactures of gold; but they have no villages in them that desire particular notice, neither are there any European settlements in them.

There are several islands and islets, stretching for miles along the coast, and almost in the general direction of the fort, which belong to the English, and the other to the Dutch. The former is a large, very irregular piece of land, and surrounded by thick woods; the latter is a small one, very irregular in its form, and in the centre there is a large tower built of stone and lime. It mounts twenty-four guns, and has a garden of twenty-five whites, and the same number of blacks.

The Dutch fort is called Vredenburg, and was built in the year 1648. It is a square building, strengthened by good batteries, on which might be conveniently mounted thirty-two guns within so many parts of the breath-work; though at present it contains only twenty-three that are manned.

Feta is a fine plentiful country, extending about one hundred and sixty miles in length, and about the same number in breadth. The plains, and part of the inhabitants are employed in agriculture, growing corn, and drawing wine from the palm-tree; others in fishing, and building sail and frame trade as brokers for the inhabitants of the islands of Kissamou, or other countries.

The town or village of El-Mina is the principal place in this kingdom; it is situated about nine miles from the Dutch fort. It is a very considerable place for the height of St. George, another strong fort belonging to the Dutch, who took it from the Portuguese in the year 1638. It is a large square building, with very high stone walls, so strong, that they seem to be built of cannon-proof. It has four large batteries or batteries within, and one very strong one on the outworks. Two of the batteries are placed in the sea, and are very lofty, the point of the peninsulas on which they stand being a high rock; but the other two are low, the ground defending it gradually from the rock. Their batteries are mounted with forty-eight pieces of fire-brass cannon, and that on the outworks is filled with iron pieces, which are only fixed as fowlers, or on days of public rejoicing.

This fort, towards the land, is adorned with two canals cut in the rock, which are always filled with rain or from the sea. Each of these canals, on both sides of the fort, contains a large quadrangle, surrounded with handsome frontispieces of brick and stone. The general lodgings are on the upper part of the castle, the ascents to which is by a large fire-brass of black and white stone, defended at top by two small brass guns, and covered with the same frontispieces of the same sort of metal, commanding the place of arms, and a corps-de-garde. Next to this is a great hall full of arms, and beyond it a large gallery containing a vast number of fine brass and iron swords, old and new.

This gallery leads to the general's apartments, which consist of several handsome rooms and offices belonging to the rongus. On one side of these rooms is a very broad chapel, where services are held every Saturday, but every day in the month when the date of the year is divisible by twenty-five, and also on Thursday.

El-Mina was formerly the seat of the grand viceroy, but it is now a place of little consequence.

There are several other settlements on the coast, which are occupied by English and Dutch, and which have not the same importance as the above.

The town of Ghardaia is the terminal point of the great caravan route from the Sahara, and is a very considerable place, containing about ten thousand inhabitants. It is a large town, with four square-shaped forts, and with their long correspondence with the Europeans, are the most civilized on the coast. This town is watered by a small river called Comenda and Fort, on the north side of which, opposite to St. George's castle, is the fort of Conradeburgh, belonging also to the Dutch. On this case is finished and called St. Jago, it consists of a handsome quadrangle, strengthened with four good batteries; the walls are twelve feet high and strong, and is mounted with twelve guns. Within the fort is a large tower, with convenient apartments for the garden, which consists in general of twenty-five men, who are relieved from El-Mina once in twenty-four hours. The chief to the fort is easy on the side of El-Mina, but on that towards Comenda it is formed of a wall. The bridge over the river Bonja has a drawbridge in the center and necessary, to admit of heavy ships to go up the river.

At the foot of St. Jago hill are several tombs and monuments, one of which is supposed to have been erected by the Portuguese as a monument to the memory of their kings, or other distinguished personages. On the north side of the hill is a large garden, which was formerly the estate of the Grand Viceroy. Here you may see a great number of fountains, and a large lake, which is supplied with water from a spring in the neighborhood.

The town of Tabora is very important as a trading station in the interior of the country. It is situated on the banks of the river, and is about twenty miles from the coast. The town is surrounded by walls, and has a large square building, with several apartments, and a good number of small houses.

The town of Coast-Castle, which is the most important fortress of any belonging to the English on the coast of Guinea, stands on a large rock that projects into the sea, and was erected by the Portuguese, who first settled here about the year 1615. In a short time after the Portuguese had built it, they were dispossessed by a tribe of negroes, from whom it was taken by the English under admiral Holman in 1644.

By the treaty of Badja, it was stipulated that the first friendly approach of the English, and a certain being afterwards granted by king Charles II. to the English company, they immediately set about enlarging it, and gave it the elegant form which it now retains.

The walls are very thick and high, particularly on the land side; they are partly built of rock, stone, and part of brick; the parade is twenty feet perpendicular above the rock, and forms a kind of quadrangle, being open on the sea side towards the sea, which renders it very pleasant, and affords a delightful prospect of Queen Anne's point, and the floods in the Anambar road; on this side are thirteen pieces of heavy cannon, which command the road and passage leading to the fort; the other three sides contain many spacious apartments and offices, particularly the fourth side, where there is a very neat chapel, the whole part of which joins to the castle wall, having the grand body of the rock called Tahora on the outside. On the battlements are ten guns, and twenty-five on the flanks, which are four in number. On the rock Tahora, which is about twenty paces from the castle, there is a large chapel, where services are kept up in the winter to keep in awe the blacks of the adjacent town. The entrance to the castle is by a large well-fortified gate that opens into the square, which is large enough for five thousand men to be drawn up and exercised in. The apartments for the agents and officers are very spacious and convenient, and the apartments of the governors of the company are commodious and commodious, and the apartments of the conquerors are commodious and commodious.
Two small forts are erected in the neighborhood of Cape Coast Castle; their site belongs to the English, and are left three quarters of a mile from the castle; one of them is called Pippew's tower, and the other fort Royal, or Queen Anne's fortress; the former is a small round tower situated on the eminence of a steep hill by the side of Cape Coast garden, and was built by General Pippew, from whom it received its name; it stands north-west from the town, and mounts seven guns. Fort Royal is a large square fort, about a mile east from the main road, and is surrounded by a strong wall, and contains ten guns. It is called a hill named Saotinam, the Dutch name, because the Danes have formerly a fort on the same spot; it is a square building, with a large elevation, and is built entirely of large stones, which are mounted on the top of the fort, and eleven on the platform. The garrison are daily relieved from Cape Coast by a small body of the fleet with twelve other small black men.

Manfour, is situated beneath the fort, and is almost inaccessible by means of the great rocks that surround it; it is a very small town, and the few inhabitants that live there, are chiefly salt makers, labourers, and fishermen.

A town called Naffan, is situated about one mile from Fort Royal to the west, and six miles from a Dutch fort called Naffan to the east; it has a garrison of five hundred, and the same number of black men, and mounts five guns.

Naffan fort, belonging to the Dutch, stands on a hill, near a small village called Naffan, it is almost square, and has been surrounded with eighteen pieces of cannon; the walls are higher than those of any fort on the coast, two of which are excised out of the fort, and the few flaps are defended by two convicts and a Dutch soldier; but with the presence of the Dutch, the fort is only held by a small garrison.

On the coast, near Cape Coast, is a small village called Mewari, it has a garrison of fifty-five men, and is a tributary to the Dutch factor, a fifteenth part of what they catch.

The territory of Faweym, extends about fifteen miles along the coast, and contains many villages well inhabited; it has no king, but is under the government of a chief, or leader, who is greatly respected by the older men, or countrymen. They are generally hospitable, and without paying any regard to the braggart, the inlander people are chiefly employed in agriculture, and add their produce to the exportation of tea, tobacco, and various articles. The coast is defended by a fortification, and is incidentally defended by a small garrison, which has a garrison of fifteen men, and when they are operated, it is defended by two flanks, and on the other side by a parapet, and mounted with a few guns, and the garrison consists of thirty men, twelve of whom are white, and the other fifty are black men. The garrison and theレスト for the principal officers are very com-
some part of it is called Arca, and was formerly a kingdom of itself; but in 1685, it was conquered by the Portuguese, and has ever since been subject to them. The country is not so fertile as the other parts we have mentioned, there being very little fruit, or other articles of commerce that have been brought from other parts. It is, however, a good farming country, and abounds with hares, rabbits, hedges, red and fallow deer, and all manner of wild beasts, both large and small; yet, the inhabitants are so plentiful, that the hares kill them with stiles as they pass along on their ordinary occupations.

The Genoese, which is the name given to the race of the island, is from its continually changing its name and design, an almost national event. From its elevation, it is one species that are exceeding troublesome, and perhaps the most difficult animals that are to be met with in the universe. It is about eighteen miles in length, and the seas on both sides, to extend the circumference of a good's quilt. The miles have five towns turning back on their head, about three inches long, without bushes or trees: they are cocked up and one of a shining black colour. They are very tame and familiar, and for the tender nature, that they cannot bear the sun, for no one could ever yet be brought to Europe, though the attempts have been several times made, and every means possible used to convey them thither.

The Genoese and Dutch have each of them a fort at Arca. That belonging to the former is called Fort James, and is a strong, spacious building. It is situated on the top of a lofty rock, which hangs over the sea, and has a defence of twenty places of cannon just under the wall, besides which, the fort has several large whalers mounted with twenty-seven pieces of ordnance. The walls, which are very thick and solid, and in the center of the fort is a square tower, with a small house, on the top of which is the flag-staff. The garrison consists of five hundred and thirty men. Neatly far is a small village called Sokoh, the inhabitants of which from a peculiar attachment to the English make a point of trading only with them.

The other fort of Crevecoat belongs to the Dutch, and is situated on a rocky headland, about a quarter of a mile from the fort, and has a battery of twenty places of cannon just under the wall, besides which, the fort has several large whalers mounted with twenty-seven pieces of ordnance. The walls, which are very thick and solid, and in the center of the fort is a square tower, with a small house, on the top of which is the flag-staff. The garrison consists of fifteen hundred and thirty men. Near this fort is a small village called Sokoh, the inhabitants of which from a peculiar attachment to the English make a point of trading only with them.

Christianburgh, a fort belonging to the Dutch, stands at a small distance from Crevecoat, and is the only one they have on this coast. It is a square building strengthened with four batteries, planted with twenty guns. It wears a very handsome and seems like one continued battery; for the cannon can be removed to any part of it, the road being quite flat.

We may here remark, that, considering the warlike disposition of the blacks on this part of the coast, it is strange they did not more effectually endeavor the Europeans to build forts for defense together: but it is great the power of money even in this golden country, as well as in other parts of the world; that one of the princes of Arca being gainers by considerable presents, which the Danes and Dutch made him, granted them liberty: at first, they tried to build each of them a house-two houses to form a father or, under the direction of seven marks of gold yearly for each house. The blacks thus built, the Dutch and Danes constantly inhabited to the natives, that whereas they were previously exposed to the assaults of their mortal enemies the Aquamboes, it would be for their safety to allow their houses to be turned into forts, and that they cased them with their cannon. By these means they prevailed on the people to permit their places to be put into the condition above described.

The European forts are chiefly supplied with provisions brought from Cape Coas, Anamaboe, and Coromantin. The country round Arca is exceeding pleasant, not being so woody as other parts of the coast, it is much less fertile, owing to its being almost depopulated by the frequent wars with the Aquamboes.

A market is held there three times a week, at a village called A, and distant twenty miles from the coast, for the sale of gold and slaves, of which commodities the trade chiefly consists; for the negroes who are carried away from the inland country, are reckoned as good in quality as that at A, or any other part of the whole coast, and the slaves being to numerous, is occasioned by the frequent wars.

with the neighboring nations, which being very large, from most of the prisoners taken on both these are sold as slaves in this country. It is one of the chief sources for their slaves, besides of cowrie, woolen cloth, little tin, cotton, powder, fire arms, knives, and yellow and red dyed cloths.

The Great coast has for its eastern boundary, the river Volta, so called from its rapid reflux and refuty. It discharges its waters into the sea, that there is sometimes visible several leagues from the shore. The eastern of its coast in hand cannot be ascertained, as it is impossible to determine the place from its emaciated state. The members of whose tribes are frequently brought down with it, which reaching, first at the mouth of the river, occasion violent agitation of the waves; so that it is said the sea has been in a state of agitation at this time, which is generally between the months of April and November, this being the dry season and the influx of the river not forming. At the mouth of it is a small lagoon, deep on each side, and covered with many trees. On each side the river, a few miles from the mouth, the country is open, and adorned with a great number of palm-trees planted at equal distances, but farther muddy and extensive, and very deep mountains. The shore is bordered all along with a large sandy beach, forming several small bays, which, about a league to two miles, are at least three fathoms deep.

SECTION IV.

Treaties of the Slave coast, and the several kingdoms thereof; their commerce, commodities, trade, &c. and various revolutions.

THAT part of the coast of Guinea, which goes under the appellation of the Slave coast, is very extensive, but it is very thinly inhabited. This coast is very properly described in its different parts. It commences at the river Volta, from whence to the river Benas, are about one hundred and thirty-five miles; from thence to Cape Formosa, is about one hundred and forty; from thence to Mounts of Ambaris, one hundred and fifty-five; from thence to the river Canico, is about two hundred and forty-five; from thence to the river, is about two hundred and forty-five; from thence to the river Canico, two hundred and thirty; from thence to the river Matambo, is about three hundred and fifty-five. It is bounded on the east by the kingdom of Benin; on the west, by the Gold coast on the northeast, and distant, with the defeat of Seth; and the Atlantic ocean, on the south.

The four following kingdoms are on this coast; namely, Coto, Popo, Whidah, and Ashanti; but the principal of them are the two last.

Coto (by some called the Land, or Lamp) begins at the river Volta, and extends seaward to Little Popo, a distance of about fifty miles; it is a flat, sandy, and barren country, and the only trees to be found in it are the palm and wild coco. The town or village of Coto, otherwise called Venbon, is about fourteen miles from the river Volta, and is the residence of the king of this country. The inhabitants of this kingdom are poor and illiterate, and their chief traffic consists in slaves, whom they sell to the inland countries, and to all the Europeans. They produce much of the same cotton and manufactures on which they exceed their neighbours of Coto, being of a more considerable size and more difficult.--The Coto's are great towns, and frequently take advantage of the Europeans, by deluding them on the exportation of slaves, or by carrying them away, and when they are come to Cape Coromantin, they only seize them, but sometimes detain them for several months, before they can procure the number wanted, and then exact upon them, by fixing an exorbitant price for them they seize.

Little Popo, is situated on the shore, about ten miles from Coto. It is a poor miserable place, and consists only of a number of huts built by people who live chiefly on fish, and lives are chiefly spent in concerting measures for the enslaving of their fellow-creatures, whom the districts of humanity should endeavor to relieve and defend.

products, animals, inhabitants, laws, customs, 

THE kingdom of Whidah next demands our attention.

It extends about ten leagues along the coast, and
is about fifty miles in breadth, being divided
into several districts. There are several towns or
settlements in this kingdom, each consisting of
several districts. In the district of Whidah, the
king and his ministers reside; and this town is
about ten miles in circumference. The inhabitants
are a warlike and independent people, and are
averse to the authority of any other government.

The capital of Whidah consists of several
buildings, and is surrounded by a strong wall.
The town is well supplied with water, and is
placed on an eminence. The inhabitants are

Whidah, is divided into twenty-four provinces or
governments, which are given to the governors
of the country, and are hereditary in their fami-
lies. The king is at the head of this order, and it
is with the advice of the governors that the
province of Xavier, so called from the capital of
the kingdom, is composed of several small
islands. The capital of the kingdom appears to be
one large and populous town, divided by gardens,
lawns, and groves into different parts.

The fertility of the soil is so great as to make it
appear, as soon as a harvest is over, the ground to
be covered with a better growth of oil-seed than
some parts of Europe. The timber is also of a
fine and excellent quality; and the climate gen-

erally is healthful. The inhabitants are well
provided with all the necessaries of life, and
the produce of the soil is sufficient to supply the
requirements of the whole kingdom.
The plume, or Guinea barb, has a round back, with a tail curved downwards like a partridge; and the feet are furnished with membranes or webs, like the toes of fraile-birds. The head is large and round, and the bill of helmet, and of a uniform plumage is black, or dark grey, speckled with white spots. It is the size of a common fowl, and the helmet on the long beak is a horn of a hoffine figure, and is a dusky red colour. Underneath the bill is a red streak, and the back of the head a dark grey. The scale of this fish is rather large, but not so much as the saffron perch. It is rare.

The bill is like that of a common fowl; but in some of them, at the root of it, there is a small tuft conspicuous, which is regarded as a mark of a black colour, but there when first seen, it is always black. The bill is long, and thick as a stick, and in fulbidence nearly resembling the bill of a hog. On each side of the bill there is a plume, or plume, and the noise when it passes through the water, but, when dead, loses its luster. It is a lively fish, and forms very swift. When it appears first on the surface of the water, it is remarkable, but the moment it is caught, the skin almost entirely loses its ghi, and the skin is very beautiful, the ground of it being white, with waved breaks or spots of yellow and brown agreeably intermixed. They are so gentle that they will not hurt any creature except the venomous ferapets, to whom they have the greatest cunning, and seem to make a pleasure in destroying them. They live in the sea, and play with them without the least danger; but should either a negro or a white man kill one of them, whether on purpose or by accident, he would pay for it. When the English first settled at Whidah, a captain of that country having landed and bought his cargo, his men found one, a hog or a snake, which the Englishman killed, and threw out before the doors. The blacks next morning seeing the dead fish, and the Englishman innocently owning they had killed it, the natives massacred all that were in the lodge, for it was one of the chief things that they venerated. The English, detested by this cruelty, forbade going to trade there for some time; but at length, some of them again venturing on their affairs, attacked some of these snakes, and defied them not to hurt them, as they were here. The English readily obeyed this request, and their commerce was renewed.

The recreation of the Whidians for these fish is so great, that they will not hear any thing spoken in derision of them, fipping their cars, and running away, if any European pretends to laugh at their superstitious reverence for them. Afofin relates, that a hog happening to devour one of these fakes, a proclamation was immediately issued for destroying all the hogs in the country, and abundance of them were slaughtered on the occasion; but at the instance of some of their rich owners, and some presents made to the king, the fever decreased, but it seems that so many of them were destroyed for this offence, that hog's fakes became very dear while he was there.

With respect to the perfumes of the Whidian blacks, both sexes are generally tall, lusty, and well proportioned, but their colour is not to be mistaken for that of the Gold coast. Their drefs consists of three or four eills of a flaff called pane, which is wrapped round the waist, and then defended to the middle of the leg. The ladies wear a silk garment, with two or three rows of strings or, each row, the bottom of it covering the feet. Sometimes they wrap them selves round with a piece of the abovementioned fluff pane, and bring part of it over the feet long, and rest it down, and disfigure, and like a mantle. The better ferts of the men are distinguished by their hats, which they purchase of the Europeans; the larger they are, the better they like them, and are particularly
particularly proud of them; after they are old and ugly; others have a propensity for dogs or cats. The last are found on their necks, and on their arm and wrists have bracelets of the same kind.

They are generally more polite and civil than any other people on this earth. They have great information and are of the like kind, but are much better made and their food is not so hard.

The chief circumference in Widah is in most other parts of Guiana; but the time of performing the operation is uncertain, some doing it at the stout instant, and others not till the latter is given or a certain time after. 

The natives are little subject to smallpox, particularly malignant fever and the clothes-worm, which latter we have already described in our last section. Their fevers are most prevalent in the months of June, July, and August, and also themselves by violent pains in the head and arms, an inclination to vomit, bleeding at the nostrils, and a thirst that the tongue appears quite black. However, they have excellent physicians; so that though their disorders are frequent, yet they seldom prove fatal. The worst and most difficult disorder to care is the dysentery, which attacks people at all seasons of the year. It commonly arises either from their making too free with spirituous liquors, or from eating the country fruit to excess. They are greatly addicted to the use of tobacco, and to rum, and which is very pernicious to their bodies. They are also great smokers, and use tobacco in almost every village, with pipes and pipe-ends to offer to their friends. They are so fond of smoking that they will smoke when they are ill, and apply to their physicians by not smoking.

The Widahs not only differ in good behaviour and costume from those on the Gold coast, but also in point of industry; for the latter are naturally thoughtless and indolent; so the former are cleanly and industrious in business; now as they are very industrious, they undertake till is thoroughly completed. Besides being employed in agriculture, the men make calabashes, wooden furniture, and various other things, carry on a very considerable trade in other commodities, particularly in flaves.

Flaves, and indians as these people are, yet next to the Chinese, are the most errant people in the universe; and, like them, are extremely addicted to gaming. What they have left their money and other property will play for their wives and children; and when they have lost them, they have lost their own liberty, and thus become the property of strangers, who sometimes sell them to the European traders.

Most of the eunuchs here are the same as those preserved by the inhabitants of the Gold coast. One of the most material differences between them, and perhaps from all other countries in the universe, is, the indulgence given to polygamy. It is not uncommon thing here for a poor man to have forty or fifty wives; a chief, or grandee, three or four hundred, and a king as many thousands. These wives, however, may be considered only as so many females, and indeed so used as such by the great people; the great people are probably captives that happen to please their masters, who therefore, rather than sell them to the Europeans, think it safer to remain with them.

With respect to their marriages, little ceremony is used. When a man marries a young woman, he applies to her father, and the head-fon for his wife, which is seldom refused. He then presents her with a fine garment, as also necklaces or bracelets; after which he provides a grand entertainment, which concludes the ceremony. If a slave has a mind to marry a girl who is the female of another, he asks her of her master, without applying to her parents. The matter of the girl claims the boys of this marriage, and property.

In this country, the women may be considered in no other light than as flaves. They are in general obliged to till the ground for their husbands, and in all other respects, who are kept at home are not exempt from work; besides which, they are obliged constantly to attend on their husbands, and behave with the greatest submission to them.

We need not wonder that the women of this country have so few children, for the multiplication of wives each man has, a great number of children must result from this; besides which, all the women are considered as the property of the men, who have two hundred children living at the same time, and it often happens that a man has half a dozen children. The boys inherit in one day all their property, which is directly the reason why this country is so populous, as they are deprived of their property at an early age, if they are not rid of their husbands by marriage, they are subject to be kept as concubines, for a very low price, so that the women are fond of going to these temples on such occasions, being allowed to take greater liberties there, than they could at home. The widows are allowed to live in these temples, and are subject to their particular regulations; the sons are allowed to live in their own houses, which are in some grove, or under some spreading tree.

The sacrifices offered to the tree consist of loaves, of mille, maiz, or rice, placed at the foot of the tree; if the patient
patient complements the priest with a peculiar prefix, he leaves them to be devoured by the beasts and birds; if he not takes them home, and converts them to his own use, they are not to be eaten.

The fire is another of their principal gods; to which they sacrifice, when the winds and waves are so tempestuous, that the stem boats, and men in general, are in great danger of being drowned. It happens in July and August, and sometimes in other months: then they throw in all manner of goods, meat, drink, and clothing; and after a religious ceremony, the priest and his attendants are to receive a portion of the spoils from the victors. But the sacrifice of the fire itself offered on this occasion is the property of the priest, who dispose of it in such manner as he thinks proper; sometimes he divides it among the people: but in general he appropriates it to himself.

Besides these public objects of adoration, every man has a numerous list of gods of his own chusing, as Whidah: Every thing they meet with on going abroad, animate or inanimate, they introduce into the number; after it has undergone the following process: they pray to it for something they stand in need of, and if they obtain their desire by any means, they ascribe their success to the influence of this new god; but if they are disappointed, the blame is generally laid on themselves, and not on the deity.

Another of their public objects, called Agoge, is made of black earth or clay, and in a kind of ornamented vase or jar, in which they deposit their ruins of offerings. It is placed on a kind of permanent monument with a slip of red cloth bordered with cowries; the head is crowned with braids and fringes, intermixed with cowries and other shells; and the hair is cut short at the top, and tied with a sort of white silk that goes through a larger loop, and which is a silver crescent. This idol is placed on a table in the house, before the deity's seat or the altar, and is surrounded by the holy bowls, or half calabashes, in one of which are a number of small earthen balls. The people generally cautious that this idol does not appear to be on its seat, and are in no manner aware to whom they sacrifice, for which reason it is called the god of counsels. Those who consult with this idol, address themselves to the sacrifice, in such a manner, that they are not above to observe; after which, they present their offerings to the god, and give the priest, his interpreter, the fee. If the priest is satisfied with the presents, he takes the bowls, and, after his favor has been obtained, throws the balls round out of one bowl into another. If the number in each appears to be odd, the undertaker is declared prosperous, and the person who applies for advice returns home perfectly satisfied. This oracle, however, frequently proves erroneous, in which case, such is the postulation of the deities, that they lay the blame entirely on themselves, and acquit agoge.

Priests and priestesses have an uncommon respect paid them in the kingdom of Whidah: their persons, and all that belong to them, are held sacred and inviolable, and though the wives of other men are little better than slaves to their husbands, the husband and a priestess is obliged to be obedient at his peril. Both the reeditified and the godlike persons are exempted from all the authority over such a wife, which makes the natives very cautious of marrying a priestess. Nor would they ever consent to marry without being put into the state of the priestess, if they could help it. For so I apprehend it, there is a sort of tribe amongst them who enter this apart, and are held as sacred for life: they are exempt from all other crimes committed by others admitted by that tribe into this order upon special occasions.

The priests, as well as priestesses, are easily known by the scars and marks on their bodies, made at the time they were initiated into the religious order. In other respects they differ but little from the native, their habit being much the same, though they have the privilege of dressing themselves like the grandees. They trade like other people, and gather considerable poxseftions by the sale of cattle and the disproportion of their agricultural to the quantity of the people, from whom they extort offerings and presents for the great serpent, which their deluded doctrines imagine is religiously believed, whereas it only contributes to the extortions of the priests, and the ruin of the people on their own use; and in this they are so diligent, that they sometimes even the poor peasant without victuals.

The idolaters have also very unaccountable notions of heaven and a future state; and some of them mention a local hell for the punishment of the wicked, but is but an ill figure compared to the torments in this world, from which they receive it, that both black and white men were created by the Supreme God at the same time; while others ascribe the creation to a great spider they call maaci. Every thing which defies the laws of nature, is considered as a punishment, either by the idol of their hearts, or favourite god, they give the title of No. 28.

boffine; and to this god, the beloved wife is always dedicated, and also affirms that name.

Each priest, or priestess, hath a different god, to whose power, under his own name, they appear on public occasions. Their oblaclations, ceremonies, and common callations: When they are debating on war and peace, they bring sacrifices, and consult the god by their priest, and sometimes, with a great ceremony, the priest returns an answer to those who come to enquire of him: at other times he consults the idol in their presence; from whom, when they return, they resolve the cases by the vocal intonations of the priest. The priest throws up some nuts or small pieces of leather, and as they fly nearer or farther from each other, he foresees good or bad successes to the undertaking. They take every single castal also before an idol, divining a design or event, and praying their god may strike them dead, or the liquor may burst them, if they do not, frame their engagements, or if the thing be true, which they attempt; however, in fact, the priest has power to abate these from their oaths to prevent which, upon great occasions, they make the priest fecours; that he will not absolve the parties, or decide with his oath, requiring the most dreadful impressions from the priest to confirm it: and the negroes believe, that whatsoever drinks the dreadful cup with such impressions, and afterwards breaks it, will infallibly burst or die soon after.

If the weather is unfavorable, other sacrifices are made by the whole town or country, to consult their priest how the vengeance of heaven may be appeased: and he generally advises them to offer certain sacrifices, which is readily performed in the same manner as before.

These sorcerers are perfidious, insidious, and deceitful, the most infamous of their kind. They are chiefly held in esteem by the persons of the meaner sort, and have many names among them, among which, at Agra, the God coast, circumcision is one; but from whence they received it, or how long they have used this name, we cannot say; as none among them could give us any farther account of the matter, their answering often being insignificant.

What notion they have of the duties they worship is also uncertain, any farther than that they look upon them as leading them to despair: but it is true that they endeavor to improve themselves, and to save their society from the consequences of their life according to their deisms; they have no great expectation of any thing after death, nor is there any hope or happiness of any kind in the world; and they expect are multiplied of wise and foolish, rich and poor people, and other prosperous circumstances in this world; and the punishments they apprehend, are a deprivation of their goods. The greatest calamity that can befal them, and what they dread most is death. Murder, adultery, theft, according to their account, are venial crimes, and may be stoned with great and dreadful punishment after death, and some few of an uncertain and uncertain disposition in such occasions, though the细节man is free; that is, such as have kept their holidays, inviolately abhomed from forbidden meats, and are not corrupted with other desires, who are least afraid in any of these particulars are drowned in a certain river, and a period put to their existence; but scarce any, for want of food, are ever punished eternally. Those that have been foppocked to have learned to be the Christians, with whom they have conversed upwards of two hundred years; and there are their thoughts, imaginations, and resolutions, the same as if they were of white men, and undergo an unlimited transfiguration.

4 C
Though all the agents work on some creature or other, yet they have not all hold or images in their houses; and families. In several instances of his opinion what punishment the offender deserves; and, according to the verdict, the punishment is immediately inflicted.

For the murder of a free subject, the criminal is cut open alive, his entrails taken out and burnt, and his body fixed on a pole erected in after death, excites, without being the like, the admiration and desire of others.

He having given an account of the religion of the Dutch faction, is revered and reverenced by his subjects as a demi-god, who always appears in his presence, either by standing, or floating on the ground: when he appears to them in the morning, they adore themselves before the gate of his palace, kiss the earth three times, and clapping their hands together, we some expressions that last more than the adoration of some deity, than compliments paid to an earthly prince; and they even tremble at the height of the Dutch factions, who have the same respect for their own nations, and are frequently seen on earth, and employed in executing their commands and sentences, as often more proper for man, as to prove to them that he is not a god, but like the Hebrew gentleman, that a little before his arrival at Whidah, a negro-officer of his acquaintance having been unjustly accused by his captains, was sentenced to be hanged in the palace, and destroyed all that he had of which the man having received some notice, when a detachment of two or three men landed, he came before the house and ac-
ting the sentence, they bound him naked near a heap of gunpowder, with a lighted match in his hand, professing his innocence, but threatened to burn him to death himself, as if of a cert-
to give him time to prepare his fate to the king; who is being agreed to, he had the good fortune to convince his Whidah majesty of his innocence, and to get the sen-
tence reversed. 1721.

When the king goes abroad five or six hundred of his wives run before him, to attend him; he has not, in his own, a single man in his train, but he spends the greatest part of his time at home in his palace, administering justice to his subjects, and transacting affairs of state, or conversing with the European officers or merchants, who find him, usually, in a family ball of attendance, richly habited in gold and silver-dress, his wives, also, when they attend him, are richly embroidered and adorned with gold, coral, and glittering uncles, especially their hair; and though the king never eats before company, it is said he will drink very plentifully both with the Europeans and his own subjects, at the table, and in the room.

The cabarees are the chief magistrates under the king, that he contains in state affairs, and concerning peace and war, is attended by a body of soldiers, which was engaged in the war with the English, and is employed in the service of the king.

The cabarees, the cities, and the cabarees, or the king's officers, all pay a tax of five dollars each per annum, which is collected by the king himself, and gives him a revenue of seven dollars per annum for the king's officers. 1851.

After the expiration of four days, the grandees, attended by their ushers, and a prolocutor of their consorts of people,
number of bedeles, or confrables; with large rods or
sticks in their hands, go foremost to keep orders, and
shake way. These oblige the people, gathered near the
temple, to stand for some time. Next follow forty of the
king's musketeers, four and four, with their
capitan at their head: then the king's trumpet-maj-
er, and his many trumpeters, after him the drum-man-
ner, with as many drums, beating as loud as they can;
next, the chief player on the flutes, with twenty musicians,
on the drum, and another drum; these three are the king's
chamber-musick; and sometimes play separately, sometimes
altogether. Twelve of the king's wives, two and two,
carrying the king's presents to the serpent, which consist of
hour-glasses, vines, lamps, and other presents to their heart.
As on the other side, such as the king's dea-
chamberlaine, alone, with a cane in his hand, barreled, and
eblotted like the grandees, his page trailing on the ground;
twenty-one trumpets, three and three; forty folders with
muskets, four and four; twenty drums, two and two;
twenty flutes, two and two; twelve of the king's wives of
the third class, with large bunches of reeds on their heads,
with victuals for the serpent, from the king; three
of the king's dwarfs richly drested, and long pages trailing
behind them, which makes them look more diminutive;
the grand manner of the ceremonies barreled, his cane in
his hand, drest like the grandees; forty musketeers, four
and four; twenty drums; twenty trumpets; twenty
flutes; twelve of the king's wives, carrying the queen-mo-
thert's presents to the serpent; three valets of the queen-
mother carrying her arm-chair; the serenoss has the back
of the arm-chair, and is the outer ear that the outer ear of
the feet; three of the king's dwarfs, drest like the for-
mer; after them comes the queen-mother, walking alone,
her page preceding hands before him, who is drest like a
page, trailing behind, and on her head a red hat, neatly
wrought; three circles of the palace rich drest duffel and
bare headed; twelve women carrying a rich duffel pa-
tron drums; two tend with them, richly
women flutes; the grand sacrificer, barreled, his cane in
his hand, richly drest, like a grandee; ially, a body of
fourteen drest like seraglio, with four, with fourteen bedeles
or confrables, to keep off the populace, and preserve the peace.

When these several bodies arrived at the place of the
serpent, without entering the court, they prostrated them-
their with their faces to the earth at the gate, keeping
their hands, throwing dust on their heads, and giving ex-
traordinary shouts of joy. Mean time the men and wo-

cumicians, ranged on each side, made a horrible noise,
while the folders kept continually firing with their muf-
kets. The king's wives, who carried his presents and
those of the queen-mother, waited, ranged in a line in the
outer court, till that princes entered, and delivered thase
presents to the grand sacrificer. In doing this, she was
affixed by the king's valet-de-chamber, the master of the
ceremonies, and the three ladies of the palace, who were the
only persons admitted into the temple. This princes it
seems, was not allowed to see the sacrifice, for that is a

The people of the country, in which he has been brought up, should delight to him the paths of such diversities: and that he should enjoy a
peculiar relish for these pleasures, with which, had he been
proportionately familiar, he would in all probability, have
been fascinated. He lives almost in a state of innocence,
folking going abroad, and only attending his grandees oc-
casionaly when they are assembled in the hall of audi-
ence for the administration of justice; all the rest of his time is
spent in a sort of isolation, which he thinks is the best way
for him: After this, the proceedings returned to Sah and the same order and attendants that it
set out with, from the palace.

There is another character of a monarch of this country, after the obfcur manner in
which he has been brought up, should delight to him the paths of such diversities: and that he should enjoy a
peculiar relish for these pleasures, with which, had he been
proportionately familiar, he would in all probability, have
been fascinated. He lives almost in a state of innocence,
folking going abroad, and only attending his grandees oc-
casionaly when they are assembled in the hall of audi-
ance for the administration of justice; all the rest of his time is

Booths are erected round the markets; some of them are occupied by otiose sellers, who feel no present anxiety for a profit; but their goods are of a nature to be sold at a moment's notice, as they are the produce of the land, and are in constant demand. The prices are generally fixed by the dealers, and are fixed in a manner to secure profit to themselves. The materials of which they are made are either wood or straw, and the prices are fixed by the dealers, and are fixed in a manner to secure profit to themselves. The materials of which they are made are either wood or straw, and the prices are fixed by the dealers, and are fixed in a manner to secure profit to themselves. of full water into their eyes, and are pleased when awaked in the same manner. This pleased for an engagement of peace and security; and yet, after all this ceremony, they will sometimes return to sleep, if hardly enough to come over the waves; yet they say that the purpose, or rather the theft appearance of a pinnary, jumps all hour over.

Such vows to Hadrian, Affine, Jupes, cape is Hou, Junes, Jupes, cape Apollonias, and Three Points, or where they have gained a knowledge of the English fac
tures, their answer is a better one to safety and security. The rivalry of their wits forms timorous, but by their boats casting along the beach, and pay as folds of a small duty to the chief cahemists.

When a ships has gathered up all this trade, the makes up the deficiency of her freight at Amsterdam, three leagues below, cape Corfo, where they constantly stop, and are sometimes two or three months in smoothing. It is a place of very considerable trade itself; and besides, the company have a body of factors, keeping always a number of savages against their demands of the interlopers, who they are sensible want dispatch, and therefore make them pay a higher price than any where on the whole coast, falling at fix ounces and half a fable (in exchange for goods) though the poor savages look as meagre and thin as their writers. *[Revised to make sense]*

Another article is, the whalers trading and management of savages on board. The common, cheapest, and most serviceable money in the country, is the Indian cow, and farine, or flour; the former, ships bring them out of England; rice they meet to windward along the coast of Greenland, the number of St. Thomas and Princes, masters governing themselves in purchasing; according to the course they design to follow. This trade is accounted more fatiguing to savages, and nearer to their accustomed way of feeding than sail fish. One or other is boisted on board at constant times twice a day into a dash of gab (sometimes with meat in it) and have an over

sea, with a cat-of-nine-tails, to force it upon them that are taken and refuse to eat it.

When there goes that great trade for savages at Whidah, the commanders, while their servants, always go on shore, where they purchased them, in what they called a food market on the ships, and have given up, receiving from time to time their mother's directions, as to the goods wanted, and to prepare the ships for reception and security of the savages, which is, as already stated, to keep the passengers always a part from the women and children, to barbour the former (lechel ships triple such as are very busy with chains round their necks) and supply them with what they want, and must always be, these is not such a matter as their brothers of the

touch, through the natural cowardice of these creatures, and no other project upon rising, less falling into the hands of the former. The use of savages and when they are, very much lessened the danger; nevertheless it is advisable, at all times, to have a diligent watch on their actions, yet (feeling their fectors) so treat them.

The bulk of them are country people, fixed in proportion to their distance from the centre of the coast, a great deal of their trade being carried on board a small ship, and the hoard barbarities extended on some of them for a conspiracy to murder the crew, and recover their liberty by making this reflection: Will not Christianity blush at this flagrant falsehood, at the time of its first to call back the straggling remains of humanity in the hearts of those, who, from a love of wealth, or some other motive, are not without, and in any degree of condamn of the first, or free from the air, and left they should attempts to recover their freedom, they were made fast to two common boats, which were extended on each side the main deck; the women and children were rowed off.

When whales are more subject to the final pass and fox eyes; other parts as a deep /flamalners; and to winé the interest of all.

May this, even their vessels know nothing of chro

dinal dissanders, nor their ladies of the vapours. Their sailors often are nothing but a crowd in the, in the

When we are flved, says our author; and our state, it is constant, the negroes ignorance of navigation, will always be a disadvantage; yet, as a

The number of the savages well know enough, that their letters and book making men may suffer their purpose in an exchange: however, generally (enjoining) as a passage; as conductive to their health, we let them go, to be large on the ships deck, from fun-fish to fun-fish, give fish as it pipes and tobacco, and clean and air their dormitories every day.

Slaves differ in their goodness; these from the Gold coast are accountedben, being cleanest limbed, and more docile by our settlements than others; but then they are for that very reason more prompt to revenge, and murder the instruments of their slavery, and also spurn in the means to compass it. To windward, they approach in good ships, as is the distance from the Gold coast; so as at Gambia, or Sierra Leone, to be much better than any of the interjacent places.

To leeward from thence, they alter gradually for the worse; an Anglican negro is a proverb for a change, and they mend (if we may call it in) in that way, till you come to the Hottentot, that is to the southernmost extremity of Africa.

We have observed how our trading is managed for savages, when obliged to be carried on aboard the ships. Where there are savages (as at Gambia, Sierra Leone, the Gold coast, Whidah, Calabar, Gaboon, and Angola, are more at large; they are sold in open market on shore, and are examined by us in like manner as our brother trade boats in Smithfield, the counts, rice, coffee, and tea, for tent of feet, pitchery in their limbs and joints, and being free of venereal taint, are the things inspected, and governs our choice in buying.

Before we conclude this account of the slave-trade, we shall give some further particulars relative to the unhappy factation of these wretched whites which, on board the vessels, which is truly deploitable: they are all put in front two by two, shackled together, to prevent their mutiny or swimming away. Such is the horror of their minds at the thought of leaving their own country, that they frequently leap out of the canoes, boat, or ship, into the sea, and keep under water till they are drowned, to avoid being taken up and saved by their pursuers. Captain Phillips, who was commander of a Liverpool slave ship to the coast of Guiney, after narrating the shocking sufferings of a great number of the negroes in the slaving, brought on board a small ship, and the hoard barbarities extended on some of them for a conspiracy to murder the crew, and recover their liberty by making this reflection: Will not Christianity blush at this flagrant falsehood, at the time of its first to call back the straggling remains of humanity in the hearts of those, who, from a love of wealth, or some other motive, are not without, and in any degree of condamn of the first, or free from the air, and left they should attempts to recover their freedom, they were made fast to two common boats, which were extended on each side the main deck; the women and children were rowed off.

means of saving their lives. However, they first endeavored to hold the chains by which the negroes were fastened to the stake, but in the confusion, the key being missing, they had but just time to loose one of the chains by wrenching the staple, when the rehensment of the fire fire-crested of the vessel, as the vessel had immediately the fire having gained the powder, the vessel blew up with all its flaves who remained fastened to the stake, and killed many of the crew. There happened to be three Portuguese vessels in sight, who, with others from the shore, putting out their boats, took up their arms, and accompanied them home. He the king, who remained alive, of which number about fifty died on shore, being mostly of those who were tethered together by iron shackles, which, as they jumped into the sea, had broken their legs, and their throats being dashed by the violence of their struggling, mortified, and occasioned their deaths. Those who remained alive were soon dispersed to other purchasers, for the benefit of the owners.

The Europeans pay for the slaves in gold dust, but the payments for other commodities; in strings of cowries, which, as we observed above, contain each forty in number. Five of these strings make a soume, which weighs about sixty pounds.

As the negro traders bring their gold from distant places, so do they the slaves furnish us with, many of which are brought as recently as in war by the negro kings; and here agreed with the European merchants for the price of the goods they are to take in exchange a ship is soon dispatched, if the treaty fairly is; but if he is not he delivers his goods before he has his slaves, they will sometimes make him wait a great while, and, perhaps, put hard conditions upon him. But when King Daboome was about forty, which was near there were several exported from the whole coast of Guinea, seventy thousand slaves and upwards, by the English, Dutch and Portuguese, but the country where the greatest number of slaves were purchased, till of late years, was the kingdom of Whidah, or Dafa, for that reason usually called the Slave coast.

The returns arising from the slave trade are very considerable, the king receiving three and a half dollars for every slave sold in his dominions. Every European vessel also pays him a pecuniary duty, exclusive of presents, which he takes to the king for the liberty of trading, and his protection.

SECT. VI.

Treaty of the revolution in the kingdom of Whidah, by the consent of its, and that of Adrash, by the king of Dahomey.

We shall now give a relation of the conquest of the kingdom of Whidah by the king of Dahomey, and the revolution that happened there in the year 1746.

The king of Dahomey, hearing that the king of Whidah country, situated about seven miles from the sea-fide. In this town the king allowed the Europeans convenient houses for their families, besides his own palaces and mansions, and goods, and when our business was finished, we were permitted to go away in safety. The road where ships anchored was distant from port for all European nations trading in any part for negroes. And this trade was so very considerable, that it was computed, while it was in a flourishing state, there were above twenty thousand negroes yearly exported from there.

The land was well stocked with people, the whole country appeared full of towns and villages; and being a very rich soil, and well cultivated by the inhabitants, it looked like a garden. Trade having flourished for a long time, had greatly enriched the people, which, with the fertility of the land, had unusually made them to prod, effentiate, and luxurious, that though they could have brought at least one hundred thousand men into the field, yet for great were their fears, that they were driven out of their principal city by two hundred of their enemies, and at last left their whole country to a nation, they formerly contumined.

The king of Dahomey, a far inland prince, who for some years past had rendered himself famous by many victories gained over his neighbours, sent an embassador to the king of Whidah, demanding the surrender of his town, the sea-fide, and offering to pay his whole courtiers in negroexported, which being refused, he retired the affair; and invaded Adrash, the most northern province of the kingdom of Whidah, of which a great lord, named Appasah, was hereditary governor, who forthwith sent to the king for his affiance; but through the king's enemies at court, who wished his destruction, he was refused; so having made a little resistance, he submitted to the king of Dahomey, who received him with every assurance of kindnese.

The conquest of Adrash gave the king an easy entrance into the habitable part of the coast; and as he was well informed of the state of Dahomey, he encamped for some time, not imagining he could have found to easy a passage and conquest as he met with afterwards. For the sake of the river was of that nature, it might have been defended against his whole army by five hundred resolute men; but instead of guarding it, these cowardly luxurious people, thinking the fame of their numbers sufficient to deter the Dahomeans from attempting it, kept no fort-guard. They only went every morning and evening to the river side to stoke the fire, as they call it; that is, to offer sacrifices to their principal god, which was a particular harmless snake they adored, and prayed to on this occasion, to keep their enemies from coming over the river.

In the mean time the king of Dahomey, fast to the Europeans, then refraining at Whidah, to allure them, if they would sueor, and were not found in arms, they should receive no damage in that country; and here agreed to his improved conquer, and he would extend their trade, and remove divers impediments laid on it by the king of Whidah; on the contrary, if they did not relinquish the sea coast we would expect his resentment. They would gladly have retired from Daba to two mud-walled forts, belonging to the English and French; but being of the idea of dissuading the king of Dahomey, as a diffusion to his people, they were obliged to remain in the town, not suspecting the inhabitants would have run away in that cowardly manner they did, or that they should share the fate of war with them.

The pala of the river being left wholly to the care of the snakes, whom the enemy little feared, and they having observed for several days, that the Whidah kept no sea-guard there, it encouraged the king of Dahomey's general to lend two hundred of his soldiers to ford the river; which having done without opposition, and being bold fellows, they marched towards the town of Safa, founding their musical instruments. This was about three o'clock in the afternoon, and the out-guards of the town were almost all asleep; but being roused by the noise of the enemies marching, men and women, they fled into the town, reporting that all the Dahome army was got over the river, which soon reaching the king's side, he immediately fled with all his people, making no resistance. The white people, then, in the English and French forts, affirmed that about five o'clock the same afternoon, they saw fift few numbers of people flying from across the river, one little hundred of his soldiers, that it was very surprizing; for the fields were covered with them many miles round, and their black colour made them the more conspicuous, and came ashore on the same day, on a fine, flat, champaign country. The king, with a great number of his subjects, fled to an island on the sea-coast, which was washed by the sea on three sides, having ferried over in canoes; but a great many that could not have the same benefit, being hurried on by their fears, were drowned in the river, in attempting to swim to the island lying near Pepos, which was the next country to their own on the sea coast to the wellward, and where they might have been secure from their enemies. Many thousands of their people, that sheltered themselves up and down the country, among the bushes, perished afterwards by sword and famine.

But to return to the Dahomeye soldiers; when they first came to Safa, it seems they marched directly to the king's court, where, not finding him they lit on fire, and then sent their general word what had happened, who brought the whole army over the river that evening, but being in such surprise at his good fortune, that he could hardly believe what he saw, and the white gentlemen were as much amazed to see the front of the English, as the English, who had vapored so highly, and as ignominiously quitted the town, without opposing their enemies in the least, leaving them entirely in their power to conquer the whole country and make them richers.

The day after the taking the town of Safa, the white men taken prisoners were sent into the country to the king of Dahomey, who then lay encamped with ano-
their army, about forty miles off in the kingdom of Arab, some hundreds being provided for the principal, which is the usual way of travelling in that country for gentlemen, either white or black.

Some few days after their arrival in the kingdom of Dahomey, a little after the day on which the captain arrived, a small body of the natives of the country, which is the usual way of travelling in that country for gentlemen, either white or black.

Some few days after their arrival in the kingdom of Dahomey, a little after the day on which the captain arrived, a small body of the natives of the country, which is the usual way of travelling in that country for gentlemen, either white or black.

The king of Dahomey, hearing of captain Snuggraves's arrival on the coast, with an intent to trade, invited him to his camp, which they then lay about forty miles up the country, whither the captain went, being furnished with horses, harnacks, servants, and all manner of accompany- ment. The king, after some days after his arrival, in the camp, he had an audience of his negro majesty, of which the captain gives the following account, (viz.)

The king and queen, as the inhabitants are under the same laws and government as before it was conected, and also possessed of the same indulgence in religion, etc...

Sah, the capital of Whidah, is very small in comparison to what it was before; its being reduced to after the king of Dahomey, he has preferred the authority he then acceded; ever since. It is at this time considered only as a provizore, and its king as a tributary ruler.

The inhabitants are under the same laws and government as before it was conected, and also possessed of the same indulgence in religion, etc....
The kingdom of Ardras, or Arder, is bounded on the east by the kingdom of Benin; on the west, by that of Whidah; and on the south, by the gulf of Guinea, but how far it extends northward, and what countries are upon the south, is not known. It is as narrow towards the sea, but widely considerable, and is divided into two parts, distinguished by the names of Okwalla and Littar Arder. Little Arder is divided into five districts, east longitude, and five degrees north latitude.

This kingdom is not so considerable as that of Whidah, but is very picturesque and elegant. The country in general is very flat, and being well watered by several rivers in different parts of it, the soil is exceedingly fertile, and produces great quantities of Indian wheat, millet, and potatoes, as also several kinds of fruits; particularly pine-apples, bananas, coconuts, oranges, and lemons.

The manners, customs, religion, &c. of the inhabitants of this kingdom differ little from those of Whidah.

In the drefs of the men consists of several cloths, the manufactory of the country, wound round the body, and fastened with a girdle; but the better sort wear two short petticoats, made of taffety, or other silk, and have flit loaves in the form of shoulder-belts. They modify go with their heads and feet bare, though they are permitted to wear sandals, and hats or bonnets, except in the king's presence. Women of rank also wear petticoats and scarfs, but, like the men, they have not any covering either to their heads or feet. The poorer sort have only short cloths tied about their waists, the other parts of their body being merely naked. Both sexes are exceedingly cleanly in their persons, washing their bodies every morning and evening in pure water, and anointing themselves with civet, or some other utensil of perfumes.

Rice, pulse, herbs, and roots, with beef, mutton, and dog's flesh is their common food: their ordinary drink is the water of the Nile, and the vine, with water: palm-wine is the drink of the better sort.

Fishing, boating of sail, and trading, are the employment of these people, who would not allow themselves to use the land. They allow polygamy here as at Whidah, every man being allowed to take as many wives as he thinks proper. No difference is paid to birth or fortune, the poorest man has liberty to pay his addresses to a woman of the greatest quality; but if the rejects him on the first visit, he is not allowed to make a second. Little ceremony is used in marriage, except the giving of a small piece of gold, and the removal of the bride to the house of the bridegroom, when the wedding ceremony is over. Men of condition marry girls at ten or twelve years of age, but they do not contract the marriage until they have kept them several years as the companions of servants; when the time is fixed, the bridegroom pays a present of a horse, or a piece of cloth, or a feast, and the relation of both parties are invited to an elegant entertainment.

In laying their dowry, they usually have nearly the same ceremony and present as at Whidah; except that this particular, that the bridegroom pays a present at the time of the marriage, in which most of them are seated in their houses, in the presence of all the relations, and many unhappy faces are witnessed at his interview.

The religion of the people is very different from that of their neighbours in Whidah, only they do not consider the serpent as an evil, but are exceedingly fond of their faith. Though they are such gross idolaters, they acknowledge one supreme Being, who, they believe, appoints the time when every person shall come into, or go out of the world; notwithstanding which, they tremble at the very mention of death, and are greatly alarmed at sickness.

If a person is taken ill, he sends for a priest, who immediately goes to him, and sacrifices some animal for the recovery of his health. The priest rubs the patient's head with the blood; but throws away the feth of the animal.

The high priest appoints the faithful belonging to the king and court: these are birds of a black hue, not unlike the crows in England; prodigious numbers of them are kept in the gardens of the high-priest, and it is the custom of them to make a salutation to the priest in honour of their mistress, at the same time asking the idol several questions relative to their future welfare. If the priest thinks the offering too insignificant, he tells the people that the feth does not like it, and will not answer his questions till he has one to please him. On this the person enlarges his offering, and then the answers are delivered by the priest in a low voice, which the pleritious blocks imagine to be effected by some secret influence of the feth. The oracle thus delivered, the priest covers the idol with the pot, and affords it either with beer or meal. The like is done to every person present at this occasion.

The people consider the priests in general as the most respectable light, but the great marabout, or high-priest, is perfectly adored by them. They imagine him to be an infallible diviner, and that he can foretell things by converting with an awkward image, which he keeps in his hall of audience, where he receives visits from his credulous devotees. This image is painted white, and represents a child, which the marabout tells them can communi- cate to him such circumstances as shall arise from their future conduct. When they go to consult the marabout, they present him with the belt offering their circumstances to his advice, and the intelligence of their future misfortunes or misfortunes is directly proportioned in it to proportion. As to their laws, whoever disobeys the king's commands is beheaded, and his wife and children become the feth's slaves. Infrudent debtors are left to the mercy of their creditors, who have liberty to pay themselves by any thing for their favours. The feme punishment is also inflicted on him who has debunked another man's wife. The same punishment as at Whidah are inflicted on women convicted of adultery, and other crimes.

Ardras is the most considerable place in Arder, but the Europeans call it Great Ardras. It is the capital of the kingdom, and is situated about sixteen leagues inland from the north-west coast of Africa. Ardras, or Arder, is that name leading from the one to the other. It is encompassed with four walls of earth, which are very lofty and substantial: each wall has a large and deep ditch, but they are all within, and over them are wooden bridges. The houses are built in general well built, and the streets regularly formed. The king's palace is a spacious edifice, though greatly inferior to the original buildings in the king of Whidah, which was burned and froyed in the year 1726. At that time the palace contained many large courts entirely surrounded with porticoes, above which were apartments that had large windows. Some of the floors of these apartments were covered with mats, and others with large Turkey carpets, and the furniture consisted of easy chairs, cabinets, and porcelain brought from China. There was not any glass in
in the windows, but only frames of white linen, and taffeta curtains. The gardens belonging to it were very extensive, and laid out in long vistas of thick and lofty trees, which are only estmated when the sun was intensely hot. The present palace, however, is far from being unsightly.

The ground is kept with great splendor, though on its majesty, like the foregoer of Whigdon, is dependent on the king of Dahome. His Sikkim goes abroad, and when he does, it is in to private a matter; that few of his subjects privy and unknown, and that he is to fight on the high road, and in the country, with whom his time he has been employed, the principal of his motion, with this proviso, that, the said business in the other without, which was unwise to supply him with victuals, in case his majesty does deny any thing else he has occasion for.

No person whatever eats in company with the king; and when he drinks, an officer makes a signal, by striking two small rods of iron together, in order that all who are within flight may turn away, and not look at his majesty; for it is a capital offence for any one to see him drink, and is punished with death. An instance of this was once seen in an infant, who being allowed by the king, was awakened by the noise of the rods; and his majesty observing that the child cast its eyes at him while the cup was at his mouth, ordered it to be put to death immediately.

When a person pretends any thing to the king, it is offered kneeling; and the like respect is shown even to the provisions set on the table. They who happen to be in the room when the officer carries them, perceive them set by their faces to the earth, and dare not rise till the dishes are carried out of their fight to the king's table.

The king of Dahome has a suite of men with him, very different and religious respect. When any one goes to Athens, to obtain an audience of his majesty to liberty for trade (which must be done by every one that comes for that purpose), and in all their ladish, which is daily made for him at the king's expense. On the day fixed for the audience, he is introduced to his majesty by the captain of commerce, he enters the hall where the king is seated, his majesty immediately rises, and advances some steps to meet him; he then takes it by the hand, pretends its own, and three times successively touches his fore-finger, which is the great seal that can be given of amity and friendship. After this, he deft him to fit down by his side on mats spread on the floor; which being complied with, he then lays his pretence before the king, and, by an interpreter, communicates his buffet; the answers to which, the king returns through the same channel. As soon as the audience is over, the European goes, with his attendants, to the house of the high-priest, who, in respect to the king, provides an elegant dinner on the occasion, after which, he sends for his victuall, and entertains his guests with dancing, music, and such other diversions as are usually practised in this part of the world. In the evening a licence is granted by the king for the European to liberty for trade, and the same is made known by the public crier, who receives forty brants rings, a goat, and a piece of fish. For this, he pays tribute, for his gentle men, is the only way to be understood, as is said to be done for them; and in that case it is their greatest pleasure to oblige the person that applies to them: on the contrary, if they are affronted, they are ready to pursue the world everywhere, and they are not used to refractory; and then they will take as much pains to injure, as they would at other times to serve you. Among themselves, they carry the appearance of civility and complaisance, but in reality they are very close and referred, especially in their dealings, not caring to trust each other. The traders are very attentive to buffets, and remarkably tenacious of their old customs; and a foreigner may easily deal with them, if he complies in this particular.

There are four classes of inhabitants in this kingdom; the first of which is called the chief, he is the king's servant; and whoever wants to obtain any favour from his majesty, must apply to the crier, who, when he has seen the king with his deference, and return his answer. As there is no intermediate person between them, the king, and he who fulfils former, they set on their matters in such manner as best suits their interest. For that reason the whole kingdom is entirely in their hands. How contradictory better to condemn the king to be the intimation of the king, yet it can never be known how the other persons are admitted into his presence, except those in a public capacity.

The ares de roes, or road chiefs, who are at four forts, are the second rank or class of people here: the

boundaries on the east, south, and west, are uncertain. This is a very wholesome country, as it lies high, and is daily refreshed by fine cool breezes, and the kingdom of Dahome, though at a considerable distance, may be seen from it.

Alomy, is situated two hundred miles up in the inland country; the king has his palace in this town. It is a very populous place, and always keeps a considerable standing army, but it consists only of foot soldiers. The king has for his succour a nation called jous, who live a good way from the sea, but are used to fight on the high road, and in the country.

These two powers have been frequently at variance with each other; but they have been upon good terms, since the treaty which was very agreeably agreed to, was formed between them three or four years ago.

Adjoining to Ardirah is the kingdom of Benin, which extends about five hundred miles from east to west; but its extent from north to south cannot be ascertained. It is bounded on the east by the kingdoms of Mucaj and Magoko; on the west by Ardirah, and part of the gulf of Guinea; on the south, by Congo, and on the north, by part of Congo and Bafria.

This is in general very low and woody country but well watered with rivers; the most distinguished of which is that called by the English and French the river Benin; but by the Portuguese Rio Formosa, or the Beautiful River. Its length and source are not known, but its branches are supposed to extend through most parts of the neighbouring countries. Its banks are exceeding pleasant, being ornamented with lofty trees, and many dull and neat villages.

The numerous explors exhibhed from the low grounds by the heat of the sun, and the excessive heat, are very unpleasant: the soil is unfertile, and well adapted for the produce of millets and rice; but as the inhabitants are not fond of those grains, little of them are cultivated. The produce of the region consists of cotton and tobacco, the latter of which produces a tolerable commodity, but not in such quantities, neither are the crops so large, as those of the East Indies. In this country, the wild beasts are, tigers, leopards, bears, and monkeys. The same most consist of hens, cows, sheep, dogs, and cats; the two latter of which the natives prefer to any kind of flesh whatever. They have also great plenty of poultry, and the woods abound with game, as hares, hares, turtleneck, partridges, pheasants, &c.

The people inhabiting this kingdom each have their particular king; all of whom, except the king of Overy, are slaves or vassals to the king of Great Benin. The natives in general are good-natured and obliging, particularly to Europeans; and if the latter compliment them with the least signs of respect, they are well disposed to them.

When any favour is asked of them, they use all their utmost endeavours to grant it, even though it may in some degree be prejudicial to themselves. For their gentle men, is the only way to be understood, as is said to be done for them; and in that case it is their greatest pleasure to oblige the person that applies to them: on the contrary, if they are affronted, they are ready to pursue the world everywhere, and they are not used to refractory; and then they will take as much pains to injure, as they would at other times to serve you. Among themselves, they carry the appearance of civility and complaisance, but in reality they are very close and referred, especially in their dealings, not caring to trust each other. The traders are very attentive to buffets, and remarkably tenacious of their old customs; and a foreigner may easily deal with them, if he complies in this particular.

There are four classes of inhabitants in this kingdom; the first of which is called the chief, he is the king's servant; and whoever wants to obtain any favour from his majesty, must apply to the crier, who, when he has seen the king with his deference, and return his answer. As there is no intermediate person between them, the king, and he who fulfils former, they set on their matters in such manner as best suits their interest. For that reason the whole kingdom is entirely in their hands. How contradictory better to condemn the king to be the intimation of the king, yet it can never be known how the other persons are admitted into his presence, except those in a public capacity.

The

meant.
are three or four places, where the stores of the poor people are close confined, to obviate all opportunities of transgression; the forests have the full enjoyment of their liberty. The pickpockets are very numerous, and from them are chosen the vixens and go-

nons of those countries subject to the king. They are all under the command of the three great men, and are re-

quired to be in attendance on the king when he goes abroad.

They have the custom of giving presents to the king by the recommendation of their three lords; and the king, as an ensign of his honor, presents such of them with a suit of clothes, which are obliged to wear about their necks. They are made of a port of pale earth or bone well glazed, and greatly reformed varied sorts of cloth and polished so as to be careful of the weather; for if any one should hide this badge of honour, whether by accident or otherwise, the consequences would not only be disgrace, but they would be put to death for it.

The fudurs, or brokers, are the third class: they are appointed by government to see that all matters of commerce are fairly transacted between the respective parties; and their business is to trade with the Europeans on behalf of the traders of Benin.

The community form the last class. The generality of the Benin are very indolent, nor will they go to work, but when necessity obliges them: the laborious part of their business is executed by the wives, such as tilling the ground, spinning of cotton, weaving of cloth, and other household crafts. Smiths, carpenters, and leather-dealers, are the principal artificers amongst them.

The negroes have for their higher (the better sort) dress in a white cotton or cotton cloth, which is fastened round the waist, and neatly plaited in the middle, but the lower and upper parts of the body are entirely naked. The dress of the negroes for the poorer sort is about a fortnight old and does not differ in the quality of the stuff it is made with.

Calico pieces are worn by the wives of the negroes—those who are born in this country, and those children who are full-grown, of different colours: they are fastened round the waist, and the upper part of the body is covered with a coat of coarse cloth, which is turned up about a yard long. Their arms, legs, wrists, and fingers, are ornamented with copper or iron rings; and they wear necklaces of coral agreeably disposed.

The men let their hair grow in its natural form, and take but little pains with it, except buckling it in two or three places, in order to hang a great coral to it: but the women's hair is artificially formed into large and small bunches and divided on the crown of the head, so that the latter are plaited with great uniformity. Some of them all their hair, by which means it loses its black colour, and in time turns to a fort of green, which they are very fond of, but to a stranger it has a disagreeable appearance.

In this country, when a great man goes abroad, he is attended by a number of servants, all of whom are armed, some with spears, others with long darts, and some with broad swords. They ride on horseback, and sit on the beast's back, as the women do in England. One of his attendants holds an umbrella over his head, to shelter him from the sun; another has a knife, and the third goes before leading the horse. The only security of the rider consists in his reposing the left hand on the shoulder of his attendant, for they use neither bridles nor saddles.

There are very spacious and lofty buildings in most of the towns in this kingdom, but they are differently con-

structed, some of them being square, and others of an ob-

long form. The doors are made high but narrow, and the windows are few in number and exceeding small. They are all covered with a flat roof, on the top of which is a cov-

ering raised several feet, to keep off the heat of the sun; and when they say a word to each other, they frequently re-

present throws.

Persons of condition live well, but not luxuriously: their principal diet consists of beef, mutton, or chicken, and for bread they use yams, which, after being boiled, are mixed with mud and made into a dough, which is eaten with a stick, but sometimes they mix brandy with it. The poorer sort live on dried fish, yams, bananas, and pulse; and their drink is water, or a kind of beer, and a kind of rum resembling that drank on the Slave coast, called pito.

They allow polygamy here, with the same latitude as on the continent of Africa, but it is not generally practised, it only in the case of the parents, and an entertainment for the guests on both sides. The great men are exceeding jealous, for which reason the wives of the poor people enjoy a pleasure which is little that of the better sort.

All the boys born in this country are presented to the king as his property, for which reason all the males are called the king's slaves, but the females are the property of the father, who has his claim on them of their behaviour. If a woman happens to be delivered of two children at a birth, immediate information of it is given to the king, who orders public religics to be performed to them. Such circumstances are considered as happy occasions in the territories of Benin, except at a place called Abobo, where they are productive of the greatest slaughter. In these places the people generally sacrifice both the woman and children to a certain divinity, which they pay inhabits a wood near the town. Sometimes, indeed, they will sacrifice the wife, by the husband's offering a female slave in her stead, but the children are condemned without redemption.

It is affirmed by Holfman, that while he was at this town in 1730, he knew a merchant's wife that desired, but her children were delivered who had fasted the often despised with tears. The following year, says the same writer, the like happened to the wife of a priest: she was delivered of two children, whom, with a slave in his wife's room, the father was, by virtue of his office, him-SELF obliged to sacrifice with his own hands. This shocking custom still prevails in that town; but of late years, they are enabled to desist from the sacrifice, avoid the consequences, by finding their wives a more humane part of the country, when they draw near the time of their delivery.

Circumcision is practiced on both sexes, which is performed when the children are about a fortnight old; for they can give no reason for this custom, only saying, that it was handed down to them by their ancestors. They also inflect another custom of shaving their heads, and parting their hair in the middle, that is, making intimations in different parts, in a sort of regular order, and leaving the marks of birds, beasts, and other figures, upon their head, to signify their unhappiness in this particular being much more marked than the boys; for their parents are very liberal in bestow ing their marks, which are considered as the greatest ornaments they have.

The thoughts of death are not so terrifying to the negroes of Benin as to their neighbours on the coast of Guinea. When a person falls sick, he immediately applies to the priest, who also acts in the capacity of physician, and furnishes him with medicines; but if these prove ineffectual, he has recourse to sacrifices. If the patient recovers, the priest is rewarded for his assistance; but no further regard is paid to him: so that the priests here are generally poor, having little other dependence than what arises from their abilities as physicians; for without sacrificing to the priest, each man offers his own sacrifices to his idols, and think they sufficiently atone themselves of their religious duties.

On the death of a person, the corpse is kept only one day before interment, except he happens to die at a distance from his general place of residence; then he is buried in order to preserve it for conveyance, it is dried over a gentle fire till all the moisture is extracted, when it is put into a coffin, and publicly exhibited; after which, it is carried on men's shoulders to the place of interment. When the funeral is over, the nearest relations go into mourning, and bewail their loss by cries and lamentations. The shew of mourning consists only in having their heads, arms half-

way, and others half-over; and the men shave off their beards on their occasion.

Many slaves are sacrificed at the burial of a grandee; but the greatest number fall victims on the death of a king. The ceremonies attending a royal burial in this country are very singular, and are described by Barbot, that give occasion to some eye-witnesses of them. As soon as the body of Benin expir'd, they dig a large pit in the ground at the palace, in order to preserve it for conveyance, it is dried over a gentle fire till all the moisture is extracted, when it is put into a coffin, and publicly exhibited; after which, it is carried on men's shoulders to the place of interment. When the funeral is over, the nearest relations go into mourning, and bewail their loss by cries and lamentations. following day opened with the like ceremony, which consists of the performing of many public services; and no answer returned. After this, the chief ministers inform the council of war, immediately repair to the pit; and causing the throne to stand thereon, drink the libations to the king, to consecrate the throne, and request that the king may be entertained, and that the entertainment be so arranged that it may be for the entertainment of the populace. After they have reconquered themselves, they run about the city in the night, console and comfort the widows and orphans, killing all the men, women, and children they find. They chop off their heads, and leave them in the streets, but they bring their bodies in their chariots. The king, supported in his body, and the part of his face which is not visible, comes to the city, to show them the full violence on the occasion are so far from hastening their fate; that they reckon it the highest mark of honour they can be favoured with.

The people worship various kinds of idols, some of which are made of elephants' teeth, claws, dead men's hands, fingers, etc. Each is his own priest, and addresses himself to such of his idols as he chooses. Many, however, have a tolerable idea of the Supreme Being; for they ascribe to God the divine attributes, and believe that he governs all things by his Providence. As he is invisible, they say it shall be a sufficient to attempt to make any corporeal representation of him, for that could not be effected, as it would be impossible to make an image of what was never seen: The images of their gods they consider as subordinates deities, and believe that they are mediators between the people and the Supreme Being. They believe all in the devil, and think themselves obliged to reverence him; lest he should hurt them. They make their offerings to him by the same idols of the same kind and quantity that own the king; and he is declared the lawful heir to all the lands left by his father. He is not compelled to make any allowance to his younger brother, that being wholly left to his own discretion; but if his mother be alive, he must allow her a maintenance suitable to her rank. He takes, his father's other wives wives, especially those that have not had child before, and whatever they have lived well or ill. If the former, they are to be raised to great dignity; but if the latter, they are to perish with hunger and poverty.

Daily offerings are made by the poorest to their idols, which could only of a very easy mixed with oil; sometimes they offer a bowl, but they only sprinkle the blood of it on the idol, for the devil to convert to their own use. The great men make annual sacrifices, which are very expensive, and they provide an elaborate entertainment for their friends, that last several days; besides which, the poor have always handsome presents made them on these occasions.

The time is divided by months, weeks, and days, each of which is distinguished by a particular name; but in their division they make fourteen months to the year. They keep their festivals every fifth day: which is solemnly observed, particularly the better fact, who on the occasion sacrifice cows, sheep, and goats; with bread, fruits, and fruits, and cats, chickens, or whatever they are able to purchase. In order that the festival may be universally kept, those who are do not as well able to obtain any of these, are assisted by the others.

They keep two other annual festivals, besides those held on the Sabbath. The first of these is in commemoration of their ancients, when they not only sacrificed a great number of beasts, but also human beings; but the latter are generally made feasts and fed to the king, and for the entertainment of their friends, that last several days; besides which, the poor have always handsome presents made them on these occasions.

The festival is celebrated on the twenty-fifth day of the month, when the king orders his officers to parade the streets, and feeds in different places such persons as are able to pay a ransom, if he is found in the streets, or in the market place, where he is cut in pieces, and sold as slave food. If the persons so taken, from whom they are able to receive a very handsome compliment.

The second annual festival, which is called the coral festival, is celebrated in the month of May; and the king appears in public the day on which it is held. A person is the one to preside at this festival, and is called the king's priest, or the king's messenger, or the king's envoy. The king of the country and all the other inhabitants of the country. On the day appointed, the king came magnificently dressed into the second court of the palace, where, under a rich canopy, a feast was placed for all, as also others for his wives and a great number of his principal officers. Soon after the king was festively received, the procession began to move, and to circle round the king's throne, in order to sacrifice to the gods in the open air, and thereby begin the feast. This action was accompanied with a great show of pageantry, and music. After paying a quarter of an hour in this manner, he returned to the former place, where he sat two hours, in order to give the united nations a sight of his magnificence, and his devotions. This done, he returned into the palace.

The rest of the day was spent in costly treating and feasting, and the king was attended by persons who were allotted to attendions to their devotions. The reason why this is called the coral feast, is, because this time the king beholds the offerings of coral on those whom he advances to any preferment, which he never does but on this festival, unless a very extraordinary occasion urges the contrary.

The kingdom of Benin, which lies contiguous to Ardra, is divided into an arbitrary number, and the king is an absolute law; but the chief direction of government is vested in the three great lords. Their laws are in general very mild, and not attended with arbitrary and insolent pretensions to which the inhabitants of some other countries are subject. When a person of property dies, the right of inheritance descends to his eldest son, who is obliged to present a slave to the king, and another to the three great lords, with a petition that he may distribute his father in the future. The present law is considered as an extraordinary grant, and he is declared the lawful heir to all the lands left by his father. He is not compelled to make any allowance to his younger brother, that being wholly left to his own discretion; but if his mother be alive, he must allow her a maintenance suitable to her rank. He takes, his father's other wives wives, especially those that have not had child before, and whatever they have lived well or ill. If the former, they are to be raised to great dignity; but if the latter, they are to perish with hunger and poverty.

Criminals are punished in proportion to the nature of their offence. From the particular respect which they pay to their ancient laws, the injurious of any European is considered as a capital crime, and the punishment for such offence is thus executed: they take the offender, tie his hands behind his back, and blindfold him. After this, the judge raises him up, so that he lend hangs towards the ground, which the executioner cuts off with a hatchet, and separating the body into four quarters, leaves it for the wild beasts and birds to devour.

When a person is found guilty of theft, he is obliged to restore the goods, and pays a fine; and if he is unable to pay the latter, he is condemned to be cut in pieces, and sold as slave food. If he be committed on a grandee, the punishment is death. But theft is seldom committed here, the natives not being of so pilfering a disposition as those of the neighbouring nations. They punish murder with death, except the crime be committed by the king's son, or a grandee, in which case the offender is banished to the most distant part of the kingdom, and never permitted to return. But murders seldom happen here. If a person kills another by accident, he pays for his life, by self burying the deceased, and afterwards producing a slave to suffer in his stead. When the slave is sacrificed, the offender must bend his body, and touch the slave with the forehead; after which he must pay a fine to the great lord, when he obtains his freedom, and the relations of the deceased think the offence has been sufficiently atoned for.

They have been to those feared by slaves, in proportion to the circumstances of the parties. If a common person furnishes his wife in the field, he is entitled to all the effects of their produce to release her; but if a man furnishes the woman, after being severely drubbed by her husband, is totally deserted, being left to shift for herself the remainder of her life. In these cases, the better sex finds themselves much in the same way, but the relations of the offending party, in order to save themselves from the scandal that might accrue to their family, frequently bring about a reconciliation; these circular ceremonies are a great relief and comfort to the injured husband, who after this satisfaction,
tion, hushes up the matter, and the unreasonable liberality of his inconstant spouse is apparently forgot-

of the king's refactoriness, and accordingly bidding himself to flight, attended by the principal part of the in-
heatists. As on an occasion of this kind, he raised an army to pursue the traitor, and obliged them to return, but thearem.meet with such a repulse, that they were obliged to return within twenty-four hours, or lose the property they had taken. The king, irritated at this, made a second attempt, by sending a much more considerable army; but when he also failed, the king took shelter in the city.

Elated with this success, the king determined to be revenged on his foreigner, and marched with all the men of the city, which he plundered, and burnt down the king's palace. After this he retired, but continued for several years to rob those inhabitants of Benin that happened to fall in his way; till at last, at the intercession of some Europeans, a peace was concluded between him and the king; by which he was pardoned, and interred to return to his former habitation. Fearful, however, of the integrity of his majesty, whom he still considered as his most inveterate enemy, he did not think proper to comply, but settled at a place about three days journey from Benin, where he kept a court; was highly respected by the people who adhered to him, and lived with as much splendor and dignity as the king himself. Few of the citizens returned to the capital, and were not only received by the king with great friendship, but were preferred to honorable offices, in order to reduce the rest to follow their example; the multitude, however, were not convinced; they preferred a life of ease and freedom to that of servility and oppression, and nor did the most profuse inducements made to them have the desired effect.

Such were the circumstances that occasioned the reduction of the inhabitants of this city, whose number is at present not more than one thousand, and that before this the city contained many thousands. Most of the other towns in this kingdom are situated on the river Benin, and are chiefly remarkable for trade. The prince, however, as a care to those who belong to him, who is the only one that is independent of the king of Benin. The Portuguese have a church and factory in this town, which stands about six miles from the mouth of the river.

Bowbodee, a trading village, at a small distance from Aweri, it contains about fifty houses, built with reeds and mud, and covered with the leaves of trees. It is governed by a viceroy and some great men, whose authority extends only to trifling matters, as trivial cases, and the raising of taxes for the king; but they have the power to the court, and wait the determination, in case anything considerable happens.

The village of Egberton, near the mouth of the river, is pleasantly situated on a high island in the center of it, and surrounded with fruit trees. This was once a considerable place; but it was destroyed in the wars, that it was almost laid waste; however, its delightful situation, the buildings of late years have considerably increased, and it seems as if its original splendor would be restored before long.

Arboe, is the greatest place of trade on the river Benin, and is situated about fifty miles from its mouth. It is a large populous town, which is built in a very handsome manner in its dealings. The Dutch and English have both factories here; but the latter having neglected their trade, they have and has never since been rebuilt; so that only the English settlement in this part of the country now belongs to the Dutch.

The town of Mcnbong, is a small but very neat place, and the houses are built with great uniformity. The Dutch had once a factory here, and were greatly respected by the natives; but during their stay a melancholy circumstance happened, occasioned by the indiscretion of the principal factor, that entirely ruined their affairs; which was this: N. Beuclidzy, their left factor, having cast a wanton eye on one of the king's wives, who was extremely handsome, and who owed her wealth to a husband, whom she so exasperated, by taking the goods of her household, that he took revenge. The Dutch, in a fit of passion, killed the husband, and took the goods for themselves; and the king, who was highly incensed, gave the two officers for execution, and they were beheaded. The company's director-general on the coast, not being rightly informed of the case, sent a vessel from Elmina, well armed, to take revenge the murder. The Dutch followed in their reconciliation, and the inhabitants of Mcnbong, the king, who was highly incensed, gave the two officers for execution, and they were beheaded. The company's director-general on the coast, not being rightly informed of the case, sent a vessel from Elmina, well armed, to take revenge the murder. The Dutch followed in their reconciliation, and the inhabitants of Mcnbong,
of the honour of his family, yet the king castrated him and his wife, and put them to death in the most cruel manner.

The dead bodies of these miserable wretches were exposed to be devoured by the beasts, and their houses were raised to the ground, with Pitta, and they should never be rebuilt. The Dutch, however, from these circumstances, made no further attempt, and even since that time there has been none in any part of the town.

There are, in this kingdom, several other confidencine rivers, besides Benin; particularly the river Rio del Rey, which is bounded on one side by the kingdom of Benin, and on the other by that of the king of guinea, is twenty miles in length, and is navigable from the sea to the main branch of the river. It is the young king of guinea, and is celebrated for its fertility, and produces great quantities of yams, bananas, palm, and other fruits. The people here carry on a considerable trade in timber, which is carried to the coast in small boats, and is sold at a higher price here than in any other part of the world. The nod and bark of this tree are also much in demand, and are sold at a premium.

Another large river is called the Kas(propertyName), its inhabitants are governed by a chief of their own name, called Moro. His seat, or palace, is situated on a delightful spot on the bank of this river, which is surrounded by a grove of palm trees, and is covered with a canopy of leaves. The people here are of a darker complexion than those of the kingdom of Benin, and are more warlike and treacherous. They are divided into three tribes, each of which is under the government of a prince, and the third is totally independent. The two former

CHAP. IV.

THE NEW HISTORY AND DESCRIPTION OF CONGO.

SECT. 1.

Contents: A general description of the kingdom of Congo, or Lower Guinea, with an account of the division of it called Benguela.

Thekingdom of Congo is situated between the equinoctial line, and eighteen degrees of southern latitude. It is the kingdom of the king of guinea, and bounded on the south by the inland parts of Africa, on the east by Matamana, and on the north and west by the Atlantic ocean, on the west. It extends upwards of one thousand four hundred miles from north to south. In order to give a more clear and distinct description of this extensive country, we shall divide it into four parts: namely, 1. Benguela; 2. Angola; 3. Congo Proper; and, 4. Louango; and shall treat of them separately, as there is little connection between each of these kingdoms in the arts, which are peculiar to the first.

Benguela,
Benguela, is bounded on the west, by the Ethiopian ocean; on the north, by Angola; on the south, by the kingdom of Matamian; and, on the east, by that of the Jaggas, from which it is separated by the Kangan. It is about four hundred and thirty miles in length, from east to west, and one hundred and eighty from north to south. This country begins the beguines of an elephant. The river Cuanza, which extends and to cape Negro. About the center of it is the bay of Cows, which, though not very large, is nevertheless very deep, and abounds with fish and small game. It receives its name from the many herds of that fort of cattle which are bred within its environs. The contumacy, and part of the provision found in the port. Different forms of insects, particularly fiver and lead, are found in some parts of it.

With respect to the climate, it is so exceedingly unhealthy, and prejudicial to strangers, that few choose to land there. Even the provisions are affected by the ill quality of the air, so that they who eat of them at their first coming, run the hazard of their lives, and, if they escape, generally centrefaunte to a lingering and digesting fever. The Europeans who reside here look more like companions of the dead than the residents of the unhealthy place rendering them mere spectres.

Among the few places in this kingdom that merit any particular notice, the most material is Old Benguela from whence the kingdom receives its name, and is so called to distinguish it from New Benguela, a small town built by the Portuguese on the coast of the bay of Cows. Old Benguela is situated in ten degrees thirty-five minutes south latitude, and thirteen degrees ten minutes east longitude. It does not give the name to the country, it gives name also to a province, which extends about ten leagues along the coast, from cape St. Bras, to the bay of Pullets and Fowls, so called from the great numbers of fowls they find there.

The land here is very low, but the soil is fertile, and produces abundance of cattle, as also several kinds of grain and roots. Here the Portuguese have built a strong fortress, called fort Benguela, in which they maintain a garrison to keep the savage Jaggas in awe, who would otherwise ravage the whole country. The fort is fladed with orange, lemon, banana, and other fruit trees, and is surrounded with hedges.

There are seven villages in the neighbourhood of Old Benguela, the most considerable of which is Mani-Kafomba, and is so large and populous, that the inhabitants can sail three thousand men at a very short notice in case of necessity.

The bay is situated to the south of the town of Benguela, is about two leagues broad at the entrance, and so deep, that scarcely a hundred fathoms deep in the mouth of the bay: at this place the Portuguese have a warehouse for the reception of various commodities. The village stands at the foot of a hill, and is very large and populous. The chief articles sold here by the Portuguese to the natives, are guns, gunpowder, fine linens, and woollen cloths.

The mouth of the river called Cambikongo lies about twenty miles from the mouth of the bay: at this place the Portuguese have a warehouse for the reception of various commodities. The village stands at the foot of a hill, and is very large and populous. The chief articles sold here by the Portuguese to the natives, are guns, gunpowder, fine linens, and woollen cloths.

A N SIKO, is bounded on the west, by the river Umba, which runs into the Zaire on the west, by the borders of Louange; on the north by the mountain of Nubia; and on the south, by the province of Songo. It is one hundred and eighty miles in breadth, from north to south; and two hundred and eighty-five miles in length, from east to west.

There are many copper-mines in this kingdom, of which the Portuguese make considerable use, and is in general a very barren country, and the inhabitants of it move agrest. They have no lands or inheritance, but wander, like Arabs, from one place to another, regardless of life, and intrepid in their undertakings. They pay no attention to agriculture, nor do they use any endeavours to prefer their existence, but by plundering all who happen to fall in their way, some of whom they kill, and others they keep as slaves. They are dreaded for their extreme brutality; and are so irrational, that few Europeans can trade with them. Their language is barbarous, and so unintelligible, that even the inhabitants of Congo cannot understand it.

In order to preserve their health, they all anoint their bodies with a composition made of white sandal-wood pounded, and palm-oil. Both sexes go naked from the waist upwards; but it is in such a manner that the males lower their thighs, and the females raise the hips, by wearing red and black caps made of Portuguese velvet.

The Anfikans are perfect cannibals, their chief food being human flesh; and there are public markets where bodies are hung up and exposed for sale. They believe themselves possessed of an absolute right to dispose of their slaves; and those taken in war are quartered, killed, and either fed by their conquerors, or sold to the buccaneers. However shocking these relations may appear, yet they are inestimable favours; for the people of this country feed on each other with as much relish as the most savage nations do on the respective animals appropriated by Providence for the sustenance of mankind. Here domestic animals offer themselves to food to their masters in the same manner as the living, who eat the deceased fowl after their departure.

Their weapons are battle-axes, and small but very strong bows, strengthened of a mast divided with the broad end and bends downwards; that on the nape of the neck is fatter and shorter, of a blackish or dark brown hue. The head is not so long in proportion as that of a horse: it is droll and flat, like that of an ox, only more hairy, and the hair much stronger. Its tail is also like that of an ox, though not quite so long and the hair more like that of the horse; the fast of the skin is as thick as that of a Kangaroo. When this creature is young, the front horn is straight, but as it advances in age, the horn bends gradually up like the forehead of a horse. The eyes are red, and the Portuguese, in order to know the goodness of its meat, are in the habit of preparing fumptuous meals of this animal when it is very old.

Grief beads about an inch long, and of various colours, are the current coin of this kingdom; these they also use as ornaments about their arms, legs, and other parts of the body. They are made of the pulverized bones of this creature mixed with water, which they say is a sovereign remedy against all aches, pains of the body, by drawing away the pecent humour from the whole mass of blood, as well as from the part affected.

Glass beads about an inch long, and of various colours, are the current coin of this kingdom; these they also use as ornaments about their arms, legs, and other parts of the body. the most for rising agility, incomprehensible dexterity, by which they will charge with a speed between forty and forty-five miles an hour, with such dexterity: one and of this instrument is very strong, and the other flat like a mallet, with a handle about an inch and a half thick at the end, and covered with the skin of a serpent, with the flat end they forest their bodies, and stand on the darts of their enemies. They have daggers in their hands made of the bones of serpents, which they carry to leaden guilders fastened by their sides.

It may be reasonably supposed that their religion is gross idolatry. They have among them figures of men, which they represent in the figure of a man, and the moon under that of a woman. They have also an infinite number of infernal deities, each keeping one peculiar idea. As to how he offers sacrifices, and constantly invokes before he engages in any enterprise of importance.

Zimbab, or small feet, are the current coin of their people: these they gather on the coast of Angola, in exchange for which, as also fish, glass, knives, and other merchandize, they give slaves.

The Jagas, a large and canibal people, inhabiting a small kingdom called Matamba, to the southward of Ango- lio, and have also considerable territories to the south- east of it. It is uncertain from whence these people originate, but they are supposed to have first settled about the kingdom of Aniko, and from thence spread themselves along those spacious waters that lie between Aniko and Loango. From thence it is imagined they spread by degrees along the eastern frontiers of Loango, Angola, and Aniko, and from Ango's redistricts on to Basamba, and, from the latter of which, with the territory adjoining, they made themselves complete masters, and, to the great injury of their more rational and peaceable neighbours, have ever since preferred.

These people possess territories which extend from some of the number of Mbohal and Benguele about nine hundred miles; but they are very narrow in proportion, being in some parts one hundred and fifty, and in other parts about one hundred miles broad. They are inclosed between the kingdoms of Matamba and Ben- guele, from whence they are separated by the great river Kongo, the sea, and the empire of Mbohal on the other. The only town within all these dominions is called Kafiri, and is situated on the north part of them, near the frontier of Matamba, where the great jagas, or king, occasionally resides. Having neither towns nor houses besides, they roam from place to place with tents remaining as inclination directs, or necessity obliges them to shift their quarters.

They live entirely by plundering their neighbours, and seize every thing that comes in their way; consequently they neither know nor plant; in their persons, they are tall, f Uttar, and strong, yet nimble and fleet of foot, climbing up the steep mountains and craggy rocks with the most alacrity and dexterity. Their habitation is that of being, well furnished with fire-arms, and their barks are swift, strong, and active; and both sexes are so in- trepied that no enterprise is thought too hard or dangerous for them to undertake; and whenever they meet with a body of their enemy or plundering, they rush with rapidity, and their bows and arrows, spears, darts, daggers, and clubs; but their wealth, and their defensive weapons far more powerful ones, being particularly instructed to cover their bodies, which are armed with the most admirable deciduous splinters made of thick hides; and this method is singularly favorable in a retreat, as it preserves them from being wounded by the arrows of their enemy. Their chief excellence consists in strength and activity of body, in the artfully covering themselves, and in the throwing their euny weapons by which they gener- ally annoy the enemy, and make them spend their shot against their shields; after this they renew the offense with fresh vigor, as seldom fails of doing the enemy great hurt, which is always followed by a general slaughter; for they pay no respect either to persons or places when victory declares in their favor.

If they happen to invade a country where any considerable opposition is expected, they interpose themselves very quietly for some time, and only alarm the inhabitants with frequent skirmishes. In their entrance into the kingdom, each of the brigades of the army, before they attack the camp, under the command of its own particular commander; and the chief officer, furnished with a band of infantry, and three or four companies of cavalry, make a sortie at daybreak; or, if these avail them, they stand on the defensive for two or three days, till the others have spent their strength and are scourged from the camp, and sends out a large detachment in the night, to lie in ambush at some distance from the enemy's camp. On the following morning, they begin the attack, when the poor natives, being suddenly surprised, are easily put to the field to leave their country to the merciless invaders, to plunder and savage at their pleasure.

The sovereign of the Jagas, who is head of a man of

great courage and resolution, never undertakes any thing in war without previous encloudments, and consulting his methyl, or devil, by hieraphants, from whom he pretends to receive the divine commands. On their occasions and in their moments of danger, the king, when he rises before day-break, and sets himself on a stool, attended by two of his conjurers, one on each side, and about fifty women clothed in a single gown, standing behind him, hidden from view, to assist him in his incantations, the whole is placed in a sort of screen, or alcove, in the centre of which is a large fire, over which is placed an earthen pot containing some white powder or paint, with whose confluence he paints, with his own hand, his face, hands, and breasts, bread, and belly, with the same time many enchanting terms, and circumscribing their ridiculous ceremonies till finished; at which time they strike the drum, and put it into his hands, bidding him to fight against his enemies, for the methyl is with him. A male child is then brought to him, which he immediately and apprising which five men are brought to him, two of whom he slays, and orders the other two to be killed without the camp. He also orders ten men to be killed, five within, and five without the camp, with the same name of gods and dogs, the blood of these animals is sprinkled on the fire, but the flesh is eaten with great facility and triumph. The same ceremonies are likewise used by the inferior officers of the army on the like account; but as they pretend that the methyl frequently appears found among the trees, in forests, and not their chief make use of idols thereon or any other occasion.

An extraordinary degree of respect is paid to the great jagus, or king, no person being permitted to be before him, except the kalambo, or head general, who is supreme justicior and supreme criminal. This officer is allowed to sit in a chair with a back to it, but the genels, who likewise sit as judges, are only allowed a small stool about a foot high. Those of a certain rank are permitted to sit on the ground, but they must spread their with their hands. They who obtain audience of the king, must speak to him with their bodies covered in a double cloth, and no manner of drawing themselves on the ground. If the king happens to frown, cough, or sneeze, the whole assembly must with him and be quiet, and they who are neither observed to his person, must give notice to those at a distance to do the same; on which they all express their good will by bestowing them presents and clapping their hands.

That our readers may have a proper idea, not only of their deets, but also the importance of the most dignified among the people, we shall select men with the following account, as extracted from Liston, of the dress, &c. of the kalambo, or head-general, under whom he served for many years. He was, in those days; with, long hair, fat off with many knots of tamaela braids. His neck was adorned with a collar of mazes, which are another kind of bead, their diameter exceeding an English coin, and full accounting them for the value of twenty shillings. His middle was incircled with a girdle of larders, or beads made of oblong eggs, and under it a pale-clot, as fine as his. His dress, or formal attire, consisted of the same every day with human fat. He wore across his nose a piece of copper about two inches long, and of the same size, and of the same shape, a nose ring or septum, which he wore whenever he went abroad, one of whom carried his bow and arrows, and that four men and drink, and whenever he drank, they all knelt down, clasped their hands, and sang. He kept his men under the strictest discipline; and if any of them turned his back to the enemy, he was condemned to death, and his body eaten, and the more effectually to deter that they might see, he used to make an oration from a kind of scaffold at night, in the middle of it, and in commendation of courage and valour.

The people are not allowed, from the same writer, a description of the method in which they bring up their young. 'The boys,' (says the writer,) are brought up by the children of such captives as they make in their excursions; for though they allow themselves many women, and those are not left to the children of other nations. At his nations, yet they suffer few of them to rear up their children, but order them to be buried alive as soon as born; and, in lieu of them, make choice of such as are the most promising from among those of their prisoners, to be trained up in arms, and to the plundering trade. Their policy commonly consists of taking women at ages of fifteen or thirteen years, the females for procreation, and the males for war. The latter are no sooner enrolled, than they have a collar hung about their necks, in token of bravery, which is to be worn by them till they bring home the head of an enemy, when it is publicly taken off, and they declared freemen of the commonwealth. The remainder of the captive train of both sexes are indiscriminately to be killed and devoured, not in time of war only, but out of cruel lustomenfia, and in preference to all other flesh. This privilege of being accounted men, and freed from their servitude, is the only thing that excites the youths so chosen with an uncommon ambition to assist in all hazards, and to face the greatest dangers with the highest courage. By this means they have kept up their number complete, and the savage nature of the Jagus people from recollecting to compasion and humanity.

In this century the common people of both sexes are almost naked, having only a piece of cloth fastened round the waist, which is so thin, that it barely covers their shingles. Persons of rank indeed dress in the natives in gaudy apparel, adorning their head, neck, arms, and legs, with beads and beads of various sorts; but their additional dress arises more from pride than any affection of modesty. They often grave costumes of pulling out four of their teeth, two above and two below; and they who submit or neglect to do this are so detested by the rest, as to be deemed worthy to be excluded from their society.

The king and people have no ceremonial marriages, teaching each other according to their inclination. But they have some particular customs in the interment of their dead, especially those of the male kind, and which chiefly consists of the disposal of their dead bodies. The deceased is not only washed, anointed, and bedecked with all his most valuable finery, but accompanied by two men of his most beloved followers, who follow him to his grave, with his arms broken. The body is carried to the grave in a chair, between two men, and placed in it as if still alive, and two women, one on each side of it. As soon as they are seated, the chair, being commonly very deep, is covered on the top with earth; and the relations, who are present, formikle it with their bodies, and they, who are nearest according to the rank, make a funeral lamentation over it for several succeeding days. Those of high rank are interred with more pomp; and the ceremony is only suspended when the decedent is decreed, or interred after a shorter number of days, weeks, &c.

We shall next proceed to give some account of the country of the Jagus, a nation of cannibals and savages who practises the most cruel and barbarous practices in the world. Some have been driven down to us of the history of this people is but of recent date, yet the circumstances are so surprising, and the events so fierce, that we cannot forbear giving them a place in this work. They have no account of their origin; and in this nation we shall find, their religions, and their customs, which have nothing but the ceremonies of the Jagus, as far as they are known. The person, who, in hopes of exciting themselves by the plunder of those nations, roundly approved of their proposals, and tracked to him in such numbers, that he readily found himself at the head of a numerous army, who all promised to obey him in every thing, and to follow him wherever he thought proper to lead them. He took with him a favourite woman named Tem-ma-dama, who forged him at once as a concubine and a general; and when he perished without any considerable opposition, to the very centre of the Congose empire, committing the most dreadful ravages and destructions wherever he came, leaving nothing behind him but devastation and destruction. What added to the inhumanity of their proceedings, was, being accustomed to feed on human flesh, they made no less havoc among their own subjects, but, in order to give a higher relish to the flesh, they wanted to put them to the most excruciating deaths.

This monster, by his force, and by exorbitant demands, gave in to his army, the wretched Congose ticking to him, in hopes of preferring themselves from the famine and devastation with which they were threatened. Zimbo accordingly grew more powerful, still having one day mustered up all his forces, and finding him too numerous to continue longer in one body, he divided them into several parts; and, having left some of his most eminent officers over them, dispersed them into various parts of Ethiopia, entrusting them to spread devastation wherever they went. One of these officers, named Quixense, man.
than no less breath than martial, had the influence to go
and attack the Portuguese at one of their forteresses.
They then engaged the army of the king of the
enemies, that he threw one
with the sea itself, and, being totally defeated and
killed, with a great number of his men; the sea
being blown up in the time of his retreat, and into
Zimbo, who had shared the
justiciary of the officer of the enemy, and
mean, before the kingdom, and thus
incrusted, in all the forteresses of his
the kingdom, and, after an obstinate struggle
on both sides, defeated and killed him, taking a
and a great deal of human and enemy.
who took prisoners under a most creased fire,
being put to the most horrid deaths; particularly his
shapely horses, which he lost in fleeing, losing her
engagement. He ordered all his hands to be
flung into battle, and carried away as trophies, together with all
their choicest treasures, and, drafting himself in a privilege
habit, in devotion of their religion, he marched at the head of the
protection.

""Fulfilling with this justice, Zimbo made a defeat upon
the head of Quinao, where, after plundering the place, he
killed three thousand of the inhabitants of the isle; the
second of his victories, one of which he ordered to be
crowned with a stone of the rock.
The kingdom of Melinda, was the next object of this
divine mission; the inhabitants of which at the first
saw them, thought them the gods of their holy
properties, by breaking themselves to the woods. They
were persuaded, however, from carrying their design into
execution, by the noble-minded monarch, who represented
them in the strongest terms, the impropriety
of abandoning their country to a set of robbers, who had
not only estranged from the nation itself, but
profaning the embassage, and to the
same time, that whatever they might resolve on with regard
to their own safety, he was determined to meet and engage
them, and ordered his army and subjects to the last
drop of his blood.

This declaration so animated the people, that they
determined, one and all, and hand by hand to resist
him; and the king, having made every necessary preparation, set
out with them to engage the enemy. Having accordingly
advances from the sea side of the coast, he met Zimbo
at the head of his victorious caravans, who immediately
engaged the king's troops with his usual fierceness and
alacrity of success. The engagement lasted several hours,
during which it was of bloody and bloody, that
glorious numbers were killed on both sides. At length,
evertheless, the savages, despairing of success, betook themselves
to flight; when the king thinking it might expediently
possible, to extirpate so disorderly a race, ordered his men
to pursue, and kill all that fell into their hands; which
orders they readily obeyed, that very few, except some of the
most active, escaped their fury.

Zimbo the general, who was among the fugitives, re
turned with his army into the woods, where he continued some time,
in expectation of recruiting his army; and during his stay here, he formed
a resolution of marching towards the coast of Africa, in
which there was a prospect of daily increasing his army
from amongst the savages, and enriching himself with
his spoils, which fell in his way. Accordingly he set
out, and proceeded to the good of the Cape, with
without meeting with any opposition or difficulty: and,
as he found his army considerably augmented, he divided them
into several columns, for the better convenience of ravaging;
but charged them not to separate further, than that
they might, in case of an emergency, be immediately
enfamed together for action.

Leaving the Cape, after a short stay there, he proceeded northward as far as the river Cunua, on the banks of
which fighting for a camp, distributing his men into several
bodies under proper commanders, and referring to himself
the supreme command over the whole. In a short
time he increased his army, which so animated
him, that he made all necessary preparations for some
grand expedition, when death put an end to all his
projects, by destroying him in the midst of his
arrival on the field of battle, his favourite concubine Tem-ban-
dumba.

The surviving commanders, on the death of Zimbo,
resolved to find a camp distributing his men into several

martial exploits, but invincible, and consequently a terror to other kinglys. This influence of diabolical hierominy was universally approved by her barbarian subjects, who immediately followed her, by considering many thousands of male infants in the same horrid manner.

Kulambbo, after this, made several laws, which the strictly enjoined her subjects to achieve, among these, one of the most detestable was, that none of her subjects should infringe any thing of conscience, or even covet, those which he had already solemnly appointed themselves with the backing copy completed above described, which the wild would inscribe them with wilfulness to enshrine, and courage and resolution to execute, to all their projects with undoubted success: and that there might never be wanting a supply of it, the enacting some other edicts, by which the force of male children were excluded from being admitted into the camp, or even from being brought up; some of which, that were either deformed or defective, the ordered to be thrown to the dogs, and return to be pounded or boil for the ufs above mentioned.

Fearing, however, that such barbarity might at length terminate in a general discontent, or perhaps in open rebellion, the found herself, in the fourth of time, under the necessity of reducing the force of such her laws as were either detrimental to the increase of the male kind, or too thocking to natural affection of parents; and, insted thereof, she introduced others more agreeable to the nature of the state, which was that of focusing on human life, and preferring it to every other kind of diet. In this law, however, she made an exception to the killing any of her own sex.

She made, besides these, several other laws, all of which were of the same inhuman nature, and calculated to encour all and one about her fondness, her cruelty, and remorseless cruelty. In this, in the last, at length so hardened all her subjects in their destructive trade, that they spread and deft all over the western parts of Africa, without mercy, or more by opposition: and if at any time the met with a repulse, or even defeat, from her warlike neighbours, instead of being discouraged, the only thing that was to be expected was to be well with all possible speed, and fall upon her enemies with furious enemise and fury, that every thing was forced to give way to her. What effect all this had on her animated her troops to follow her through the most arduous and dangerous enterprises, was, the applause and recognition of her in her own eyes, with her subjects, and to the camp, especially with respect to the distribution of the plunder and slaves, which the divided amongst them, without referring to her self any of the most valuable part thereof.

This disparate and blood-thirsty monster, after having rid the greater part of Ethiopia, with iron blood, and blood, and thereof, at length fell a victim to lust and inconstancy. After the had murdered great numbers of her parameters in order to dispose of her private debauches, the, at length grew enamoured of a freethorne, in whom, though then only a private foddler, the discoverd such ex- ceptional powers and properties, that he carried the great mistress of the world, thither, with himself. His name was Numbi, Kulambbo was in peripatetik, tall, strong, and well-shaped; in his disposition bold and fearless, and no way inferior to his, in courtly and in his, and was that he had attended so many of his predecessors, so neither did he accept of her condescending offers, but with a fixed resolution to retaliation upon her, as soon as he found her affection for him in the least to decrease. In the mean time, however, he ufed every means he could project to pleasze her, and in a short time to work up her passion, that he prevailed on her to marry him. The nuptials were accordingly celebrated with great pomp, after their manner, that a great number of her subjects, for the entertainment of their numerous guests; yet neither could this, nor the many other favours the he offered her, but that his love, so watchful an eye over her, that he became more and more appraised of her fickle, lewd, treacherous, and tyrannical disposition; in so much that he at length prevailed, and became least indifferent, if not altogether disapproving of her, in spite of all her female art and address.

Kulambbo now thought it time to hand off the other branch of his kingdom, by choosing and allying his care to her, by busommed banquets, and such other entertainments and diversions as he knew were most likely to please her. He treated with her and supplied her with a particular variety of European wines, and with the most delightful cordial water, till he found an opportunity of conveying a strong dose of poison into one ofthem, of which she no looter drank, than the expired in his arms, according to his expectations.

He appeared, after this event, highly satisfied, and conducted himself with all the artifice and subterfuge, and altogether undisguised of having any hand in the death of a spouse, whose loss he seemed to deeply lament, that he affected to attempt, in order to defend the better with some shrewd hints; Besides, he had previously sheath the sword in his own breast. This counterfeited excess of grief, joined to his well-known, courage, and deep inimict to Europe, and the Europian, and he was declared her successor, and soon after, by proclamation, to the sovereignty over them.

That Kulambbo's new successor might have a false proof of his pretended affection for his late spouse, he buried her with the most distinguished magnificence. The place which he chose for her interment was, in a distance, where he caused a spacious cave to be dug, and divided into several large apartments, all of which were hung with furs of the richest depths of Europe, and the floors covered with the finest, furri, and most exquisite mantles. That designed for the corpse was well stored with the choicest meats and liquors. She was buried with all her costly ornaments, and seated on a throne in a commanding attitude. The throne was carried by the ed ministers of state, guarded by the guards in their whole court, who accompanied it with their usual dreadful ostentation, brightened by the sound of all their martial music. The troops of human victims, which were either to be butchered over her grave, or buried alive in it with her corpse.

On their return, the corpse of the dead queen was deposited in the apartment prepared for it, amidst the mock hideous cries of the court and fudges, and the horrid sound of the martial instruments, after which, the victims were slain, and their blood drain in the whole place immediately filled up with earth. As soon as the ceremony was over, he, the new monarch assumed the reigns of government, and the court retired to the camp. The beginning of Kulambbo's reign was remarkable for his frequent executions and ravages; but he was more depressed in his, than any of the many he had committed, by an interior delay by her and all her subjects.

Chingaril was appointed the successor of Kulambbo; he was not only a man of predeceing but of a more savage disposition. The ravages he committed were attended with much greater cruelty than had been exercised by any of the preceding. Kulambbo, after his death, left his sons to follow his example, and leave no room for his in his in his aftermen.

Caluximbo succeeded Chingaril. This prince was a man of great courage and an acute, but of no gentle and humane disposition, that he could not be prevailed upon to cut any human flesh either before or after his election. His barbarian subjects, from this circumstance, only, conceived an invincible aversion against him; and under pretext that their late queen Tenn-ban-dumba relieved his open violation of her banishment (a notion which the prince, by his calumniators and defaminators) he was affiliated to appease his anger; and at his funeral obsequies three hundred victims of each sex were offered. The several successors of Caluximbo committed in general, in a greater or less degree, the usual ravages of their predecessors, leaving nothing behind them, where ever they went, but the melancholy marks of his own, and the marks of their successions. Of these Calanga was the most distinguished; he was a man of no less prudence than courage. This chief having entered into alliance with the Portuguese governor of Angola against queen Zingha, who then headed another party of deprecatagger chief in the kingdom of Maniamba, was prevailed upon by this chief to join with him in the laws made by queen Tenn-ban-dumba, particularly such as related to the destroying their own children,
Angola, divided into sixteen provinces; namely,
and bodies with the fat. These people are much more free
and enter upon the small battles, and have a
language peculiar to themselves. They are very artful,
and use a singular figuration in war, which is to
drive great quantities of stones on the enemy, to
flame them out of the way, and then to drive the
enemy out of the city, which they do not cease to
continue until the enemy is expelled, whereupon
these same stones are fired by a small fire on
which, having spread the flames, they extinguish
with water at the same time that they advance in
order to make a
capture, when they suddenly rise, and furiously fall
on them with their armed clubs. This scheme is generally
accepted by the enemy, and frequently succeeds;
and, after which, they are said to be slaves to the Europeans by
their conquerors.

The province of Tembea, in general flat and low, and
is well watered by a number of small rivers. The Rio
Longo, or Long River, is the most remarkable, rising
out of a rock, on the top of which there are fortresses
which defend the whole district. This province is
divided into twelve lordships, each chief, though
under the protection of the Portuguese, live free and inde-
pendent, being only obliged to furnish them with a certain
number of soldiers in case of emergency. The whole
province abounds with wild cows and oxen, which
the inhabitants hunt and kill for food; it also produces sev-
eral excellent roots, among which one in particular reten-
hes far more, but is much finer in taste, and is said not
useful to the nation as a medicine, but to be an admirable purifier
of the blood. Some of the inhabitants have been
converted to the Roman Catholic religion, which they strictly
adhere to, but most of them are still idolaters.

Ocean, is bounded on the south-west by Lelobolo; and
on the north-east, by the river Coanza. It is beautifully
divided with hills and plains; and is so well watered
with rivers and springs, that it is one of the most delightful
provinces in the kingdom. Its advantage, however,
are null, it is difficult to get to the mouth of the whole
province, which is isolated from the rest of the
province by the Portuguese settlements on this side
of Africa, and is remarkable for having, in its capital
and the whole province, very remarkable
buildings, and those of considerable
size, situated on the declivity of a hill, near the
sea coast. It is strongly defended by a strong fort, in which a
church dedicated to St. Mary, and a convent of Con-
nells, besides several bulwarks that serve to guard the
entrance of the port. This city is called by the Portuguese
San Paulo de Leon, and was built by the
in the year 1718, under the direction of Pa
do de Novais, the
first governor of this part of Angola. It is very populous,
and greatly reformed; not only on account of its being
the residence of the Portuguese governor, but also for its
containing the chief courts of judicature for the whole
province.

The churches and other public buildings are numerous,
as are also those of the merchants and officers, both spiritual
and temporal. The streets are straight, wide, and
grateful, and always kept clean. The houses
belonging to the Portuguese are built of stone, and most of
them very elegantly furnished; but the de of the natives
are very mean, being built only of earth, and thatched
with straw.

The center of the city is a large square belonging to the
jews, who are here held in the highest esteem. It is a large edifice, and enclosed with a con-
derable revenue.

On the south-west is the hill known as the Milicordia, which has twenty-four wards or rooms
for patients, besides convenient apartments for the doctors,
and surgeons, and other attendants. On the
other side of the convent is a church belonging to the
bishops of the cathedral, which is a large finely
structured to Our Lady of the Conception, un-
der which is another dedicated to the Holy Sacrament.
Here are also many monasteries and chapels belonging to
the Conception, Carmelites, and friars, which, with
other parochial churches, form around the city, as to serve instead
of fortifications and walls to defend it.

Prodigious numbers of birds are kept in this city, who
are employed in tilling the ground, carrying burdens,
and fetching water from springs in an adjacent island called
Looma; the city has also a large water-cistern, the whole of which
being watered by any other kind of means. On the north
side of the city, at a small distance from it, is a lofty hill,
on which the original city stood. It still bears the name of
San Paulo, and is surrounded by some fine houses, and with the
ruins of a monastery which formerly belonged to
the Jews. The present city suffered much by the Dutch
in 1760, and was retaken by the Portuguese a short time after, and
restored to its primitive grandeur.

Notwithstanding the want of water, the country
round is very fertile, and is as divided
with a variety of fruit-trees, gardens, and
villas,

which sometimes terminate in a dead fall, but more fre-
quently in a forked continuation, and have a
tendency to the south, which is called The
Iron Mountain, from the yielding great quantities of iron,
which the Portuguese have taught the natives to use,
and work into various kinds of instruments. In this
province are many large iron mines, and coke-ovens; there is also one fort that greatly resembles
our apple-tree, the bark of which is cut with a
knife, yields an excellent juice of the colour and con-
tency of honey; it is very useful in medicine, but must
be first qualified by some cooling drug, being in itself of a
very hot nature.

Great pains have been taken by the Portuguese to propa-
gate the Roman Catholic religion in this province; and
not without success, for there are more mildates in this
province than in any other of Angola, and are to be found here.

Lelobolo, is situated on the southern banks of the river
Coanza, between the province of Gatabara and Mpimba.
It is very unhealthy, and the soil remarkably sul-
ture, producing great plenty of most sorts of provisions.
It is chiefly noted for its excellent palm-trees, which
produce better wine, oil, and timber, than anywhere else
in all the other parts of the kingdom. This province is
tributory to the Portuguese, and the greater part of the people are of
the Roman Catholic religion.

The province of Loanda, which is situated in the south
of Angola, and is the most healthy province in the kingdom.
It is a large and fertile province, the only

About half a mile from the city is situated the island of Laconda, or Leondo, which is very insignificant in its size, and on which stands only one broad. The Portuguese have many houses on it, as also a great number of granges, which they keep well fenced with moat fences and ditches. They have also on this island several handlooms churches; besides which, there is a spacious convent belonging to the Jesuits, who have many granges about the island, which enliven it in this place. In the neighbourhood of the capital (which is called by the name of the island) are many elegant farts and villas belonging to the Portuguese, most of which are richly furnished, and surrounded with gardens, orchards, and other embellishments. In some of these are also very handsome chapels in which services are performed by priests, who are allowed a sufficient salary for that purpose. The city which contains about three thousand houses, built of stone and covered with tiles, is well supplied with most kinds of provisions, particularly meat and pork, the latter of which is greatly obliged by the Europeans.

Here are plenty of fishes, which they take on the coasts of the Island of Laconda. The bread used by the Europeans is made of millet and Indian wheat; but that used by the natives is made from the meal of the manioc root. The latter also appear degenerate, as to other, for which reason numbers of these animals are fastened up, slaughtered, and sold in the public markets.

The chief crops are made either in zimba (the shell of a small fish) or eel boats, the latter of which are of various sorts, colours, and fashions, and are worn by some of these natives as ornaments to their arms, necks, and heads. The Europeans are also furnished with pieces of eel of their own manufacture, of a fixed length and breadth; and goods are usually paid for in eels, where the form is considered as money.

Bengo, or Bengo, is divided into many districts, the chief of which are natives, though tributary to the Portuguese. It is situated on a river of the same name; and is bounded, on the west, by the sea; and, on the east, by the province of Molucca. Here are nine churches, three of which are of adobes and adobe; and one of these is built for the Jesuits, who celebrate their festivals in it with the greatest pomp and magnificence. The country is fertile, and the men mostly engaged in agriculture, as also a prodigious number of bananas and cocoa trees.

The province of Dande, is situated to the north of Bengo, on the south side of the river of that name, which separates the kingdom of Angola from that of Congo. As this country is well watered, it is very fertile, and produces plenty of grain, with various kinds of fruits; but it is greatly infested with crocodiles and large reptiles, which abound in the river Benga. The Jesuits take great pains to bring over the unconverted to a sense of Christianity; and as the inhabitants are for the most part Christians, there are several churches regularly served by pious friars.

The chief of this is situated at the mouth of the Dande; and there is another, at the chief part of the river, which is so pleasantly situated, that large quantities of it are annually sent to the city of Luanda.

Molucca is situated on the northern banks of the river Coatallica. In this province are two considerable forresses, called Benga, and Benga, which is of which is under its particular commander. The two have twelve farts, or native chiefs, under them, who are obliged to maintain a certain number of men, and are generally supplied, for the defence of the kingdom, but for the service of their Portuguese masters. The soil is very fertile, and, besides grains, is remarkable for producing the manioc, which is so plentiful, that large quantities of it are annually sent to the city of Luanda.

Many of various kinds of metal are found in this province, particularly in the government of Cambamba. What is very remarkable, each mine tinges the complexion of the inhabitants who live in that territory; for though they have black, yellow, and white men, none of the silver mines differ in their complexion from those who live near the mines of gold and lead; which cannot be otherwise accounted for, than from the dyes of which they exhale from the different metals found in them.

Here are a great number of churches, the most considerable being Cambamba, which has two of our own in the town. These bear the title of royal chapels, and the priests that belong to them are endowed with many distinguished privileges. The inhabitants are chiefly Christians. The province is divided into three great districts, distinguished by the names of Higher and Lower. The former is situated between the rivers Benga and Cambamba; and the latter between the Dande, on the north, and the Benga, on the

The Portuguese have a station on the coast of Benga, which is about two miles from the town of Benga. It produces all kinds of fish, and is a very fine promontory. The town itself is well built, and is surrounded with a strong wall, which is about three miles in circumference, and contains about three thousand houses, built of stone and covered with tiles. It is well supplied with all kinds of provisions, particularly meat and pork, the latter of which is greatly obliged by the Europeans.

The province of Osuli, is situated on the northern banks of the river Coatallica, and adjoining to the province of Moctofo. It is watered by a great number of small rivers that fall into the Coatallica, but which, in the time of the great rains, become large, rapid, and dangerous. The Portuguese have two forresses in this province, at which they keep a strong garrison. One of them is built at Quipungo, an island of great importance on the river Coatallica, and the other at a place called Mapongaba.

This last-mentioned fortress is situated on the top of a number of large rocks, and appears, at a distance, like a considerable city surrounded with high walls, and diversified with turrets, turrets, pyramids, obelisks, triumphal arches, and other eminent structures; on a nearer view, however, it seems to be no more than a heap of gigantic rocks, parted from each other by intervals of a vast depth, and several fathoms wide; and the summits of it, exclusive of a small part round the fortres, is a large, bare, and uncalculable plain.

Though this place is near one hundred leagues from the sea, yet it abounds with a variety of springs of briskish water, very proper for making salt, and which, sitting and falling with the tide, mount up at high water, and leave the waters above the level of the plain. A circumstance still more singular than this, is, that these springs are intermixed with an equal number of fresh ones, the waters of which from both are clear and well-tafted. The fowppahs of the ancient monarchs of Angola, called by the Portuguese Las Pavullas de Cobazebo, are still to be seen about five miles from this place.

The province of Êmcluso, or Membues, which is the last we have to mention, is situated on the north side of the river Loucalas, and between that and the Higher Ilambamba. It is wholly subject to the Portuguese; for though the lord who governs it, affirms a claim to a kind of independence, yet it is granted him only on condition that he shall maintain, at his own expense, a numerous body of soldiers for their service. These troops though idlers, are fine, well cut, and well-disciplined, never betraying any fear of death when they engage an enemy, for which reason they are highly valued by the Portuguese.

The reader will easily perceive, from what we have observed in describing the above provinces, that form the kingdom of Angola, that the Portuguese are masters of the chief part of the country, and in that chief part, because some of them neither pay tribute to, nor acknowledge any dependance on them, except when they want their assistance in times of emergency. The following, namely, Dande, Dande, Mbo, Benga, and Lower Ilambamba, Benga, Masca, Cavao, Loulo, and Osuli, acknowledge a real subjection to the king of Portugal.

The Portuguese, on the little islands that lie in the mouth of the river Loucalas, where the trade is carried on in this kingdom by the Portuguese and other Europeans; and indeed this inhuman commerce first invited the Portuguese to this part of Africa. The commodities brought in exchange, are, bread cloths, crimson and other silks, velvets, cambrics, and holland of all sorts, gold and silver lace, broad and narrow rep and picots, black ferges, Turkey carpets, cloths and stuffs of all sorts, and colours, terry, copper, and other wines, brandy and other spirits, oil, spices of all sorts, etc. The gold and silver mines differ in their complexion from those who live near the mines of gold and lead; which cannot be otherwise accounted for, than from the dyes of which they exhale from the different metals found in them.

It is usual here, to divide the inhabitants of every province (called by the natives Mundi) into four different classes. The first is that of the Quica, who are the property and inheritance of the lords of that province, which derives, like all other real estates, to their heirs and successors. And the last is the Alaba, who are...
are the slaves either taken in war, purchased, or condemned to forfeit their freedom for some misdemeanour or crime that has been committed.

The kingdom of Angola was formerly subjected to Congo, but it does not at present acknowledge any such dependence on the king, though the protection he receives from the Portuguese prevents its being involved in the wars of the other negro nations. He obliges all the lords under his dominion to maintain a certain number of troops for the common service of the realm; but since their lives are frequently exposed to the discipline or hazard, their arms or accoutrements. They are only a kind of national militia, in which every man that has a considerable estate is bound to bear arms, and is not allowed to quit his place without the consent of his lord. 

In time of war, they divide themselves into three bodies, at certain distances from each other. In the center is the general, who directs all their motions by the sound of several warlike instruments. They then move forward, retire, or wheel about as their lords direct, and fall on the enemy with great fury: making at the same time a most hideous noise. If they find themselves like to be wounded, they betake themselves to flight (for they are earnest warriors,) nor is it possible for their general to rally them; so that the first loss determines the success of the battle.

They have several kinds and forms of musical instruments which they use in war. One of the officers of them resembles the drums in Congo; it is covered at one end with the skin of a wild beast, and is beaten with ivory sticks, which are divided into red and white, and wound up four times. They have another instrument that resembles an inverted pyramid, with the point fixed on the ground, and conflids within a spherical metal, thin and round, like balls turned upside down. This instrument is of such importance in an engagement, that the person who touches it with wooden sticks frequently cracks the metal by endeavouring to give a loud and dreadful sound. 

The third fort is made of elephants' teeth: they are of various forms and sizes, and in the form somewhat resemble our German futes. This instrument is much more musical than either of the former two; it gives a sound like that of the cornet, but has a greater variety of notes, and, when played on by a skilful hand, affords a very agreeable music. This instrument is supposed either to have been first introduced, or else greatly improved by the Portuguese, who have also introduced the use of kettle-drums, trumpets, hautboys, and other instruments; but those principally used in war are the three first mentioned.

The largest of their instruments are appropriated to the head general, whose orders, by means of theirs, are heard by the whole army. The next in size are used by the officers who command the several bodies into which it is divided, and the smallest are for the use of the captains and other inferior officers; so that the sound of the larger instrument is no sooner heard, than all the other answer in concert. In this manner, by this means of communication, the army is made acquainted with the orders of the general.

The military officers are dressed in a very grand manner and wear a great many more things than their traders, as well as more terrible, by the length and variety of ostrich, peacock, and other feathers, with which they adorn their caps. They have also a great deal of iron chain, or tassels, to which are fastened great rings of iron that make a loud jingle at every motion; for the same purpose also, they hang a number of bells about their middle, the noise of which if they stop animates the soldiers to fight with more ardour, and at the same time gives themselves a greater air of pomp and grandeur. They wear bulkins on their legs, the lower part of their Portuguese, their weapons are the bow, sword, target, and dagger, thongs, however, who carry the bow, are allowed only to wear the fword and dagger.

Three lakes communicate water to the river Zaire; the first of which is the Zambre, the second the Zales, and the third a great lake, from whence the Nile is supposed to be derived. Behind them, to have its course together. This, however, is not to be wondered at, in a country where there is no regular grammar, even England and France, which abound in polished writers, labour under the same inconveniences, as the jargon spoken in many of the countries of the former, and the several provincial dialects of the latter, render it impossible for the natives of the same country to be understood by a person (fonder in their language.)

We shall conclude our account of the particulars relative to this kingdom, with the description of a remarkable ridge of mountainous terrains. Here, and on its north-eastern border, are people called the Cames. Some of these, on account of their prodigious height and coldness, are called by the Portuguese Mount Fimondi; and some others repel in the Portuguese, Mount Navor, on account of their snowy tops; the nature of which, falling in great plenty during the summer season, forms a constant supply to the inhabitants. It is considered as one of the most delightful countries in the world; it is divided into three parts, which produce excellent flax. The Portuguese have long since made themselves masters of this place, and, in order to secure it, have built a very strong fortress. This place, which, by reason of its vicinity to the great river Zaire, is very conveniently situated for the great trade carried on in flax, is under the direction of a governor appointed by the Portuguese.

Congo Proper. is situated between the tenth and the eleventh degree of south latitude, and between the thirty-third and forty-first, being a tract of country varying in length from north to south, five hundred and forty miles, and in breadth, from east to west, about four hundred and twenty-five; it is divided into three kingdoms of Makoko and Zambashe; on the north, by the river Zaire; on the south, by Angola, from which it is separated by the river Umba; and, on the west, by the ocean.

The most considerable of its rivers is the Zaire, above-mentioned, called by the natives the great river of Congo. This river is situated in five degrees forty minutes south latitude, it is three miles broad at the mouth, and runs with a very strong current into the sea. It is navigable for large vessels about seventy miles up the country; but beyond that it cannot be passed, owing to a prodigious number of rocks that lie in the centre of it. From this river run several small brooks, which near the sea become so small as to be almost dry. 

The inhabitants of these islands, who are so very convenient for the merchants, and other inhabitants, who can go in canoes from one village to another. In the course of this river are several small islands, the inhabitants of which are under the government of lords appointed by the king of Congo. Those called Beemmo and Quintania, are the two principal, and are situated near the mouth of the river, the first of which is remarkable for having many mines of iron.

The islands above-mentioned are all inhabited, yet there is not an isle that body belongs to any kingdom, particularly the islands of Great and Little Yamba, and those of the Porlandese, which are situated near the mouth of the river, and have not a very considerable forms. 

The inhabitants of these islands, including, in fact, all, are called Beemmo and Quintania, are the two principal, and are situated near the mouth of the river, the first of which is remarkable for having many mines of iron.

the top of long poles, to shelter him from the heat of the sun. After which, Drake, as he was always in the habit of doing, set fire to a volley, which is followed by the sound of drums, and other instruments of war.

Nine or ten miles from here is the capital of the province of Benga; it is situated on the coast, and the count to the southeast; there generally extends his residence. The choice is always made between the death of the king, and the destruction of the kingdom; but the government is in the hands of the electors during the vacancy.

On the death of the count, it sometimes happens, that his son, or some other relative of the family, will raise a faction in the province, in order to obtain possession of the throne, and exclude the electors from their accustomed privileges. But if the count is in health, the whole has been sometimes claimed to be administered to him, the state of covering his situation by the priest's going to court; and, his death is always concealed as much as possible from the public, lest the civil offices be disposed of to those who are thought worthy of holding them; and fuch as have misbehaved in their employment are disabled.

The capital of Benga is the second province of Congo Proper; it is situated between the rivers of Ambrih and Loga, the latter of which separates it from the province of Benga on the east, and the former from the country of Soega on the south. Along the sea-coast it extends itself much farther than the territory of Benga, and is the capital of the province.

Benga is one of the most rich and fertile provinces of the whole kingdom; its soil is naturally fertile, and would produce abundance of all the necessaries of life, were the inhabitants industrious and capable of improving it. But the sea-coast produces chiefly a prodigious quantity of ivory, which is brought by the natives in such innumerable numbers, that they have not only a sufficiency for their own consumption, but also export it to foreign countries, which makes the article yield an extraordinary revenue to the crown. The inhabitants in general profess the Roman religion, and keep several festivals and other ceremonies.

Benga, or Pungo, the capital of the country, is situated about thirty miles from the sea-coast. It is a large town, but the houses, like those in Soega, are built in a very trifling and irregular manner. It stands in a hilly country, and is watered by two rivulets. Here are several churches, but they are not only as small as many towns, but being covered with thatch, and the walls made of clay.

The greatest respect is paid at court to the lord of Banga, who is also captain-general of all his majesty's forces, and the most powerful of all his vassals.

The duchy or province of Tamba begins about forty miles north-east of São Salvador. It is bounded on the east by the province of Benga; on the north, by the river Zaire, and, on the south, by the duchy of Bamba, whose capital is called Bamba, and which is situated about twenty miles from the sea; and, on the west, by the province of Curimba, called the capital of the province of all the inhabitants.

There are several distinct governours in this province, each of which is far distant from the capital and in places surrounded with mountains almost inaccessible, the people pay obedience to the governor according to their own discretion. They are always armed, and keep the whole province in a constant state of trouble and agitation; for, as the Portuguese have not been able to propagate their religion among them, they are more refractory than any other people in the whole kingdom of Congo.

If this province was well cultivated, it would be one of the most fertile in the universe, being watered with several rivers; but the inhabitants are so indolent, that they rather chuse to live almost in want, than apply themselves to labour; and the产出 carries with him, the benefits which they have occasion for.

The most precious metals abound in the mountains here, but, by reason of the turbulent spirit of the inhabitants, they are not suffered to be dug for. They work only the iron mines, and one mine of copper of which is found in the mountains on the north side of the Zaire. This field is of a beautiful yellow, and the inhabitants of Loango purchase great quantities of it.

Pungo, was formerly called Panga Logos, at which place the principal buildings of the archbishopric were erected; and it had the title of a city of dignity, but it has lost both the authors the kings of Congo subdued and reduced it to the rank of a province. This marqui-
CONGO

PROPER

AfricA.

The city is bounded on the east, by the mountains of the Join, on the north by the town of Banta, on the south, by the coast, and on the fourth, by Batta. Its capital is called Banta Pango, and is situated on the banks of the river Barabasa, which runs through the heart of the country. On the south side of the town, is the habitation of the inhabitants; as also their dispositions, customs, and manners, are the same in general as those of Congo, nor has it an officer, or the province itself, any thing remarkable in them.

The province on either side of Banta, or Barsa, is situated on the left bank of the river, and is the country of the Mozambique, or Bornigal Mountains, and on the west, by the same. The first is of considerable extent, and was formerly a kingdom of itself; till it voluntarily submitted to the king of Congo; for which reason it enjoys more privileges than any other province in the kingdom, and a person descended from the ancient kings of that country is always appointed governor of it.

The province has a very fertile soil, which produces several sorts of excellent grains; the inhabitants are more civilized and affable than their neighbours; and were more easily converted to Christianity, the principles of which they have ever since freely retained and adhered to.

Batta, is the capital city of this province; but it is not considerable for any thing except its being the residence of the governor of the province, the voice, who are allowed to have a number of muleteers in pay to defend it from the incursions of the wild Jeggas, who inhabit near their callar forest, and dread the crossing of the Sumb and Salt Paf, which are inhabited by living chiefly by ravaging their neighbours on all sides; and would do the same by this, were they not overawed by these troops. The road between this capital and that of the whole kingdom is a great number of houses and huts, all built on both sides, a circumstance very uncommon in these countries. The boundaries of this capital are extremely fertile.

The governor of this province, who is settled in Batta, is considered as the second person in the kingdom. Whatever property or possessions are enjoyed by any of the rest, and on the failure of the royal line, the succession devolves upon him. His court and attendants are little inferior to those of the king, for he goes abroad on any public occasion, he is preceded by trumpets, drums, and other martial instruments. He sometimes also eats at the king's table, which is a privilege not granted even to the king's sons.

The marquisate of Pemba, is the last province that remains to be mentioned in this kingdom, which, though smaller in extent than any of the rest, hath always had that singular advantage, that its capital hath always been the native residence and burial place of all the kings of Congo, whether idolaters or Christians. This province is well watered, not only by the Leboda, which runs quite through it from east to west, but also by the river Ambrilli and another branch of the Nile, which, which, together with the natives to its fertility, and which have a little more than the produce of the hill a spring of excellent water called the vefs, which falls into the river Lebonda, and is extremely serviceable to the adjacent country and environs of the city.

There is a spacious square before the church, on one side of which a large market is kept every day for the sale of provisions. The rest of the square is surrounded with elegantly built houses, chiefly inhabited by noblemen.

In the valleys below the city, as also in the adjacent plains, are produced several sorts of grain; the chief of which is an exotic brought thither from the banks of the Nile, called leuco, in shapes and size like the millet; the meal of which, when ground, makes excellent bread, and is preferred by the natives to its fertility, and which have a little more than the produce of the hill a spring of excellent water called the vefs, which falls into the river Lebonda, and is extremely serviceable to the adjacent country and environs of the city.

The governors of the several provinces, every year present to the king, at the expiration of the year, a copy of the state of the kingdom, as their pasture-grounds yield excellent grains for them.

Conferrers of the equatorial position of the kingdom of Congo, its climate is much less sultry than might naturally have been expected. Their winter months, are April, May, June, July, August, and September, during which months they have almost continual rains, whereby the rivers are so swollen as to overflow the principal part of the country.

The lands in which the forests from north to west, and from north to north-east. These winds drive the clouds towards the mountains, where being gathered and condensed, they at length condense into water. In the summer, they bring from the south to the lighthills, and they clear the southern skies, so they drive the rain into the northern regions. These winds are of infinite service in cooling the climate in its circumference, which commends a most extensive and delightful prospect, and is beautifully shaded with a great variety of fruit trees, as prunus, apricarius, pears, and mangos.

The air is also exceeding wholesome, which is also due to the influence which the king's fires to his subjects; these winds drive the clouds towards the mountains, being gathered and condensed, they at length condense into water. In the summer, they bring from the south to the lighthills, and they clear the southern skies, so they drive the rain into the northern regions. These winds are of infinite service in cooling the climate in its circumference, which commends a most extensive and delightful prospect, and is beautifully shaded with a great variety of fruit trees, as prunus, apricarius, pears, and mangos.

The air is also exceeding wholesome, which is also due to the influence which the king's fires to his subjects; these winds drive the clouds towards the mountains, being gathered and condensed, they at length condense into water. These winds are of infinite service in cooling the climate in its circumference, which commends a most extensive and delightful prospect, and is beautifully shaded with a great variety of fruit trees, as prunus, apricarius, pears, and mangos.
and either eat it raw, or else boil it in broth. They have likewise a beast called Admixtus, and which, besides eat, either to the appetite, or necessity, they find in liquids, of which they are very fond, and frequently drink to the greatest excess. They have naturally poison to their use; either those who offend, or others; and they drink, or eat, it in great quantities, without being any prejudice to their health, but destroying the object of their resentment, which they generally effect by poison.

The draught of the common people consists only of a loose garment made of cloth, which is stuffed round the waist, from whence it reaches to the middle of the legs, and some have the bottom ornamented with a fringe. The upper part of the body is entirely naked, nor do they wear any coat covering on their heads. The richer sort have long and broad cloaks made of cloth or serge, and in some sorts they wear brown, or a kind of damask or fustian petitots, which reaches from the waist to the ankles; they have also gold or silver laces, and various designs of red cloth, and on their heads they wear caps made of white cotton. Some of the ladies have a veil over their heads, and a velvet cap richly ornamented with jewels under it.

The great men, when they travel, are carried in hammocks made either of net-work, or strong flax; the manner of which is thus described. The hammock is tied to a long pole about a foot from each end; and when a person has got into the hammock, two men, one before and one behind him, raise up the pole, so that the flax is better raised than the same ones, but they are not suffered by the natives. The birds of prey, as eagles, falcon, etc., fly about this pole, and some parts of these birds are of otter, and on the borders of Angola is a wood encompassed with walls, where peacocks are bred for the use of the king. The fowls of their birds, mixed together, and made in the form of an umbrella, are used instead of banners and ensigns in war.

There are great numbers of parrots in the woods, most of which are very large, and either of a grey or green colour; but there is one species exceeding small, not being larger than sparrows, and their feathers are beautifully variegated; the most admired among the small birds are those called birds of music; they are about the size of a canary-bird, but differ greatly in the colour of their feathers. The larger sort have all a general green, blue, and crimson, and bill only black; some again are all white, grey, dun, or black. These last are kept in cages by the better sort of people, merely for the sake of their song, as they have the sweetest melodious noise.

They have several kinds of reptiles here, as scorpions, millipedes, vipers, snakes, ferpents, &c. Among the snakes, there is one species of a very large, that is called a saura, and will swallow a whole sheep. It is called the great water-adder, from its being chiefly found in the rivers. It goes, however, on land in search of prey, and climbs the trees, where it lives in wait for the cattle that come to pasture. As foott as a sheep or hog arrives near the place, the snake immediately descends, and winding its tail round the hinder part of the animal, freezes it down, and kills and devours it. When he has gorged his prey, he becomes for some time full; but as soon as he recovers, he immediately makes for the water, where he continues till hunger prompts him to seek for a fresh supply of food.

The great variety of fish is found in the seas and rivers: among others, in the former, are prodigious quantities of swordfish and anchovies; and in the latter are plenty of fluggans, sole, barbel, trout, tenches, &c. Of sole there is a great variety at the mouths of the river, several kinds of bill-dish, as oysters, mussels, cockles, and large crabs.

They are mines of several sorts of metal in this kingdom, especially iron and copper; and in the mountainous parts are large quarries, that produce not only excellent stone, but marble of various colours; also porphyry and jasper.

With respect to the natives of Congo, they differ in their persons, according to the respective provinces in which they are born: some of them are very tall and robust, but the generality of are of a middle stature; some again are of an olive complexion, while others are of a darker black. They have all black curling hair, but their noses are not so flat, neither are their lips so thick, as those of the negroes do, unless it be in the Angolese. They are proud and haughty among themselves, but to strangers they are very affable and courteous. They have a natural propensity to theft; and either by force or other means, they find in liquors, of which they are very fond, and frequently drink to the greatest excess. They have naturally poison to their use; and in lumps, which, under some pretext, or other, they provide that to those who offend, or others; and they drink, or eat, it in great quantities, without being any prejudice to their health, but destroying the object of their resentment, which they generally effect by poison.

The men who reside near towns, live chiefly by trade; but in the country they are principally employed in agriculture, and the keeping of cattle. About the city.
Kioss some of them build by fishing, bones by drawing up the fish, and others by digging. They are divided into men and women. The men of the kingdom are some excellent artists, who get considerable wealth by making various sorts of cloth, as cloth of taffeta, taffeta, taffeta, taffeta, and others, and coins, which are cut and sold to them. The yarn is made of the leaves of palm-trees, which trees they always keep short, every year cutting and watering them, so that they grow small and thick. The threads drawn from these leaves are very fine and even, and with these that are longer they weave the largest pieces. The threads are woven in various figures, which are sewn in both sides. Others, called canamakins, are made like leaves, or the figures of birds and animals. Their broaches, are by far the best, but leave must be first obtained from the king, before any person is permitted to wear them.

The Congolese are extremely fond of diversion and fertility. In most villages, the people amuse themselves every evening at some open place, where they form a ring, in the center of which is placed a large wooden platter full of provisions. To the side of the company who is called, Makalantu, gives to each portion, which he divides with each friend, that no person has the least reason to complain. They do not make use of either cups or glasses, but only a large flask, which, when one wants to drink, the makalantu holds to the person’s mouth, and when he thinks he has drunk enough, he takes the flask. It is returned to the person who held it, to come by at the time of these festivities, they are equally welcome to participate with the rest of the guests, and always make an appearance in the same way. The reason of this is, being united to those who are, or from whence they came.

On several particular occasions they have also feasts, such as: the birth of a child, birth of a son, or any singular advancement in life. At these feasts they dance, and sing love-songs, which are attended with a variety of musical instruments, made of flutes, pipes, tambourines, and drums, the latter of which are made of wood, and covered with the skin of a beast. One of their most noted and the most common is a kind, called the marimbas. It consists of sixteen calabashes of several sizes, placed uniformly between two boards joined together on a long frame, which is about a yard in length, and is wrapped with a cloth. Over the top of the calabashes are thick strips of red wood, which being struck with two small sticks, produce a sound, somewhat resembling that of an organ, and which is very agreeable.

Another favorite instrument is the lakofo. It consists of a hollow piece of wood about a yard long, covered with a board, with a slit in it. It is hung on a stick, and is struck by a stick. These boards are always used in concerts.

They have also an instrument called the Congo; which is made with two iron bells, joined to a piece of iron and steel, and is struck with it with a small stick. This instrument is always carried before chieftains when they make public proclamations to the people, in the same manner as the trumpet is among us.

The Congolese are married according to the rites of the Roman church, some of the natives of Congo having embraced this religion; but most of them prefer their ancient customs, and are married by their own priests, who have a number of wives, each taking as many as he thinks he is able to maintain. Their ceremonies of marriage are thus performed: When two parties agree each other, the parents of the young man and woman present to each other, that they will let the former have her for a wife. If the parents of the young woman retain the presents, it is a token of compliance; in which case the young man, with his relations and friends, goes immediately to the house of his bride’s father, and comes with him to his own. Here the marriage ceremonies are performed, and the evening is concluded with joy and festivity. When the father of the girl appears at the marriage feast, he must not come near the bride, he must not微量 up, be it ever so trifling, as that would be considered in the light of telling his daughter; for this reason, and to prevent the damage of the gods, which every man shall give, according to his circumstances in life.

The husband afterwards disposes of any material improvement, as the corn, oil, or what is to be disposed of, and he disposes of the land, the houses, etc., which belong to his parent, and has the presents restored; but if the fault appears to be on his own side, he cannot recover anything. A man who is desirous of having a wife, must first settle her, and cheer the young woman, and besides her domestics, and other officers of his household.
The New and Universal System of Geography

He gives public audiences twice a week, but no one is permitted to speak to him except his favourite nobles:

The king's dress is very rich, being for the most part of divers-coloured cloth of gold or silver, with a long mantle. He goes generally about in a cap, and adorns his head with a white cap, but if any of the latter come under the displeasure of the king, he orders the cap to be taken off, when they are at liberty to receive it back again. The white cap is considered as a badge of distinction or knighthood, and no less honourable than the star and grandees among the nobles of England.

His Majesty is attended when he goes abroad, by a numerous retinue, for not only his nobles accompany him, but the common people, the bearers of whom go before, and others behind. The king is preceded by a chaplain, and a numerous guard, some of whom are armed with swords, some with arrows of different makes and sizes, and others with bread wafers, daggers, and cutlasses; some without any other clothing than their long trowsers, others with their bodies covered with furs of different kinds of beafl, together to the knee; some have their face and body painted with figures of animals, birds, etc. Though, all of them are armed and accoutered according to their fancy or ability, and they who cannot obtain a broad sword of metal, will get one made of heavy wood. What contributes towards making them look still more formidable, is that their colours are generally little better than dyed rag torn and mangled, their feet and iron weapons eaten up with rust, and their wooden ones very indifferently fashioned. The poor are drest with feathers of various colours, and in almost as many different fashions as there are men; and all of them being armed, the tumult which they follow, besides their particular weapons:

When they march, the soldiers are taught to fall on the foe with a dreadful kind of noise, which they keep up, and do on all occasions; but as their arms are of little use to such wretches and irregular officers, for want of better discipline, they are sometimes used merely as the pretence of action, which happens, they are fable to enrage, for the breaking of the very first body is mostly attended with the loss of the battle. Sometimes it is really intended, but the enemy takes the other to an easier pursuit, the consequences attending which are dreadful; the carnage being always great. When the conquerors think they have killed, they return, and plunder the enemy's camp, seize all the men, women, and children; they meet with and fell them too.

The king and the Commons are generally present at the coronation of the crown of Congo, neither legitimation nor seniority taking place farther than the ruling nobles think proper, who are often all home-born subjects, and choose him from among the king's sons for whom they have the greatest respect, or think the most proper to govern. Sometimes they give the crown to a younger, neglecting some fuch relation, setting aside all the children.

As soon as a successor is pitched upon, and the day appointed for the coronation, all the grands are summoned to appear on a plain near the estropolis; from whence, with the male children and relations of the deceased king, they proceed in great pomp to the cathedral, which, on those occasions, is richly ornamented. At one end of it is erected an altar, by the side of which is a statue throne for the bishop or priest; and at the other end is a chair of state for the principal officer, who is selected by the respective candidates for the kingly office; but the person to be elected is concealed from the officer and people. Before the persons pretending to the crown are seated, the king's sons, from the eldest to the youngest, file in a line from his chair, and proceed to the altar, where he kneels down, and makes a short prayer, after which he proceeds to his seat, and gives a signal for all the people on the duties of a monarch, and the necessary care that is required to discharge so important a trust. He then declares to the assembly, that he and the other electors, having maturely weighed the merits of each respective candidate, think such one the most proper to be elected to the sovereign dignity. After this, the officers take the new monarch by the hand, and lead him up to the throne.
they both present their cases before the judge, who gives
his final decision, if not during the day, at least before
the next morning. No boundary is marked out for
other streets, he authorizes him to be a presence of the
people, absolute to the Catholic church, and aavenous
progression of the law. The judge remits the theft
of the goods, after which he is committed to the throne by
the priest, who puts the royal flannel on his head, and
then his crown on his head. This shoves, the whole ceremony
proceeded on the ground, and evidenced himself
"by", which is testified by the closing of hands,
the king's right hand; the king proceeds by his principal
noble, and followed by all that attended the coronation,
and the whole ceremony is over, the king, preceded by his principal
noble, and followed by all that attended the coronation,
and the whole ceremony is over, the king, preceded by his principal
noble, and followed by all that attended the coronation,

The kingdom of Loango, is the most northern division of Congo in general; by the treaty called, by the king of Makoko; on the west, by the Atlantic ocean; on the north, by the kingdom of Basin; and on the south, by Congo Proper; it is bounded on the west by the mouth of the river, a mill, palm-trees, and the seacoast. The principal provinces it contains, are, Loangoi, Logango-Mongo, Chibb, go, and Piri. Beneath these, there are others, all of them called provinces; this has been the case, as it is annually frequented by the Portuguese.

The province of Loangoi is a large mountainous country, and particularly abunds with palm-trees. The inhabitants are merchants, and, thousands of Loangoi, employ themselves chiefly in making cloth and linen. The city of Loango, is the usual residence of the king of this kingdom, it is the most considerable.

Chilongo is a more extensive province than either of the other three. Some parts of it are very mountainous, but low; and there are many streams which are very fertile, and produce good grain, as also abundance of palm-trees; it is very populous part of the country, and by its inhabitants are called Loangoi, they carry on a considerable trade, particularly in elephants teeth and cloth. The governor of this province is a chief, but the people have the liberty, at his disposal, of choosing a fit person to perform his office.

The province of Piri, is a very flat country, but it is well peopled, and produces great plenty of much sorts of provisions, particularly cattle and poultry. The woods are well stocked with timber; besides which there are fruit trees in abundance. Some of the inhabitants are great traders, and they are all distinguished for being very quiet and affable in their dispositions. They live chiefly on milk, and beasts which they kill in the woods.

The principal part of the country consists of woods and groves, the former of which abound in various kinds of animals, particularly monkeys. The foil of the provinces is in general very barren, not producing any kind of corn or grain, so that the natives live on fish, bread and berries; but sometimes they catch elephants, which they greatly admire.

There is only one large stream in this part, called Majumba; and this is built near the sea, that the waves often oblige the inhabitants to desert their houses. On the south side of it is a river of fresh water, producing great quantities of styrians. This river is very narrow at the mouth, and not above six feet deep; but higher up it is both broader and deeper, at present navigable for large canoes. It is very convenient for those who trade with the inhabitants of Sette, as it extends at least fifty miles into the country. In the mouth of this is a most curious cataract, which is kept in a large boat, or raft. It resembles the figure of a man, and climbs upright in a high bell, made like a bee-hive. When the first or governor of the province goes abroad on any particular occasion, the image is always carried before him; and the first step is placed at the feet of the idol, when the governor drinks palm-wine.

The province of Sette is situated about twenty miles north of Majumba, and is watered by a river of the same name. It is about forty miles in length, and ten in breadth. The chief town in it lies about twenty miles from the coast, but it is a small place, and poorly inhabited.

Kilongo, which is another province of Majumba, is the largest of the province. It is a fertile country, in which the soil is very fertile, producing great quantities of salt and other grains. Here are two small villages, called the king of Loango, it became a part of his dominions. However, the inhabitants still enjoy their ancient suzerain and privileges, and only make acknowledgment of submission by paying the king an annual tribute.

Cacongo lies to the southward of Loangoi: this kingdom or province is bounded, on the west, by the sea, and on the north, by the river Loango. Towards the south and south-east, it borders on the kingdom of Angoy, and to the westward extends to the coast. Ten miles, the town of Cacongo, the capital of the province, is very agreeably situated, tolerably large, and well inhabited. The soil of the country is very fertile, and produces most kinds of provisions with which the natives frequently affort their different neighbours, who live in their parts where they are not so well supplied as their own. The river Cacongo runs quite across the kingdom, and, after a course of twenty-five or thirty leagues, falls into the sea, in the fifth degree of south latitude. To the south of this river, about four miles from the coast, is a town called Malumbo, where the sea making a gulf, affords a safe road for shipping. All the soil of this coast, from the river Cacongo to the river Zaire, is very dangerous, being full of rocks and flats.

The principal part of the trade of this province is carried on at Malumbo, where the Dutch and Portuguese sell several sorts of cloth, iron ware, and other commodities, to the natives, who dispose of them farther up the country, and sell elephants teeth and furs to the Portuguese in exchange.

The finest of all the provinces is Angoy, but the soil of it is a much better land, the produce of the principal grain, were not for the natural indolence of the inhabitants, who sometimes, from this causo only, are obliged to apply for relief to their neighbours. This province is bounded, on the north and east, by Cacongo; on the west, by the sea; and, on the south, by the river Zaire.

The capital town is a city called Bapau, on the Cape St. Capel, and it is situated on the north side of the above river, not far from its mouth. It is tolerably large and populous, but the houses are very mean buildings, being irregular in form, and constructed out of clay, and mud, covered with the branches of trees. The bay is a very commodious place, and
and here with slips supply themselves with wood and water.

So here is the description of the climate of Kabenda. The island
has only two ways of its own, one being a road from the vil-
lage of Kumbula, and the other from the river Zera.

There are great numbers of wild beasts, in the more
remote parts of the island, such as crocodiles, hippopotami,
leopards, hyenas, hyenas, and various kinds of monkeys.

The people, in fact, have only two ways to go, one to the
north, and the other to the south, and these ways are
lined with the roads of Europeans, and the people are
often accused of being too hospital to the country, among
the latter, the most remarkable is called the pelican, which, being
a bird little known in Europe, we shall take this oppor-
tunity of describing.

The pelican, from the top of the hill to the end of the
tail, is about six feet in length, and weighs in general
less than twenty pounds. The bill, which is hooked, is
about fourteen inches long, from the tip to the corners
of the mouth. The feathers of the body are of a grey
colour, and those on the top of the head and neck,
and are much longer than the rest. The tail and covert
feathers are of a different colour, and those on the back
are black, of which there are twenty-six,
in each wing. The upper cover is flat and broad,
and the bill is of a deep colour, the feathers
of the back are black; of which there are twenty-six,
in each wing. The upper cover is flat and broad,
and the bill is of a deep colour, the feathers
of the back are black; of which there are twenty-six,
in each wing. The upper cover is flat and broad,
and the bill is of a deep colour, the feathers

The priap asks the parents what was their instruction, and they answer them, that the oracle, by the mokillo, has ordered, that the child shall be enjoined not to do such things during the night as will endanger his soul. It is the custom of the mokillo to prescribe to the child rules and maxims, with which he is to be instructed in the mind of the infant as it grows. These injunctions are of various kinds; as, that they must abstain from eating certain fish, bats, or fruits; or, that if they eat such foods, they must eat it alone, leave none, and by the bones deep; that they may not be snared up again, and sentenced by any hand.

Some are forbidden by the priests to shave either their heads or beards, and others are commanded to abstain from all kinds of fruits. Some are forbidden to go over any water; others to enter a river in a canoe, though at the same time they are permitted to walk, swim, or ride through. If an unmarried man has got a foolish child, he must eat of the breast and Nodo of a buffalo; but if he gets another more sensible, it then becomes freed from that restraint.

Thee, and such like idle maxims, they observe with the greatest exactness, firmly believing, that if the command enjoined by the mokillo, or the promise made to him, are not fully performed, he hath power to kill, or otherwise punish them; and all circumstances that happen to them, whether good or evil, they suppose to arise from the power of the mokillo.

In this preference a good combination, by living in a simple and temperate manner, firmly believing, that if the command enjoined by the mokillo, or the promise made to him, are not fully performed, he hath power to kill, or otherwise punish them; and all circumstances that happen to them, whether good or evil, they suppose to arise from the power of the mokillo.

They have, besides their private mokillos, many public ones, that are kept in temples or huts, to which they daily repair to pay their devotions. One of these is kept in a village called Thiriko, in figure resembles a man. The ganga, or high-priest, who is lord of the village, performs the service every morning, in this order. As soon as the people are assembled, he sets down upon a mat, and with a leaftem bags strikes his knees several times, having small iron balls in his mokillo's ears, says a few words, and deprecates it, frequently repeating the words marionettes; and when the assembly is over, he repeats them several times, to which he supposes answer. When this has continued for some time, the god supposes a good proportion of the people is present, and if he has received the mokillo, and what must be done in case of sickness, and the like. After this, he recommends them to the benefit of the mokillo, and the prosperity of the family, flourishing the food, success to the merchants, and full nets for fishermen. The whole company clap their hands, and repeat several times the mention of the king's name, which concludes the ceremony.

Kikokoo is another remarkable mokillo. This is a black image cut in the shape of a man sitting. They believe that this mokillo presides over them from death, and that he keeps them from being hurt by fortune. It is kept in a hut, which is always guarded on account of its having been once stolen by some Portuguese followers, who took it out of the house, and carried it on board their ship; but in the way the head and one of the arms broke off. When the Portuguese came again to Loango, they were afraid to venture on shore without reposing kikokoo, in mending on the broken limbs, they conveyed him at night to the old habitation. The next day a report was spread among the blacks, that kikokoo had been in Portugal, and that a trading ship had carried him away. Some time after this, a Portuguese ship happening to strike upon the rocks of Loango, the blacks said that kikokoo had broken the ship, because the Portuguese had driven a nail into his head.

But the mokillo, called malaria, is the most revered by them, and is particularly venerated on account of the extraordinary influence which he is supposed to have over them. His idolaters are led into the practice of the most absurd ceremonies, being prompted thereto by the craftiness of the priests, who pretend that the pious and fervent motions. When a child is born, they call a feithier, or priest, to enjoin to keep some particular thing as a law.

This...
hands. After this, a fong is chanted by the company, and a person with a staff dips a brush into a jar of water that has been coloured with tallow, and which he sprinkles on the king and the ganga, or high-priest. The nobility that are present kneel before their bodies out of the tier of pot; after which, they have the honour to carry away incense, with their pots, branches, &c. which they replace as before.

Another of their miskoffs is called tokofie, which consists of a flock with some horns full of whiting. The service is performed by the painter, and some singing songs in the night, creeping on their knees, walking, sitting, standing, tying rings and bands about their bodies, and the like. They say this miskokef serves them against the dreadful consequences of thunder and lightning, and also preserves them from sickness.

Before the above-mentioned, they have many other images which have different names, and are supposed to be serviceable to them on various occasions; but they are all equally ridiculous, with those we have already described, and only tend farther to excite the folly and superstition of their deluded votaries, who sacrifice every particle of reason to defend the honour of their contemptible idols.

Before we describe the city of Loango, &c. we shall give some further particulars relative to the trade, inhabitants, method of travelling, houses, coin, produce, &c. of the Loango, as extricated from the account given by Captain Urin, who failed to this part of Africa.

The trade of their country, according to this writer, is mainly confined to the sale of tobacco, brass, some elephants' teeth, and bee-wax, and have very rich copper mines in the country. I have seen, says he, quantities of copper-drops, which weighed one pound weight, run from the country, and is for the most part bought by the Dutch. I was informed, that the greatest part of their flaves were brought eight or nine hundred miles out of the country, which the Dutch bought to the slave-traders to be sold, and used to make excursions nearer home, in strong parties, and where they found any people fettled by themselves, and not under the protection of any government, they seized them, and drove them before them, as other people do cattle, till they brought them to a trading-town, where they gained the price of their goods at much higher prices.

The women all drudger; as planting, reaping, dressing their provisions, carrying burdens, combing their husband's hair, twisting it into several forms, and painting their bodies: they also make mats. Most of the bread eaten amongst them they call canky, which is made with Indien corn, beef small, which they mix with some paste as dough, and when they take it out of the pot, then they wrap it up in leaves, and it will keep five or six days.

The houses of the inhabitants are low, the sides of them made with straw, wattled together with tappa, and covered with leaves or branches of trees, of which they have many convenient for that purpose, and consist mostly of two or three rooms, the innermost of which is particularly for their women. Most of them have small yards, enclosed in the same manner as the walls of their houses, where are generally growing plantain, bananas, and other trees, whilst others are planted with tobacco, pimento, mace, pepper, and some of them have had the branches convenient to flake them from the sun, when they have a mind to take the fifth air, which makes the town very pleasant. Some of the yellow gardens, and the chief of their merchants have cane-walls of about ten or twelve feet high, which form a walk about eight feet wide, reaching near forty yards from the houses, but are covered with so many vines, that it is impossible for a man to walk out of them, one time that distance before you come to their habitations, which is all the grandure I observed in their buildings. I have been entertained with palm-wine and fruit at many of their houses.

The chief of their common people's food is canky, bananas, and other roots; the but and fead fish. Their fish is drest thus: they take five or six fresh maboung, and put them into an earthen pot, with a little water and grass, which is called cor, and some pepper, and some salt; over the fish they lay three or four pieces of small flicks scrota, and then fill the pot with green plantains, and cover it close, the flame of the pot flava the plantains: this is esteemed an excellent dish. I was prevailed on to taste it, but it was so hot of the pepper, that I could not get the tafe of it out of my mouth for several hours.

Their money they call mucea, being certain pieces of coin made of filk-grains by the women, about the bigness of aleet of paper, and placed as current coin, they few several of them together, which make a farthum, and was what they cloathed themselves with, before the Europeans traded with them. They value our goods by an imaginary coin, something in the nature of the Portugese manner of counting by reis, of which I suppose they learned it. A piece of blue ball is a thousand, a piece of painted calico at six hundred, a Guineas three hundred, of paper-brul three hundred, a small log of wood ninety, and four hundred of the ref. Antabulas and brass pans, pewter-glasses, guns, powder, are much coughter with them: they are very fond of small black beads, and corn, to make arrows: we had also knives, tassels, and charms, with a small quantity of scarlet, and blue broad-cloth, which the natives wear in small rings tied round their waist for ornament.

We bought over three hundred people, from one hundred to four thousand, and women, boys, and girls, in proportion. We reckoned a man-flave at fifty shillinings prime-coft of the goods in England. There was in the town a large Portugese flactory, and in the road a large Dutch ship and two English ships besides ourselves, or we should have purchased them, as they are plentiful here, as they have plenty of Indian corn, kidney-beans, calvans, pickles and gula-gula; which last are in shape and tafe like our white peas, with this difference, one grain being the big as they are most of them tall, strong, and well limbed, and all of them are great lovers of brandy and tobacco: they do not make good flaves as the Gold coast, or Whidal: the reason which is given for it is, that the people on the Gold coast fare hard for want of provisions, and are capable of going through more labour, with less fatigue, than they fare at other places, where they have plenty, as they have in the kingdoms of Angolo, Congo, and those countries from whence these flaves are brought. They take great care to make them as short as they can, and sell them; for they do not think it fit to let them grow upon a vine which runs upon the ground, and every single grain is covered with a distinct shell. They have great numbers of plantain and banana trees, as they have of palm-trees of several sorts, from whence they draw great quantities of palm-wine, and extract a great deal of oil from the fruit, which they both eat and anoint themselves with, and burn it. They have in this country large cotton-trees, of a proligious size: pine-apples are so plentiful here, that I have bought ten for a knife, which cost in England about a shilling. They are of two sorts: the one I call the white, but I saw no lemons, and but very few oranges, and those better, four, and ill tafflet. They have plenty of dungbhillows; but I saw neither muley nor ducker in the country, no back cattle, nor hogs, (except wild ones) but one sheep. The men have their drinking-bouts of palm-wine, which is the only liquor the country affords besides water; they let it stand two days after it is taken from the tree, in which it ferments, and grows four, and has some spirit in it, which exhilarates them, and makes them merry; they sit at their drinking-bouts twelve hours together, till they get drunk. I have tasted it, but found it very disagreeable, but when it is first taken from the tree it has a very pleasant tafe. Thus far this author.

We shall now, as we proposed, give particular description of the city of Loango, and particularly the king's palace, with its设置, the king, his government, laws, punishments, revenues, 

Loango, the capital city of the kingdom of the same name, stands about four miles from the sea coast, and is situated in four degrees and a half of south latitude. It is a very large and populous city; the streets are long and narrow, with few trees, and the houses are made of mats, and the palmetto and banana-trees. The houses are built of an oblong form, with two gable ends, and a sloping roof, which falls on four sides, and the walls are all built of the same material, and stand at equal distances, and appear with great uniformity. The inside contains

3
three or four apartments, which are all on the ground floor. It is a flat partition made of wicker or reeds. Their household furniture consists chiefly of pots, wooden trays, mats, small and great buffets for the kitchen, and chests.

There is a spacious figure, surrounded with lofty trees, near the center of the city; here (as is observed above) a deer is kept for the amusement of all kinds of provender, as meat, poultry, fish, wine, corn, and oil; also palm clothes of various sorts, and great quantities of elephant's teeth, which are in use, find their way to the royal palace, which consists of a number of detached houses. The king's apartments are in front, and behind them are those belonging to the queen. The palace is furnished with lofty palm-trees, and it is at least a mile and a half in circumference.

At a slight distance from the front of the palace is the place where the king holds public audience, and transacts all business relative to the state. Adjoining to the entrance of the palace, on the east side, is the banqueting-house, where the king every day retires to drink palm-wine. It is a noble building, and the place where all difficult cases are adjusted in the presence of the king. The front of it is supported by four columns of large trees, and about twenty feet backwards is a forest or partition quite across, so prevent the palm-wine from being seen by the people. The room is long and narrow, and in the center of it; just without the screen, is the throne, which is supported by four pillars made of palm-branches curiously wrought. The king, with his queen, is seated on a throne raised from the ground about a foot and a half, and on each side of it are two large wicker-baskets that contain fruit. The king, while he keeps his eye on the security of his person. The garden is on the east side behind the palace; and those belonging to the queen are on the west.

There are two molehills at a slight distance from the city, one of which is called Modika a Loango, and is highly esteemed. It is kept in a small box, and remains a man in a fishing pot. The natives perform their services to this idol by dancing round it with rattles in their hands, and throwing themselves into the most ridiculous postures and resolutions.

A place called the Broad way, is situated from the east end of the city, whither such as have been found guilty of any guilt in the former's drink, are dragged and executed. The ceremony respecting the trial of innocence by means of this drink, we shall take notice in treating of the civil laws.

The monarch of this country has a great number of wives, all of whom, except the principal one, are obliged to attend him daily. This one, however, who is distinguished by the title of matrona, has not only the superiority over the rest, but indeed over the king; her husband; for he is obliged to consult her on all affairs of importance that concern her. Such is the power, that the king has liberty of cutting any other male companions her inclination may suggest; and whatever is said or supposed of the king, is repeated in the court, from the first to the last, without much alteration. But notwithstanding the king is thus subject to his principal wife, he otherwise presides a kingly dignity.

This prince is very powerful; and so circumstanced, as to be able to bring into the field a considerable army; for all his subjects are obliged to equip themselves with arms, and immediately attend at his command. His dress consists of a garment made of cloth or fluff, and both he and his nobles wear, on their left arm, the skin of a wild cat, or any other animal, to the value of which is worth 1000 crowns. The king's fluff, and all his fluff, is valued at 5000 crowns. He makes two meals a day, the first of which is about ten o'clock in the morning. His provisions are brought to his apartment in covers, and the men who bring them to him, there is a man with a large bell in his hand, which he rings, to give notice, that the king's dish is arrived.

But the king does not always attend the calls of his company; and as soon as he enters the apartment, the servants retire and leave him, when he thus the door, and continues by himself during the whole time he is in private; for (as is the case in other parts of Africa) should any person happen to see him either eat or drink, he would immediately be put to death. And as particularly is this law is imposed on all persons, that the king, when he is in private, to observe the similarity, which happened to a sable dog presented to the king by the Portuguese. This creature, not being well fed by those who were used to feed the king's dogs, and being made to drink what is given to the dogs of the people, he became so much attached to his master, and so much attached to the king, that when the king went to dinner, followed the scent, and his majesty not feeding the dog properly, the dog, while he was diligently thrust to keep his feet, and room, when the king particularly quitted his seat, and ordered the stewards to be killed, as a sign for his bold instruction.

After dinner, the king goes every day in state, accompanied by his nobles, and a great crowd of people, to the banqueting-house, in order to refresh himself, by drinking palm-wine. As soon as he enters the room, the stewards throw the lid of which is given to the company by him on the left, who strikes two iron rods, pointed at the ends, against one another. At this signal the company rise from their seats, and bend their faces to the ground, in which posture they remain so long as the iron continues ringing after which, they rise, turn their faces to the king, and with him, by clapping their hands.

His majesty, goes a second time after fun-fet, to the apartments adapted for eating, where his provisions are prepared for him as before; after which, he again visits the banqueting-house, where he remains till nine or ten o'clock, when he returns and retires soon after to his chamber.

It is very uncommon for the king to appear abroad, except on the above occasions; or when an ambassador arrives, or an extraordinary occasion has happened. Thus as when a leopard is taken in the country, or else lodged about the city ready for the sale (for he is very fond of that diversion), or when a new, large, and fair bell has taken place in the city, or his chief nobility being him tribute. The place appointed for his appearance on these occasions is a large plain, with a fence or hedge, and in the center is the joining of the road, or, on which, it is raised about a foot from the ground, and adorned with black and white wickers, very artificially woven. Behind his bed, a great stone table, with foiled edges, covered with European stuffs of various colors. Near him are placed the eight first fixed at the ends of long sticks run through the middle of them, which being moved with great force produce very refreshing breezes.

Before the king, a great cloth is spread on the ground, made of leaves very curiously woven, and on this is sown raw tea, except the king and his children. The nobility sit in ranks, on the bare ground, and others on cloth made of the same stuff with the king's, each of whom hold a buffalo's tail in his hand, which he keeps continually waving to and fro. All the great officers stand behind the king, and the nobles are seated by the multitude.

As soon as the king is seated, the first men play, and continues during the whole time his majesty is on the throne.

The musical instruments are of three sorts, the first of which is made of ivory, and is like a hunting horn. The second is a drum made of a hollow piece of timber, covered at one end with leather, or the skin of wild beasts; and the left side is lined with skin. Such a drum is called by the king, the third sort is also a drum, but with a thin piece of skin. When the drum has been some time playing, the most distinguished of the nobility rise from their places, and the others are permitted to rise backwards and forwards before him two or three times; after which they clap their hands together, and then, in token of subjection, prostrate themselves on the ground, rolling their bodies several times over.

Three or four criers stand on one side of the king's feet, with iron instruments in their hands, upon which they strike with a stick, to give notice when the king demands silence. These criers are likewise officers of the city, and not only proclaim the king's orders, but also, like the bellman in England, go about the streets, striking their iron instruments, to give notice to the people when anything is lost or found.

The king likewise appears in a public manner at the commencement of the seed-time, which is always on the first of January. He takes his seat at three o'clock, when all the women take off their dresses before him, with their instruments of husbandry; and the men walk backwards and forwards, armed in their military habits. The king generally stays about an hour, when he returns to his palace, amid the exclamations of the people, who raise themselves to felicity and mirth for the remainder of the day.

Hunting the wild beasts is a favorite diversion here; therefore when any of the inhabitants have discovered a leopard in the woods adjoining to the capital, inflammation and excitement among the people; in order to have it given to the king, they make a great noise, and a trumpet is sounded, to give notice to the people to attend his majesty at the sport. If the
place where the leopard lies too far for the king to walk, he is carried on a sort of shoulders on a kind of chair made of wicker, and richly ornamented. As soon as they arrive at the spot where the leopard is located, the people set to work with darts, spears, arrows, lances, darts and crossbows, leaving only a small space open that the animal may not have a convenient opportunity of fleeing the shot. They spread nets before the opening, so that if the leopard should happen to take his course on the spot, he may be taken alive. When every thing is steady, the beast is routed by the people making an universal flooring, together with the blowing of horns, and beating of drums, and every one of the tribe, as soon as the creature finds himself surrounded, he endeavours to make his escape, but is prevented by the voices of drums and arrows that are discharged at him by the multitude, who follow him close; and if he happens not to take to the road, overpower and dispatch him. When the leopard is killed, the king retires to his palace, before which the hunters bring the carcasse, and triumph over it by dancing, singing, and exhibiting various kinds of animal postures and diversions.

The highest respect is not only shown by the common people of the city of Loango to the king, but also to all its neighbours, as equals. All the inhabitants respect the king, and the relations of the king are treated with the same respect as if they were kings of their own countries. Thieves are punished with death, unless it be common custom in the king's account, when a thief is detected, either he or his friends must restore the goods stolen, or else the goods are not worth the rent of them by an adequate indemnity. The theft is then said to have been performed in the middle of the street, where he continues an hour as an object of ridicule and contempt to the spectators. If the thief be unable to restore the goods, or pay the value of them, his relations must work for the poff, robbed, till he thinks himself sufficiently furnished.

They punish adultery by a fine, which is levied in proportion to the circumstances of the offender; except it be committed on any of the king's wives, when the man is hanged, and the woman burnt.

Whosoever is suspected of a crime, and it cannot be clearly proved against him, he is sworn by drinking a certain quantity of a liquor called imbunda. It is made from the root of a small tree or shrub so called, which is about six inches long, and much resembles a coriander. The root is scraped into a vessel, which is boiled in gourds. The liquor is as bitter as gall, and so strong, that one root would serve to try an hundred people. When the liquor is drunk, if it be not too much infested, it occasioneth a sensation of urine, and strikes up into the head, incontinent to such a degree, that he falls down as if dead, in which case he is pronounced guilty, and is dragged through the Broad way and executed; but if he can stand upright, and make water, he is deemed innocent. The determination of this matter rests entirely in the mind of the person appointed to administer the punishment. This, however, innocent, he may be that is suspected, yet if the people shall see any dislike to his relations, they are frightened with a formal imposture, and is made to give him the liquor to drink, and is immediately killed. Thus the operation proves fatal, but he is sufficiently discovered. Thus the ceremony is performed at Loango almost every week, so that many people are delivered by it in the course of a year.

On the death of the king, the succession of the crown does not devolve to his children, but to his eldest brother, for want of such. As soon as the king is dead, they select a person of some degree, and fix him as the king's child-"m. They who have pretensions to the crown are five in number, and reside in towns or villages at some distance from the court; they preserve their titles agreeable to the names of the respective villages in which they live.

The next heir to the crown is called Mani-kay, who resides at a large town of that name about fifty miles from Loango. The second is called Many-Bokke, and lives at a town called Bobke, situated about fourteen miles up the country. The third, called Mani-Selogo, lives at Selogo, a large town situated about thirty-five miles north of Loango. Mani-Kat, the fourth, lives at the village of Kat, about fifty miles from Loango. And Many-Inyami, the fifth and last, resides at the hamlet of Inyami, which is situated on the borders of the kingdom. When, on the king's death, Mani-Kay succumbs, Mani-Bokke reposes to the residence of Mani-Kay, and the rest all follow, a proper person being appointed to supply the place of the king, and then they succeed to each other, and afterwards to the crown by regular rotation.

Mani-Kay, after the decease of the king, immediately enters upon the government; but he does not go to court till the funeral of the late king is over, the ceremonies attending which are these:—they first make two vaunts underground, adjoining to each other, in one of which they lay the corpse, richly dressed, and by all means as fit for the houshold service, as pots, kettles, pans, clothes, and garments. They then place round it little images made of wood and clay, and represent the houshold servants of the deceased. After this, they leave the royal corpse, and go to the other vault, where they place the bodies of several flaves, who have been hurried to serve the king in the other world, and to make atonement in that manner he behaved during his life. The two vaunts are then sealed, and in order to preserve it from the insinuation of the weather, a covering is erected over each of them.

The revenues of the king of Loango principally arise from elephants' teeth, copper, and ivory. The greater part of the copper is brought by trade from an inland country, because the inhabitants of it and the king of Loango are always at variance.

Besides the branches of trade mentioned above, in captain Urving's account, the natives also deal in tin, lead, copper, iron, scarlet, ivory, and speckled and figured sorts of cloth, the manufacture of the country, in exchange for which, they purchase the Europeans, fall, Silesia tacking, beads, looking-glasses, candles, and other commodities.

C H A P. V.
THE NEW HISTORY AND DESCRIPTION OF

CAFFARIA.

S E C T. I.
Contains a general account of Caffaria, and the countries thereto belonging; a description of the interior of the country of the Caffars, that part of Caffaria called the country of the Hottentots; and of the kingdom of Matabee or Chiberti.

C A F F A R I A, or Cafferraria, is extremely well situated for navigation and commerce. Both, which advantages are almost entirely neglected. The country is fertile, but wants the benefit of civilization. The inhabitants are naturally sagacious, but their faculties are infirm in point of education; they know the lands and minds of the people round about, but have no idea of the improvements of that kind. They have no idea of the benefit of cultivation, and the profit of discoveries, and the improvement of knowledge. Their minds are imbued with the notions of the Dutch, who possess the greatest part of the coast.
The Cape of Good Hope, from the left mentioned cape, the mouth of the river Orange, to the town of Stellenbosch, it runs about 1200000 feet, and in 17 miles, and from hence proceeding up the country almost to the equator, in 20 miles it is a hundred miles broad. At forty miles farther, in some places it is nine hundred, and in others not above six hundred. Cape Negro is the longest cape, in four leagues and a half. The width of the river Del Spritito Santo in twenty-five degrees south latitude. Casafina is not named from the Cairo, its inhabitants are much like islands. Its name is Casafina, which is merely an erroneous term given by the Arabs to all who have both confederations of the Lebey, and which the Portuguese have by one building to this people. Geographers usually divide this extensive region into the five parts, and the kingdom of Misam, or Caxa, the Terra de Natnal, and the Terra de Zuma, and the Terra de Com. It is necessary first to take notice of the discovery of this country, before we enter upon a description of it.

The Cape of Good Hope, which is the most southern part of Africa, till five years ago, when it was first discovered by Bartolomew Diaz, the admiral of a Portuguese fleet, who, on account of the boisterous sea, and the extreme cold, did not find the haven of Cabo dos totes Terra, but the Cape of the whole Portuguese empire.

The Cape of Good Hope is a very considerable, and it is not more than 1200000 feet, and in seven leagues and a half. The width of the river Del Spritito Santo in twenty-five degrees south latitude. Casafina is not named from the Cairo, its inhabitants are much like islands. Its name is Casafina, which is merely an erroneous term given by the Arabs to all who have both confederations of the Lebey, and which the Portuguese have by one building to this people. Geographers usually divide this extensive region into the five parts, and the kingdom of Misam, or Caxa, the Terra de Natnal, and the Terra de Zuma, and the Terra de Com. It is necessary first to take notice of the discovery of this country, before we enter upon a description of it.

Some time after, when the people landed here, under the conduct of a viceroy of Brazil, named Francis d'Alencar, of the Portuguese empire, the natives of this country, who were armed with a large gun, loaded with grape-shot. Knowing the strength of this cannon, they prepared to make a present of two pieces of it, which were not more than thirty feet long, and the gunners were very much surprised, and many others were ready to yield. The natives were so much afraid of the loss of their lives, that they were killed, but the few who escaped, abandoned with the most precipitate terror the fatal prey. The Portuguese, at this time, were not able to touch at the Cape, in their way to and from the East Indies; and the expedition of this country, till this time, being a little more favorable in the importance of the place, they effected a settlement there in 1600, which since that time has been a military, and a commercial station. Though this country is not as fertile as the others, yet it is very much more navigable. It is watered by several large rivers, which discharge themselves into the river Paimbair. The land of Daquis, being the 5th part of it, is barren, and most friendly to the people of Africa. It is a country of great extent, and the people are very friendly to the Portuguese. The climate is tolerably mild, considering the tropical
situation of the country. The inland parts, however,
and distant from the sea, are subject to the same
in
The coast here is very sandy. The Dutch judge of their
approach to this coast by the flank called
were occupied by the officer or escheaters from land.
There is likewise another token by which failure
they are near the flite, which is, by the founding
of the sand called cargoes upon the flite of the offacies.

Citzenie, is very little known; but, according to the
few writers who have mentioned it, the government is
dispersed, and the whole country filled with the foreign,
to whom a few petty lords, who live themselves
underordinate, though a small number of towns toward
the coast constitute the whole of their dominions.

Sect. II.
Treaties of peace belonging to the Dutch, with their
method of government, at the Cape of Good Hope.

The Dutch did not enter into the scheme of settling
a colony at the cape, till the year 1592, when M.
Van Ricbeek, a surgeon, in his return from India, ob-
erved that, in 1589, a strong settlement, and laying before the Dutch East India company, a plan of its
eligibility, the scheme was approved, and the proposer
was sent to thetheni by the government, with four
ships to the cape, invested under a certain negotiation
with the people, who, in consideration of fifty thousand guilders,
or four thousand three hundred and seventy-five pounds sterling,
was to be paid to them, about their colonization within the
country about the cape.

Van Ricbeek, in order to secure his new purchases, im-
mediately purchased a strong square fort, and laid out a large
garden, and planted it with a great variety of the
productions of Europe, that he might render the place as
commodious and agreeable as possible.

The Dutch company, having thus successfully begun
the settlement, proposed, in order the more effectually
to establish it, that every man, who would settle three years
at the cape, should have an inheritance of sixty acres of
land, provided that during that space he would improve
the soil, as to render it sufficient to maintain himself,
and contribute something towards the maintenance of the
garison: and at the expiration of the time, he might
either keep possession of it, or sell it, and return home.
Indians of all sorts were employed to clear their
fortunes at the Cape, and were furnished on credit with
vast guns, plow-utensils, &c.

The planters, however, and, as a great many of them, did
not concur in the bills of the new house, the
real societ of the government, to prevent their leaving the place, provided with wives from the
then-twenty-household settlements.
In processes of time they greatly increased, and spread them
furnishing the country in a manner resembling that at
all the lands from Nastans, bay, round the
forth point of Africa, to Deelf, bay, on the east; and
afterwards purchased Terra de Natal, in order to extend
their limits still farther.

The Dutch politicians, then, may be considered under
four different heads or colonies, viz. 1. Cape; 2. Stu-
lbolt; 3. Drakenstein; and, 4. Waveren; and of these,
there were four parties concerning the
Dutch settlements in the cape, which we shall severally
In this celebrated African settlement, there are
establishments for the public administration of affairs.
We refer the reader to the
article for capital matters; 3. An inferior court for the
discussion of petty affairs; 4. A matrimonial court; 5. An
organ of the city; 6. A democratic council; 7. A common
and 8. A board of militia.

The great council has the government for its president, who
has, after having granted a few particulars concerning the
citizens of the Cape, compose the second
court, or college of judges.

The court for the discussion of petty affairs, or the
inferior court, consists of a president, who must be a member of
the great council, of three other judges, one of whom sits as
vice-president; of the company's clerk, and three other
judges, who sit in rotation.

Different matters come under the cognizance of the
matrimonial court, which consists of the same members as the

Several members compose the supreme court, viz. the vice-
president of the grand council, three of the company's
men, and three judges of the cape.

We see, as it were, the same government, the same
laws, and the same council, with twelve or sixteen of the
people, in every case.

The council, however, is made up of the officers of the
council; and, in every quarter, there is a governor,
who presides over the council; and minister of the

The power of the six courts is as follows: the first
takes cognizance of everything which concerns commerce,
fleet and regulations; and likewise both authority to
declare war or make peace with the nations in the
vice of the settlement. The second tries all capital cases in
civil and criminal cases; but an appeal lies from this court
to the council of Barry. The third is inferior to the
fourth, and is only for small debts, and for
The fourth tries property in case that no action can be entered here which
respects, and if the hundredth part of the
member of the council, of the marriage of the Europeans at the cape, of
grants permission for their celebration. The fifth takes
law of marriage, and the
right of the case, to the president, who, having received their
marriage before the age of twenty-five.

If the husband, during the period of all lands is paid towards
replacing the government. The duties on brandy, wine,
tobacco, and beer, are taxed at first thousand two hundred
and fifty pounds per annum, and the profits of other
merchandize amount to seventy-five per cent.

Great indulgence is shown by the Dutch to those who
ride here, and the Cape Europeans meet with much en-
couragement upon all occasions; nor are they left free to
cultivate the friendship and conciliate the affections,
beget good will, or to be partial to the different sects;
beget friendship, and
So are the sects
in unity with them: and so are much respected as to be
considered brethren in all of their quarrels. Deputies
from the principal of the principal for want of time waited
for, and by the governor with perfects of castle, &c.
which they are, hoi
plenty entertained, and, in return, are sent back again, with
what is according to their condition.

It appears, however, that on the first settlement of the
Dutch at the cape, all the Hottentot nations did not ac-
cept the influence of the Cape of Good Hope, for the
Cape Europeans, from the government of the colon-
and, in 1590, disputed the possession of the purchased
terrain with the Dutch. They always made their attack
in fierce and boisterous weather, as thinking the first
then of their
marsh, and every one of them, to drive away
their cattle.

A Hottentot, named by the Dutch Doman, who had
received for some time at Barry, and afterwards lived at
cape town, at length, as the court of the
vice of the European court, they could meet, turn their
down their heads, and drive away
their cattle.

received for some time at Barry, and afterwards lived at
cape town, at length, as the court of the
vice of the European court, they could meet, turn their
down their heads, and drive away
their cattle.
Not long after this, a chief of another nation, with a considerable number of attendants, came in pursuit of the fugitives, they being armed with a thousand firearms and a hundred little pieces of tobacco where their enemies were concentrated; in this action they were surprised and taken prisoner. 

Two forts were then built, one at the mouth of the river, and the other on the eastern side of the island. The first was called the Dutch fort, and the second the English fort. The latter was built by me, with the assistance of a few men, and was completed in a few days. The former was built by the Dutch, who had previously occupied the island, and had fortified it with a line of earthworks and a moat. The two forts were connected by a bridge, which was constructed of timber and brick, and was defended by a garrison of twelve men, under the command of a captain of the English army. The island was thus provisioned for a long siege, and the Dutch were not able to lay siege to it, as they had no means to transport a sufficient supply of provisions to the garrison.
The district of Botetroyd, which is the most northern part of the colony, receives its name from the quantity of hay which it is calculated to produce, and is divided into two parts, the Upper and Lower.

The mountains, which are veryitous, are inhabited, but there is not a man in all the district, or in the whole of this island, who can be called a gentleman, inhabitant, produce, &c. The advantages of these inundations are many; and the few inconveniences which occur are more than compensated by the great increase of the produce of the land, and the advantages of the fishery. The fishery is very abundant, and the inhabitants have both time and leisure to catch them.
...and at the other end of the capes, where the mountains present a flat, or even a broken surface, may be seen the settlements of the Hottentots and Bushmen. In many respects these people are very different from the colonists adjacent.

The inhabitants of this colony, having neither church or council-houses, are obliged, for worship, to go to Drakenstein church; for marriages or christenings to the capes; and to Stellenbosch on account of legislative concerns.

There are two hot baths; but it is dangerous to go to either, on account of the wild beasts which swarm in those parts. The waters of this colony are in general very good.

Terra del Nata, was likewise purchased by the Dutch, and is inhabited principally by the Cafrres, who are very different in many respects from the Hottentots, not great as to bulk of body; but the women have this advantage, that unlike the Hottentots, none, few, corn, brew a kind of beer, and build square houses with a kind of platter. They trade with the Arabian tribes of Red sea, for flk, elephants-teeth, coffee, &c. which they barter with the Europeans for ordnance, anchors, tar, and other maritime stores, and exchange with the former for various articles.

This district has been little penetrated by intelligence; and though I have collected some very curious and ample facts, I have not had the opportunity of describing them in this work. It has been our custom to be able to obtain concerning it, we learn, that such part of the country as lies towards the sea is plain, champaign, and woody; but within it appears more uneven, by reason of many hills which rise in unequal heights above each other; yet it is intersected with pleasant valleys and large plains, and is clothed with natural groves and savannah on marshlands. There is no want of water; for every hill afford little brooks that glide down several ways; some of which, after several windings and windings, meet by degrees, and make up the river of Natal, which discharges itself into the eastern ocean, in the latitude of about thirty degrees south; then it swells to a vast width, and is deep enough for small vessels.

But at the mouth of the river is a bar, which has not above ten or twelve feet water on it in a spring tide; though within there is water enough. This river is the seat of much cattle and fisheries; it depends by some of our English ships. There are also other streams and rivers, which bend their course northerly; especially the large river, which turns due north, about one hundred miles within land.

Several sorts of trees grow in the woods, many of which are very curious and large, and they being being tall and large. The savannahs are clothed with kindly thick grass. The land animals of this country are lions, tygers, cheetahs, bison, buffaloes, and elephants. Here are also abundance of fox-hares; buffaloes and bull-bucks only are kept tame, but the rest are all wild. Elephants are so numerous here, that they feed together in prodigious herds. Mornings and evenings they are seen grazing in the savannah; but in the heat of the day they retire into the woods, and they are very peaceable if not molested. In this district is one of the finest woods in the savannah among the same cattle; for the natives seldom disturb them.

Fowls of various sorts are found here in great plenty, for instance, we have here in England, ducks and teal both tame and wild, and plenty of cocks and hens, besides abundance of wild birds, wholly unknown to the. Here are hawks to be seen in great plenty, such as hawks, and many fine coloured feathers; they are rare and thy. There are others like curlews, but bigger: the fheep of the shee, &c.

Though there is plenty of divers sorts of fish in the sea and rivers; yet the natives do but seldom, in the night time to take any, except terns or gulls, and that is chiefly when their other store of food is very small. They go fishing, but they have another very strange way to catch turtle:

...they take a living fighting fish, or remora, and fastening a couple of strings to it (one at the head and the other at the tail) they let the fighting-fish down into the water, on which they go fishing, and when they find that the fish has fastened itself to the back of a turtle, as he will soon do, they then draw him up, and the turtle very easily, the horses way. This method is also practised at Madagascar, one of the islands in the Indian Ocean.

With respect to the natives of this country, they are but of a middling stature, yet have very good limbs; the colour of their faces is black, and the hair clipped; they are oval in the face, and have very strong teeth, but very well proportioned: their teeth are white, and their bodies more or less gracefull; they are nimble but very lazy, which probably is for want of provisions; their chief employment is husbandry. They have a great many bulls and cows, which they carefully look after; for every man knows his own, though they all run promiscuously in the savannahs; yet they have pots near their own brooks, where they make them gentle, and bring the cows to the tail. They also plant corn, and fence in the fields, to keep out all cattle, as well tame as wild. They have Guinen corn, which is their bread; and a small grain, no bigger than matted feed, of which they make their drink. No acts or trades are practised among them, but every one makes for himself such necessaries as need or ornament requires; the men keeping to their employment, and the women to theirs; they have both hounds and hawks; plant, and do much in the vegetable way. They have many flocks of cows, drefs the violets, &c. and manage all domestic matters. Their houses are not large, nor richly furnished; they are made chiefly of rush and reed, but they are well defended from the inclemency of the weather.

The clothes, of which they wear but few, are extremely mean, they are the most in a manner, the common garment being only a square piece of cloth made with flakes, or mohorind, and wrought in form of a graining, and being short upon the body, so that one may turn without raising his head, and so as to round their waists; and the lower end, being finely fringed with the same, hangs down to the knees. They have caps made with buff goat's, of about nine or ten inches high, blue, their caps, and their store of garments, must be made very pure before it is fit for this use; besides, they lay on but a little at a time, and mix it finely among the hair, and it neither afterwards comes off their heads. When they go a hunting, which is but seldom, theypare off three or four inches from the top of their caps, so that it may fit the snagger; but the next day they begin to build it up again, and so they do every day till it is of a greater and fashionable height. It would be a ridiculous thing for a man here to be worn without a graining cap, but boys are not suffered to wear any till they arrive at years of maturity, and then they begin to build up their heads. The women have only short petticoats, which reach from the waist to the knees; and then they wear their bodies with a simple cow hide, thrown like a blanket over their shoulders.

The food of these people chiefly consists of Guinen corn, beef, fish, milk, ducks, eggs, &c. They also drink milk often to quench their thirst, and this sometimes when it is frozen, for they do not boil it. Besides milk, which is their common drink, they make a better, but of the same grain beforementioned, purposely to be merry with, and when they meet on such occasions, they make themselves extraordinary fine with feathers stuck in their caps very thick: they make use of the long feathers of cocks tails, and none else. Besides their head ornaments, they wear a piece of cow hide made like a tail, and, like that, it is fastened behind them, reaching to their waist to the ground. This piece of hide is about six inches broad, and the back is decorated with some iron rings of their own making: when they are thus attired, their heads a little intoxicated, and the mufic playing, they all skip about merrily, and shake their tail briskly; but in their mirth they are very harmless and inoffensive.

Polygamy being tolerated here, every man may have many wives as he can wish, but they being named here are none to be had; neither is there any other necessity to be bought or sold here for women. Young virgin girls, are disposed of by their fathers, brothers, or other male relations; the price is according to the beauty of the damsel. They have no money in this country, but give cows in exchange for wives; and therefore is the richest man who has most daugh ters the most to be wished for, who, by this means, can get the most cattle enough. They make merry all the wedding, but at
bride cries all the wedding day, and hours join to the ninth.

These people are very just, and extraordinary civil to strangers. They live together in small villages, and the old women have an interest in all the fields, and the young ones in the vineyards. Every village has a chief, and a council of elders, and therefore willingly submit to his government.

Terra do Fume, is but a small trilling boggy, bounded on the north by the river Delagoa, which separates it from the interior of the country; on the west, by the country of the Nanomine; and by the Eastern ocean on the east. It extends from the mouth of the river Delagoa, on the north, to the mouth of the river Lodore, or Toley, the first appellation signifies the river of robbers, which is in twenty-six degrees forty minutes south latitude. The only place worthy of notice here is the village of Fedre, which is about the twenty-ninth degree of south latitude. Ponto de Pequeira, or the Filihing-places, which is a little beyond the former; and the bay of St. Liut, which is between the latter and the Ladron river.

The Portuguese, who either named places from the saints days on which they discovered them, or from necrotrivial circumstance which they observed, when they first saw them, gave this country the name of Terra do Fume, or the Land of Smoke, from perceiving smoke rise on the open district of the country.

The Europeans, as yet, have not made any settlement here; and the Crioules, who inhabit the place, live in a simple state of nature, without towns, villages, houses, or any kind of movable habitation; so many are the artificial walls of stones, and few their real necessities.

Cape Town, is situated in Cape Colony, in thirty-four degrees fifteen minutes south latitude, and forty-three degrees twenty seconds west longitude. It is an extensive shell, lying along the sea, and towards it are very low and only thatched; both which circumstances are owing to the stormy weather; for were they built high, they would be blown down, and, if trees were used instead of thatch, the people would be knocked on the head with them as they pulled along the streets. The houses in general have pleasant gardens behind, and neat courtyard yards before them. Building, as well as tillage is greatly encouraged here, and land given for either purpose to those who choose to accept of it; but then the government claims an annual tenth of the value; the former, and produce of the latter, and a title of all purchase money when estates are sold.

The town extends from the sea shore to the company's garden, stretching along the Table bay. The fort is very extensive, but is in a very bad state. The garrison is composed of the landing place, and is garrisoned by two hundred soldiers; the government fortresses are within it; there are also two of the officers, who have different quarters her, as well as for hundred ferrates; the same number of slaves are lodged in a commodious building in the town, which is divided into two parts, for the men, and the other for the women; and there is a house of correction for the reception of delinquent persons of either sex. The hospital for sick freemen is of essential use to the Dutch fleets in going to or returning from India.

The church is a large commodious edifice, elegantly plain; but the roof and spires are thatched, for the reason already mentioned. Thatching indeed, from the nature of the hurricanes, seems absolutely necessary, on the method in which it was formerly done; it appears that as the wind rises, the straw is stirred with wings, as we are informed; that there were formerly thatching houses erected on both sides the streets, to shelter passengers in rainy weather; but these brought the inhabitants under such dangers and inconveniences, that they were generally all done down by order of the government. Sailors and Hottentots were continually allambling and snapping their pipes under the roofs through carelessness, and by chance the fire.

The government very wisely laid hold of that occasion to rid the streets of those fellows that were continually pernicious to them, and we are informed, that there were formerly thatching new houses erected on both sides the streets, to shelter passengers in rainy weather; but these brought the inhabitants under such dangers and inconveniences, that they were generally all done down by order of the government. Sailors and Hottentots were continually allambling and snapping their pipes under the roofs through carelessness, and by chance the fire.

The canals of the rivers in this country are in the mountains: they glide over a gravelly bottom, are clear, pleasant, and delicious, and though other streams traverse the banks, they are muddy, and unwholesome. Here are a few broad springs, whose waters, medicinally used, greatly purify the blood. The water is not very clear in several parts of the Polar, which are highly salubrious in various disorders.
